A visit to the works of the Pacific Gas Engine Co. shows the demand for their popular engine to be far in excess of their ability to supply, forcing them to make arrangements which will within the next 60 days more than double their present output.

On the first page of this issue we illustrate their single and double engines. The motive-power is obtained by drawing air over gasoline which is contained in an iron tank (or carburetter) located at some distance from the engine. This is again mixed with pure air, which mixture of air and gas is drawn into the cylinder of the engine by the downward stroke of the piston, and there closely compressed by the upward stroke of the same. This mixture of air and gas in its compressed state is ignited by an electric spark produced by a small battery. This mixture of air and gas, upon being ignited, produces extraordinary power by the expansion of the heated gas. When the engine is operated by natural or manufactured gas, direct communication is made to the meter.

SINGLE AND DOUBLE GAS OR GASOLINE ENGINES OF THE PACIFIC GAS ENGINE COMPANY.

These engines are now in practical use, supplying power for pumps, printing-presses, grape-crushers, cream-separators, electric-lighting, factories, etc. They are specially adapted for mining and irrigating in locations where fuel is scarce, and have in many cases displaced horse-powers, windmills and steam.

The Stockton Street Railway Co. has fitted up a car with these engines, and it is now in successful operation in that city. Their motor carries 40 passengers at a speed of ten miles per hour. The company plans to adopt this system on their entire line, and will probably have it in operation early in the coming year. San Jose is also advancing in this direction, and has a Pacific street-car motor now ready to be put on their tracks. Sacramento capitalists are taking a deep interest in the new power and are now taking steps toward introducing it in that city.

These motors are claimed to be under perfect control, start easily without unpleasant jar, and run more smoothly than the dummies on our cable lines.

Another field in which this motor has been successfully applied is in the propelling of boats. A number of launches are now afloat in the bay and in the waters about Sacramento, Stockton, San Diego, Monterey, etc. The launch Viva, a 15-foot boat, fitted up with a three-quarter-horse power engine, runs seven miles per hour and has been in successful operation for more than a year, while the Mary McNeil, a 25 foot boat, propelled by a double-cylinder, 5-horse power engine, makes nine miles per hour on the bay. A 15-horse power engine has just been set up in a new 50-foot schooner, now on the ways at Stone's shipyard.

The company has had numerous communications regarding the use of the engine on agricultural machinery, but owing to the press of business during the past year, have been unable to give the matter their personal attention, but as soon as they are established in their new works they will build a new model specially adapted to agricultural purposes. On headers and threshers it is believed this will be a great improvement on present methods, as danger of fire, which is now the great objection to power in the field, will be entirely obviated.

In looking over the testimonials received by the company, we notice that one purchaser got excellent returns from his investment, and in a manner not taken into consideration when buying his engine. He says: "A fire broke out at 2:30 o'clock this morning in a tenement-house on my premises. I started the engine, connected the hose and by its use saved at least $3000 worth of my property. The engine never faltered and threw the water between 50 and 60 feet high."

Four of these engines are now in the Mechanics' Institute Fair. A four-horse power is furnishing power for a 60-light electrical storage system, and a three-fourths-horse power is running an ice machine. They also have pumping and boat engines on exhibition.

Little's Antipest.

THE GREATEST DISCOVERY OF THE NINETEENTH CENTURY.

Silver Medal Awarded by the State Fair of 1890.

This preparation is a Sure Destroyer of the SCALE, WOOLY APHIS and INSECT PESTS of any and all descriptions. It may be as freely used in the conservatory, garden or greenhouse as in the orchard or vineyard. It is non-poisonous and harmless to vegetation when diluted and used according to directions. It mixes instantly with cold water in any proportions. It is SAFE, SURE and CHEAP. No Fruit-grower or Florist should be without it. Send for Circulars and Price List.

TRACK AND FARM.

The First Souther Farm Sale.

Great Brood Mares and Promising Young Stock at Auction—Good Road Horses—Some Well-Bred Young Stallions—A Good Opportunity to See a California Stock Farm.

The Souther Farm began collecting well-bred trotting stock in January, 1887. The collection has been gradually increased since that time, and as nothing has been sold, the farm is at present greatly overstocked; consequently a large number of well-bred trotting stock will be sold at the first annual sale, which will take place on Thursday, November 20, 1890, at the Souther Farm, near San Leandro. On that day practically the entire produce of the farm will be sold, the only exceptions among the young stock being two or three fillies reserved for brood mares, and all of the foals of 1890, which are too young for present sale. Furthermore, on that same day the entire Souther Farm collection of brood mares will be sold, saving and excepting a few that are not in condition to place on the market, besides three or four kept for road use. Among this collection of brood mares are some of the best and most fashionably bred, and there are a great many individuals that produce good colts. The produce of almost every mare offered will be shown in such a manner that purchasers may judge for themselves of the worth of the mares.

I wish it distinctly understood that every animal offered will be sold without reserve, limit, or by-bidding, and it will be a long time before those who are looking for brood mares will have a better opportunity of purchasing first-class stock at exactly what they will bring when fairly and squarely offered at public sale.

The following is a partial list of the stock that will be sold on Nov. 20th:

Brood Mares.

VERONICA, b m, right hind foot white, foaled 1884; bred by Silas Skinner, Napa, Cal., by Alcona 730, son of Almont 33, and Queen Mary by Mambrino Chief 11; 1st dam Fontana (dam of Silas Skinner 2:19, Flora Belle 2:24) by Almont 33; 2d dam Fanny Williams (dam of Bay Chieftain 2:28¼) by Alexander's Abdallah 15; 3d dam by Denmark, etc.

Veronica is a full sister to Flora Belle 2:24, for whom Mr. Corbitt paid $3000, and a three-quarter sister to Silas Skinner 2:19, he being by a son of Alcona from Fontana, whereas Veronica is by Alcona from the same mare. Her dam has produced two with fast records, and her granddam produced Bay Chieftain 2:28¼, the only trotter ever produced by John F. Payne. Veronica is a grand individual fully 16 hands high, beautiful head and neck, has grand size, substance and finish, and has every mark of a grand brood mare which she will undoubtedly be. Her first colt Woodside, by Woodnut, Mr. B. C. Holly considers one of the best colts he ever handled, as he drove him quarters close to 40 seconds when the colt was but 14 months old. Her second foal is the bay colt Lord Clive by Sable Wilkes, now the property of Coombs Bros., Napa. Her third foal, a weanling, is now at the Souther Farm, and will be exhibited on the day of the sale. At the sale of Mrs. Silas Skinner's stock on March 6, 1890, Veronica brought $2500, and her dam Fontana $4400. Stinted in 1890 to Figaro (son of Whipple's Hambletonian and Emblem, sister to Voltaire 2:20¼, by Tattler).

ROSALINE, b m, hind ankles white, by Major Mono, son of Pacific, he by Old Niagara, dam unknown.

Rosaline is the dam of Alpheus 2:27—a gamer horse never lived. The mare is very powerfully built and is a model brood mare; every colt she ever produced has shown great speed.

Not stinted in 1890—the mare was supposed to be in foal until so late in the season that it was decided not to breed her until 1891.

PUSS, ch m, strip, hind foot white, foaled 1866, bred by D. H. Gleason, San Leandro, Cal., by Skenandoah 926 (Kentucky Hunter).

Puss is the dam of Haverly (pacing) 2:25, and Modjeska (pacing) 2:32½, who showed a half-mile at Napa in 1:11½, in the heat she nearly lost through slipping in a wet part of the track. Puss is also the dam of Belle Davis, who was the best three-year-old of her year, and made a record of 2:40 some 13 years ago. Puss has produced two fine-looking colts by Figaro, and is in foal again to the same horse.

NAMORA, br mare, small strip, foaled May 24, 1879; bred at Fairlawn, Kentucky; by Almont Mambrino 761 (by Almont 33 out of Monogram by Mambrino Chief); 1st dam the Lackey mare by Blood's Blackhawk. I bought this mare on the showing made by two of her colts which I purchased at the sale of Mrs. Silas Skinner's stock in March, 1890. She is well bred, being by a son of Almont from a Mambrino Chief mare; and Blood's Blackhawk has, through his sons and daughters, given the trotting turf some of its very best and purest gaited performers. See Wallace's Year Book, page 428, for Blood's Black Hawk.

ROSEBUD, br m, foaled 1884; bred by Monroe Salisbury; by Gibraltar 2:22½ (sire of Homestake 2:14¼); 1st dam by A. W. Richmond, sire of Arrow (pacer) 2:13¼, and dam of Anteeo 2:16¼ and Antevolo 2:19½; 2d dam by Crichton, thoroughbred (son of Imp Glencoe), sire of the dam of Arrow (pacer) 2:13¼. Homestake won one of the best races of the year at Napa on Oct. 14th, defeating Hazel Wilkes, Maggie E. and Emma Temple in three straight heats. Time 2:18, 2:14½ and 2:14¼, the last two heats the fastest ever trotted in a contested race in California. Rosebud is by the sire of Homestake out of a three-quarter sister to Arrow 2:13¼. She is a grand individual, and showed a full mile in her work at Napa in 2:40, last quarter in 38 seconds. In the right hands she will make a good race mare and will be of great value as a brood mare.

EFFIE DEANS, br m, foaled about 1875; bred by David Stoddart (now) of Oakland; by Whipple's Hambletonian; first dam, Hallidie mare, a mare that carried Mr. A. S. Hallidie from one end of California to the other when he was Surveyor-General of this State. Effie Deans is the dam of Gerster, by Washington, a pacer that drove out the winner of a heat in about 2:24 on the Northern Circuit this past summer. Effie Deans' weanling foal by Jester D. is one of the best colts of his age at the farm and will be exhibited on the day of the sale. The mare has great speed and wonderful endurance, and she will produce trotters. Daughters of Whipple's Hambletonian are producing very creditably.

ROBERTA, gr m, foaled about 1878; by Patchen Vernon (sire of Allan Roy 2:17½ and the dam of Voucher 2:22) son of George M. Patchen Jr. 31 and Lady Vernon; first dam by John Nelson (sire of Nerea 2:23½ and of the dams of Albert W. 2:20, Valensin 2:23 and others). This mare is bred from strong lines. She has great endurance herself and should produce game and fast colts.

STRAWBERRY, roan m, foaled about 1879; by Newland's Hambletonian (son of Speculation and a mare by imp. Joseph, the sire of the dam of Vanderlynn 2:21); first dam by Owen Dale, one of the best, if not the best son of Williamson's Belmont. This mare has beautiful finish and was a great road mare, but she ran away one day and was put to breeding. Her first foal is a yearling by Figaro and is simply a phenomenal pacer. He has been driven but about six weeks and has been worked very easily, as he is too good a colt to spoil. He will be sold with the other Souther Farm yearlings. Her weanling foal is also by Figaro, and is the best lot trotter on the farm, and unless all signs fail he will be a horse of wonderful trotting speed. He will be exhibited on the day of the sale. This mare will produce extreme speed and will be simply invaluable to whoever purchases her.

FANNY LINFOOT, bl m, foaled about 1873, by Erwin Davis (son of Skenandoah 926), sire of Ed 2:26, Carrie F 2:27¾ and the dam of Florence R 2:26¼; 1st dam by Frank Wise, a Black Hawk horse formerly owned by Mr. Hathaway of San Lorenzo.

Fanny Linfoot is the dam of Jim Linfoot by Figaro, who was the fastest two-year-old on the Souther Farm last spring except El Benton, and he could make it lively for him. He took to growing, however, and it was deemed prudent to stop driving him for fear of overtasking his strength. He will be shown in harness and sold at the sale, and in the right hands will make a dead game race horse.

LA TOSCA, b m, foal 1887, by Ulster Chief, son of Ryedyk's Hambletonian. 1st dam Puss (dam of Haverly (pacing) 2:25, and Modjeska (pacing) 2:32½, by Skenandoah 926.

La Tosca is a full sister to Modjeska (pacer), 2:32½, and half sister to Haverly (pacer), 2:25. With proper handling she should become fast, and will make a good brood mare.

FREDA, brown filly, foaled 1888, by Fred Arnold, son of Nephew; 1st dam Bernarda, a great road mare, every one of whose colts show speed.

Freda started in the two-year-old purse at Napa on Oct. 17, 1890, and divided second and third money with Captain Ben Harris' Dawn filly Starlight.

Freda was timed in the second heat of this race a mile in 2:49¾. She is a perfect beauty in form and coloring, is a dead game little trotter, and with proper handling will make a grand campaigner. She has shown quarters very close to 40 seconds; is very clean-gaited and a delightful filly to drive. Whoever gets her may consider himself fortunate. If she were by one of my own horses, I would reserve her for a brood mare.

Freda's dam Bernarda and two of her half sisters, four and five years of age, both by Fleetwood (son of Nutwood and Centennial Belle by Woodburn) will also be sold.

BABY, ch m, star, foaled about 1885 by Tom Benton [son of General Benton (sire of the dam of Sunol, 2:10½), from a mare by George M. Patchen, Jr. Tom Benton is the sire of Ned Winslow (pacer), 2:15, and Mary Lou, 2:21]; 1st dam Weasel by McCracken's Golddust (sire of Artist, 2:26¼); 2d dam Young St. Lawrence by McCracken's David Hill (sire of Black Swan, 2:28½); 3d dam Old St. Lawrence mare, dam of Dave Hill, Jr. (sire of George Treat, 2:25½), by Foster's St. Lawrence, who had a record of about 2:32, and died in a race on the Kalamazoo track.

This mare had great natural speed, but was foundered before she came to the Souther Farm. She is a splendid brood mare, and has a remarkably good pedigree which will bear close scrutiny. Her sire, Tom Benton, is a producing son of the great General Benton, and through her dam she has three crosses of first-class Black Hawk and St. Lawrence blood, so useful in giving purity of action and fine road qualities, coupled with extreme speed.

With the above will be sold many other well-bred trotting road and work brood mares. Everything will be sold to the highest bidder, and no by-bidding will be tolerated; so this will be an unusual opportunity to acquire good breeding stock.

The following two-year-old stallions will be sold:

JIM LINFOOT, br c, foaled 1888 by Figaro (son of Whipple's Hambletonian and Emblem, full sister to Voltaire 2:20¼, by Tattler); 1st dam Fanny Linfoot (see above), by Erwin Davis; 2d dam by Frank Wise (Black Hawk).

A very fast colt of fine size and conformation; would make a first-class stock horse for the coming season of 1891.

THE BARBER, gray colt, foaled 1888 by Figaro; 1st dam Roberta (see above), by Patchen Vernon; 2d dam by John Nelson.

A large, stout-built colt of very speedy formation. He certainly ought to finish his miles in good shape if speed sustaining blood will tell.

HORATIO, b c, foaled 1888 by Alcona (sire of Flora Bell, 2:24, etc.), by Almont; 1st dam Namora (see above), by Almont Mambrino 761; 2d dam by Blood's Black Hawk.

Horatio is of fine appearance, and shows a first-class gait. He is a three-quarter brother to Prince Warwick, a horse that Mr. Hickok campaigned through the past season without getting him a record. Prince Warwick went through the grand circuit and seemed as capable of trotting second in 2:15 as in 2:25. Horatio will earn some man a good living, as he is well-bred and very promising.

Gran Moro, bl c, foaled 1888, by Le Grande (son of Almont and Jessie Pepper by Mambrino Chief) sire of Grandee, three-year-old record 2:23½; first dam Sunny Slope Belle (dam of Don Carlos three-year-old record 2:32) by The Moor [sire of Sultan 2:24 (sire of 19 in 2:30 list), and grandsire of Stamboul 2:11½, within three-quarters of a second of the world's stallion record]; second dam, running bred, a mare that won races in and about Los Angeles for Mr. L. J. Rose. I hope to have her pedigree by the date of the sale. Don Carlos 2:32 (out of the dam of Gran Moro) is used as a gentleman's roadster in New York, and has been driven a mile over the Fleetwood track in 2:25.

The above is a preliminary and partial list of the stock that will be sold on Nov. 20th at the Souther Farm. Besides these there will be sold the yearlings, colts, and fillies, and the two-year-olds, colts, geldings and fillies. Complete catalogues are now ready and will be mailed to all applying to Killip & Co., 22 Montgomery street, San Francisco, or to the Souther Farm, San Leandro, Cal.

Full instructions for reaching San Leandro, where conveyances will take purchasers to the farm, will be duly advertised. It is a pleasant drive from San Francisco to the farm by way of the creek ferryboat to Oakland, and the place is but eight miles from Oakland, so that all living in or about that city can drive to the farm easily, where careful men will look after all horses driven there. Take the county road between Oakland and San Leandro and turn off at the sign-board.

The stock will be exhibited in harness and at the halter, a few days before the sale; due notice will be given of the exact date. On the day of the sale a good lunch will be provided for all attending. An invitation is extended to all interested in fine stock to come and see the horses and the appointments of the farm, which are very complete.

The stallions El Benton, Glen Fortune, Figaro and Jester D. will remain at the farm, and the business of educating, training and boarding horses will be carried on in the most careful manner.

None of the foals of 1890 will be sold, as it is intended to sell them when they are yearlings in the spring of 1891. GILBERT TOMPKINS.

Souther Farm, San Leandro, Cal.

Both air and water abound in microbes, or germs of disease, ready to infect the debilitated system. To impart that strength and vigor necessary to resist the effect of these pernicious atoms, no tonic blood-purifier equals Ayer's Sarsaparilla.

SECRETARY WINDOM has determined to call a meeting of the lady managers of the World's Fair in Chicago, November 18th. They will receive $6 per day and expenses.

Floral Shows.

These elegant exhibitions are now on the tapis and deserve most cordial and liberal encouragement by the public. During Thursday, Friday and Saturday of this week, November 6th, 7th and 8th, the State Floral Society will hold its fall show in the new building of the Academy of Sciences, on Market street, near Fourth, in this city. The exhibition will not be large, but it is expected that it will be notably fine, and in the line of chrysanthemums especially will be a sight to look upon. The display will be open day and evening and our readers in the Bay counties to whom this notice will come in time are urged to attend. The rules and premiums were published in the RURAL of Oct. 25th.

On another page of this issue will be found accounts of the chrysanthemum shows of Los Angeles and San Diego, prepared for our columns by two of the best known literary ladies of Southern California. Their descriptions are charming, as the reader will no doubt discover for himself.

Another important floral event will be the first floral exhibition to be held Nov. 11th to 14th, under the auspices of the Southern California Floral Society in Hazard's pavilion, Los Angeles. The premiums aggregate some $1100 in cash, and every facility is afforded exhibitors.

A neat pamphlet premium list is published and may be obtained from H. W. Kruckeberg, Secretary, 218 N. Main St., Los Angeles.

The society extends a cordial invitation to all persons interested in its work to become members. The initiation fee is but 50 cents, and the dues 50 cents per quarter. Application blanks are to be had of the secretary, to whom application should be made.

The society also asks that growers from distant localities send in flowers for exhibition. It is designed that the coming display be a Southern California affair, and not in any sense local in its general character. To avoid this, it is earnestly requested that the growers of Santa Barbara, Ventura, Los Angeles, Orange, San Bernardino and San Diego counties send plants and cut flowers for the exhibition.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

FOR WEEK ENDING OCT. 28, 1890.

439,469.—CULTIVATOR — H. S. Brink, Biggs, Cal.

439,336.—COMBINATION TOOL—Geo. Zitlow, Tacoma, Wash.

The following brief list by telegraph, for Nov. 4, will appear more complete on receipt of mail advices:

California—William H. Anderson, Riverside, treadle pump; John W. Criter, S. F., mining; Owen T. Davies, Brighton, combined ditcher and cultivator; James B. Dean, Lompoc, and H. H. Earl, S. F., brush attachment for dustpans; Adolf Fritsch, Suisun, cigar or cigarette-holder; Louis Goldstone, S. F., street or station indicator; Charles D. Kennedy, California City, machine for making shells; William A. J. Kohrn, S. F., telegraph key; William Maybury, Pasadena, apparatus for drying, bleaching and washing yarn; Horace D. Ranlett and G. Provost, S. F., device for operating shutters for elevator shafts; James W. Reid, S. F., discharge attachment for wash basins, etc.; Percy W. Ross, Los Angeles, car-coupling; Frank Sharon, S. F., hose-coupling; Joseph L. Stillman, Fresno, car-coupling; John Taggart, San Diego, rubber-shoe attachment; Ludwig Wagner, S. F., wine schooner; Alfred M. Whiteley, Sacramento, attachment for chairs; William H. Wiester, S. F., waterback for gas stoves.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

WHITE ADRIATIC FIGS.—A. B. Van Arsdale of Yuba City has produced this year a very fine article of dried White Adriatic figs of which we have seen a sample. The color is light, but we do not detect any sulphur flavor. If sulphuring has been done, it has been well done. The skin is moderately thin and tender, the pulp well preserved, and the product on the whole a creditable one.

Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

HORSES AND CATTLE.

PERCHERON HORSES. Pure bred horses and mares, all ages, and guaranteed breeders, for sale at my ranch near Lakeport, Lake Co., Cal. New catalogue now ready. Wm. B. Collier.

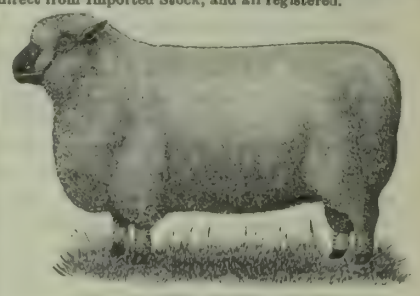
Red Polled Cattle.

We have 19 head of Imported Stock.



Young Bulls and Cross-breds on Devons for sale.

H. MECHAM,

Importer and Breeder of Shropshire Sheep

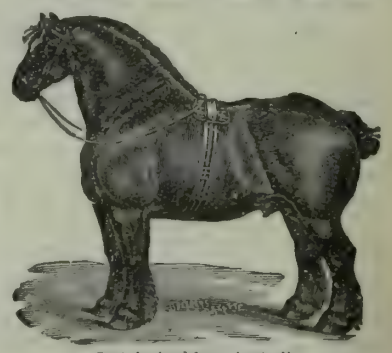
They were all imported from England in '88, or bred direct from Imported Stock, and all registered.

H. MECHAM,

—BREEDER OF—

American Merino Sheep Without Horns.

The only flock in the United States. When we bought our sheep East 20 years ago, among them was a ram without horns. He grew to be a large fine sheep, shearing at 2 years old, a 12 months' fleece, 35 lbs. of long white wool.



I have bred from him and his get ever since and have never made an out-cross and never used the same ram but one year on the same flock. My rams at 2 years old will weigh from 160 to 180 lbs.; have a strong constitution, without wrinkles, and will shear on an average about 25 lbs., a 12 months' fleece, of long white wool. Rams and Ewes for sale. **P. O. Address:**

Stony Point, Sonoma Co., Cal.

R. R. Station, Petaluma.

FOR SALE!

THE

PACIFIC GAS OR GASOLINE ENGINE.

PATENTED JUNE 17, 1890—NOS. 430,504, 430,505, 430,506.
Also in Great Britain and other foreign countries.

Starts Instantly Without the Necessity of Boiler, Fire or Experienced Engineer.

The engine uses from 20 to 25 cubic feet of coal gas, or about one-eighth (1/8) of a gallon of gasoline per hour per horse-power. It can be used for pumping purposes, running printing presses, small factories, elevators, jewelers' lathes and polishers; dairymen's, agricultural, mining and wood-working machinery; well-boring and all other purposes requiring cheap and convenient power. Persons having but little space will find this the most suitable of all motors.

USE IN BOATS.—The Company make a specialty of ENGINES FOR SMALL BOATS AND LAUNCHES, and claim there is no engine in the market their superior for this purpose. Boats so fitted require no licensed engineer or pilot, as is required by law for all vessels propelled by steam power.

ELECTRIC LIGHTING.—The engines are PARTICULARLY ADAPTED, and cannot be equaled for operating small electric light plants, either arc or incandescent.

STATIONARY and MARINE ENGINES

From 3/4 to 15 horse-power.

OVER 100 IN ACTUAL OPERATION.

READ THESE TESTIMONIALS.

ALAMEDA, April 8, 1890.

PACIFIC GAS ENGINE CO.—GENTLEMEN: Permit me to add my testimonial to the many you have received indorsing your engine. As you are aware, mine was a Regan engine which gave me considerable trouble. I had to remove the head and raise the tappet valve every time I wanted to start the engine. I sent you the engine; you removed all the Regan appliance except the cylinder and stand. You put in your appliances, head, sparking device, inlet valve, and, in fact, changed it to the Pacific Gas Engine, which now works splendidly. I have not had to remove the head for any cause since you made the change (over two months). It gives me no trouble; my boy, 14 years old, attends to it.

The change from the Regan to the Pacific is a decided improvement. I can also get a third more power since the change, and I cheerfully recommend your engine as being simple, effective, and cheap. Respectfully yours,
B. S. HILL, S. W. Cor. Encinal Ave. and Morton St.

MAYFIELD, March 26, 1890.

PACIFIC GAS ENGINE CO.—We have given your little 1-H. P. engine a splendid advertisement. A fire broke out at 2:30 o'clock this morning, in a tenement house on my premises. I started the engine, connected the hose, and by its use saved at least $3000 worth of my property. I saved my blacksmith shop lying 12 feet from the burning building, my barn and my dwelling. Three times the fire started in these buildings, and I extinguished it every time. The engine never faltered, and threw water between 50 and 60 feet high. The whole town was astonished, and they acknowledged that I saved at least $20,000 worth of property.

A fire department is being organized here, and I think they will have one of the engines on a truck for fire purposes *They cannot be beaten.*

Hoping that all of your customers will be as well pleased with the engine as I am, I remain, Yours truly,
JOS. P. PONCE.

S. F. Market Report

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Nov. 5, 1890.

Election the past week demoralized the market for all kinds of farm products, making it very difficult to get a correct idea of the general situation of each leading product. It will take two or three days yet before business resumes its normal condition. Wheat at the East and abroad has fluctuated slightly. The following is to-day's cablegram:

LIVERPOOL, Nov. 5.—Wheat—Quiet but steady. California spot lots, 7s 4½d to 7s 7½d; cargoes off coast, 38s; just shipped, 37s 9d; nearly due, 37s 9d; cargoes off coast, steady; on passage, not much demand; Mark Lane wheat, firm; English country markets, generally dearer; wheat in Paris, slow; flour, quiet.

Foreign Grain Review.

LONDON, Nov. 3.—The *Mark Lane Express*, in its review of the British grain trade for the past week, says: There are good samples of English wheat and prices are 6d dearer. Foreign wheats are slightly stronger under lessening shipments. At to-day's market there was a fair demand for English and foreign wheats at an average rise of 6d. Barley was firm. Oats and corn advanced 6d. Flour was well held at a rise of 3s.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per ctl. for the past week:

	Nov.	Dec.	Jan.	Feb.	Mar.	April.
Thursday	7s7½d	7s7½d	7s7½d	7s7½d	7s7½d	7s7½d
Friday	7s7½	7s8d	7s7½d	7s7½d	7s7½d	7s7½d
Saturday	7s7½d	7s8d	7s8d	7s8½d	7s8d	7s7½d
Monday	7s7½d	7s8d	7s8d	7s8d	7s7½d	7s7½d
Tuesday	....	....	....	....	....	....

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday	38s0d	37s9d	37s9d	Firm.
Friday	38s0d	37s9d	37s6d	Firm.
Saturday	38s0d	37s9d	37s9d	Firm.
Monday	38s0d	37s9d	37s9d	Firm.
Tuesday	38s0d	37s9d	37s9d	Quiet.

Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

Day.	Nov.	Dec.	Jan.	May.	June.	July.
Thursday	108½	109	....	112⅝	....	...
Friday	107⅝	109	110	112⅝	....	...
Saturday	107⅞	109½	....	112⅛	....	...
Monday	....	108	109½	111⅝	....	...
Tuesday	....	...	....	....	....	...

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

Day.	Dec.	May.	June.	July.
Thursday	103	108½	....	....
Friday	103½	108⅝	....	....
Saturday	103½	108⅝	....	....
Monday	103⅛	107⅞	....	....
Tuesday	....	....	....	....

NEW YORK, Nov. 5.—Wheat—$1.08 for cash, $1.07 for December, $1.08¾ for January, and $1.10⅝ for May.

CHICAGO, Nov. 5.—Wheat—$1.00¾ for December and $1.06⅞ for May.

Hops.

NEW YORK, Nov. 3.—Tight money still has a restraining effect on the market here and in London, but prices are not strongly affected. Fancy prices seem out of the question for the time being. Liverpool buyers were a short time ago picking up Columbia river salmon in this market. Saturday a local jobbing firm sold 500 cases of Alaska to go to the city named.

Visible Supply of Grain.

NEW YORK, Nov. 3.—The visible supply of wheat is 21,235,381 bushels, an increase of 1,520,356; corn, 7,017,335, a decrease of 189,108; barley, 4,846,679, an increase of 37,397; oats, 4,161,657, an increase of 38,368.

California Dried Fruits.

NEW YORK, Oct. 31.—California loose Muscatel raisins have been rather more freely offered in this market the past few days, and prices averaged somewhat lower in a number of instances. Brands that enjoy particular favor appear very little affected, if at all, as the arrivals of that class of fruit are nearly all absorbed through deliveries now making on back orders, but the average quality can undoubtedly be secured at a concession on prices generally asked one week ago. The quantity of fruit offering is not very large, nor are there any indications of a general pressure to sell. London layers of really attractive quality are in moderate supply as yet, and bring relatively better prices than loose Muscatels.

NEW YORK, Nov. 3.—California packed goods had a quiet week. Raisins indifferently regarded; three-crown, loose, $2@2.15; layers, $2.50; fancy, $2.75. Pitted plums, steady, 16c. Apricots, unchanged; boxes strongest. No new figures in prunes; some rain-damaged samples have appeared. Buyers make careful inspection, with cheap French competing with ordinary grocery grades. Evaporated-apples, quoted 10c. State superior in quality quoted 15½c; some Western surplus canned fruits moderately held show our poverty in these goods.

Eastern Wool Markets.

BOSTON, Oct. 31.—Further large sales of over 1,100,000 lbs. in all of Territory wools have been made on a scoured basis at 62@65c ₩ lb. for fine; fine medium, 58@60c; medium, 56@58c; fancy Easter Oregon wool sold at 25c, and other sales were made at 17@21c. California wool is firm; choice spring selling at 25@26c, and average at 18 @22c.

NEW YORK, Oct. 31.—*Bradstreet's* weekly summary will say: There is still a good demand for all kinds of wool and prices are unchanged, though it is to be said that sellers in the principal markets predict higher values before January 1st. Manufacturers, as a rule, are understood to be well supplied and dealers generally report lower stocks than usual at this season of the year. There has been so little wool offered at Melbourne that higher prices have not been established, and consequently the American market is not being affected by any outside influence. The demand for Texas and Oregon wools has improved, as they will in part take the place of wools which are excluded by tariff. Ohio and Michigan supplies are being taken as fast as they are offered. There is a fair trade in Territories of which worsted mills are good buyers. The supply of Australian wools is not large, and there is little difficulty of disposing of them at current quotations. It is hard for dealers to fill orders in some grades.

NEW YORK, Nov. 3.—The buoyancy in wool is unabated. If the stocks at the seaboard were equal to it, the buying would continue. Manufacturers who stocked up largely of late are again in the market with an eye to purchase, if not speculation. Prices not higher, but full. The decline abroad causes some comment, but is not really regarded as an early disturbing element upon home quotations.

BAGS—The market is reported dull with standard size obtainable at 6⅜c to 6⅝c for May-June delivery.

BARLEY—The sample market has ruled strong at a slight advance. In futures, trading continues light but at better prices. The following are to-day's Call Board sales:

Morning Session: Buyer 1890—400 tons, $1.50; 100, $1.50¾. Buyer season—100 tons, $1.56; 100, $1.56¼; 400, $1.55¾; 100, $1.56⅜; 100, $1.56½ ₩ ctl. Afternoon Session: Buyer season—200 tons, $1.56 ₩ ctl.

BUTTER—The market is fairly steady. The weather is an important factor in the market. Pickled is in good demand. Eastern creamery is in light receipt—prices too high in the supply markets in the Central States.

CHEESE—The market is strong at full figures, with still higher prices for choice mild expected to obtain.

EGGS—Heavy receipts of Eastern are against Californian. The larger proportion coming to hand from the East are good to choice.

FLOUR—The market is quiet but firm.

WHEAT—In the sample market there has not been any material change. On Call, futures have held barely steady under light trading. The impression prevails that the election just past insures a majority in Congress favorable to free coinage of silver, which, if proven true by after-legislation, will greatly benefit wheat-growers in this country. With this the case, short sellers on Call are timid. The following are to-day's Call Board sales:

Morning Session: Buyer season—200 tons, $1.43¾; 200, $1.43⅞ ₩ ctl. Afternoon Session: Buyer 1890—100 tons, $1.35⅜. Buyer season—400 tons, $1.43¾ ₩ ctl.

Market Information.

Cereals.

Election has demoralized trade, and consequently both remarks and quotations are out of sorts. After this week business will probably resume its natural course, when we can be in position to furnish our usual quota of news.

In wheat, trading has been of an offish character. The offerings have been light, while buyers appeared disposed not to anticipate their wants. In this they have been largely influenced by a prevailing opinion that the price of silver will go down still more, which will be in the interest of Indian and Russian wheat buyers, and against American buyers or exporters. The tonnage situation is still against wheat. The limited supply on spot keeps charters well up. The European and Eastern markets have held fairly strong, with trading, reported by telegraph, light. The close money market at the East, combined with stagnant markets in all speculative securities at the East and abroad, has considerable to do in making English operators afraid of buying heavily of wheat.

In this State, our advices are confirmatory of a large increase of summer-fallowed land. The fall seeding is on a larger scale than for some years past.

Barley has held firm at steady prices. Although receipts continue large, yet stocks do not accumulate. The supply in the State to draw from is light, which causes many well-informed dealers to look for still higher prices. There are some who are confident that buyer season will go over $1.75 before next harvest. Several thousand tons of barley have been bought in Washington for this market, but its purchase has, as yet, no visible effect on our market, so large is the feeding.

Corn has ruled barely steady. The demand is fair, but the knowledge that the supply in the State is large causes many to bear the market. Holders are slow to make concessions; in this they are largely influenced by the high prices ruling for other feedstuffs.

Oats are firm, notwithstanding receipts have been free. It is claimed by many that the supply on this coast is not equal to that at this time in 1889.

Rye and buckwheat are fairly steady.

Feedstuff.

Ground feed has a strong tone although cloudy weather toward the close caused some dealers to be offish. Receipts are only fair, while the demand is good.

Hay continues to rule at full figures. The demand is largely for the better grades. The feeding requirements are reported to be on the increase, while the supply is decreasing. If the weather should set in rainy soon, the feeling may be easier under dealers and feeders holding off, but while this may be the case, yet natural pasturage is not obtained in a week's time, and until length and strength are secured by grass, hay will be in good demand.

Fruits.

The election is still the chief topic, and consequently to-day (Wednesday) it is very difficult to get correct information regarding the market or quotations. It will probably be two or three days before the normal condition of affairs is resumed.

The grapes coming in are generally in excellent condition, and being good keepers are not forced on the market. Buyers in search of choice good keepers have to pay top prices. If rains should set in soon, then the market will again be glutted, but while they hold off dealers clean up fairly well.

Pears show slightly more strength. Apples are in free supply, but then the demand is larger. Choice good-keeping apples are wanted. Some extra choice might command even higher prices than we quote. While defective apples are still on the market, the receipts appear to be lessening, which naturally helps the better selected stock. Peaches come in sparingly.

In dried fruits the market shows continued strength, although the election temporarily restricts trading. After this week a better inquiry is expected to obtain. We have made a very general canvass of the market and find dealers slow to express themselves on the market, preferring to wait until trade resumes its normal state.

Raisins are being shipped quite freely to the East. The second crop is turning out excellent. It now looks as if the pack of first-class raisins will be fully up to early estimates. A large quantity of poorer raisins are being marketed in sacks. They go largely into consumption at the East.

Dried grapes are strong at full figures.

Vegetables.

Garden truck is in fair supply, with the demand still of an offish character.

Cabbages move off free under a good demand.

Onions are in light supply, and as the demand is good, prices rule higher. It now looks as if still better prices will obtain, unless Oregon sends us heavy supplies.

Potatoes are in freer receipt, yet the market does not shade off much, so large is the overland and shipping demand. The more choice kinds are chiefly inquired for. Absence of rains admits of free shipments to this city. Last year large quantities were not dug, owing to rains, but this year no such unfavorable result is expected.

Marrowfat squash, Hubbard squash and pumpkins have a good tone.

Live-stock.

The market is steady for bullocks and mutton sheep. Good roads and absence of rains favor buyers. With the rainy season, it is claimed that better prices will set in. Hogs appear to have a firmer tone. Receipts are free, but all coming to hand have either been bought before shipping or else they have ready sale on receipts. It is much better to sell before sending to this market, and also that there shall not be any reclamation on receipt here. Horses and milch cows are unchanged.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4½@4½c ₩ lb. dressed, 7@8c ₩ lb.; heavy, 4@4¾c ₩ lb.; dressed, 6½@7½c ₩ lb. Stock hogs, 3¾@3½c ₩ lb.

BEEF—Stall fed, 6½@—c ₩ lb.; grass fed, extra, 6@—c ₩ lb.; first quality, 5¾@5¾c ₩ lb.; second quality 4¾@5c ₩ lb.; third quality, 4c@— ₩ lb.; bulls and thin cows, 2@3c ₩ lb.

VEAL—Small, 6@8c ₩ lb.; large, 4@6c.

MUTTON—Wethers, 7c ₩ lb.; ewes, 6½c ₩ lb.; lamb, spring, 8@9c.

Miscellaneous.

Poultry is slow and heavy for poor stock, but choice, well-conditioned stock find a ready market.

Honey shows a slightly firmer tone. The uncertainty of the winter weather and next season's flower crop is in favor of holders.

Beans are in heavy receipt, yet the market holds firm at full prices under a good shipping demand.

Hops are essentially unchanged. The supply in first hands on this coast is light. That changing hands is generally from second and third hands.

Wool has a strong, firm tone under a good demand. The grade given preference is for the manufacture of luster goods.

The demand for grass seeds is light, owing to the absence of rain.

Exports by sea the past week aggregate as follows: Flour, bbls, Panama, 325; Central America, 7895; Liverpool, 8600; Japan, 2461; Honolulu, 320; Tahiti, 703; Londonderry, 20,000. Wheat, ctls, Liverpool, 123,654; Cork, 58,335. Barley, ctls, Tahiti, 452; Honolulu, 747. Brandy, gals, New York, 3927. Wine, gals, New York, 141,182; Philadelphia, 334; Baltimore, 1015; Central America, 3603; Liverpool, 1100; Santa Rosalia, 1970. Cotton, bales, Liverpool, 181. Mustard, lbs, 44,982. Canned fruits, cs, Central America, 66; Liverpool, 5988; Glasgow, 583; Dublin, 220; Belfast, 260; Japan, 788; Bristol, 80; Honolulu, 232. Wool, lbs, New York, 123,648. Raisins, bxs, Central America, 175. Honey, cs, Liverpool, 700. Beans, lbs, Central America, 57,758; Victoria, 4656; China, 11,141; Honolulu, 8828; Tahiti, 4760. Dried fruits, lbs, Liverpool, 2551; Victoria, 4750.

From the *Commercial News* of Nov. 4th the following summary of tonnage movement is compiled:

	1890.	1889.
On the way to this port	271,758	212,157
On the way to neighboring ports	20,318	11,913
In port, disengaged	6,449	37,832
In port, engaged for wheat	62,975	72,101
Totals	361,500	333,983

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to Oct. 29, 1890, the following are the exports from this port:

	1890.	1889.
Wheat, ctls	3,469,981	3,834,818
Flour, bbls	381,632	395,054
Barley	151,391	655,318

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

HOG CHOLERA IN PENNSYLVANIA. — Word comes from Brownville, Pa., that 400 hogs, which were being fattened at a distillery, had died and had been buried in a trench. The State Veterinary Surgeon, after a careful investigation, pronounced the disease hog cholera of the worst kind. Meanwhile the rest of the drove, some 700, had been driven through the streets of Brownville and shipped East, mainly to Philadelphia. Many of the hogs dropped dead on the streets, but were picked up and shipped with the living. Many animals owned by farmers in that vicinity have since died.

BERKSHIRE SALES.—Phil M. Springer, Secretary American Berkshire Association, Springfield, Ill., sends us information of transfers of recorded Berkshires as follows: Model Prince 24431, Beauty 24881, and Belle 24882, by Andrew Smith, Redwood City, Cal., to Sessions & Bigelow, Los Angeles, Cal.; Alexander 24837, by R. W. Carey, Macleay, Oregon, to C. M. Stiles, Williams, Oregon; Jennie 24838, by R. W. Carey to J. W. McKinney, Turner, Oregon; Oregon Standard 24839, by R. W. Carey to C. J. Strange, McCoy, Oregon.

The combination of ingredients found in Ayer's Pills renders them tonic and curative as well as cathartic. For this reason they are the best medicine for people of costive habit, as they restore the natural action of the bowels, without debilitating.

Eugen D'Albert to William Knabe & Co.
(Translation from the German.)

During my sojourn here I had frequent opportunities to make myself acquainted with the Knabe pianos, and from fullest conviction I declare them to be the *best instruments of America*. Should I return here for artistic purposes—which may be the case very soon—I shall most certainly use the pianos of this celebrated make. I give this testimonial with pleasure, voluntarily, and entirely *unsolicited* for by the house of Knabe.

EUGEN D'ALBERT.

SAVE WOOD AND AVOID FIRE.

FARNHAM'S
PATENT
Stovepipe Drums.

It is a perfect SPARK ARRESTER as well as a FUEL-SAVER. Not a spark can escape through the pipe when the damper is properly turned, and for this reason alone, should be on every stove.

It is especially adapted to cooking stoves. If the oven is slow to heat, the drum will correct this fault, throwing more heat around the oven. It will last from 10 to 15 years. Parties desiring can give it a fair trial on their stoves before purchasing.

This drum is sold at the modest sum of $5 and is warranted to give ENTIRE SATISFACTION. For further particulars apply to

NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & Co., Publishers,
No. 220 Market St., S. F.

TRAIN-ROBBING IN RUSSIA is a new enterprise in that country, and the robbers seem to have copied closely the methods of their American brethren, according to accounts in the London *Railway News*. About two months ago the express train between Vladikavkas and Rostof was boarded by four men at night and the passengers in a first-class carriage were plundered. And, later still, an express train near Moscow was robbed by five armed men in broad daylight, the railway employes and passengers being overawed by revolvers in the good old style. Russia is progressing, and a much-needed zest is being given to travel through that flat and uninteresting country.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos, $1; 10 mos., $2; 15 mos., $3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

Arizona Everbearing Strawberry.

BY PLANTING QUITE A NUMBER OF THE LEADing varieties of Strawberry together for five years, I have produced a variety unlike any of the former. I have picked the fruit daily since April 20th to the present time, October 18th, and the vines are still full of bloom and berries. Roots are long and stand the drouth well. The berries are large, fine flavor and high color, and resemble the Jessie in shape somewhat. I am prepared to furnish them in small lots at $1.50 per doz., post paid. R. E. FARRINGTON, General Nurseryman, Phœnix, Arizona.

The Whole Country Needs Fertilization

ADMONITION TO FARMERS!

GUAYMAS, MEXICO, September 9, 1890.

R. B. CUNNINGHAM, ESQ., Agent Mexican Phosphate and Sulphur Company—DEAR SIR: In answer to your inquiries as to the value of phosphates for worn-out lands, I will state that it is my opinion the lands of the older settled portions of California afford a good field for the use of phosphates These lands have been cropped for years without any restoration of the chemical constituents necessary for an abundant crop. They therefore show plainly that they need assistance artificially to produce crops good in quantity and quality, let the crop be whatever it may.

Take, for instance, San Joaquin and Santa Clara valleys, and what do you see? Many crops that are so imperfect in quantity and quality that the eye at once detects the defect. The only relief that can be resorted to must be infused into the soil to replace the chemical properties that have been extracted by previous crops, and the writer is of the opinion that a liberal supply of phosphates will accomplish this.

The attention of the cultivators of the soil is sharply turned to rotation of crops, hoping thereby to get wealth out of their lands without fertilization. Some have turned their attention to beet cultivation in soil worn out by other crops. Beet or other seeds will not grow successfully unless the soil will nourish them.

This summer I saw several crops of beets on excessively cropped lands, the majority of which showed that there was something wanting to complete the plants to ample size and in quantity that should be expected of sugar beets under favorable circumstances. If a good crop is not obtained, there is deficiency in profit. It costs as much to cultivate soil deficient in chemical properties as it does if ample nutrition was in the soil. Under the former condition a deficient crop is certain, while under the latter condition he may reasonably expect an ample crop with profit.

Fields often are allowed to go to weeds, supposing thereby to enrich the soil. This is an uncertain method and not profitable. Your weeds have grown up and seeded: the dead stems can only add a limited addition to fertilize the soil, while the seeds of the same will cause much expense to exterminate them from the future crops. Besides, while thus only weeds as a crop, no profit was realized, while if a supply of phosphates had been applied to the soil, a profitable crop of beets or corn would be had. Besides, the weeds would have been exterminated during the cultivation of the said crop. I am, Sir, your obedient servant, EDWARD PALMER, M. D.

The Fig.

[By B. M. LELONG, Secretary of the State Board of Horticulture.]

The fig (*Ficus carica*) is one of the oldest of cultivated fruits on record. It is probably a native of the Eastern Mediterranean regions, but is now so widely spread throughout the warm temperate, sub-tropical and northern tropical zones that it is a difficult matter to hazard any conjectures as to its original source. It grows in the plains of Northwest India, on the Himalayas, to an elevation of 5000 feet, Afghanistan, North Persia, Asia Minor, Palestine, North Africa, and the warmer parts of Europe, ripening its fruit in sheltered situations in the south of England. It is naturalized in Australia, the north island of New Zealand, Chili, California and other parts of the United States.

The fig is a deciduous tree; it requires about the same degree of temperature as the olive to ripen to perfection, but will ripen its fruit where the olive could not. The edible part of the tree is not really a fruit, but is the hollow receptacle containing the flowers, in the pulp of which the seeds are buried.*

The flowers are very small and unisexual, the male flowers occupying the upper and the female flowers the lower part of the cavity.

[*A*. One of the fruits of the fig; *B*. One of the pistillate flowers; *C*. One of the staminate flowers; *D*. Seed with embryo; all enlarged.]

The fructification and vegetation of the fig is uninterrupted where the mean temperature does not sink below 53 degrees F.; but where the temperature descends below this mean, the leaves fall and the fruit presents a curious phenomenon. A branch only develops and ripens part of the figs borne upon it—those on the lower end, nearest the stem. The immature figs at the farther end of the branch have their growth arrested by the first cold weather and remain dormant during the winter, resuming their growth the following spring and ripening in the summer. These are known as "first figs" or "summer figs." Those which commence their formation in spring on the lower part of the branches are called "second figs" or "autumn figs." In our warm climate there are thus two crops from the same tree every year. In colder climates the "first" or "summer figs" form the whole crop, as autumn figs can only be produced in unusually warm seasons. In a warm climate the autumn crop will yield most figs, which are sweeter, less watery, and better suited for drying than summer fruit.

As to when the fig was subjected to culture by man is difficult to say, and one can only recall that mention is made of the fruit in the most ancient book of the world, that is to say, Genesis; that the Greeks cultivated it, as is evidenced by the writers of the country; and that Pliny relates how in his time there could be seen in Rome, precisely on the piazza where the people used to meet, a fig, grown there naturally, which was the object of the greatest respect, from the fact that Romulus and Remus had been suckled by a she wolf under it. Another fig, in the time of this same author, was religiously preserved in the forum of Rome, at the place where existed the abyss into which Curtius precipitated himself.

The fig is the faithful companion of the olive and the vine, and where these two plants thrive it also grows and fructifies. It is necessary, though, that the plants be never subjected to a cold more intense than 10 degrees (14 degrees Fahrenheit). If the temperature exceeds this limit it is necessary to head the fig very low, as is practiced at Argenteuil, in France.

The long cultivation to which this plant has been subjected, in greatly different countries, has given rise to a very large number of varieties, a few of which only were known to the ancients. In fact, Cato mentions but six, and Pliny, two centuries later, carried the number to about thirty. Thus, by the side of the figs of Tivoli and Herculaneum, mentioned by this writer, are indicated those from Rhodes, Lydia, Hyrcania, and others, which, like the *Liviani*, the *Pompeiiani*, got their names from their introducers and propagators.

To-day the number of fig varieties is so great that it would require a long study to be able to describe them all, and such a task would not be one of the easiest, inasmuch as a great many of these varieties possess some peculiar characters and habits, which might be observed and recognized through experience, but could not be described exactly without much difficulty. Suffren, who lovingly devoted himself to the study of the varieties of figs which were cultivated in Provence in his time, found that their number exceeded several hundreds. The figs may be classed into two large groups, the first of which comprises the varieties that yield only one crop of fruits a year, be they early or late, and the second, the other varieties which to a first yield add another, called September fruits, to distinguish them from the first, which are called flower or first figs.

BLOOM, FRUIT-BEARING AND PROPAGATION OF THE FIG ILLUSTRATED.

The propagation of the fig is very simple and can be multiplied in various ways, viz.: By suckers (shoots that spring from the roots), by layers and by cuttings.

Suckers.—The young shoots that spring up from near the base or crown of the tree are called suckers. They generally contain a small portion of roots, which upon being transplanted soon form trees. The wound made on them by removing from the parent tree soon heals over. There are, however, great objections to trees produced from suckers. First among all is, perhaps, the fact that as the sucker generally contains a portion of bark from the parent tree from which many shoots or suckers put forth; also, the growth is not well formed, resembling water sprouts, having but a feeble body, and as they are required to be topped in order to branch out, put forth feeble shoots which the body of the tree cannot support. In such cases it is best to allow such trees to grow the first year without trimming to form their body, and the second year the trees can be pruned as desired; in this way they become more healthful.

Cuttings.—There is no better way to propagate the fig than by the simple method of *cuttings*, which is the most practical, and above all the best. By this method nearly every part of a tree can be utilized. The best months for the propagation of the fig by cuttings is through the months of February and March, the cuttings at this time being taken off while the trees are quite dormant. Great care must be taken that no cuttings be cut after the sap is in motion, because the milky juice which is produced so abundantly prevents the rooting of the cuttings. This, however, has no reference to young shoots in summer, which toward autumn, when the wood is ripening, root very rapidly.

The illustrations (Figs. 1, 2, 3 and 4) show the selection and preparation of cuttings. Fig. 3 represents a cutting made from the end of a shoot, showing the formation of roots. Fig. 4 represents a single eye cutting. Fig. 2 represents a large cutting, six to eight inches long. Fig. 1 represents a large cutting as it should be prepared, six to eight inches long, containing four eyes. The upper cut is made at least a half-inch above the eye, which is a protection to it, as the ends generally die back. All reduced in size for illustrating. The best cuttings are from stubby, short-jointed, well-ripened wood; they grow the most readily. One-year-old wood is generally the best age for cuttings, although two and three-year-old wood also does remarkably well, though no eyes may be visible. The long, spindling, badly ripened shoots, like water sprouts, suckers, and such as are produced where the wood is crowded, are very difficult to make grow, and those that do grow require age to become thrifty trees.

Pruning.—Pruning should be performed as soon after the fall of the leaves as possible, in whatever situations the trees may be. When trees are pruned at that season, they being then dormant, no injury is sustained; while, if the operation is delayed until late in the spring, when the sap is again in motion, there being such a volume flowing, in that event the shoots are apt to die after being cut. The

The Field.

The Beet-Sugar Industry.

FIFTH PAPER.

Concentration of the Juice.

EDITORS PRESS:—The next operation is the concentration of the "thin" juice, by the removal of sufficient water to allow the sugar to crystallize.

At the beginning of this operation the juice should show not less than 5°.56 B. by the saccharometer and the concentration should continue until the syrup will show not less than 30° B. This operation is carried on in quadruple effects *in vacuo* by means of which rapid evaporation is effected and that with a temperature that does not exceed 200° F.

The now "thick" juice is next pumped into the syrup-tanks located in the fifth story of building. These tanks are provided with copper steam coils and supplied with carbonic acid gas and sulphuric acid gas. By means of the proper tests it can be determined whether there now remains any lime in the concentrated syrup, and if there should be, carbonic or sulphuric acid gas is used. At this point the "thick juice" may be further purified by the use of hyposulphite of lime in conjunction with acid sulphate of alumina, acetate of alumina, or similar substances; also the use of the combination of sugar and lime known as saccharate of lime, to produce a *magna* of carbonate of lime of sugar for the purpose of neutralizing the excess of acid which may have been used in any process.

The "thick juice" is now further boiled for the purpose of aiding filtration and is now turned into the final filter press situated just below on the fourth floor; from thence to the storing-tanks on the pan floor, third story; the liquor is now ready for crystallizing.

Vacuum Pans.

The difficulty of evaporating dense liquors without burning the sugar makes it necessary to boil the liquor *in vacuo*. This is accomplished by providing the vacuum pan. The principle on which this works is precisely the same as the quadruple effect; its results, however, are different. There must of necessity be different arrangements. In this case the object is to crystallize out the sugar, and for this purpose a cast-iron pan circular in shape, about 10 feet in diameter and 9 feet high, must be provided, and will contain about 16 tons of liquor. The pan is provided with copper coils for heating the liquor. At the top a pipe leads up and connects with a condenser, by means of which a constant vacuum is maintained in the pan. At the bottom a discharge is provided. The pan is further provided with thermometer, vacuum gauge, proof-stick, sight-glasses and test-pot. The condenser must be connected with an air-pump to maintain a good vacuum. The coils are supplied with steam from the exhaust of the various engines and tanks used throughout the mill. The condensed water is conducted from the pans into the receiver, from which it is pumped to the hot-water tank, located in sixth story, and is used in the diffusion battery. The proof-stick is so constructed that a sample can be withdrawn at any time from the interior part of the pan without interfering with the vacuum.

Working the Vacuum Pan.

The vacuum pan is operated by first starting the air-pump until a vacuum of 26 or 27 inches is obtained. The feed-cock connected with the tanks of concentrated liquor is opened, and a quantity of liquor is drawn in sufficiently to cover the first, second, third and fourth coils. It is then closed until the mass commences to show "grain." The grain is now carefully fed by admitting more liquor at frequent intervals—each time the quantity being increased. As the amount of sugar in the pan continues to augment, steam is turned on the coils that are covered, until at the completion of the charge the pan is full to the sight-glass. In this way the grain grows in size.

On conclusion of the "strike" the vacuum in the pan is destroyed and the charge of *masse cuite* is run off through the discharge valve, located in the bottom of the pan, into the sugar-mixer, where it is allowed to stand two or three hours, when further crystallization takes place.

Curing the Sugar.

The methods adopted from time to time for separating the crystals of sugar from the remaining syrup have been very crude and imperfect. The first consisted in putting the *masse cuite* in bags and allowing it to drain off. The first improvement on this method was introduced by the Spaniards and Portuguese in Cuba, and is based upon the fact that the impurities present in Muscovado sugar are much more soluble in water than the crystalline sugar itself, thus washing in water will effect considerable purification. The earliest manner of carrying this out was by placing the sugar in inverted cones with a minute aperture in the apex, which is stopped up during the filling and for 12 hours afterward. Upon the mass of sugar in the cone was placed a batter of clay and water (hence the term "claying"), the object being to insure a very gradual percolation of the water through the mass. This carries with it the uncrystallizable sugar and other impure matters imbedded between the crystals of the sugar. This results in purer and lighter-colored sugars, but the grain is very soft and the operation is very wasteful.

Spirit washing.—The very slight solubility of sugar in alcohol, coupled with the ready solubility in that medium of many of its impurities, suggested the practice called "spirit washing." The results are not perfect, however, and the cost soon caused its abandonment.

Centrifugals.

The preceding methods have been practically superseded by centrifugal machines or hydro-extractors, so called from their being first used for drying textile goods. There are many varieties, but all consist essentially of a cylindrical basket revolving on a vertical shaft. The basket is perforated and revolves within an outside case that remains stationary, with a space of about four inches between the two. The annular space thus left is for the reception of the molasses as it is driven by centrifugal force through the perforations in the basket into this space, thence it runs off into the receiving-tanks below. As the basket is driven at a high speed, the centrifugal force is very great, and any moisture is forced through the mass of sugar that may be in the machine at any one time until it finds an outlet through the perforations in the basket. As soon as the sugar has become dry the machine is stopped and the sugar is discharged at the bottom through gates that are provided. The first sugar that is discharged should equal "Golden C" and analyze 96 to 98 per cent.

Alameda, Cal. B. B. CHANDLER, M. E.

Hot Water Instead of Bluestone.

Those who are in the habit of bluestoning their seed wheat as a preventive of smut may be interested in trying hot water as a substitute for the bluestone solution. Eastern experiments, which we will describe below, seem to affirm the efficacy of the hot-water treatment, and if the farmer can save the cost of bluestone, it will be a good item. However, we do not advise those who have been trusting to bluestone to turn their backs wholly upon their own past experience, but rather to treat part of their seed this year with hot water, so that they can have an opportunity to compare the results by the two treatments.

Prof. C. H. Peck, State Botanist of New York, publishes in the *Country Gentleman* an article which gives a popular description of the smut disease and recites the hot-water remedy, and we quote as follows:

Three kinds of smut are parasitic upon wheat. They are known to mycologists by the names *Ustilago tritici*, *Tilletia fœtens* and *Tilletia tritici*. The first has been called "loose smut" and the others "stinking smut." The first converts the whole head of wheat into a blackish, dusty mass of smut loosely adhering to the shreddy remnants of the spike. This smut destroys both grain and chaff, and is very conspicuous among the sound heads. The stinking smuts are much less conspicuous. By these the interior of the grain or kernel is transformed into a dusty, somewhat odorous, smutty mass, but the head of wheat is only slightly changed in appearance. These two stinking smuts differ but slightly from each other, the microscope showing the globose particles of one to be smooth, of the other to be reticulated on the surface.

All these smuts are parasitic fungi, plants of a low order that live in and derive their nourishment from the tissues of the plant they attack. The dusty mass either of the heads or of the grains is composed mostly of the spores of the fungus, minute bodies which correspond to the seeds of flowering plants, and which like them are produced for the purpose of propagating the species. They are produced about the time the wheat develops its heads, and many of these spores become scattered upon and adhere to the sound grains, and if these grains are used for seed without first being disinfected they produce a new crop of smut, the smut spores germinating about the same time the wheat seed does, and the mycelium entering the young wheat plant and living in and growing through its tissues till the smut appears. The smutted grains themselves will not germinate, the whole interior being destroyed by the stinking smut, but sound grains on which smut spores have lodged will germinate, and it is chiefly in this way that the smut gets into the wheat-fields and is kept up from year to year. When wholly clean seed is used the crop will be free from smut. The object of the copper sulphate or bluestone treatment and of other treatments of the seed is to destroy any smut spores that may adhere to it and thereby make the seed clean.

A series of experiments, in which various disinfectants or fungicides were employed for the prevention of smut in wheat, has recently been tried at the Kansas Agricultural Experiment Station. The results of these experiments and the conclusions reached are published in Bulletin 12, for August, 1890. It is there decided that the Jensen hot-water treatment is, upon the whole, the best and most available for ordinary and general use. While it is nearly if not quite as efficient as any other, it has this advantage, that it does not weaken the germinating power of the seed, and thereby diminish the product, as the copper sulphate and other treatments do. It reduced the amount of smut in the experiments to less than one per cent, and it may be employed with equally good effect against either of the three smuts of wheat or the smut of oats.

The following directions for its employment are quoted from the bulletin already mentioned:

Provide two large vessels, as two kettles over a fire, or boilers on a cook-stove; the first containing warm water (say 110° to 120°) the second containing scalding water (132°).

The first is for the purpose of warming the seed preparatory to dipping it into the second. Unless this precaution is taken, it will be difficult to keep the water in the second vessel at a proper temperature. The seed to be treated must first be placed in a barrel or other large vessel filled with water and be stirred till all the grains are wetted, and the smutted and imperfect ones rise to the surface. These must be removed by skimming. The grain may remain in the water 15 minutes to half an hour. Then it must be removed and placed, a half-bushel or more at a time, in a vessel that will allow free entrance and exit of water on all sides. For this purpose a bushel basket made of heavy wire could be used, over which stretch wire netting, say 12 meshes to the inch, or an iron frame could be made at a trifling cost, over which the wire netting could be stretched. This would allow the water to pass freely, and yet prevent the passage of the seed. A sack made of loosely woven material (as gunny sack) could perhaps be used instead of the wire basket.

Now dip the basket of seed in the first vessel; after a moment lift it, and when the water has for the most part escaped, plunge it into the water again, repeating the operation several times. The object of the lifting and plunging, to which might be added also a rotary motion, is to bring every grain in contact with the hot water. Less than a minute is required for this preparatory treatment, after which plunge the basket of seed into the second vessel. If the thermometer indicates that the temperature of the water is falling, pour in hot water until it is elevated to 132°. If it should rise higher than 132°, add small quantities of cold water. This will doubtless be the most effectual method of keeping the proper temperature,* and requires only the addition of two small vessels—one for cold and the other for boiling water. The basket of seed should, very shortly after its immersion, be lifted, and then plunged and agitated in the manner described above; and the operation should be repeated eight to ten times during the immersion (which should be continued 15 minutes). In this way every portion of the seed will be subjected to the action of the scalding water. Immediately after its removal dash cold water over it, or plunge it into a vessel of cold water, and then spread out to dry. Another portion can be treated similarly, and so on till all the seed has been disinfected.

The important precautions to be taken are as follows: 1st. *Maintain the proper temperature* of the water (132° Fahr.), in no case allowing it to rise higher than 135° or to fall below 130°. This will not be difficult to do if a reliable thermometer is used and hot or cold water be dipped into the vessel as the falling or rising temperature demands. Immersion 15 minutes will not then injure the seed. 2d. See that the volume of scalding water is much greater (at least six or eight times) than that of the seed treated at any one time. 3d. Never fill the basket or sack containing the seed entirely full, but always leave room for the grain to move about freely. 4th. Leave the seed in the second vessel of water *fifteen minutes*.

*Steam, conducted into the second vessel by a pipe provided with a stop-cock, answers very well both for heating the water and elevating the temperature from time to time.

The Vineyard.

Future of the Wine Interest.

EDITORS PRESS:—In a recent number you reprint an interview with Mr. Dresel on resistant vines. In this interview, Mr. D. is made to say that he advises vineyardists who have lost their vineyards through phylloxera to replant with resistant stock, notably *riparia*, and gives as a reason that there is a great improvement in the price of grapes. There undoubtedly is, if common Zinfandel brings $15 to $17 in his market, and at this price they will pay a fair profit to the grower. Gutedel and Riesling he quotes at $16 to $20, which is certainly very cheap; and to raise Cabernet Sauvignon at $27 per ton, there is an absolute loss. Zinfandel in the Santa Clara valley sold this season at $10; white grapes and Pinots at $11 to $12. Where does the profit come in at that? People in our valley talk about pulling up their vines in spite of the apparent improvement in the market of $2 per ton over last year. Now let us see why this slight improvement.

What would growers in Sonoma have realized for their grapes if the so-called Los Angeles disease in the South and phylloxera in Napa and Sonoma had not killed out thousands of acres of vines? What if a sudden demand for dried grapes, on account of the total failure of the fruit crop in the East, had not sprung up? What if the passage of the Sweet Wine bill had not stimulated the brandy market? Hogs would have been turned into thousands of acres of Zinfandel, Gutedel and Riesling. In spite of all the above, grapes sold hardly at a living price this season.

Now let us see if we can reasonably expect an improvement hereafter. Our surplus production of wine has been about 5,000,000 gallons in 1888 and nearly the same in 1889. During the last fiscal year, the United States imported less than 2,000,000 gallons from all countries. If prices are again to come back to a paying basis, it is clear that we must find a market outside of the United States or teach our people to drink more wine. Unless either of the two or both can be done, we have made more wine this season than the United States consumes in a year. Prices have gone down because there is an overproduction, a glut in the market.

Can we hope for a great demand for dried grapes a year hence? Hardly, unless the Eastern crop is again a failure. The so-called Los Angeles disease is said to have been checked. If that is so, Southern California will in the near future make more raisins than the market will take. The first thing that will happen, then, is to cut off the dried-grape industry of the North. Raisins will go down so low that the northern dried grapes will be worth but very little. Besides this they will cut us off from making brandy and sweet wines and oblige us to throw our entire production into dry wines.

To plant a vineyard on resistant stock costs considerable. Rooted Riparias are $15 per 1000; grafting is worth $16 per 1000, not including scions. All roots don't grow, and all grafts don't take, and replanting and regrafting is troublesome and expensive.

When I set out my vineyard three years ago, the wine industry was not flourishing, but I was told that there would be a decided improvement almost immediately. The only improvement I have been able to discover is lower prices for grapes and wine. Let those who contemplate planting new vineyards first look up statistics as to our present production and consumption, and figure whether it will pay them to put a fortune in vines and wait five years or more before any returns are possible, and if they are determined to go into the business, why not buy out somebody who is unwilling or unable to stick to his vineyard? There are plenty of vineyards for sale in districts where the phylloxera has not yet appeared, and they can be bought for very much less than it will cost to set them out and care for until of age. WILLIAM WEHNER.

Evergreen, Santa Clara Co.

[These points are commended for comment by readers who see a better outlook for the wine-grape interest, and probably no one would be better pleased than Mr. Wehner to have his position successfully assailed.—EDS. PRESS.]

The Garden.

Onion Culture in Southern California.

S. J. Murdock of Westminster, Orange county, writes for the *Rural Californian* as follows: On good seed more than any one thing depends the success of the onion crop, and possibly to a greater extent than any other vegetable unless it be the cauliflower, which requires also honesty and confidence on the part of the grower.

Good and Poor Seed.

Onion seed should be of the best possible strain and strictly fresh, as it soon loses its vitality. It should be procured of a reliable grower or seedsman. Cheap or high-priced seeds or new-named novelties I generally let alone or test them before planting extensively. It has been my experience that the novelties of the catalogue are generally more for the benefit of the originator and dealer. Nevertheless once in awhile the producers do get hold of something that is a source of profit. Cheapness in seeds of any kind carries with it the stamp of inferiority. The value attached to good seed by experienced growers often is a source of wonder to the inexperienced, and is frequently overlooked by the beginner, and there is no doubt in my mind that poor seed has caused many a novice and corbstone rancher to quit the business in disgust.

I will try and explain why cheap onion seed is not cheap and how the seed is produced. The onion top grows from 15 to 24 inches high, according to the variety and the fertility of the soil. As the onion develops and the crop begins to mature, the stalk or top dries and shrivels up near the bulb and falls over; this forms a ripe onion; but a portion of them, according to the purity of the seed used, will remain large and stiff just above the bulb. This constitutes a scallion or stiff neck. The scallion, although good to eat, does not keep well. It is an inferior product. The onion, like most other vegetables, is susceptible of being bred up to a high degree of perfection. If we should select and grow seed from scallions for a few years, we would soon have a strain of seed that would grow scallions to a certainty.

On the other hand, if we select the earliest and best-shaped bulbs with small necks to propagate our seed from and continue this from year to year, we would soon have a strain of seed that would produce but few scallions, which, with proper treatment, would insure a good crop of fine quality. While the unscrupulous grower will sell all his marketable product and reset his scallions and grow a crop of worthless seed whereby the purchaser not only loses the cost of the same, but invariably his time and labor, experience with poor seed all goes to show the importance of selecting only the very best.

Another disreputable practice among the

seed-dealers is to buy up the seed still on the market at the close of the season and hold it over until the following year. This is a shrewd practice on the part of the dealers, as they buy at a low figure and sell at a profit, but it is very unsatisfactory to the producer planting it. Good, reliable seed is the key-note to success in onion culture; if we go wrong here, all is lost. Remember this, that unless your seed is fertile and in every way first class, your crop will at best be but a partial success.

Planting and Cultivation.

The preparation of the seed-bed should be thorough, but not too deep. The plat should be brought to the finest state of cultivation—as smooth and level as possible and free from all rubbish. The onion will succeed in a greater diversity of soils than is generally believed, but the more humus the better. I prefer for a large crop of solid onions a rather heavy soil well drained, yet for an extra early crop would plant on rich sandy loam. It should be protected from heavy winds, but avoid all shade, as the onion likes sunshine at all stages of its growth. Well subdued and well-drained muck land offers every condition of success.

Planting is generally done with a seed-drill, of which there are several patterns. I find the Planet Jr. a reliable tool. Care should be taken to start the first row straight, as following rows are ganged by it. Not only are regular rows the pride of the practical gardener, but a great help in after cultivation; the straighter the rows the closer can the operator work with a wheel hoe. The rows should be 12 to 16 inches apart according to the variety grown—the larger the variety the greater the distance. On moist, heavy land the seed should be drilled just deep enough to fairly cover it; the lighter and looser the soil the deeper the seed should be put to prevent it drying out before striking root.

The proper time to sow the seed varies with different varieties. To cover the entire year I have sown onion seed every month, and have been successful in maturing my crops. However, they are not harvested at regular monthly periods, as it requires warm weather to mature.

As to varieties, I shall mention only two, the White Italian and Yellow Danver. The first is the best early onion I have ever grown, and from what I can learn, it seems to do better in my locality than in other sections. So far as my observations go I am the only one growing this particular variety in Southern California and perhaps on the coast. It is a quick grower, a fair yielder and the best selling onion I ever put on the market. Three years ago, when I first offered it, I could scarcely find a buyer, but when its superior qualities became better known, the trade gave it the preference over all others. Last year and this I could not supply the demand. For a summer crop the Yellow Danver stands pre-eminent. It is a good yielder and the best keeper and shipper grown on the coast. The proper time to sow the seed is about the middle of February, or as soon after that date as the soil can be got in good condition. The seed should be drilled at the rate of four pounds to the acre. After seeding, thorough but shallow cultivation is essential. Do not wait until the plants are up before beginning; from four to eight days after sowing (when the seed shows signs of germination, which can be ascertained by carefully brushing the soil from the drill row) will be proper.

I put the curved hoes on my wheel hoe, with the straight ends of the hoes pointing inward and lapping about two inches, and hoe right over the seed rows but not deep enough to disturb the seed. I find this saves a great deal of hand-weeding by killing the weeds just starting to grow in the rows. As soon as the onions are up sufficiently to follow the rows, I reverse my hoes with the curved ends next to the rows and just far enough apart so as to hoe as close as possible without cutting the young onions by running astride the rows. This operation hoes both sides of the row at one trip of the machine. Follow this by hand-weeding on hands and knees astride the rows, and pulling every weed in sight; repeat as often as any weeds are to be found, and under no circumstances allow the weeds to grow above the onions.

Harvesting.

When the tops have turned yellow and dried up, the crop is ripe and ready to harvest. If on moist land, they should be harvested at once, for if left long in the ground the moisture from below and the heavy fogs will soon cause them to throw out new roots and start a new growth of top which would soon spoil the whole crop. On dry land, however, the summer crop can remain quite a while without injury. Harvesting a mature crop is done by pulling two or more rows, lay the onions to one side and when across the field turn round and pull a like number of rows, putting the onions with the first rows; this forms a continuous pile through the field which leaves them conveniently for topping, which is done with a knife. The crop is then thrown into heaps ready for sacking to store away or market. It is best to sack and haul from the field while the sun shines to insure the onions being perfectly dry.

The yield per acre varies with different varieties and on different soils. Two hundred centals is an ordinary yield of the small varieties, yet it is not uncommon to raise 300 and 400 centals per acre, and I know of one instance (which is certified to by witnesses) of one single acre yielding 660 centals, and that I am proud to say was done on Southern California soil. The price received is about as variable as the mercury is in the Eastern States during April. This time last year onions were a drug on the market at 30 cents per cental, while last April they sold at $10 in San Francisco. I have never seen a year in this State (and I have been a resident for 20 years) but that onions have sold for $3 or more per cental wholesale. I have found the business a profitable one, but let no one suppose that success can be attained otherwise than by steady personal application. A great mistake with many is to attempt too much at the start. Without the necessary experience and insufficient help a failure or at best but a partial success is the result.

A friend and neighbor of mine, a few years ago, conceived the idea of clearing off a mortgage on his farm by growing a crop of early onions. He put in nearly five acres on land that was well seeded with weeds, and got along very well until he got his onion seed all sown. At this stage of the game it began to rain, and his soil being rather heavy, the weeds got the start of him; he was not prepared to hire much help, and the outcome was a total failure. I believe he has not raised any onions since, nor his mortgage either.

FRUIT PRESERVATION.

Water-proofing Cloth for Fruit Protection.

EDITORS PRESS:—Yours of the 27th ult. received, in which you request me to write up fully my experience in waterproofing cloth according to a recipe furnished by Prof. Hilgard. I will do so with pleasure.

This recipe, together with others, was sent to me in September, 1886, and as you will see by the following copy of a letter which I had published at the time in our local paper, knowing that others here were interested in the subject and would probably like to experiment also.

Prof. Hilgard's Letter.

BERKELEY, Sept. 15, 1886.

J. W. Osburn, Orange—DEAR SIR: When I looked up the subject of waterproof cloth, after last writing to you, I found it more "mixed" than I had anticipated; and being called away for an absence of several days, from which I have just returned, the matter has unavoidably lain over. The difficulty arises not so much from the lack of processes, but from the difficulty of finding one that will suit your present needs, so that you can carry it out quickly. From that point of view I came back to my original idea: Dip your cloth in white paraffine, melted and kept pretty hot, until it is fully permeated, then wring it out thoroughly, so as to take all the surplus possible, which you can do more effectually afterward by ironing it after laying it over another piece of stuff to be treated.

This being well done, you have a cloth that will not allow water to pass, but is readily permeated by air and vapors, and is entirely inodorous. I use paraffine constantly for sealing wine-bottles, cask-bungs, etc.

The objection to this process is only that when creased the paraffine gradually crumbles off. But for your purpose it seems to me it would answer well enough anyway.

Hereafter it may turn out that the "maltha," of Ventura, is good enough for this use, and it would be cheaper. Still, even refined paraffine does not cost a great deal.

Now for the other sort of waterproofing of which I spoke. Here is a good example of how it is done: "Soften 4½ ozs. of glue in 8¾ pints of water, cold at first; then dissolve in, say a wash-boilerful, of warm water, with 2½ ozs. of hard soap, and boil for an hour, wring and dry; then prepare a bath of a pound of alum and a pound of salt, soak the prepared cloth in it for a couple of hours, rinse with clear water and dry." Another, and a good way, too, is to make a bath of alum and commercial acetate of lime, or acetate of soda; steep the stuff in this, warm, for several hours, then wring and dry over a warm stove, or, after drying, iron it; then rinse once more in clear water, and dry.

The principle of all these methods is to prepare a cloth imbued with alumina or one of its compounds that, like the one made with soap, sheds water. It is the same in substance as that in which sugar of lead is used, in which really the sulphate of lead cuts much less of a figure than the acetate of alumina, which is formed when the mixture is made. The lead is superfluous, and only renders the cloth heavy and otherwise objectionable.

If you have a dyer down there who understands his business, and knows how to make acetate of alumina for use as a mordant for his colors, he can make the cloth for you; for cloth so mordanted and then dried is just what is wanted.

However, for present use, I recommend to you the paraffine process, then for another season set somebody to work to make the other sort.

Very respectfully, E. W. HILGARD.

Partly because my attention was otherwise directed and partly because the raisin industry here immediately thereafter collapsed, I did not make to Prof. Hilgard the report which was undoubtedly his due. But now that serious loss has this season been sustained by raisin-producers in Fresno, El Cajon and other places, the question of a good, cheap and convenient covering for raisins again assumes importance. I contend that every raisin-producer should, no matter where located, provide himself with the best sort of covering and put it over his drying beds nightly as a preventive against the dews and occasional showers which may occur during September and October in this State.

With a covering, the beginning of picking may be delayed a week or ten days and that much additional time afforded the grapes for the accumulation of saccharine material, to the great improvement of the appearance and quality and increase in the weight of the product.

The interest on the cost of such covering as I prepared, added to the annual expense of caring for and using it, together amount to what is practically an insurance on the crop, and I found it to be about one-third of a cent per pound for each pound of raisins. This is a cheap insurance and one which the experience of the present year shows the raisin produced can ill-afford to do without.

One of the things suggested for waterproofing was paraffine, and paraffine is good if the cloth is to be stretched on frames. But paraffine stiffens and renders the cloth unmanageable unless it is on frames, and frames, or any kind of wooden or other light, inflexible covering, are blown around and battered up by winds and on that account are objectionable. Piling up trays is too slow and laborious.

Making a Cover and Supports for It.

Before we can know what kind of waterproofing is needed we must first know what arrangement for covering is best. The best and most convenient in my judgment is made as follows: Take three bolts of "Cabot A" sheeting and sew them together longitudinally; then hem the two outside edges and slip a wire into each hem. The cloth will be about 66 feet in length and the wires about four feet longer, as each wire ought to project about two feet beyond the cloth at each end. Now take 20 strips of cloth two inches wide and six inches long. Sew their edges together lengthwise, and, beginning at each corner of the large cloth, fasten these little strips along the edge, at intervals of nine feet, by sewing their ends together around and above but close to the wire so as to form a loop below and to bear on the wire above.

Sink four 2x3 posts two feet long 20 inches into the ground for the corners of the bed. They should be 8 feet apart one way and about 70 the other. Half-way between—the short way—sink at each end one 2x4 post 4 feet long two feet into the ground and stretch a wire across their tops and place under it a few props for support. This wire will serve as a ridge-pole; then between the corner posts drive at intervals of nine feet stakes to correspond with the loops before described. Into the top of each stake drive a staple such as is used for fencing and fasten under each staple one end of a piece of bailing rope about seven inches long.

The beds ought te extend east and west. The ropes on the north edge are tied to their corresponding loops and remain tied during the season, the ends of the wire on that side being stapled down to the corner posts. The two ends of the wire on the south edge are so looped that they can be conveniently held in the hand and drawn over the projecting ends of the two corner posts. Such beds can be covered and uncovered by two men almost as fast as they can walk. The wire should be kept taut between them and carried over the ridge-pole evenly. While the bed is being covered, the air fills in under the cloth, and the cloth comes over without dragging.

From the foregoing it will be seen that no preparation for waterproofing that makes the cloth less pliable will do. It will also be seen that with this or some similar arrangement of the covering the cloth when extended over the bed is shaped like a roof and has a considerable slant, and that, therefore, it does not need to be so perfectly waterproofed as it would were the cloth simply spread over the ground.

Now for the process. The recipe as given by Prof. Hilgard in his letter printed above is as follows:

Soften 4½ ounces of glue in 8¾ pints of water, cold at first; then dissolve in, say a wash-boiler full of warm water, with 2½ ounces of hard soap, and boil for an hour, wring and dry; then prepare a bath of a pound of alum and a pound of salt, soak the prepared cloth in it for a couple of hours, rinse with clear water and dry.

I tried this first on a small scale and found the cost of the materials very small—less, if I recollect, than half a cent per yard. A number of times I bagged the cloth in places and poured in half a bucket of water and found that little or none came through, while cloth not so processed allowed the water to run through in streams.

It was then inconvenient to put all of my cloth through the process, as it was in use. But at the end of the season most of my cloth had become more or less mildewed, and I decided to put all of it through the process at once, so as to kill the mildew before storing it away, and have it ready prepared for another season. The small amount which had been processed remained perfectly free from mildew, though exposed in the same manner as the other.

So I put all—1300 yards—through and in the same manner as the small pieces previously waterproofed.

The recipe says a "wash-boiler full of warm water." I took that to mean six gallons. Ten yards will soak up about one gallon. So for 650 yards—half the cloth—there would have to be 65 gallons. I put three pounds of glue into 11½ gallons of cold water and allowed it to soak for 24 hours. Then this, together with 1½ pounds of hard soap, was put into a boiler containing, if my memory serves me, 53½ gallons, making in all about 65 gallons. I found that only 325 yards would boil conveniently in about 65 gallons, so that many yards were boiled for an hour, wrung and dried, and then 325 more were put into what remained of the 65 gallons and treated in the same way. Afterward a fresh quantity of liquid was prepared, and the other half of the cloth—650 yards—was put through it in two lots in the same manner as the first half.

Next, 22 pounds of alum and 22 pounds of Liverpool salt were put into a barrel containing 60 gallons and the same filled up with water. After dissolving, 24 gallons of this mixture and 36 gallons of water were put into the boiler, warmed but not heated (this warming was not authorized by the recipe, and was perhaps a mistake, as the glue may have melted) and 325 yards placed therein and soaked for a couple of hours. Then the cloth was raised and placed upon cross-bars and permitted to drain back into the boiler. To this drainage the 12 gallons of the mixture from the barrel were added as well as 18 gallons of water and another 325 yards soaked as before, which process was repeated twice after that—12 gallons of the mixture and 18 of water being added each time and 325 yards soaked. After draining, one end of each piece of cloth was thrown into a flowing stream of rather clear water and rinsed in that manner for four or five minutes, and then hung up on wire and dried.

When the salt and alum mixture and water were put into the boiler, the contents of the boiler seemed so cold that I thought part of the chill might be taken off, but to what extent this was done I did not make a note of, and cannot now recollect.

History of the Cloth.

The following season, having no need of this cloth, I sold it to Mr. C. L. Leslie. He having some raisins badly rained upon, used it at once by simply spreading it on the ground over his beds, in which position no such cloth could be expected to afford perfect protection. As to the usage it has received since, I know very little. I asked Mr. Leslie once, who is very little about Orange himself, how the cloth had kept, and he did not seem to know. But last summer, being down at his extensive drying-grounds, near here, I noticed some of this cloth was in use for spreading over apricots. Examining it, I found that it was as strong and the same in appearance as when I sold it, which leads me to think that the salt in it has had, perhaps, a preservative effect. I noted the condition of the cloth carefully, because I once saw some cloth which had been waterproofed by a certain application of, as I remember, soap and alum, and though it had been kept under cover when not in use, had deteriorated greatly, tearing easily if stretched. The amount of soap used in preparing it was, I think, considerable, and possibly not of the best kind.

I trust the above will be of service, and I would like to hear from others what success they have had in the use of covers for drying fruit and raisins. J. W. OSBURN.

Orange, Cal.

[This communication is exceedingly interesting, and we trust that the invitation for a general discussion of the matters involved through the columns of the RURAL may be generally accepted. Growers can help each other greatly by such discussion of arrangements and contrivances.—EDS. PRESS.]

PUGET SOUND LUMBER.—A lumber-pile made of boards each 100 feet long and six feet in width would be an unprecedented sight in the East, says the Philadelphia *Press;* but a gentleman recently returned from a visit to the Northern Pacific ocean says that piles of timber such as that are common at the mills of Puget Sound. "Boards 100 feet long and six feet wide, without a knot in them," he says, "are common cuts from gigantic fir trees of the Puget Sound forests." These trees grow to the enormous hight of 250 feet, and the forests are so vast that although the sawmills have been ripping 500,000,000 feet of lumber out of them every year for ten years, the spaces made by these tremendous inroads seem no more than garden patches. Puget Sound has 1800 miles of shore line, and all along this line and extending thence on both sides miles and miles farther than the eye can see, is one vast and almost unbroken forest of these enormous trees. An official estimate places the amount of standing timber in that area at 500,000,000,000 feet, or a thousand years' supply, even at the enormous rate the timber is now being felled and sawed. The timber belt covers 30,000,000 acres of Washington, an area equal to the States of Vermont, Massachusetts, New Hampshire and Connecticut.

RAILROAD EARNINGS IN THE U. S.—The gross earnings of 151 railways for the month of September, according to statistics collected by the *Financial Chronicle*, are $43,381,520, as compared with $40,407,531 for the same month of 1889, an increase of 7.36 per cent. The increase is quite general in all parts of the country, and is especially significant of the prosperous condition of the railway transportation business, since the September earnings of 1889 showed a large increase over the same month of the previous year. One of the most noticeable things in the detailed list is the strikingly favorable results shown by Southern roads. Of 46 roads reporting from this section, only three report decreases.

PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

Past Master Hale.

We had the pleasure of another visit from Past Master Hale of Connecticut on Monday. He had a pleasant meeting with the Patrons at Lodi on Wednesday, Nov. 5th, Stockton on Thursday, and San Jose on Saturday. Monday he visited the State University, and Tuesday looked in on the Board of Directors at the Grangers' Bank while in session. Tuesday evening he started for Los Angeles, expecting to return as far as Tulare by 10 o'clock A. M. on Thursday, Nov. 20, leave at 10:10 A. M. Nov. 21st for a hasty visit to Merced, arriving at 2 P. M., and leaving on his return to the East at 10:25 P. M. We feel confident the Patrons of Tulare and Merced will give him a good reception.

We received a telegram on Tuesday from Past Master Coulter, inquiring when Bro. Hale could visit Santa Rosa. Bro. Hale was very sorry to have to decline visiting the home Grange of Worthy Master Davis, Past Master Coulter and other good Patrons.

The visitation of the wide-awake Past Master from Connecticut has afforded a real benefit to many Patrons and farmers on this coast. He leaves with much regret at not being able to remain and visit and confer with many other quarters who were too late in speaking for his services.

Bro. Hale's time is limited in this State on account of engagements to speak four days to Farmers' Institutes in Massachusetts in December and some two weeks of similar work in Pennsylvania during the month of January.

Forging Ahead.

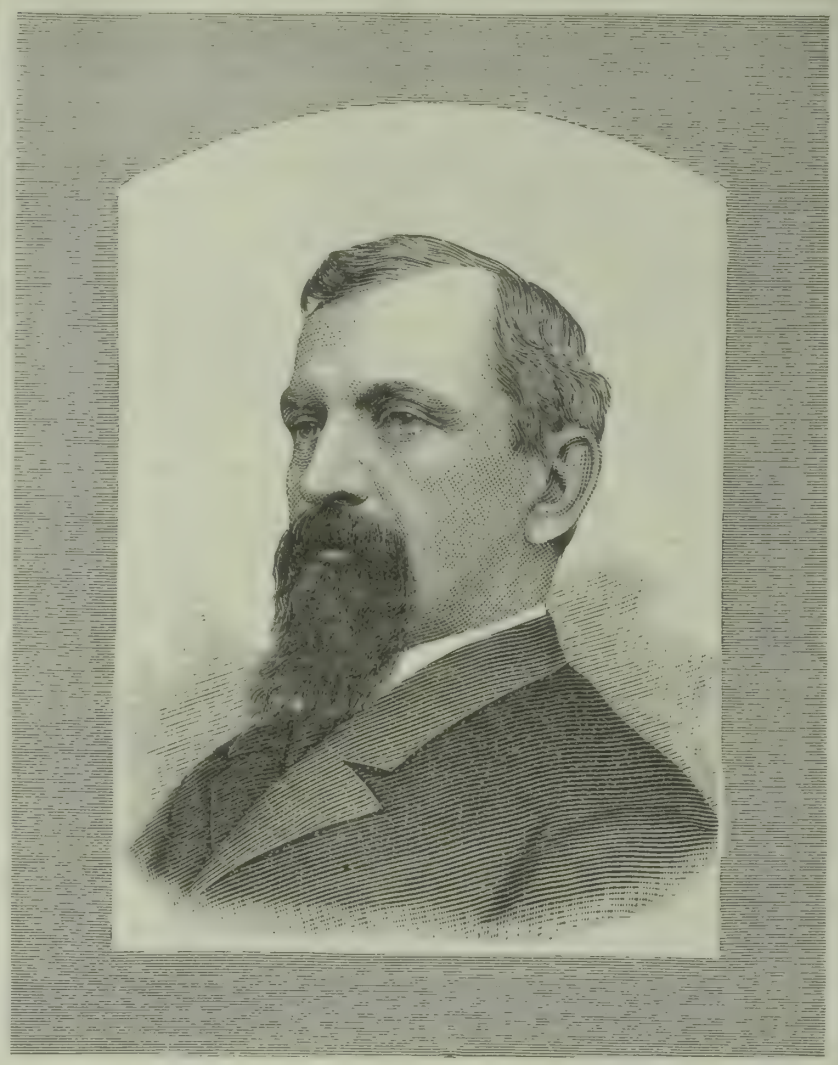
Returns from the election in the Eastern States seem to indicate that a reform in Government officials has commenced. The Farmers' Alliance, backed no doubt by many Patrons and other independent farmers, is being heard throughout the land. No doubt some of the seed planted in the early days of the Grange, when the great uprising took place from '73 to '75, nurtured by many of the true and faithful since, is now fruiting.

While the Grange holds that conservative position which has kept its organization firm, steady and thoroughly entrenched for the work, and is constantly developing, we have only to say to the Alliance: "Boys, go it cross-lots when necessary, and as opportunity may offer, and as often as you can see your way to 'get there.'" In fact it looks as if the "boys" were getting there by one route or another, and in a manner which cannot but be pleasing to observe by every agricultural and industrial producer and honest deal loving citizen.

Bro. Hale at Tulare.

Connecticut's Past Master Will Speak to the Grange and Alliance.

The Grange and Alliance at Tulare will join in receiving Past Master Hale on Thursday, November 20th. The subject of the meeting will be the organization of a Farmers' Institute and taking the preliminary steps therefor. The U. S. Experiment Station being established at Tulare, this movement is appropriate and timely. Not only every farmer in Tulare and adjoining counties, but every other industrial and business man is interested and should favor such a movement.



Few if any men in the United States could have been employed to speak upon this subject at the present time, we believe, more interestingly and effectively than Bro. Hale. We congratulate the farmers of Tulare upon their prompt moving in this matter and hope that they will have a successful meeting.

More complete mention of the meeting will doubtless be made in the Tulare county papers.

Twenty-third Birthday.

On the 4th of December the Order of Patrons of Husbandry will have reached its twenty-third birthday, and it is but proper that some recognition be made of the event. The Order has grown more during the last year than in the preceding 12 years, and we should do something to commemorate the birth of the Order, and to increase our love and appreciation of its services. Open meetings, public addresses and many other features will do much in reviving Grange spirit and in increasing our membership. We have plenty of good speakers within our ranks who are ever willing to assist their brothers and sisters in any Grange doings, so let them be invited to join in the festivities and add to the occasion by their presence and their counsel. Work is required, so do not be idle.

THE NATIONAL GRANGE commenced its sessions on Wednesday at Atlanta, Ga., and we expect to have some interesting reports soon through Worthy Master Davis and Treasurer Cressey.

LEONARD RHONE, GRAND HIGH PRIEST AND MASTER OF STATE GRANGE OF PENNSYLVANIA.

[From Our Recent National Grange Edition.]

Leonard Rhone.

The able and faithful Patron whose life-like portrait appears herewith is one of the strongest good men who attended the National Grange session last year at Sacramento, Cal.

His reputation as the head of the Pennsylvania State Grange (considered by many the best organized of any State Grange for business, if not also for social and educational advantages) preceded him, and no member was oftener called upon by Patrons of the Pacific Coast for information and advice during the sessions and excursions of the National Grange in California than our plain, candid and practical friend, Leonard Rhone.

At the same session he was popularly elected Grand High Priest, the presiding officer of the degree of Ceres (seventh).

In rank, it is the highest office in the Order of Patrons of Husbandry.

To the *Farmers' Friend*, published at Mechanicsburg, Pa., by Bro. R. H. Thomas, we are indebted for the following interesting statement of Bro. Rhone's life:

Leonard Rhone was born on the 21st of July, 1838, on the farm on which he now resides, part of the old Manor of Nottingham, once owned by the Penns. He was one of the sons of Jacob and Sarah Rhone, and during his early life worked upon his father's place during the summer and attended a public school in the winter, thus acquiring a taste for farm life, to which he is devotedly attached, and at the same time obtaining the rudiments of an education which he has not failed to vastly improve.

His father died in 1853, and Leonard remained on the farm with his mother, who, with true womanly courage, continued to carry on its operations, keeping the family together and securing for them all the educational advantages the neighborhood afforded until its members arrived at a proper age to enter upon higher courses of study at seminaries and colleges.

In 1857, Mr. Rhone served a voluntary apprenticeship of some months in a coachmaker's shop, in order to acquire a more practical knowledge of mechanic arts to aid him in farm management. But deeming a better education in the science and learning of the schools of great importance to his success, in Nov., 1857, he entered Kishacoquillas Seminary as a student. When asked by Mr. Alexander, the principal, what pursuit or profession he proposed to select for life, he promptly responded, "that of a farmer."

During the winter of 1858–59 he taught school, thus firmly grounding his knowledge in efforts to instruct others, and at the close of his school returned to his home and assisted his mother on the farm.

In 1864 Mr. Rhone was married to Miss Maggie Sankey, daughter of James Sankey of Potter's Mills, a lady of extraordinary energy of character and rare mental worth. His mother relinquishing charge of the farm, he became the lessee of the old homestead, and in May, 1865, upon a sale of the place, on mutual agreement of the family, he became sole proprietor of his father's property.

During these years of farm-life, while actively engaged in his favorite pursuit, he began to see the importance and necessity of some organization among farmers of a social and educational character, for the purpose of breaking up the monotony of rural life and cementing the tillers of the soil together in one fraternal brotherhood. This was not only a theory with him, but a real principle. He felt it, and as he pondered over the situation the idea burned itself into his very soul and he longed for the day when the isolation of the farmer and his family should be broken up and they could meet upon a fraternal platform for mutual benefit and protection. He saw other pursuits and professions banding together for like purposes, realizing the benefits of combined efforts to their respective classes, and earnestly desired to see the same principles introduced among farmers. While absorbed with the thought, the Patrons of Husbandry began to formulate their ideas in the same direction. He discerned the wisdom of the new organization and its adaptation to the wants of the agricultural people and at once entered into the work, and, in connection with a few of his neighbors, made application for a charter, and on the 3d day of February, 1874, Progress Grange, No. 96, was duly organized at Centre hall, he being a charter member of the first subordinate Grange instituted in Centre county.

Once inside the gate, he saw still more clearly the power of the organization for good. He applied himself with great zeal and energy in the new field. So faithful and earnest were his efforts that on the 9th of April following he was commissioned by D. B. Manger, the Worthy Master Pennsylvania State Grange, Deputy for Centre county, which position he continued to hold by consecutive annual appointments for seven years, during which time he displayed most untiring activity and performed an immense amount of labor in behalf of the organization; and so successful were his labors that the organization in Centre county to-day is admitted to be more complete than in any other county in the State.

At the organization of Centre County Pomona Grange, No. 13, Sept. 15, 1875, he was elected Master for one year, and re-elected five consecutive terms. In December, 1877, he was chosen Master of his own Grange, No. 96, and served his term with great acceptability.

In December, 1878, he was elected Overseer of the Pennsylvania State Grange, which position he held for two years, and at the close of his term at the session of the State Grange, held in Greensburg, in December, 1880, was unanimously chosen Master, to succeed Colonel V. E. Piollet, and is now serving as Master of the Pennsylvania State Grange, having been re-elected for five consecutive terms. In his administration of the State Grange he has displayed great skill and executive ability in the organization and management of its affairs; perhaps no organization ever had a more popular and successful leader.

In June, 1880, he was elected a trustee of the Pennsylvania State College, and re-elected in 1882.

In 1882, Governor Hoyt appointed him a delegate to the National Agricultural Convention, held in the City of New York.

In December, 1883, Governor Pattison appointed him one of the seven Building Commissioners of the Huntingdon State Industrial Reformatory, and in 1884, Governor Pattison appointed him a member of the State Board of Agriculture.

In November, 1884, the Democratic party of Centre county nominated and elected him to the State Legislature, and in 1886 he was re-elected, serving with distinction and acceptability.

In 1889 he was, by an Act of the Legislature, selected by the State Grange as one of the seven Revenue Commissioners, appointed to revise the "tax laws" of the State.

In stature Mr. Rhone is five feet eight inches high, erect, compactly built, capable of great endurance.

Intellectually Mr. Rhone is a plain, practical thinker, only arrives at conclusions after mature consideration. His enthusiasm is always tempered with good and careful judgment. He may justly be considered a safe counselor.

His administration of the State Grange and public official duties have been eminently successful. As a presiding officer he is calm, courteous and firm, and wields the gavel with grace. As a speaker he is earnest and enthusiastic, fortifying his positions with facts and figures.

Personally Leonard Rhone is a warm-hearted, generous and true man, never forgets a favor or forsakes a friend. Appeals to his generosity are never made in vain. His moral character is unsullied and his Christian conduct above reproach. In a word, he is one of "nature's noblemen."

West San Joaquin Grange.

TRACY Nov. 10, 1890.

A. T. Dewey—DEAR SIR AND BROTHER: On the first Saturday in this month I visited this place by request of the Deputy of this district, he having been invited, by the Secretary, to visit this Grange, but could not come, and requested me to fill his place. At that time I made arrangements with Bros. Stocking and Kerlinger to come again at my earliest convenience, and try to work up a class.

As the weather continued dry, I could not plow, and wrote to Bro. Stocking that I would be here on Saturday, the 8th, at 2 P. M., and requested him to meet me with a good team, and we would see what could be done in the way of canvassing from house to house.

On my arrival I met Bros. Kerlinger and Stocking, and we were soon off on our mission. By dark we had four applications. I staid with Bro. Stocking over night and afterward canvassed with good success, returned and staid last night with Bro. and Sister Stocking. This morning we started early, stopped with Bro. and Sister Kerlinger for dinner, and have been riding all the afternoon.

We can now report our success, having received 25 applications, and will initiate the class on Saturday, 22d, at 2 P. M. I have promised to be present with as many assistants as I can bring with me, and shall invite Bros. Flint, Hoffman, Norton, and some from Waterloo Grange to come.

I expect soon to be called to Bellota to canvass for a new Grange, if the weather continues fair.

The members of this Grange intend adding an ante-room, preparation-room and children's room to their hall. The bill of lumber has been made out, will be ordered at once, and the work completed before the class is initiated.

Yours fraternally, W. L. OVERHISER.

Anniversary at Sacramento.

EDITORS PRESS:—On the 4th of December Sacramento Grange will celebrate the anniversary of the Order by appropriate exercises and banquet.

We send a general invitation to all Patrons of Husbandry and hope to see a goodly number of visiting members. We hope to see all who read this and can arrange to be with us that day. Exercises commence at 11 A M Fraternally yours, ALICE L. GREENLAW, Sec'y.

Sacramento, Nov. 10th.

North Butte Grange.

Brother D. A. Hedger, Secretary, writes us from Live Oak, Sutter county, Nov. 8th, announcing that a class of 15 is expected to be ready for instruction in the fourth degree on November 29th, and that a Harvest Feast will be held on that occasion. The Grange has requested that some officer of the State Grange shall be present. We are in correspondence with several able speakers, and will, no doubt, succeed in having some one present to fill out a good time with North Butte on so encouraging an occasion.

MAP OF A PORTION OF FRANCE, SHOWING BORDEAUX AND THE PRUNE REGION OF AGEN.

The Prune Region of France.

California prune-growers will look with interest upon the map upon this page, which shows clearly the great prune district of France and its situation with reference to salt water and the great prune-shipping point Bordeaux. For this map we are indebted to the thoughtfulness and courtesy of Albert Montpellier, manager of the Grangers' Bank, who is both a careful student and a practical participant in the horticultural progress of California.

The scale of distance on the map is about 20 miles to one inch. Beginning, then, with the upper left-hand corner of the engraving, one notices, first, the Gironde, extending inland from the Bay of Biscay, which is, of course, a part of the Atlantic ocean. The Gironde is really an arm of the sea and is navigable for great ships. Bordeaux, the great shipping point, is about 60 miles as the ships go from the ocean, though but about half as far from the coast as the bird flies. The Gironde receives the waters from two great rivers which flow together below Bordeaux, much as the great Sacramento and San Joaquin rivers flow together into Suisun bay. So far, then, there is a resemblance between the meeting of fresh and salt water in the Bordeaux district and in California.

Proceeding inland along the Garonne river, one comes at length to Agen, the great prune center, whence comes the *Prune d'Agen* or the *Prune d'Ente* of Bordeaux. Clustering around Agen in the district Lot et Garonne are many villages, shown in the map, which are regular market-places where on certain days prunes are sold to the Bordeaux buyers. This district of Lot et Garonne produces about one-half of the prune crop of France. The district has an area of 1,282,560 acres and a population of 336,920. It has about one and a half times as great area and six times the population of our Santa Clara county, which produces perhaps two-thirds of the present prune crop of California.

The situation of the Agen region in distance from the seacoast may specially interest those who are developing the prune industry in our interior valleys. Distance from the coast is, of course, only a single factor in the problem, but still to that extent important.

The map of the country tributary to Bordeaux will interest our wine as well as our prune producers. It may also be suggestive to Californians who have recently visited this region and who have not yet written for our readers any account of their observations and experiences.

An Early Transaction in Cabbages.

EDITORS PRESS:—Mr. J. Hutchison having given his reminiscence of a transaction in the flower line in the issue of November 1st, I will venture one of mine of a *greener hue* that did not result quite so satisfactorily.

In the fall of 1852, vegetables were scarce and high in San Francisco, and knowing of about an acre of cabbages standing in a field at Suscol Ferry, I proceeded thither and purchased the lot for $100.

Next day (about Dec. 1st) it commenced raining and continued for a week, making teaming difficult, but I got them to the landing.

Obtaining a horse, I went to Napa and engaged the schooner Waterwitch to take them to the city at three cents per head. On arrival there, heaps of cabbages were in sight all around on the wharves and vessel decks, producing a decided glut in the market, and the best offer that I could get only paid for freight, so that I was out of pocket the investment, cost of hauling, two weeks' board at McCoy's tavern, etc. The charge for board was $14 per week, and not a very choice bill of fare.

After that experience, I let agricultural pursuits severely alone, doing all my plowing on the bay and ocean, which, being more in my line, was attended with more profitable results.

Oakland. M. S. PRIME.

ANOTHER IMPORTATION BY MR. SKILLMAN.—Many readers of the RURAL will be interested in the announcement in our advertising columns that Theodore Skillman has arrived in Petaluma with a fresh lot of carefully selected young stallions of several popular breeds. Mr. Skillman is a veteran in this business and his horses are in all parts of the coast. His latest importation should be looked after by horse-buyers.

The State Floral Show.

The fall show of the State Floral Society was held, according to announcement, in the New Academy of Sciences building on Market St., S. F., during the last three days of last week It was essentially a chrysanthemum show, and the wealth of the display and the excellence of individual specimens was a surprise to the public and a delight to the connoisseur. The collections were large and included the best named varieties and a few notable new kinds. The general arrangement of the show-room is described by a lady reporter for the *Chronicle* as follows:

The unfinished room in the Academy building was put in order and decorated under the direction of Timothy Hopkins and Miss Mary D. Bates. Along the side walls the place of a dado is supplied by the floral exhibits. Above is a regular series of immense fan palm leaves, arranged to suggest panels, separated by graceful, upright stalks of bamboo. At the far end of the room, to form an effective background, is a group of growing palms, tree ferns and potted foliage plants, Just within the entrance stands a tall, feathery palm tree, Seaforthia. A low sago palm is placed outside, and the temporary front is decorated with bamboo, to correspond with the walls within. The ceiling of the room is adorned with enormous Japanese umbrellas and festoons of a pink Oriental fabric. Along the left-hand wall is a raised framework, like an extended desk, covered with green moss and stuck full of a bewildering array of cut flowers. A similar arrangement occupies the opposite side of the room, for a short distance along the middle. At each end of this display stands a handsome tree fern. From the forward tree fern to the door is a magnificent show of the chrysanthemums in pots. From the other to the back of the room on the right is a vision of fairyland in chrysanthemums, violets and pinks, massed with lovely ferns, rough pieces of bark and the misty foliage of the dainty asparagus tennissimus. Another handsome tree fern stands out in the floor, and in front of the background of growing palms and foliage plants is a gorgeous group of growing chrysanthemums. Altogether, the whole arrangement of the room is as exquisitely beautiful as could well be imagined. The color effect is wonderful.

The ferns and foliage plants used in the decoration are the property of Timothy Hopkins. The growing palms came from Woodward's Gardens. The tree ferns were loaned by E. Relmur. The cut palm leaves and bamboo were contributed by John Rock of San Jose. The maiden-hair ferns belonging to Mr. Hopkins are particularly fine. The exhibit is in charge of J. H. Gardener of the Golden Gate Park conservatory.

The committee decided to offer a few prizes of considerable value rather than many small premiums, and they were offered as shown in our issue of October 25th, in three classes, viz.: First, for amateurs; second, for amateurs employing skilled labor; third, for professionals. Under the various heads the premiums were given as follows:

To Mrs. Copeland, amateur, for cut flowers, first prize, gold medal.

To William Babcock of San Rafael, who employs skilled labor, for cut flowers, first prize, silver medal.

To Timothy Hopkins of Menlo Park, who employs skilled labor, best general display of chrysanthemums, ferns and violets, silver medal.

To Timothy Hopkins, best collection of plants in bloom, first prize, silver medal.

To John H. Sievers, professional, largest and best collection of plants, first prize, gold medal.

To H. Yoshuke of Oakland, professional, cut flowers, first prize, silver cup.

Special mention was made of B. M., S. A. and M. B. Pratt of Fruitvale for a fine assortment of cut roses grown without irrigation.

The show was a credit to the society and was handsomely patronized. Most energetic and faithful work was done by the Committee of Arrangements, composed of Timothy Hopkins, W. B. Ewer, Mrs. E. M. Crane, Mrs. M. S. Sperry, Mrs. W. E. Loy and Mrs. T. L. Walker, and to their efforts is undoubtedly due in great measure the success of the exhibition.

A COMMITTEE of ladies recently raised $100,000 to open the Johns Hopkins Medical School to their sex.

POTATOES are now held at $1 a bushel in Massachusetts, and there is a short crop.

Innovation.

Tie my wrists with hempen strands
While brazen force around me stands—
You cannot with your fetters bind
The daring impulse of the mind,
Nor quench the lightning sparks of thought
That upward from the scaffold leap,
To live and wait through slavery's years
Till Destiny's firm web is wrought,
To bide their time while tyrants sleep
And prisoners pace their cells and weep,
Then burst with power, in bolt and flash,
And roaring flood and thunder crash
In answer to the exile's tears
To work their will, above control
Of human customs, courts and laws;
So leaped the fires of Emmet's soul,
To burn anew in Freedom's cause
Wherever blades for Freedom's rise,
Wherever Freedom's banners stream,
Wherever Freedom's thunders roll,
Wherever Freedom's lightnings gleam
And man for Freedom strikes and dies!
Still my pulse and stop my breath!
Who works with Truth may play with Death,
Hang me quick and hang me high!
So hung the form of Old John Brown,
And though they cut the body down,
The shadow broader, higher grew,
It met the seas, it reached the sky,
And darkened mountain, lake and town—
Wherever Freedom's eagle flew,
Wherever Freedom's breezes blew
From frigid North to fervid South,
From Maine to broad Columbia's mouth—
The shadow towered above the world
Where Freedom's stars in shame were furled,
It turned the stars and sun to blood,
And poured on earth a crimson flood.
The Nation quaffed the bloody rain
And all her first-born sons were slain.
Let me die! my work is done!
The dying stars proclaim the sun
That weaker eyes could not behold
And lower lights had not foretold,
Then die upon a bed of gold,
Because the grander light is born!
The highland rills that seaward glide
May vanish in the mountain-side
And, sinking through the voiceless earth,
Within the cold, dark caves abide;
But naught can stay their "second birth"
Or dim their resurrection morn;
Some time, somewhere, in stronger tide,
And warmer light and broader sweep
They rush to swell the distant deep
That turns its awful palms to heaven,
That girdles with its mighty bands
All kingdoms, empires, realms and lands—
Within whose all-embracing rim
The fleets of Nations sink or swim
Like fire-flies in the mist of even,
And on whose all-receiving breast
The Ages lay their dead to rest.
Lead me forth! I'm ready now!
Pull the black cap o'er my brow—
You cannot blind my inner sight—
I see the dawn behind the night,
Beyond the dawn I see the day,
And through the day I see the Truth
Arising in immortal youth!
The sunbeams on her forehead play,
The lilies in her tresses twine,
The Peace of God dwells in her face
And rolls the clouds of war away;
Around her feet the roses grow,
Her tender bosoms swell and flow
With healing for the stricken race
And in her eyes seraphic shine
Faith, Hope and Love and every grace—
The Old recedes, the New descends!
Earth clasps the hand that Heaven extends—
The Lion and the Lamb are friends!

—*Jas. G. Clark.*

A Protest.

[Written for the RURAL PRESS by MAUDE S. PEASLEE.]

In a recent issue of the RURAL PRESS I found an article two columns in length entitled "Cooks of the Future."

I have read this article over several times, and although at first I thought I would forget it by the next day, I find I just *can't*, and *must* relieve my feelings on the subject in some way.

I will not, as is too often the case in similar discussions, pick the argument to pieces step by step, nor in anger or contempt endeavor to refute each statement. I must, however, note the various heads in order to more effectually present my side of the question.

With the truly thoughtful author of the aforesaid article, I agree in condemning the statement in reference to cooking: "Upon a thorough knowledge of cookery depends the happiness of the home."

"Of the earth, earthy" indeed is the man who would find home happiness in the gratification of his appetite alone.

Perhaps my friend, if she will permit a fellow-worker to use the title in designating her, is right in saying that "the girls of to-day, generally speaking, are *not* proficient cooks." My experience, extending over a number of years spent in the various States between Indiana and our own sunny shores, has given me different impressions.

I have invariably found that the best bred, best educated, most advanced and highly cultured among my lady friends were also the best cooks and housekeepers. I do not assert that they spent their time over the cook-stove or wash-bench; most of them were so situated that they could and did hire needy but capable women in their kitchens.

There is so much of good, so much that I truly admire in my friend's able essay, that I could wish it were practicable to pause and shake hands with her across the columns of the RURAL PRESS in token of my hearty concurrence in some of her statements. The space in these columns is, however, too valuable to be used in the formation of mutual admiration societies, so I will refrain. I will only say that I was interested in the same train of thought soon after reading "Looking Backward." I wonder if my friend has read it.

However, it never occurred to me to assign this work to the men. Right here let me say that although I have not cooked much for a long time, I really like to cook and have been called a good housekeeper. On the other hand, the *man* side of the question, I want to say that my husband was a good cook when I married him, even to the extent of good, light bread. You see he was a cattleman and had camped on the summer range.

If Lady Mary Wortley Montague's husband would not have gladly prepared the dinner for her if circumstances demanded it, he was not worthy of her. I know one man in a much humbler position of life who would have done, nay, has done, it.

Yes, dear friend, I, too, say "let us have perfect reciprocity." If the Lady Mary or any one else would have her husband take her place in the house, she must be equally ready and efficient to take his duties in the counting-house, office, store or mine upon herself. She must be ready to assume the cares, worries and obligations of the conscientious business man who feels the responsibility of the head of the house—the provider, the father, the husband. By all means let us have reciprocity.

No work which tends to the comfort of the home is in my eyes unwomanly, neither can I call it unmanly; and there again I agree with my friend that boys should be taught domestic science quite as much as girls. It need not make "molly coddles" of them, either, but will certainly make them understand the mysteries of housekeeping so well that they will be reasonable in demands upon a wife's strength and endurance, and will expect to hire the heavy work done in cases where it is practicable, in all cases laying no unnecessary burdens on her shoulders.

At the same time, to be broad-minded and impartial, why not teach a girl the various principles of the different kinds of business life if you would have a man conversant with the duties of home life? Let us be consistent, my friend.

The Philadelphia club of gentlemen who like to cook would find much to deride in an organization of young ladies in bloomers who reveled in a game of ball. Such muscular games are growing in favor among the girls of the present generation, but if "woman's mission is intellectual and spiritual" only, she will have little or no time for physical development.

It's all very well for a man to be unwilling to have his wife to stand over the hot stove cooking hot cakes while he eats; but why should not the gentleman who "would stand by the stove, too, until there were cakes enough for both" use his strength and time on the wood-pile until his wife called him to breakfast?

While I greatly admire the spirit of progress evinced in this article on the "Cooks of the Future," it would be well to remember that in all innovations the greatest good to the greatest number should be considered. The principles of this same article would, if put into practice, ruin the homes of the middle classes.

The world is not yet ripe for Bellamy's theories, and until it is our farmers will personally do or superintend their work, and their wives will perforce do the same. It is certainly to the working classes that the RURAL PRESS is of the greatest value. Let us hope for help and instruction from its pages instead of articles that puzzle and bewilder those who know not the easy gradual way that leads to such principles. We cannot jump at a single bound to Nationalism, nor has co-operative housekeeping spread far enough to be widely known. Little by little, step by step, these advances must be made.

"But in the meantime?" asks the tired housewife, who perhaps *is* "tied down to the cook-stove."

In the meantime, take care of your health, that you may better serve those you love; let your aim be to save yourself all unnecessary steps. Do not be "tied" to any kind of work. It is only the ignorant and narrow-minded who will permit themselves to be. The best educated, either in school or at home, will be posted on all the advanced theories of the age, and will adapt these ideas to every-day life. Of what use are the excellent essays to be found in many of the papers and journals, easy of access to all our working classes, if we cannot put the theories in practice?

True *some* of them are, *as yet*, beyond our reach, but we can glean among them, and so, working surely if slowly upward, be ready for *any* great change that comes.

In the meantime, I think we who have daughters to raise need have no fear in training them to be good cooks and housekeepers. I do *not* believe in allowing them to dabble in it, to be mere "amateurs."

The knowledge of it need not cause them to practice it if, in the meantime, they show talent and liking for something else.

Up to a girl's fifteenth year she is incapable of persistent, deep study. Those years, which should in any case be spent under the careful training of a judicious mother, can easily be made to suffice for all she absolutely needs to know of housework.

Some change is necessary for her physical growth. She would fare ill if kept in a mental hotbed and made a fine scholar of at the expense of her health.

She should not find such training at all irksome; neither will her brother, if the requisite steps are taken to quiet his notions that it is unmanly. The first step would scarcely be to tell him cooking and housework in general is *unwomanly*.

Let us work together gradually, moderately, for the time when all heavy work may be done outside the house by systematized labor, and in the meantime abstain from fretting, from vainly beating our wings against the bars that have, it is true, encircled us. Be patient. "All things come to those who wait" *and work!*

In conclusion, I would add a good old motto:

"Be not the *first* by whom the new is tried,
Nor yet the *last* to lay the old aside."

A Beautiful Incident.

A short time before his death, the renowned engine-builder, Corliss, found it necessary to enlarge his great machine-shops, and set a squad of men at work to prepare the material for building.

One morning, after some progress had been made in the preparation, he visited the quarry from which the stone for the foundation was being taken. While the masons were arranging to blast a huge rock, a workman, pointing to a bird hovering over a ledge high up in the rock, said:

"That bird will have to change its nesting in short order if it wants to save its neck."

"Are there eggs in the nest?" inquired Mr. Corliss with evident interest.

"Yes, four little speckled fellows over which the mother-bird has been fussing ever since we began to work," replied the man. "The young birds will soon be peeping through the delicate shells."

"Then let the work stop until the birdlings are ready to fly," was the great-hearted man's command.

"You are surely not in earnest," exclaimed the foreman who was directing the preparation for blasting.

"I surely am," was the quick reply. "I have no right to break up the home of even the smallest of God's creatures, and those parent birds have rights that I am bound to respect."

"You are aware, sir, that the workingmen are all on hand, and that everything must stop if we carry out your orders," urged the man anxiously.

"I understand all this, my friend, yet I can not conscientiously do otherwise than adhere to my first command. What right have I to build up my fortunes upon the ruins of even a bird's home?"

"The men will be dissatisfied, sir; they feel that they have rights, too," retorted the man, a dark frown stealing over his honest face.

"I recognize their rights, also, and their pay shall go on just as usual during these waiting days. Send them to their homes and let them spend the time in improving their own homes and garden patches."

The sullen looks that had been gathering on the faces of the men vanished suddenly at his words, and instead of bitter imprecations and muttered curses, the air was filled with cheers and benedictions that almost overwhelmed the modest proprietor, who never thought of being applauded for simply obeying the dictates of his conscience.

At the close of a week four little birds were seen bobbing up and down in the nest away up in the cliff, but fully two weeks more passed before the young fledglings were able to leave their mossy homes in the crevice of the rock. Instead of becoming irritable at the long delay, the great engine-builder seemed to enjoy the days of waiting and frequently visited the spot to see how the feathered songsters were growing. His devotion to the rights of the little creatures won the admiration of the men, and when, after three weeks of rest, the gigantic business was again set in operation, they all felt constrained to do their utmost to help repair the loss that their noble-hearted employer had so willingly suffered.—*Belle V. Chisholm in Ploughman.*

A PREHISTORIC CITY.—An interesting bit of news comes from Mineral Bluffs, in the copper region of Polk county, Tennessee, announcing that laborers have unearthed a prehistoric city in that vicinity. The first discovery was that of an ancient stone wall, which the workmen traced for one mile. Remnants of dwellings and pottery were also found. An extensive mining operator, from the scene of the discovery, and who has visited the buried cities of Arizona, recognizes parallel characteristics revealed in Tennessee. The work of excavation will be continued. The improvements and industries of the age are uncovering many hidden secrets of the ancients. Even in North Chicago, last week, numerous relics of Indian manners and customs were unearthed.

Putting Trust in the Lord.

"No," said the lawyer, "I shan't press your claim against that man; you can get some one else to take the case, just as you think best."

"Think there's any money to be got out of it?"

"There would probably be some money in it, but it would come from the sale of the little house the man occupies and calls 'home,' but I don't want to meddle with the matter, anyhow."

"Got frightened out of it, eh?"

"No, I wasn't frightened out of it."

"I suppose the old fellow begged hard to be let off?"

"Yes, he did."

"And you caved?"

"No, I didn't say a word."

"Oh, he did all the talking, eh?"

"Yes."

"What did you do?"

"I believe I shed a few tears."

"The old fellow begged you hard, you say?"

"No, I didn't say so; he didn't speak to me."

"Well, may I respectfully inquire whom he did address in your hearing?"

"God Almighty."

"Ah! he took to praying, did he?"

"Not for my benefit, at least. You see I found the place easily enough and knocked at the outer door, which stood ajar, but nobody heard me; so I stepped inside and saw through the crack of the door a cozy sitting-room; and there on a bed with her head high on pillows was an old lady who looked for all the world just as my mother did the last time I saw her on earth. Well, I was on the point of knocking, when she said, 'Come, father, now begin,' and down on his knees by her side went an old, white-haired man, still older than his wife, I should judge; and I could not have knocked then for the life of me. Well, he began; first he reminded God that they were still submissive children, mother and he; no matter what He saw fit to bring upon them they shouldn't rebel at His will; of course it was going to be very hard for them to go out homeless in their old age, especially with the poor mother so sick and helpless; and oh, how different it might have been if only one of their boys had been spared to them. And then his voice kind of broke, and a thin, white hand stole from under the coverlet and moved slowly over his snowy hair; then he went on to repeat that nothing could be so sharp again as the parting with three sons—unless mother and he should be separated; but at last he comforted himself with the fact that the dear Lord knew it was through no fault of his own that mother and he were threatened with loss of their little home, which meant beggary and the almshouse, a place they prayed to be delivered from entering if it could be consistent with God's will; and then he quoted a multitude of promises concerning the safety of those who put their trust in the Lord; in fact it was the most thrilling plea to which I ever listened; and at last he prayed for God's blessing on those who were about to demand justice," the lawyer continued more slowly than ever. "And—I—believe I'd rather go to the poorhouse myself to-night than to stain my hands with the blood of a prosecution like that."

"Little afraid to defeat the old man's prayer?"

"You couldn't defeat it," said the lawyer. "I tell you he left it all subject to the will of God, but of all the pleading I ever heard, that beat all. You see I was taught that kind of thing myself in my childhood, and why I was sent to hear that prayer I'm sure I don't know, but I hand the case over just the same."

"I wish," said the client, twisting uneasily, "that you hadn't told me about the man's prayer."

"Why so?"

"Well, because I want the money the place would bring. But I was taught the Bible straight enough when I was a boy, and I'd hate to run counter to what you tell about. I wish you hadn't heard a word, and another time I wouldn't listen to petitions not intended for my ears."

The lawyer smiled. "My dear fellow, you are wrong again," he said. "It was intended for my ears and your ears too, and God Almighty intended it. My old mother used to sing of God's moving in a mysterious way, I remember."

"Well, my mother used to sing it, too," said the claimant, as he twisted the claim papers in his fingers. "You call in the morning, if you like, and tell 'mother and him' that the claim has been met."

"In a mysterious way," added the lawyer.—*Selected.*

MARVELS OF MECHANICAL SKILL.—Among the marvels of human skill and ingenuity exhibited by the London Mechanical and Scientific Society may be mentioned an instrument loaned by the great Armstrong Gun Works, which accurately measures thicknesses down to the one-thousandth of an inch; a similar instrument by a rival mechanic which grades thicknesses one-millionth parts; a scale by Oertling, the world-famous balance-maker, which turns with the one-thousandth of a grain while loaded with 3000 grains; and an engine by a Paddington watchmaker which contains 122 pieces, not including 32 bolts and screws, and can be hidden in a lady's No. 7 thimble.

A New Game with Letters.

A new game, which affords a good deal of amusement to many people, and also imparts considerable instruction to the young in the formation of words, is played in the following manner with the letters of the alphabet: Half a dozen sets of all the letters of the alphabet are provided, each letter on a small piece of pasteboard or wood. One player then gathers all the letters before him on the table, and the other players sit around the table as at cards. The player who has all the letters then turns them face downward, and proceeds to deal them out, one by one, to the others, beginning with the player sitting at his right hand, and continuing around the table in order.

As he deals a letter out he turns its face up, so that all may see that it is "n" for instance. The next player gets an "o," suppose, and he quickly sees that his letter, joined to the "n" received by the first player, will form the word "no." He announces that fact and claims the "n." This is surrendered to him and he forms the word "no" on the table in front of him, and must leave it there undisturbed until some other player gets a letter, which, added to the word "no," will form some other word.

Suppose, for instance, that the third letter dealt out is a "w." Then the owner of the "w" may claim the word "no," and adding his "w" to it make it "now." The fourth letter turned up may be a "y," and the owner of "now" breathes a sigh of relief as he thinks he will hold on to his word for a little while anyway, for the "now" and the "y" don't seem to make anything. Perhaps several letters follow out of which no combination can be made which will spell a correct word, until some one gets an "s." This letter, in connection with "now," will spell "snow," but if the lucky owner of the "s" is sharp enough, he will also claim the "y" from his other rival and spell "snowy."

The examples given here are sample words, as they show more clearly to young minds how the game may be played easily, but when a number of letters have been dealt out the most skillful spellers may find scope for their abilities, and many are the combinations which will escape the notice of all who are gathered around the table for a time, until some one discovers them, as if by accident, and then the wonder will be that they were not seen before.

One player may not claim from another any letter or letters which have been worked up into a word without taking that whole word and using it all, though its letters may be entirely transposed to make a different word. The range of words may wander over half a dozen languages if the players so agree, and then the game becomes difficult enough for a Boston blue-stocking or a college professor.

The winner of the game is the player who has the most complete words spread out on the table in front of him when the dealer has turned up the last letter he has in his pile. Long words count no more than short words, and if two players "tie," they set to work breaking up their long words into short ones, and this disposes of the tie nine times out of ten. For a large number of players a large number of letters is, of course, required, but two people will often play the game for half an hour before exhausting a half-dozen complete alphabets.—*N. Y. Tribune.*

Chaff.

"How can I get rid of superfluous hair, Mr. Druggist?" "Get married, sir."—*Boston Courier.*

WHATEVER may happen to P. T. Barnum in the next world, he can't complain that he has had no show in this.—*Washington Hatchet.*

"THERE is one thing I like about the vulture," said Cynicus to a physician who had overcharged him. "And that?" "He doesn't present his bill until the patient is dead."—*Harper's Bazar.*

MRS. WICKWIRE—If you go first, you will wait for me on the other shore, won't you, dear? Mr. Wickwire—I suppose so. I never went anywhere yet without having to wait for you at least half an hour.—*Terre Haute Express.*

A DOG was barking at the moon when a sage inquired why he did so, adding that he could not possibly affect the great luminary one way or the other, and that it seemed a useless waste of energy. "Oh, it isn't that it makes any difference with the moon," replied the canine; "but I want the other dogs in this neighborhood to know that I'm not dead." Moral—We never know that some men are buried until we miss their bluster.

BEFORE election the people think their candidate is a lion. After election, when they take the inventory of broken pledges, they know that he was a lyin'.—*Western Plowman.*

THE BOSTON FRANKLIN FUND IN DANGER.—In his will, Benjamin Franklin bequeathed $4000 to the cities of Boston and Philadelphia, to be loaned at 5 per cent to young mechanics. At the end of 100 years the cities were to divide the amount, which was figured to be $665,000 for each trust fund. The 100 years have expired, and Franklin's heirs have commenced suit to recover the money, alleging mismanagement on the part of the cities, Boston's fund having reached only $400,000 and Philadelphia's fund only $100,000.

YOUNG FOLKS' COLUMN.

Pretty Rosie.

[Written for the RURAL PRESS by ALICE KINGSBURY COOLEY.]

Pretty Rosie Waterford stood drumming on the window panes. Without, all was cheerless and desolate, the rain falling in that steady, dreary way that makes one feel it will never stop, nothing of the lightning and thunder and dashing style that is as fearfully magnificent and exciting as a human being in a grand, towering passion. Only the steady drip, drip of the rain falling off the stable and cow-house, and even the roof of the pig-pen making little furrows in the yellow earth that wandered away filling up each depression, making puddles everywhere.

Rosie yawned, then sighed, then turned away in disgust. She had lately returned from a fashionable boarding-school, to which her mother had sent her for six months, after worrying her poor father's life out to gain his consent.

"Well, Rosie's got to have more advantages than I ever had. This 'all work and no play' that I've had on a farm for all these years, till I joined the Grange, shan't be her lot."

But Rosie had only gained knowledge enough to make her discontented, not to enable her to look at life in a sensible manner and make the best of everything that fell to her lot, and thereby raise the standard of happiness all around her.

"This is beastly" (she had caught the "English you know" expressions). "Can't go out even to feed the pigs." (Rosie knew she never thought of doing such a thing, except perhaps to throw an apple to them as she passed by.) "Heigh-ho! I wonder what Gwendolin and Gladys are doing, but then they have such pretty homes it must be a pleasure to stay in them." Then she looked around on the rag carpet and the almost bare walls of the living-room. There was a large certificate of membership in a narrow, black frame, and a poor engraving of a group in which Webster was prominent, with a very big head. There was nothing bright or cheerful anywhere.

"What an ugly place! How could ma live in it all these years?" Then she went into the parlor; that gave her a worse chill still, with its blinds drawn down tight and its horse-hair covered furniture. From very restlessness she strolled into the kitchen. Ah! here was warmth and light, at least, and how nice the cooking smelt! Her mother was making pies and cakes—the strongholds of cooking in the country. Rosie watched for awhile in silence, but the sight of her mother's busy fingers soon affected her.

"Let me place the little cakes in the pan. I can't go out."

Her mother looked up in smiling surprise.

"Well, Rosie, put on this apron over your nice dress and tuck up your sleeves."

"Oh bother, I—" she was about to make a remonstrance, but as her mother fetched the apron and tied it on, and tucked up her sleeves, she said no more but went to work.

Soon a pan of the cakes was baked and Rosie was told to try them.

"They are real nice, ma; much better than they made at our cooking class. I knew you wanted me to learn other things, so didn't pay much attention."

Mrs. Waterford looked surprised.

"Why, Rosie! How would we live with bad cooking? Why, your father would run out of the house if the potatoes were hard or watery, or the bread sour, to say nothing of the indigestion it would cause. Good cooking is one of the bulwarks of good health, Rosie. Don't forget that."

Rosie had never thought of it in this light before, when she used to help mother a little before she went to the grand school; it seemed a disagreeable necessity to be got through with as soon and as easily as possible.

"I want to get up a good dinner for your father, for he'll be wet and cold when he comes in."

As this seemed the only pleasant place in the world (her world) on this dreary day, she became mildly interested in the preparations for dinner.

"What are these pretty purple things in the closet, ma?" she called.

"Egg-plants, dear; a neighbor gave them to your father."

The Waterfords were like many other farmers—too short-sighted to bless themselves with a variety of vegetables; so egg-plants were something new to them.

"Are you going to cook them for dinner, ma?" she called, still in the closet.

"I don't know; look in the almanac, see if there is a recipe."

Rosie did so.

"Egg-plant; peel, cut in slices, lay in salted water for half an hour; wipe dry, dip in beaten yolk of egg, then in grated cracker; fry in boiling lard."

"Is that all?" asked her mother.

"No; here is another."

"Parboil in salted water, cut in slices, dust with cornmeal, flour or cornstarch."

"Is there no other?"

Rosie shook her head.

"I remember once dining with a Southern lady years ago who had an old 'Aunty' for a cook," said Mrs. Waterford, "and the egg-plant cakes made such an impression on me that I have never quite forgotten them."

"Now try to remember everything, ma, and *I'll* make them accordingly."

"Well, let me see; you peel them, of course, and I think let them stay longer in rather strong salt and water than half an hour; cut the slices rather thick—there, that's about right; now, not to notice the time of waiting, go busy yourself about something else."

But that was not so easy for Rosie, who had become interested and wanted to finish the job, but to wait, oh!

"All right, ma," she said, cheerfully, and ran up to her room.

"Now I am going to make that ugly dining-room look more cheerful; let's see what my trunk will yield for the general good."

After removing some wearing apparel, she came to her treasures, some pretty tidies the girls had given her in return for the gifts of fruit and cake that she used to distribute when they arrived from home. Then there was several yards of cheap but bright drapery that she had bought with the idea of beautifying her own room. "Oh, yes! and my two paintings with which I intended to surprise ma and pa on Christmas; but I'll surprise them to-day, and do something else for that occasion." Then she drew out some water-colored flowers. "I'll tack these up, too, for the flies are all gone, and the rain has thoroughly laid the dust."

She ran down the stairs, and soon the sound of the hammer reached the kitchen, which brought her mother to the door.

"Oh, don't come in. I'll set the table and all," so her mother went back to work, pleased that Rosie was not quite spoiled, as they had both feared since her return.

She hung the drapery over her pictures in place of frames; she utilized the tidies for the mantelpiece and corner-shelf, and tacked up the watercolors to the best advantage.

"I don't think that looks so bad; it is rather the reverse, if anything. Now I'll light a fire—ah! a cheerful fire in a grate is what I love—and won't they be astonished!"

When the fire was started her mother called her.

"Oh, I had forgotten all about the egg-plants," so she hurried to the kitchen.

"I saw you were busy, dear, so I just put them on to 'boil.' You see they are quite tender; now take them up and mash them in a pan with a fork; now beat up a couple of eggs while it is getting cool; now put in sugar enough to make it sweet and a very little milk; now sift a couple of cups of flour and a heaping spoonful of baking powder; now beat it well together and it is ready to cook. Put a little of that nice dripping from the roast beef and a little butter—it tastes better than lard. Have it good and hot—ah, don't make the cakes too thick; now let them cook rather slowly to a nice brown; they are not good undone."

How nice and grateful the odor! Rosie's mouth watered to taste them.

"Why, mamma, this is almost as interesting as china painting, one looks so anxiously for the result and one cannot always tell how nice it is going to be."

Her mother soon relieved her, telling her to set the table, as she dared not go in.

Mr. Waterford now came in, changed his damp clothes and was soon ready for dinner. Rosie carried everything to the table, and when all was complete she threw open the door and cried:

"Entrez vous!"

They walked in, laughing heartily, then looked around in a pleased surprise.

"Well, daughter, where did you get all these things?"

"Doesn't it look nice, Fred?"

"Well, well, well!"

"My work—I wanted to surprise you, but wait until you taste the egg-plant cakes. Oh! I can cook, too, can't I, ma?" and from that time Rosie became a help and a comfort to her parents, and found out that good cooking and beautifying her home was not incompatible with her painting, reading and other studies, and that her life was fuller and happier the more she increased the happiness of others.

San Francisco.

SALT AS A PRESERVATIVE.—A correspondent of the *Scientific American* writes to that journal as follows: "Thirty-four years since, I set four 4½ by 4½ inch oak hitching-posts near my residence, 3½ feet deep in the earth, having first bored one 1-inch hole into same some 3 inches above, and another hole of like size some 4 inches below the earth's surface, and partly filling each hole with salt, and then plugging same with a dry oak plug. The posts are to-day sound and strong. Draw your own inference."

MICROSCOPICAL SCREWS.—It is stated that a lady's thimble of the ordinary size, No. 7, will hold 1,000,000 of the smaller little brass screws used in the manufacture of fine small watches. These screws are so small that to the naked eye they look like specks of brass, and it requires a magnifying glass to show their real character.

AN "INCH OF RAIN" means a gallon of water spread over a surface of nearly two square feet, or a fall of about 200 tons to an acre of ground.

DARWIN defines the wag of a dog's tail as "an escape of nervous force restrained for the moment from other modes of expression."

DOMESTIC ECONOMY.

Apple Cellar and Grape Press.

EDITORS PRESS:—Is it believed to be dangerous to human health to have apples stored in a dry, airy cellar under the general family sitting-room? Match boarded ceiling to cellar, good boarded floor and linoleum floor cloth over.

Is it easy and inexpensive to procure a small press or squeezer to express the juice of grapes for immediate drinking?

Answers to above can hardly fail to be of interest to many of your numerous readers.

Santa Cruz. "AN OLD RURALIST."

[There is decided objection to a vegetable cellar under a living-room, but to such a fruit-room as you describe, we can see no objection.

We would like to know what device any reader has found useful for grape pressing to obtain fresh juice for drinking. We have been asked the question before and cannot answer it.—EDS. PRESS.]

PUMPKIN PASTY.—Boil a pumpkin and mash it up. Season with pepper and salt to taste and add a teaspoonful of cream. Make a pudding paste to put round it. Bake thoroughly.

STEWED PRUNES.—Wash, drain, cover with cold water, let soak several hours or over night. Stew in this water, add sugar to taste, with just enough water to cover. Fine; served very cold, with any forms of bread given, are highly nutritious and gently laxative.

POTATO SOUP.—Three pints of rich milk, one pint of mashed potato, two tablespoonfuls of butter, pepper and salt to taste. Boil the milk, add the potato and boil again, stirring frequently that the potato may become thoroughly dissolved, and season just before serving. Serve very hot.

CRISP COOKIES.—One-half pound sugar, one-half pound flour, one-quarter pound of butter, a third of a nutmeg, three eggs. Cream the butter, add the sugar and yolks of the eggs, beat until light; stir in the stiff-beaten whites, the nutmeg and flour; flour the board, roll, cut and bake in a quick oven.

ONION SOUP.—Three pints of milk in which six good-sized onions have been boiled makes a delicious soup, seasoned to taste with butter, salt and pepper, thickened, if desired, with a tablespoonful of cornstarch made smooth in cold milk. Onions are much nicer boiled in milk than in water.

QUEEN FRITTERS.—Take one glass of water and two ounces of butter and put on the stove in a saucepan. When this comes to a boil, add half a pound of flour and stir till stiff. Take off the fire and add six raw eggs separately, beating each one as added till a soft dough results, then fry in lard in pieces the size of a walnut.

APPLE TAPIOCA PUDDING.—Soak a cup of pearl tapioca in a pint of water two hours, stir in three-fourths of a cup of white sugar, add one-half teaspoonful of salt and a cup of thin cream or new milk. Peel, quarter and core eight large apples (Greenings preferred), and put in an earthen pudding-dish, grate a little nutmeg on top, and bake an hour and a quarter in a slow oven. Serve with whipped cream.

CHOCOLATE FILLING FOR CAKE.—Grate such a quantity of chocolate as you may desire (I use about half of a square) into a small tin pan, and set it on the back of the stove to melt. Then beat the whites of one or two eggs with sugar as you do for unboiled frosting, and stir it into the pan with the chocolate. Flavor with vanilla, and spread between the layers and on top of the cake when the cake has cooled.

LEMON SAUCE.—Mix a tablespoonful of cornstarch with three tablespoonfuls of cold water, stir into a teacupful of boiling water, boil till clear and thick; add grated yellow rind and the juice of one lemon, with a cupful of granulated sugar. Simmer two minutes. Beat one egg, add two tablespoonfuls cold water, pour the boiling mixture into this, stirring rapidly, return to fire; remove soon as it begins to simmer.

CREAM CHOCOLATES.—One quart of fine white sugar, half a pint of boiling water, half a pound of Baker's chocolate. Pour the water on the sugar, mix well, and leave it to boil ten minutes without stirring. Place the saucepan in cold water, and stir briskly until it becomes stiff enough to handle. Mold it in little balls and put aside to cool. Break the chocolate in small pieces and put it in a bowl in the top of the boiling tea-kettle. When melted, remove the bowl and drop in the balls one at a time; take them out with a fork and place on buttered paper.

SMALL TEA BISCUIT.—One-quarter of a pound of flour, one-quarter ounce of butter, half-ounce of firm, sweet lard, a little less than a gill of milk, one teaspoonful of baking powder, and one saltspoonful of salt. Mix the baking powder with a portion of the flour and sift it into the rest of the flour through a fine sieve; then rub the butter, lard and salt through the flour until quite fine; pour in the milk, mix lightly, place on the board which has been well floured, and roll it with the rolling-pin without kneading. Cut with a small cutter, prick and bake in a hot oven until brown on top.

WHY DAMP HAY HEATS.—After a series of very careful experiments, Prof. Cohn of Breslau has found that the heating of damp hay to a temperature sufficient to cause spontaneous combustion is due to a fungus.

The Week.

The excitement over election has been followed so quickly by a financial flurry in the great money markets at the East and in London that the earlier irritation of the body politic has almost been forgotten even before a clear understanding of the results was reached. Money is reported in very short supply, although Uncle Sam has set loose about $85,000,000 by buying bonds, and now that there is less than $10,000,000 in the National pocket-book, no more bond-buying can be indulged in. It is hoped that the excitement may stop short of a panic and that matters may resume a steady course.

So far as election goes, the forecast of last week was correct, viz.: California practically all Republican and the rest of the Union all Democratic. The next Congress will be at sword's-points politically with the administration, and there will be some fur flying. But such things have not hurt the United States much in the past and probably will not in the future.

THANKSGIVING.—The President and the Governor have issued the usual proclamations appointing Thursday, November 27th, as the National Thanksgiving. Let all prepare for it.

THE LATE DR. JOHN T. STRENTZEL.

The Late Dr. Strentzel.

Many California fruit growers who will assemble at Santa Cruz next week will mourn the departure of their honored friend and associate, Dr. John T. Strentzel, who died at his home in Alhambra Valley near Martinez, on Friday, Oct. 31st. It was a sad coincidence that his old associates of the State Horticultural Society, in session in this city on that day, selected him as chairman of a committee to extend an invitation to the American Pomological Society to hold their next meeting in this State. Thus almost at the hour of his death his associates were placing upon him honors and responsibilities which during his long, active life he had accepted so quietly and discharged so well. During recent years, bodily infirmities have prevented him from many activities which he formerly pursued, and denied our younger fruit-growers the opportunity for acquaintance with him, but he never lost his interest in horticultural work and progress, and died in the harness full of years and honors.

John Theophile Strentzel was born in Lublin, Poland, November 29, 1813. He entered the University of Warsaw at the time of the revolutionary disturbance, but laid aside his tasks for service in the patriot army, and after the dismemberment of his country, proceeded to Hungary, became a student, and after taking a full course in the University of Pesth, graduated as a physician in 1839. Soon after he emigrated to Texas, where he followed his profession for nine years. On the 31st of December, 1843, he was united in marriage to Miss Louisiana Erwin, a native of Tennessee, who for 47 years has been his devoted wife and life companion. Early in the spring of 1849, having had his attention called to the far-famed El Dorado, Dr. Strentzel and family joined a company, who had organized for the purpose of crossing the then trackless plains in an endeavor to reach California. On the 14th of April, 1850, Dr. Strentzel and family reached the Tuolumne river after an eventful journey of 13 months. They resided first about two miles from La Grange, afterward on Merced river, but in 1853 selected a permanent home in Alhambra valley, adjoining the town of Martinez, where he purchased 500 acres of unimproved land. Here he became a pioneer fruit-grower, purchasing all his stock at great expense, experimenting with over 1000 varieties of fruit, besides many kinds of ornamental and flowering trees, with a view of determining which were best adapted to the climate of California. He was first to announce the success of citrus fruits in suitable locations in Northern California and the first to show a properly cured Muscat raisin at the State Fairs of California.

By persistent industry, he succeeded in amassing a moderate estate, although no distinct love of wealth became a factor in his character. On the contrary, he was ever ready to lend a helping hand to those who needed it. Bland and courteous in manner, considerate and kind in action and sociable in disposition, his circle of friends and his influence in public affairs enlarged with his growing years, and when he rendered the final account of life, at the ripe age of 77, his departure was sorrowfully honored by the community which surrounded his home and his numerous friends at more distant points. He was prominent in all public and humane enterprises, and an active member of many scientific and other associations.

In his family relations, Dr. Strentzel was exceedingly happy. His wife, whom he led to the altar 47 years ago, still lives to honor his name. His daughter Louise, wife of John Muir, the well-known geologist and *litterateur*, has remained in the neighborhood of her father's home and has cheered his declining years.

The portrait which we present herewith, though not as good as we desire, will recall his venerable features to his old friends and suggest to others the lineaments of one whom they should long remember and honor as a potent factor in California's horticultural progress.

The Nuts of the United States.

The Department of Agriculture is in receipt of reports from different parts of every State and Territory concerning the production of wild and cultivated nuts, and will embody the information in a bulletin soon to be issued by the Pomological Division. The extent and possibilities of nut culture are by no means generally understood. In Central California almond orchards of from two thousand to five thousand trees are not unusual, and in the southern portion of the same State the Madeira nut, or English walnut, as it is more commonly called, is cultivated in orchards of from one hundred to fifteen hundred trees. From most of the other States, also, the Madeira is reported to be grown for nut production. On Staten Island the same nut is marketed green for pickling and for catsup. The pecan is grown in orchards and groves in the South central and Southwestern States; while the pinon, or pine nut, though quite unknown to people east of the Mississippi, is marketed in immense quantities in the cities of the Pacific Slope. By selection and culture, nuts are found to improve almost as readily as fruits. Thin shells and increased size are the most common results of improvement. The Pomologist of the Department will be glad to add to the list of persons to receive the bulletin the names of such as furnish concise reports on matters relative to nut culture. Others who are interested may obtain the bulletin when published by applying to the Secretary of Agriculture, Washington, D. C., or to the Pomologist direct.

The Fruit-Growers' Convention.

As previously announced in the RURAL, the Fourteenth State Fruit Growers' Convention, under the auspices of the State Board of Horticulture, will be held in the city of Santa Cruz Nov. 18th to 21st. Everything indicates a meeting of unusual popularity and importance. The Santa Cruz people have promised a warm welcome to the attendants upon the convention, and a few days at the seaside amid a cordial people and with interesting and important meetings to participate in, ought to be very attractive to fruit-growers living in the interior valleys and foothills. There will also be many features of the convention very acceptable to the ladies, so the wives and daughters of fruit growers should accompany them. There will be reduced rates at the hotels and accommodations will be ample. The reduction in railroad fare amounts to one-third of the ordinary rate for the round trip—that is, you pay full fare going to Santa Cruz, either on the broad gauge or narrow-gauge roads, and you return for one-third of the same amount. *A receipt should be taken from the ticket seller at the starting point*, and for this purpose blanks can be had by applying to Secretary B. M. Lelong, 220 Sutter St., S. F.

The following is the official program for the convention as prepared by the secretary:

Opening Day—Tuesday, Nov. 18, 1890.

Morning Session.—Convention will assemble at the Y. M. C. A. hall at 10 o'clock. Order of business and subjects for discussion: Calling to order by the President. Election of two Vice-Presidents. Remarks by the Mayor of Santa Cruz. Address of welcome. Address of President.

Afternoon Session.—Fruit Culture, varieties to plant and new fruits. Essays: W. H Aiken—"Prune Culture," illustrated by specimens. Frank H. Buck—"Peach Culture and Varieties." Robert Hector—"Cherry Culture." Luther Burbank—"New Fruits." Discussion.

Wednesday, Nov. 19

Morning Session.—Insect Pests and Their Extermination, Parasites and Fungoid Diseases. Essays: E. J. Wickson—"The Study of Entomology in the Schools." Frank W. Willis—"Injurious Insects." Alexander Craw—"Insect Friends and Foes." H. K Snow—"Chemical Famigation." Prof. H. W. Harkness—"Fungus Growths Affecting Fruit Trees." Discussion.

Afternoon Session.—Excursions. Reception in the Evening.

Thursday, Nov. 20.

Selecting, Preparing and Marketing Fruits.—L. W. Buck—"Fruit Shipments of 1890." J. L. Mosher—"Fruit Preparation." Discussion.

Afternoon Session.—Orchard Fertilizers and Pruning: Prof. E. W. Hilgard—"The Proper Orchard Fertilizers." A. Scott Chapman—"Effects of Fertilizers." R. C. Kells—"Pruning." Discussion.

Evening Session — Ladies' Night.—Floral Culture, Wild Flowers and Ornamental Plants: Mrs. I. H. Haymond—"Window Gardening." Miss Lillian Howard—"Wild Flowers." Mrs. Elwood Cooper—"Floral Culture." Discussion.

Friday, Nov. 21.

Fig Culture, Table Grapes and Small Fruits. Prof. W. H. Galbraith—"The Grape." Mrs. L. U. McCann—"Small Fruits." Discussion.

Afternoon Session.—Olive Culture and Citrus Fruits: S. S. Boynton—"Citrus Culture." W. A. Hayne—"Olive Culture." Discussion. Unfinished business and arrangement for next convention.

Special.—To be assigned by the president: The advisability of forming a Union with Florida Fruit-Growers. The exhibition of California products at the coming Columbian World's Fair. Essay by John M. Stewart—"Fruit Culture in Santa Cruz County." Essay by F. L. Carke—"Forestry."

The California Fruit Industry.

Preliminary Review of 1890.

A Year of Wonderful Progress in Horticulture.

[Written for the RURAL PRESS by J. R. F.]

The early pioneers can hardly realize the wonderful progress made by California in horticulture. The writer well remembers the time, in the fifties, when two deciduous fruit orchards—they were in Yuba county, near Marysville—were considered remarkably large, the fruits from which commanded such good prices that they enriched the proprietors within a few short years. The trees were carefully pruned and cultivated, which caused them to yield a large crop. As time passed and farming came to the front, other orchards were laid out and planted with the best varieties of fruits. Besides this, many farmers planted a few trees. Without an outlet for the product of the orchard, prices under large crops fell so low that fruit farming barely paid. In consequence a large majority of fruit trees were neglected, and horticulture as an industry sank to a low point. With the advent of railroads, gradually an outlet was secured, first for canned fruits, then dried fruits, and later on green fruits have found each year an increasing demand. Reductions in railroad freight charges and better transportation facilities and improved fruit cars have had much to do with the increasing trade East. The growth of the United States and more or less failures in the fruit crops east of the Rocky mountains have also been great aids in drawing to us fruit orders that would otherwise have been hard to secure. Another consideration is that to the soil and climate of California are due the successful culture of two fruits—the apricot and prune—that largely contributed to securing attention to our deciduous fruits. Besides the above two, the nectarine is forcing itself to the front as a favorite, the successful cultivation of which is peculiar to this State.

The Prune.

It is claimed, and probably correctly so, that the prune is now attracting more attention than any other fruit, with the orange a good second. California prunes at the first were given third consideration at the East. With better care given to cultivating the tree, and a better understanding, thorough practice and also securing better information regarding the picking, curing, packing, etc., in vogue in European prune districts, California prune-growers have established a name which stands unequaled. The fruit is now acknowledged to surpass in every respect the imported article, and at the same time so prolific bearers are the trees that European prunes are relegated to a back seat. Probably there was one thing more than any other which contributed largely to popularizing California prunes at the East. That was the successful move made by buyers in 1888 to lower the price through and by means of widely-published discouraging reports. The forcing down of prices enabled buyers to purchase large quantities at such figures as enabled them to undersell in the East the foreign product. Being much cheaper, they went into more general distribution throughout the Central and Eastern States. Consumers having tasted them, were not slow in acknowledging their superiority, and what in 1888 was considered a misfortune was in reality a blessing in disguise. This was plainly manifested in the large increased demand for the fruit in 1889, and that at such prices as to enable those growers who exercised ordinary care in handling their fruit to net a large profit. This success caused more prune planting in 1889–90, and also better care to be paid to the cultivation of the tree and to the curing and packing of the fruit. Its cultivation has gradually spread to other counties aside from Santa Clara, where it receives the largest attention, for it has been found to be adapted to a wide range of soil and climate, while its remarkable freedom from attacks of insect pests and disease makes it quite a favorite with many horticulturists. The prune is not regarded as an article of luxury, and therefore it enters largely into household consumption. Probably from this cause and also to its superiority to the foreign product, prune-growers do not appear to feel any apprehension regarding the industry being overdone.

The buying or contracting season this year opened unusually early and at a slight advance over the best figures obtainable for the same grades in 1889. So tempting were the bids that buyers secured the product of many orchards. As verified reports came to hand of a probable short prune crop abroad and a short crop of all kinds of fruits in the East, buyers became more anxious, and advanced prices, in some instances, to about 11 cents a pound for the three sizes, yet toward the close of the season prices fell off from 1 to 1½ cents a pound, although now a stronger tone and a slight advance is obtainable.

Apricots.

The cultivation of apricots is steadily enlarging, with attention given to the better varieties, which give good annual crops. The fruit when canned has a reputation second to none, and wherever introduced is held in high esteem. Each year witnesses its more general distribution throughout the Central, Eastern and Southern States, while it is growing in favor abroad. The dried product has also forged ahead, and few dealers can be found but keep it in stock. This year the possibilities of a short peach crop at the East, and a shortage in the apricot crop here, brought buyers into the market quite early, and many orchards were secured at 1¾ cents a pound; but under stronger competitive buying, prices were gradually advanced until as high as 2½ cents a pound was realized by many growers for their entire product. The demand set in very heavily from the East for both canned and dried apricots, and prices advanced, particularly for dried apricots. The product soon passed into speculators' and distributors' hands, so that the year will close with nominally no supplies in first hands. The superior quality of the dried product, derived from experience in curing and catering to the wants of consumers, has made much of the fruit put on the market almost perfect, and, being so, it necessarily commands general attention from consumers. It looks as if the industry cannot be overdone, yet it is not reasonable to look for as remunerative prices in the future as obtained this year, for it may be many years before fruit crops at the East turn out as poorly as they did this season.

Peaches.

Peach growing has made great progress Formerly the best fruit came from lowland orchards, but in late years mountain or foothill orchards are turning out such fine fruit as to challenge the attention of buyers. It is claimed by many that for distant shipping and canning purposes they cannot be excelled in this State. If this be so, it is not at all improbable but the dried product from mountain or foothill orchards will give the best of satisfaction. A very large number of the latter orchards are either owned or controlled by Chinamen, who are proverbial for selling at the best obtainable prices when the product is ready for marketing. It is this that forces prices for both green and dried, at a certain time in the season, to lower prices than should obtain. Contracts with them for future delivery are seldom made, which is perhaps a fruitful source of low prices when the fruit grown by them is ready to be marketed. Americans and Caucasians in general contract largely ahead, and therefore are in better position to maintain values for the remainder.

California peaches come into general competition with Eastern peaches, and for that reason the prices are largely dependent upon crop prospects on the Atlantic seaboard. Last year our crop was large, so was that at the East, and in consequence comparatively low prices prevailed. This year high water killed many trees, which more than offset any increase in the number of trees that came into bearing. The changed character of the winter at the East caused a small crop of peaches. These two causes produced in this State strong buying. The purchases were made by driers, canners and Eastern shippers. The latter were the more anxious, and to meet their wants they unhesitatingly paid an advance over other buyers. Contracts were made early in the buying season at 2 to 2½ cents for the entire product of the orchard. Prices were gradually advanced until fully 3 cents was realized, and some say even more. In this city, for the best canning varieties, as high as 4 to 5 cents a pound were paid, and in some exceptional cases even a slight advance over 5 cents was realized by sellers. Such high prices for the green fruit naturally produced higher prices for the dried product. Prices realized ranged from 50 per cent to, in some instances, over 100 per cent over 1889 prices. The pack of canned was placed some time ago, while that of dried is better cleaned up than for many years.

Apples.

Each year's experience has demonstrated that the valley lands of this State are not adapted to the production of apples of good to choice quality. They generally lack in tartness and other requisites, which causes Eastern and Oregon apples to be the favorites with consumers. The dried product of the fruit is also poor. As a result, the cultivation of apples in the valley lands has been neglected; however, experiments in the foothills and mountain plateaus have demonstrated that superior apples can be cultivated. This naturally has led to new orchards being set out each year in those localities, while the fruits from the more favored orchards command the highest market prices. This is more readily recognized when it is known that valley apples sell at from one-quarter to one-third the prices obtainable for mountain and foothill apples. The crop this year, or at least that sent to this city, was more or less wormy and otherwise defective, and being so were forced on the market at the best obtainable prices. This naturally reacted against good to choice apples, causing them to sell for less money than they otherwise would. With the cleaning-up of the trash the market began to recover, and an advance has been established in the better qualities of fully 50 per cent over prices obtainable a few weeks ago. Dried apples have been fairly inquired after, but there has been an absence of that eagerness which characterized buyers for other fruits. This no doubt was largely due to the crop East being larger than was estimated earlier in the season. This is witnessed in the fact that Eastern apples are beginning to make their appearance in our market.

Plums, Nectarines and Pears.

Plums have not appeared to keep up in the onward march with other fruits, the causes of which are too well known to require giving. Outside of a few special varieties, the prices obtainable some seasons hardly justified marketing them, but this year they fetched better prices. This was due to the high prices obtainable for prunes, apricots and peaches. The green fruit fetched comparatively good prices, as has the dried product. The stock in first hands is said to be tolerably well cleaned up. Prices ruling for dried average a slight advance over that of 1889.

Nectarines are coming to the front, slowly but surely. Wherever tested, either in the green or dried state, they find recognition as a superior fruit. Each year finds them being more inquired for, and admits of future contracts being made. This, as much as anything else, attests its growing popularity. Prices this season ranged for the dried product higher by fully 50 per cent than last year. They averaged within 2 or 3 cents a pound of the same grade of dried peaches.

Pears have gone off quite freely this season and at good prices. Eastern parties were large buyers, which necessitated canners to pay well up so as to secure their requirements. Toward the close of the canning season the range in this city for best varieties was from 3 to 4 cents a pound, and it is said that even a slight advance was paid in some instances. The crop did not appear to be as large as it was in 1889, although the enlarged Eastern shipments made make it more apparent than real.

Cherries and Berries.

The cherry crop went early into consumption. The yield was a full average to the tree, while the quality was generally good. The East took heavier than ever before, which was a large factor in securing good prices to growers. Canners bought more fully than for several years past.

The berry crop was not as large as it was claimed early in the season it would be, and consequently good prices ruled throughout the season. Canners bought quite freely of all kinds, but more particularly of blackberries Purchases made by them of the latter were the largest in the history of the fruit-growing industry of the State. These purchases kept the market well up, prices averaging fully 50 per cent more than they did in 1889. Raspberries held to better prices than they did in 1889, as did strawberries. Huckleberries have met with quick sales. The high prices are against canners taking them.

Peach Pits.

This year a new industry sprang up, viz. saving and selling peach pits. The demand was chiefly from the East, where they were planted so as to secure young peach trees for replanting. The canners found in the trade more profit than burning the pits for fuel. It is said that as high as 3 cents a pound was paid for pits from the better varieties.

Citrus Fruits.

The first large orange orchards, or at least the first of any size the writer saw, were those of Gen. Wilson and Col. Kewen, near Los Angeles. The success met by them encouraged others to go into the business in that county. In a former article the writer stated that gradually the industry spread into San Bernardino and elsewhere, although next to Los Angeles the other county named has always maintained second rank. The orange orchards of Riverside and elsewhere commenced to attract attention by the excellence of their product, and with their attainment of maturity an Eastern market was sought for the constantly increasing crop of golden fruit. At once California oranges were received with favor at the East, and their shipment became a business of large proportions. The desire to share in the large profits that are realized from orange culture has reached other portions of the State as well, and as far north as Butte county extensive orchards have been set out. In the county named there are now three or four thousand acres of young orchard, and in Placer, Yuba, Fresno and elsewhere orange orchards will be planted upon a considerable scale this season. There has never been so general an interest in this pursuit as at the present time, and the demand for trees has been very great. At one time it was found necessary to import them from Florida by the dozen carloads.

Last season's crop went into consumption at good prices, averaging slightly over $1.75 a box. In speaking of the improved method of handling the crop, the Riverside *Phœnix* says: "The demand has been better than it ever was before, and the system of selling on the tract, which is largely coming into vogue, is the most satisfactory one that has been adopted as yet. When we contrast the practice of a few years ago with that of to-day, we can easily see how much improvement has been made. Then every grower, almost, packed his own, hauled it to Colton, and shipped it on his own responsibility in parts of a carload lot to some commission man, who could not in all cases be relied on. Even in the crop year of 1884–85, when four packing-houses took hold and shipped what they packed, and that packed by individual growers on commission, the result was very far from satisfactory, and in some cases growers had to put their hands into their pockets to help make up for losses on sales. That season, however, put an end mainly to the commission system, and from that time on, prices for the growers have been gradually improving, until the past season has been the most satisfactory that we have ever had. It has not all been, however, owing to an increase of prices in the East, but it has also been helped very materially by more improved methods of packing and lessened rates of freight, coupled with a great decrease of time occupied in transit, which has very materially reduced the percentage of loss by rotting or heating on the way. Even the risk and loss incurred by frost have been reduced to a minimum which has all inured to the benefit of the grower. These causes have made the prices of the past season, on the whole, the most satisfactory that we have ever had, even to the packers."

For the 1890–91 crop, buyers have been in the market for some time, paying, it is said, on the orchard an average price of $1 60 a box. Regarding the crop prospects, probably the estimate of the Southern Pacific railroad is the best to accept. The company estimates the number of cars that will be required to carry the orange crop of Southern California, and an interesting array of figures it makes. By counties, it is given as follows:

Los Angeles.	Cars.	
Los Angeles	316	
Downey	109	
Duarte	112	
San Gabriel and Alhambra	500	
Azusa and Glendora	130	
Pomona	148	
Spadra	4	
Pasadena and Lamanda Park	49	
		1368
Orange county.	**Cars.**	
Anaheim	90	
Santa Ana	36	
Tustin	143	
Orange	50	
McPherson	17	
		336
San Diego county		27
Ventura county		30
San Bernardino county.	**Cars.**	
Riverside	1800	
Ontario	34	
Redlands	120	
Highlands	51	
Colton Terrace	14	
		2019
Total carloads		3780

For the other counties, central and northern, no estimate is made public, but it is claimed that the crop will be about 25 per cent larger than it was for the season of 1889–90.

Lemons.

The cultivation of lemons has been successful in all respects. Inexperience brought failure, but with the discovery of the proper means to be adopted in their gathering and curing, money is being made by those giving them attention. This is having a stimulating effect upon the industry, and as a consequence there has been a largely increased acreage planted to that fruit within the past two years. With their proper curing, California lemons are displacing the best imported. It is claimed by the better informed that the markets of this country will be supplied, before the next decade, entirely with the California product. The prices obtained the past year were fair, but not as high as they would have been had the weather not been so cool during the summer months.

Olives.

Olive culture is receiving its full degree of attention. The success met with by those who are devoted to the industry is stimulating others, and as a consequence many orchards are planted. The oil sells at an advance on the imported, and at the higher prices is given preference. There are many households that use it in preference to animal fat in the kitchen. That it is much healthier is an acknowledged fact.

Figs.

California figs are forging ahead. It is only a question of time, probably shorter than generally thought, when the imported will be a stranger to the markets in this country. A few public-spirited horticulturists have given much attention to the successful curing and packing of figs, and are meeting with the success their efforts deserve. California figs on this coast are displacing the foreign, and that, too, at good prices. Considerable have been taken for the Eastern markets. Last year large quantities of figs were peddled in this city by hucksters at very low prices, but this year it was done owing to the fruit being better cured and packed and also an increased distributive demand. In writing on the fig at the close of last year, the following was said, which bears reproducing now: The success attending the cultivation of the choicer varieties now grown and packed here has been such that many have gone into the business upon quite an extensive scale, and many hundred acres of figs have been planted. It has been pretty thoroughly demonstrated that the lower foothills are the best localities for the production of choice figs. The fruit from trees of the same variety grown on the plains and in the foothills is radically different, and the quality of the foothill product is such as to have given rise to the belief among those not fully posted that they were two radically distinct varieties. The fig seems to be especially sensitive to climatic influences, and this fact should be borne in mind by those who think of embarking in the cultivation of this

fruit, which seems destined to become not the least profitable of the many branches of horticulture carried on in this State.

Viticulture.

Shortly after the culmination of the gold-mining excitement, the first systematic planting of vineyards was undertaken in this State, and each year has seen a large addition to the area devoted to grapes. Like all industries, it has met with discouragements, but it is within the bounds of truth to assert that no industry has, in the long run, given more profit for the money invested. Far too many have embarked in viticulture without giving the subject that close business attention it deserves. Many have discovered by bitter experience that the soil, climate and other surroundings should be closely studied to make it a success, and the variety adapted to any particular locality should be given preference in that section over all other varieties. Past experience has brought perfection to the many engaged in the industry upon systematic, scientific business principles. California grapes for table use are given preference at the East and bring higher prices than all others, domestic or imported. The varieties cultivated are too numerous to admit of naming, but it is well known that the most cultivated abroad are successfully grown here, while some new varieties are said to have been successfully propagated. California wines, after many drawbacks, are now acknowledged by connoisseurs to have no superior and few equals. Their superiority is finding recognition at home and is beginning to be recognized abroad, for the exports are gradually enlarging. The demand has increased to such an extent that the supply here has run down quite low, bringing in its wake a considerable advance in prices.

Raisins.

Turning from wine to raisins, one cannot help being favorably impressed with its remarkable growth, a growth won by hard experience founded upon merit. From a few thousand boxes in 1881, the industry has grown to fully 1,500,000 boxes this year. California raisins have forced the imported from the markets of this coast, and are fast taking possession of the Eastern markets to the exclusion of the foreign. California packers have by experience been taught many valuable lessons, lessons that have given them the whip handle in their competition with the product of Spain. While each year witnesses an increased pack over the preceding, still the demand keeps pace, and the close of each season finds our markets depleted of supplies. This year is no exception, for buyers were early in the field contracting for September, October and November deliveries, and it is said that fully three-quarters of the pack were engaged at satisfactory prices. The rains in last month caused considerable uneasiness and set afloat exaggerated reports of damage to the crop. The damaged raisins or grapes were either sold for wine or else cured and sacked for market, but even these were a small percentage of the pack. With several weeks of clear, sunny weather since, the second crop of raisins has been and is being cured and packed in the very best condition. The percentage of high-grade raisins is also quite large.

There has been a serious disadvantage in shipping through the lack of cars, making it hard to meet the Eastern demand before the holidays. The overland shipments for this year are largely in excess of the like time in 1889, and still the cry is for more. It seems impossible to overdo the raisin-grape industry, for it can be only a question of time when California raisins will find a firm growing foothold in foreign countries. This is verified by the largely increased shipments to foreign ports in the Pacific. Where two or three years ago none were shipped, now several thousand boxes are exported. Australasia is the largest single purchaser.

Dried Grapes.

The drying of grapes for market has assumed large proportions, with the demand taking all at good prices. The range of prices this year has been from $65 to $90 a ton, according to locality and variety. The East has taken about all cured and bids fair to take a much larger quantity next year. The drying of grapes is found to be quite remunerative. It lessens the supply of green grapes thrown on the market, which enables growers to get much better average prices for the different kinds.

Grape Syrup.

This year more attention has been given to producing grape syrup. This product is reported to find ready markets at the East at prices ranging from 45 to 60 cents a gallon. It is said that the syrup is taken in preference to other kinds, which, if the case, will cause more attention to be given the industry.

Statistics.

The shipments of fruits, canned and dried, overland by months since January 1, 1890, were as follows:

CANNED.	Cases.
September	271,800
August	230,782
July	69,150
June	24,281
May	40,322
April	15,500
March	41,160
February	27,752
January	15,571
Total since Jan. 1st	736,487
Same time 1889	341,578

DRIED FRUITS.	Pounds.
January	513,080
February	578 500
March	611,020
April	454 580
May	147 930
June	110,250
July	2 869,140
August	5,340 850
September	10,710,360
Total	21,335,710
Same time 1889	18 153,930

RAISINS.	Pounds.
January	367 170
February	404 210
March	371 340
April	256.450
May	85 520
June	32.330
July	
August	
September	3 478,780
Total	4,695 800
Same time 1889	4,118,350

Deciduous Green-Fruit Shipments.

Following is a comparative record by months of the Southern Pacific East-bound shipments of green fruit, all the shipping points of the State being included:

Months.	1889.	1890.	Gain.
May	330,150	526,650	169,500
June	2,532,490	2,798,310	265 820
July	12,518 540	13,095,810	576,970
August	13,162,490	20,720 660	7,618,260
Sept	9,159 900	17,559,840	8,400,940

AGRICULTURAL NOTES.

CALIFORNIA.

Fresno.

FUEL FOR THE DRIER.—Fresno *Republican*, Nov. 7: "As fruit-driers are on the increase, year after year," said Col. Denicke the other day, "the cost of fuel is found to be quite an item. I am satisfied that every considerable vineyard will sooner or later have a drier; that is the inevitable, and we will learn to make just as good raisins by artificial means as we do by sun-drying. Cheap fuel is also within the reach of every vineyardist. The grape prunings can be utilized for the purpose, and a very good fuel they make. These prunings should be gathered in regular layers, by hand, and tied into convenient bundles from three to five feet long by twisting and fastening the ends of the longest vines around the center of each bundle as a sheaf of wheat is gathered and tied. These bundles should be laid between the rows of vines and then gathered up and stored for the following year's use. The doors of the furnaces could easily be made of sufficient size to take in one of these bundles. Better fuel cannot be got, and all it will cost is the trifling expense of gathering and storing it."

SEEDING WHEAT.—Selma *Irrigator*, Nov. 5: Several ranchers west of town are seeding wheat, as dry as it is. They say that in the low grounds there is sufficient moisture to germinate the seed, while in the high grounds there is no moisture at all and the seed is safe.

RAISIN SHIPMENTS.—Fresno *Expositor*, Nov. 5: The number of carloads shipped East from Fresno during the season is 328; and of dried grapes there were shipped 117 carloads. The total shipments from the beginning of the year up to date are but slightly in excess of the totals for the season, being 337 carloads of raisins and 138 carloads of dried grapes.

SORGHUM YIELD.—Selma *Irrigator:* Fantz & Butler finished their sorghum-making last Saturday and found that their 35 acres of cane have yielded 4000 gallons of sorghum, which sells quite rapidly at 75 cents per gallon. This gives a profit of over $85 an acre, which, although not equal to raisins, is not bad itself.

PERSIMMONS.—Selma *Irrigator*, Nov. 7: T. B. Matthews, whose fine fruit ranch adjoins Selma on the east, brought to this office to-day a bunch of Japanese persimmons that excels in beauty anything in the fruit line we have seen lately.

PACKING-HOUSE REQUIRED. — Fresno *Inquirer*, Nov. 7: A. Garsentaub, who has handled considerable fruit in Selma, is talking of building a packing-house in order to handle the fruit and raisins of next season. A large additional acreage will come into bearing then.

Humboldt.

FARM NOTES.—Arcata *Union*, Nov. 8: Potato-digging is over, crops are all harvested, and yet it does not rain. The little shower on Wednesday evening was followed next morning by a heavy frost and a clear, cold day. Rain is badly needed on the stock ranges, and unless it comes soon, and is followed by warm weather, cattle and sheep will go into the winter in a poverty-stricken condition. A heavy, warm rain would be a blessing just now.

Kern.

IRRIGATION BONDS TO BE ISSUED.—Visalia, Nov. 8: The Kern and Tulare irrigation districts, embracing 20,000 acres in the northern part of Kern and the southern part of Tulare county, voted unanimously, Saturday evening, for the issuance of bonds in the amount of $700,000 for the construction of a canal from Kern river and laterals.

Los Angeles.

TO KILL THE LINNETS.—Pomona *Progress*, Nov. 6: We have been told by several fruit-growers that the number of linnets in this vicinity this season is a menace to the fruit crops for next year. The birds multiply very rapidly, and unless some means are taken to destroy them there will be thousands of linnets, where there are now hundreds, to nip and kill the tender fruit buds next April and May. The most effective way to kill the birds is by putting a little strychnine in a quarter or an eighth of an apple and placing the pieces of apple on hundreds of twigs in an orchard, so that the victims can easily eat of the poisoned fruit. Scores of linnet pests can be killed in a day by this method. The great trouble, however, in killing the birds is that there is not a concentrated and general action among the fruit-growers. One orchardist may kill many linnets daily, while the neighbors will do nothing to check the pest.

DROPPED ORANGES.—Pasadena *Star*, Nov. 5: Last summer, during the hot weather, the cry went up that the Navel oranges had all been killed, and that the coming crop would be a total failure. There is no doubt that the crop was injured, but not to the extent that was feared at that time. Many of the trees now show a fair quantity of fruit, and some of them have all they can well carry. The seedlings will have a heavy crop, and in fact the outlook is fairly good for all who have orange trees.

TREE-PLANTING IN POMONA.—Pomona, Nov. 6: A local nurseryman, who has for several weeks made thorough inquiries among the owners of acreage property in this valley, and who has made a little census of his own, tells us that there is no doubt that 3000 acres will be planted to deciduous and citrus fruits in this immediate vicinity next winter and spring. Perhaps the planting may run to 3600 or 3700 acres. It will be about three times what it has ever been before here. The planting of prunes will be very general—perhaps 800 acres—and peach orchards will be set out more than at any time in five years. There will be quite an acreage of the new varieties of olives, figs and apricots. There will be scarcely any pears and nectarines planted. A very large acreage of orange-planting is confidently predicted. It may be 1800 or 2000 acres. The nurseryman says that every one will be astonished at the quantity of trees to be planted here before next May. Hart's Tardiff, the new variety of late oranges, will be unusually popular among the growers. There are calls for it already.

San Bernardino.

FRUIT LAND IN DEMAND.—San Diego *Union*, Nov. 6: A trip through the upper counties has just been concluded by I. M. Merrill of the El Cajon Valley Co., who reports a vast difference in the condition of things since the boom in California fruit lands began. Sales are being made rapidly, and every foot of it is for immediate improvement. He found that at Pomona and Ontario about 3000 acres of unimproved land had been sold during the past three months at from $150 to $300 an acre. A purchaser at North Pomona already had 200 of his 300 acres in oranges. Redlands is selling much at $300 an acre. At Riverside the orange-bearing land is bringing from $500 to $2000 an acre, Mr. Lockwood having just received $60,000 for 30 of his 50 acres of orange grove. The unimproved orange land sells at from $400 to $500 an acre. Ten miles below, at South Riverside, unimproved fruit land is bringing $150 an acre. The Alessandro tract of orange land, lying both in San Diego and San Bernardino counties, is getting more buyers daily. The first 1000 acres brought $50 apiece, the second tract $75 an acre, and the last piece $100, at which it now stands. At Rialto the past three months $100,000 has been taken in for acreage by the Semi-Tropic Co. All these regions are under water, and excepting Riverside, the rates are merely nominal.

LARGEST ORANGE GROVE.—Riverside, Nov. 5: The contract has been let for planting a 700-acre orange grove at Alessandro. This will be the largest orange grove in the world, the largest at present being that of Seth Richards, at Pomona, of 400 acres.

ORANGES RIPENING.—Riverside *Press and Horticulturist*, Nov. 8: The oranges are just beginning to show a slight tinge of color on the side nearest the sun. In a few weeks the "apples of gold" will hang thickly in their yellow beauty amid the glossy green leaves of the trees. Even the Navels, which were supposed to have dropped nearly all their fruit during the hot spell in May, will surprise their owners with the crop they will bear.

SCALE-DESTROYING APPARATUS.—Riverside *Press and Horticulturist*, Nov. 8: The apparatus for destroying scale, ordered by the Board of Trustees for the use of orange-growers, is under way and will soon be finished. There will be two tents—one suspended at each end of a horizontal beam extending from a tall structure on a wagon, so that the wagon can be driven between a row of trees and two of them treated at the same time. The cost of entirely eradicating all scale on a tree will be from 20 cents to $1 each. This gas process is entirely harmless to the foliage and fruit, but is sure death to all insect life.

Santa Cruz.

APPLE SHIPMENTS.—Santa Cruz *Sentinel*, Nov. 8: The apple-packers of the Pajaro valley are about through picking fruit for the season. They are making good shipments to Mexico, New Zealand and other countries.

SUGAR BEETS RUNNING SHORT.—Watsonville *Pajaronian*, Nov. 6: The supply of beets at the factory is running short. There is a large portion of the Moro Cojo ranch crop undelivered, but the daily shipments therefrom are not sufficient to supply the demands of the factory.

San Luis Obispo.

NEW GRAIN SECTION.—Cavisa Plains Cor. San Miguel *Courier:* The first plow was started four years ago next month. The first harvest was a small affair, and it was considered by many an accident that we raised anything at all; but now we claim to have as good a grain country as this State can boast of. Our harvest this year amounted to a little more than 10,000 sacks of as fine grain as was ever grown in this or any other State.

Shasta.

TREE-PLANTING.—Anderson *Enterprise*, Nov. 6: It is the intention of Mrs. Owens, who purchased the Logan Ferry Farm of 1100 acres, to plant 100 acres of fruit trees this season and in due time plant all of the 400 acres of river bottom to orchard.

Solano.

AN INDUSTRY OF THE FUTURE.—Dixon, Nov. 8: The common black walnut tree of which there are so many in Northern Solano promises to become an article of commerce in a few years, when they shall have become fully matured. Most of the trees in this vicinity are quite young and the size of the trunk is not sufficient to make it valuable for lumber. The well-known Solano pioneer, J. R. Wolfskill, planted some walnut trees in the early 'forties, shortly after his arrival in the valley. A couple of years ago, he felled a couple of these trees and shipped the logs to a furniture factory in San Francisco. They were returned to him in the shape of a chamber set, the equal of which in beauty and solidity cannot be found in the State. It will thus be seen that a grove of a few acres of these trees planted on the waste land which cannot be utilized for any other purpose, will in time become a valuable piece of property.

A SQUIRREL EXTERMINATOR.—Dixon *Tribune*, Nov. 8: The following method is suggested as a most successful one for the extermination of gophers and squirrels, the most dangerous rodents with which farmers in this locality are troubled. Take a five-gallon can, cut the top off, put in a little cold water and insert a stick of phosphorus. Then gradually pour in hot (not boiling) water and stir with a stick until the can is full. The water should be just hot enough to melt the phosphorus gradually. As soon as the phosphorus is melted, stir the water briskly, while two pounds of sugar are added. Cornmeal and flour, half and half, is then added, sufficient to make a thick batter. Stirring is continued while wheat is put in until the batter is quite stiff. Fifteen to twenty drops of oil of rhodium is put in at the same time as the wheat. The water will be absorbed by the grain and the mass will become hard. Pieces, the size of a hickory nut, are chipped off as desired and put in the main runs of the gopher. The odor will attract the rodents from a long distance and the least nibble is sure death. One piece is sufficient to destroy an entire family.

Sonoma.

DAIRY INTERESTS.—Santa Rosa *Republican*, Nov. 7: From present indications there will soon be a revival in the dairy interests of the county, especially in the prices of dairy products. The wet, favorable weather of last winter and spring made green feed abundant, and on that account there was an oversupply of all dairy products, causing a decline in prices to almost a ruinous point to those engaged in the business. It is learned from interviews with some of our largest dairymen that feed is now very short and of such a character that but little of the lacteal-giving properties is contained in it. The consequence is that but little milk is afforded for the manufacture of butter and cheese. In fact one dairyman, who has nearly a hundred cows, stated that last week from his dairy he obtained little more milk than would be required for his coffee. The price of all dairy products is sure to advance from this cause, and when the rains come and green feed again starts the dairymen will certainly have the advantage of a better market.

Sutter.

SHEEP IN VINEYARDS.—Yuba City *Farmer*, Nov. 7: W. P. Smith brought his sheep from Yuba county last week and turned them into the vineyard of Joseph Peters below Yuba City, where there is excellent forage for them. After the grapes are taken from the vines or in young vineyards, the sheep at this time of the year crop the leaves and tender shoots, destroying the vine pests to a certain extent and clearing the way for the pruning shears. The sheep do well in the vineyards, which make good pasture when feed is scarce elsewhere.

CROP NOTES.—Yuba City, Nov. 9: Henry Best has recently finished harrowing 300 acres with his traction engine, going over the ground twice, harrowing 120 acres per day. Crops in No. 70 are about all harvested and seeding will soon begin. The land is in an excellent state of cultivation.

Tulare.

IRRIGATION CANAL WORK.—Traver *Advocate*, Nov. 7: The Poso Irrigation District, embracing 39,000 acres in the northern portion of Kern county, started a force of 100 men and 200 head of stock recently on a canal 25 miles long, a large dam and a number of reservoirs. The district includes a very fertile tract of country, which, with the completion of the canal, will become very productive and valuable. The work will be pushed to a speedy completion. Improved machinery has been

provided. Mr. Peacock, superintendent of the 76 Canal for Alta Irrigation District, says that quite a force of men and teams is at work cleaning out and repairing the main canal. The force expects to finish up its work on the main canal by next Monday and then will move down this way and clean out the McClanahan and other branches of the canal. Mr. Peacock says he expects to have the canal ready to receive water in about two weeks.

Yolo.

CATTLE EPIDEMIC. — Woodland *Democrat*, Nov. 8: A remarkable and fatal epidemic among the cattle on Dr. Merritt's ranch is reported. It is said that fat, healthy cattle are stricken with something like itch, and in a short time they bite and tear their legs in a frightful manner. Our informant says that he has not been on the ranch for some days, but up to that time eight or ten had been killed and others were taking the disease. No one seems to know how to diagnose the disease, but call it the "blackleg."

NEVADA.

STRANGE CATTLE DISEASE. — *Lyon County Times:* George Plummer of Mason Valley has a cow that is afflicted with a strange disease. Some weeks ago the animal refused to eat much fodder, and later on her hide began to crack. The hide around the animal's neck and shoulders has now all turned back from the flesh, leaving the flesh exposed and raw. The animal still lives, but other cracks in her hide are appearing. From the cracks the skin rolls back like a piece of burnt leather. It is the most peculiar cattle disease ever known, and no one seems to know what causes it or how to cure it.

GOOD CROPS. — Winnemucca *Silver State*, Nov. 7: The grain and hay crops in Paradise were unusually good this year. The average production of wheat and barley to the acre was about 25 bushels. Probably 20,000 tons of hay were stacked this summer in the valley.

HORTICULTURE.

Small-Fruit Growing in the Fifties.

EDITORS PRESS:—A recent talk with one of our pioneer horticulturists brought out some reminiscences of horticulture that doubtless will be of interest.

In "the early fifties" the demand for small fruits and the seemingly large profits to be made from them, and particularly strawberries, led many to look about for suitable locations for their culture. The sandy loam of Alameda claimed attention and was largely given up to the strawberry—in fact few were cultivated elsewhere in the State at that time.

About 1856 Robert Bryant, associated with a Mr. Jensen of the Santa Clara valley, bought 12 acres in Alameda with the idea of setting out the entire tract in strawberries. This was done in the spring, the plants being obtained of Aug. Haraszthy at Half Moon Bay. Mr. Haraszthy was one of the horticultural enthusiasts of that time and imported the original plants. There were several varieties planted, among others the Black Prince and British Queen, which were favorites at that time. They did well in the sandy soil and yielded abundantly. Pancost was another large grower, having 20 acres or more.

The plan of chest with drawers for marketing the fruit similar to those used at the present day was adopted at that time, but the size of drawer may have been a trifle different from those now used.

The problem of freight and expenses in shipping to the San Francisco market was somewhat different from to-day's quick methods and frequently cut into the profits, although the fruit in good condition brought an average of a dollar and a half a pound and frequently sold for two dollars. WILL C. AIKEN.

St. Helena, Napa Co., Cal.

Horticulture in the Tariff.

Under the McKinley bill a duty of 20 per cent ad valorem is now levied on "plants, trees, shrubs and vines of all kinds known as nursery stock" imported into the United States. They were formerly admitted free. "Orchids, lilies of the valley, azaleas, palms and other plants used for forcing under glass for cut flowers or decorative purposes," are still retained on the free list, and bulbs or bulbous roots, not edible, on which a duty of 20 per cent was levied under the old law, are now placed on the free list. Garden and agricultural seeds, and other seeds not specially provided for, with a few exceptions, still pay 20 per cent ad valorem, although the following are on the free list: Anise, canary, caraway, cardamom, coriander, cotton, cummin, fennel, fenugreek, hemp, hoarhound, mustard, rape, St. John's bread or bean, sugar beet, mangel wurzel, sorghum or sugar cane for seed, and all flower or grass seeds.

These changes are likely to make a very considerable difference in the horticultural business of the country. The admission of bulbs of flowering plants free of duty should largely increase the importation of these plants and stimulate their cultivation in this country. The duty of 20 per cent on so-called nursery stock is likely to have unfortunate results. Some plants, like hardy rhododendrons, hardy azaleas and certain conifers, which require special climatic conditions and much skilled labor to produce to the best advantage, cannot be well grown in this country, and the duty must have the tendency of reducing the number of such plants used here. The retention of the duty on greenhouse plants, which, so far as their production goes, come under the same category as the plants already mentioned, is due to special efforts of the florists of the country. The duty will not affect, probably, the production of forest-tree seedlings in this country, and the only result will be to increase the cost to the planter. American nurserymen have already demonstrated their ability to produce better plants of this class at less cost than they can be imported for from any European country.

The trade in roses will probably be benefited by the duty, as it has been the habit of some Continental growers to glut this market yearly with their surplus and generally badly grown stock, which, under forced auction sales, has demoralized prices and made it difficult to find a market at fair prices for good plants grown in this country or in England.—*Garden and Forest.*

Prune Nomenclature.

EDITORS PRESS:—Mr. Gillet does not seem to appreciate my remarks in RURAL of Sept. 25th. However, as I am sure your readers do not want to read another "tirade" (?) I will content myself by saying: 1st. That as regards nomenclature, Mr. G. agrees with me, as I have for the last six years contended that Robe de Sergent could not be the correct name for the prune generally known as such; and, second, that if Mr. Gillet will compare some of his prunes with mine and any others, and be himself present at the next August meeting of the State Horticultural Society, I am sure he will be welcome and we shall all be mutually benefited. LEONARD COATES.

Napa, Cal.

Fruit Prices.

EDITORS PRESS:—Do you not think there is danger of overproduction in a few years so that the profits will come to a level with that in growing grain? Is there any likelihood of prices for dried fruit keeping at anything near their present condition? E. C. COBURN.

Lake Co., Cal.

[These are questions over which one might argue pro and con almost indefinitely. As our correspondent only asks an opinion, and is at liberty to place his own value upon it, we will say that we are not apprehensive of any such overproduction as he speaks of, of any fruit that can be canned or dried as well as sold fresh. We do not expect that the dried-fruit prices of this year will be maintained, nor is it at all necessary that they should. Growers of fruit can do well enough at much lower figures. EDS. PRESS]

Yellow Jackets and Fruit-Drying.

EDITORS PRESS:—In sun-drying my fruit this season, I have had but one nuisance to combat, and this was a large force of those everlasting gormandizers and double-ended fighting individuals called "yellow jackets." Not alone is the dried fruit devoured by these voracious pests, but nearly the entire crop of grapes destroyed by them.

Knowing that these defiant fruit "jackets" are not peculiar to a single locality, and that some of the many readers of the PRESS may have some efficient method of dealing with them, I thus make inquiry. J. L. LAWSON.

Tres Pinos.

[We would like to have accounts of experience on this subject.—EDS PRESS]

The Citrus Fairs of 1891.

EDITORS PRESS:—The State Board of Agriculture will meet at 3 P. M. on Tuesday, Dec. 2, 1890, for the purpose of selecting locations for the citrus fairs of 1891. All interested are respectfully invited to be present. EDWIN F. SMITH, Sec'y.

Sacramento, Nov. 7th.

Citizens of localities desiring the location of the State Citrus Fairs, one in Northern and the other in Southern California, as provided by law, should heed the above notice and have representatives at the meeting.

How to save money is a problem that interests everybody. One way to do it is to invigorate the system with Ayer's Sarsaparilla. Being a highly concentrated blood medicine, it is the most powerful and economical. It is sold for a dollar a bottle, but worth five.

WOMAN'S INTUITION.

Nearly Always Right in Her Judgment in Regard to Common Things.

An old gentleman over seventy, came into the city from his farm, without his overcoat. The day turned chilly and he was obliged to forego his visit to the fair.

To a friend who remonstrated with him for going away from home thus unprepared, he said: "I thought it was going to be warm; my wife told me to take my overcoat, but I wouldn't. Women have more sense than men anyway."

A frank admission.

Women's good sense is said to come from intuition; may it not be that they are more close observers of little things? One thing is certain, they are apt to strike the nail on the head, in all the ordinary problems of life, more frequently than the lords of creation.

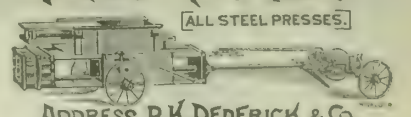
"According to Dr. Alice Bennett, who recently read a paper on Bright's disease before the Pennsylvania State Medical Society, persons subject to bilious attacks and sick headaches, who have crawling sensations, like the flowing of water in the head, who are 'tired all the time' and have unexplained attacks of sudden weakness, may well be suspected of dangerous tendencies in the direction of Bright's disease."

The veteran newspaper correspondent, Joe Howard, of the New York *Press*, in noting this statement, suggests: "Possibly Alice is correct in her diagnosis, but why doesn't she give some idea of treatment? I know a man who has been 'tired all the time' for ten years. Night before last he took two doses of calomel and yesterday he wished he hadn't."

A proper answer is found in the following letter of Mrs. Davis, wife of Rev. Wm. J. Davis, of Basil, O., June 21, 1890:

"I do not hesitate to say that I owe my life to Warner's Safe Cure. I had a constant hemorrhage from my kidneys for more than five months. The physicians could do nothing for me. My husband spent hundreds of dollars and I was not relieved. I was under the care of the most eminent medical men in the State. The hemorrhage ceased before I had taken one bottle of the Safe Cure. I can safely and do cheerfully recommend it to all who are sufferers of kidney troubles."

"Battle of Gettysburg."



The celebrated Panorama of the Battle of Gettysburg and Museum, corner Market and Tenth Streets, San Francisco, is a wonderful production. It has captured the entire State, doing a great deal of good. There is no better way of passing an hour or so, and in studying American history, than by visiting this Grand War Panorama. If any of our readers have not seen it, it will pay them well to do so.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

GRANGERS, STOP AND THINK!

What is the Use of Spending your Coin for a Wood Harrow when you can get the Champion All Steel Harrow? It lasts a life-time by renewing the Teeth for the Same Price.

THE CHAMPION ALL STEEL HARROW

Owning the Patent for the Pacific Coast States and Territories for this, the Best and Cheapest All Steel or Wrought Iron Harrow made (cheapest because it can be made cheaper than any other all steel or iron Harrow). The following are some of the advantages it has over other harrows:

1. It is all made of steel or wrought iron; all of the bars are straight, and are lighter and stronger than bent bars.
2. The teeth are driven into clips which unite the bars rigidly together; every tooth forms a key or wedge; they can be driven out, sharpened, and put back as easily as in the wood harrow.
3. There are no holes in the bars to weaken them; there is NOT ONE BOLT, NUT, SCREWED CLIP or SET SCREW to get loose and twist off when the teeth want sharpening or lightening.

These harrows are made in sections of 15 and 24 teeth each. Buyers can have any size harrow they want. The 15-tooth sections can be used for vineyard and orchard. We also furnish, when ordered, the Patent Side-hill Attachment to draw bar for side-hill harrowing—which is very important for side-hill work, as a harrow will not cut the same both ways on a side-hill without changing the draft at the turn. With this arrangement it changes and adjusts itself by turning the team.

Price List:

15-Tooth Section, weighs 40 lbs., cuts 3 feet	$ 8.00
24 " " " 70 " " 4 "	11.00
Draw Bars and Connections for 3-15 Tooth Sections	3.00
" " " " " 3-24 Tooth Sections	4.00
For each additional Section more than above described	1.00

Remember these harrows are no experiment. There have been over 25,000 sections sold in the Eastern States and Canada in the last five years, and more of them sold here in the last two years than any iron harrow in the market. Send your orders to

SAVE WOOD AND AVOID FIRE.

FARNHAM'S

PATENT

Stovepipe Drums.

It is a perfect SPARK ARRESTER as well as a FUEL-SAVER. Not a spark can escape through the pipe when the damper is properly turned, and for this reason alone, should be on every stove.

It is especially adapted to cooking stoves. If the oven is slow to heat, the drum will correct this fault, throwing more heat around the oven It will last from 10 to 15 years. Parties desiring can give it a fair trial on their stoves before purchasing.

This drum is sold at the modest sum of $5 and is warranted to give ENIIRE SATISFACTION. For further particulars apply to

The Whole Country Needs Fertilization

ADMONITION TO FARMERS!

GUAYMAS, MEXICO, September 9, 1890.

R. B. CUNNINGHAM, ESQ., Agent Mexican Phosphate and Sulphur Company—DEAR SIR: In answer to your inquiries as to the value of phosphates for worn-out lands, I will state that it is my opinion the lands of the older settled portions of California afford a good field for the use of phosphates These lands have been cropped for years without any restoration of the chemical constituents necessary for an abundant crop. They therefore show plainly that they need assistance artificially to produce crops good in quantity and quality, let the crop be whatever it may.

Take, for instance, San Joaquin and Santa Clara valleys, and what do you see? Many crops that are so imperfect in quantity and quality that the eye at once detects the defect. The only relief that can be resorted to must be infused into the soil to replace the chemical properties that have been extracted by previous crops, and the writer is of the opinion that a liberal supply of phosphates will accomplish this.

The attention of the cultivators of the soil is sharply turned to rotation of crops, hoping thereby to get wealth out of their lands without fertilization. Some have turned their attention to beet cultivation in soil worn out by other crops. Beet or other seeds will not grow successfully unless the soil will nourish them.

This summer I saw several crops of beets on excessively cropped lands, the majority of which showed that there was something wanting to complete the plants to ample size and in quantity that should be expected of sugar beets under favorable circumstances. If a good crop is not obtained, there is deficiency in profit. It costs as much to cultivate soil deficient in chemical properties as it does if ample nutrition was in the soil. Under the former condition a deficient crop is certain, while under the latter condition he may reasonably expect an ample crop with profit.

Fields often are allowed to go to weeds, supposing thereby to enrich the soil. This is an uncertain method and not profitable. Your weeds have grown up and seeded: the dead stems can only add a limited addition to fertilize the soil, while the seeds of the same will cause much expense to exterminate them from the future crops. Besides, while thus only weeds as a crop, no profit was realized, while if a supply of phosphates had been applied to the soil, a profitable crop of beets or corn would be had. Besides, the weeds would have been exterminated during the cultivation of the said crop I am, Sir, your obedient servant,

EDWARD PALMER, M. D.

THE MEXICAN PHOSPHATE AND SULPHUR CO.

Manufacture three grades of this Superior Fertilizer of the following analyses:

GUARANTEED ANALYSIS.	Brand [A] for Sugar Cane, Sugar Beets, Etc.	Brand [B] for Grain, Gardens, Lawns, etc.	Brand [C] for Fruits, Vineyards, Etc.
Phosphoric Acid	10 to 11 per cent.	15 per cent.	12 per cent.
Potash	9 to 10 "	2 "	5 to 6 "
Ammonia	3 to 4 "	2 "	3 to 4 "

And will sell in lots to suit.

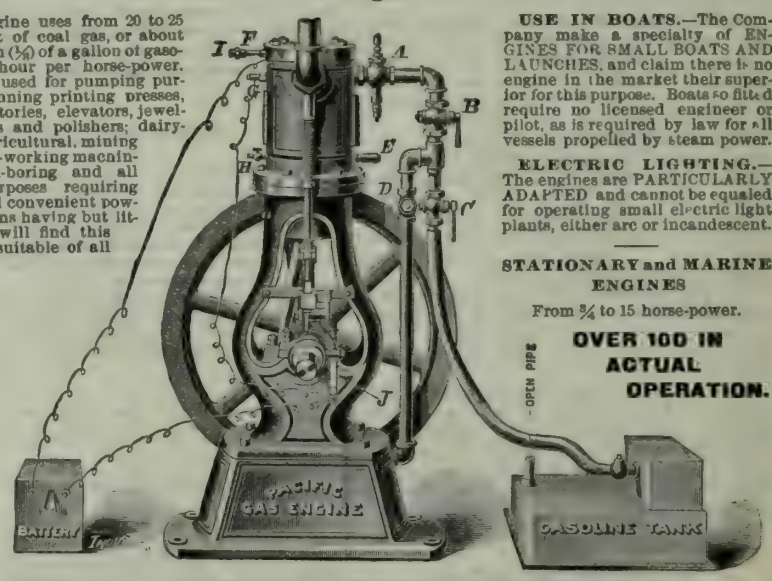
THE



PACIFIC GAS OR GASOLINE ENGINE.

PATENTED JUNE 17, 1890 — NOS. 430,504, 430,505, 430,506.

Also in Great Britain and other foreign countries.

Starts Instantly Without the Necessity of Boiler, Fire or Experienced Engineer.

The engine uses from 20 to 25 cubic feet of coal gas, or about one-eighth (⅛) of a gallon of gasoline per hour per horse-power. It can be used for pumping purposes, running printing presses, small factories, elevators, jewelers' lathes and polishers; dairymen's, agricultural, mining and wood-working machinery; well-boring and all other purposes requiring cheap and convenient power. Persons having but little space will find this the most suitable of all motors.

USE IN BOATS.—The Company make a specialty of ENGINES FOR SMALL BOATS AND LAUNCHES, and claim there is no engine in the market their superior for this purpose. Boats so fitted require no licensed engineer or pilot, as is required by law for all vessels propelled by steam power.

ELECTRIC LIGHTING.—The engines are PARTICULARLY ADAPTED and cannot be equaled for operating small electric light plants, either arc or incandescent.

STATIONARY and MARINE ENGINES

From ¾ to 15 horse-power.

OVER 100 IN ACTUAL OPERATION.

READ THESE TESTIMONIALS.

ALAMEDA, April 8, 1890.

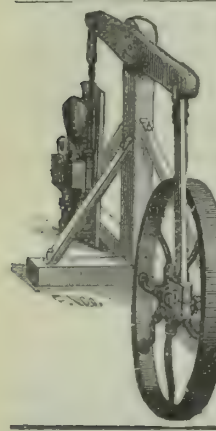
PACIFIC GAS ENGINE CO.—GENTLEMEN: Permit me to add my testimonial to the many you have received indorsing your engine. As you are aware, mine was a Regan engine which gave me considerable trouble. I had to remove the head and raise the tappet valve every time I wanted to start the engine. I sent you the engine; you removed all the Regan appliance except the cylinder and stand. You put in your appliances, head, starting device, inlet valve, and, in fact, changed it to the Pacific Gas Engine, which now works splendidly I have not had to remove the head for any cause since you made the change (over two months). It gives me no trouble: my boy, 14 years old, attends to it.

The change from the Regan to the Pacific is a decided improvement. I can also get a third more power since the change, and I cheerfully recommend your engine as being simple, effective, and cheap. Respectfully yours,

B. S. HILL, S. W. Cor. Encinal Ave. and Morton St.

MAYFIELD, March 26, 1890.

PACIFIC GAS ENGINE CO.—We have given your little 1-H. P. engine a splendid advertisement. A fire broke out at 2:30 o'clock this morning, in a tenement house on my premises. I started the engine, connected the hose, and by its use saved at least $3000 worth of my property. I saved my blacksmith shop lying 12 feet from the burning building, my barn and my dwelling. Three times the fire started in these buildings, and I extinguished it every time. The engine never faltered, and threw water between 50 and 60 feet high. The whole town was astonished, and they acknowledged that I saved at least $20,000 worth of property.



A fire department is being organized here, and I think they will have one of the engines on a truck for fire purposes. *They cannot be beaten.*

Hoping that all of your customers will be as well pleased with the engine as I am, I remain, Yours truly,

JOS. P. PONCE.

The Fig.

(*Concluded from page 411*)

success of the fruit crop greatly depends upon the method of pruning.

It has often been claimed that the fig tree never bears when once pruned; this is, to a certain extent, correct, but the real cause is entirely owing to immaturity of the wood, caused by pruning, which fails to produce fruit, or to the fruits being produced and failing to ripen, as shown in Fig. 5. If the fruit-bearing shoots (Fig. 6) are cut back, the first crop of fruit is destroyed.

Fig trees having non-bearing shoots, as shown in Fig. 7, can be pruned without any loss of fruit. If a fig tree is pruned to any extent, there will be a loss of the crop; however, such operations at times must be performed to keep the trees well balanced and within form, although this only affects the crop of one season. After the tree has been properly balanced and shaped, whether high or low, then pruning can be effected the following year with a certainty of a crop the same season; in such case the shoots, as represented in Fig. 6, must not be cut, excepting just a few here and there to keep the tree well balanced.

All such shoots which bear only wood buds, as shown in Fig. 7, should be cut back, and, if necessary, cut out entirely, as they only take away nutritious sap which should flow into the fruit and into the fruit bearing wood. Branches of almost any age or size can be cut off from any part of the tree, and young shoots will be produced quite freely, as shown in Fig. 8, but the cuts or wounds should always be covered with grafting wax or rubber paint, which helps them to heal over, and protects the stock from the action of the atmosphere. If too many shoots are thus produced, they can be reduced when young to the required number.

Formation of the Tree.

The proper formation of the tree next presents itself for consideration, with a view to the simple production of fruit. The formation of the tree with such a view requires the exercise of knowledge and understanding. All fruit trees which naturally assume a bushy form should have their energies confined to a single stem, with the head of the tree of whatever character formed thereon, and they always prove the most fruitful. When a number of shoots are allowed to spring from the root, all striving to outstrip one another, a huge, unshapely bush is the result. Fig trees, as a rule, produce suckers (shoots from the roots) in abundance, which, even if they have a fine, healthy appearance, should not be allowed to remain; they produce no fruit and only crowd up and rob the parent stem. The confining of the plant to a single stem is of the utmost importance for the production of fruit of nearly all fruit trees, and is especially so with the fig.

The trees can be trained either with high or low trunks, after once being formed; pruning then becomes less, requiring only thinning out and occasional shortening of some of the branches. The pruner has, however, great difficulty in contending against the over-luxuriance of growth of trees grown on damp soil. In such cases, it is necessary that the pruner should guard against over-luxuriance, by keeping the shoots on the tree thin and well exposed to the full influence of the direct rays of the sun. The trees should also be prevented from extending beyond bounds, even if heavy cutting has to be resorted to. Where trees grow under such conditions (too luxuriantly) the young, growing shoots should be vigorously pinched back through the summer, in order to check luxuriance and bring the tree into a stubby, fruitful form of growth.

Production of Fruit.

The first crop of the fig is borne on the wood of the previous season's formation, as represented in Fig. 6, the young embryo fruit being shown at *a*. That of the second or succeeding crop is produced in the axils of the leaves on the wood of the current season's formation. Fig. 5 represents the remnant of the last crop of figs of the previous season as they are to be seen frequently on the trees after the fall of the leaves in autumn. They are the late fruit of the past season which failed to arrive at maturity, perhaps through want of heat or the proper conditions required at that time. This fruit is not worth consideration; sometimes a few, under very favorable conditions, remain on the tree and ripen, but this, however, is very seldom. Fig. 7 represents a shoot having no fruit buds upon it, only wood buds.

These three figures represent the different characters of shoots, with the position of the fruits, buds, etc., as they are commonly seen on fig trees in the dormant period during winter-time. When a tree ripens its wood in its best conditions, healthy shoots, as shown in Fig. 6, are found most plentiful; on the contrary, when a fig tree is grown under conditions unfavorable to its culture, such feeble growth or shoots as shown in Fig. 7 will predominate.

AN ALL-STEEL HARROW.—Mr. J. Stanley of Mission San Jose has an attractive advertisement in this issue of the Champion all-steel harrow, with an engraving which shows the trim and simple form of the implement. These harrows have been widely used and approved. They can be seen at 957 Broadway, Oakland, or at the well-known place of Burge & Donahoo, 7 and 9 Main St., as well as at Mr. Stanley's factory at Mission San Jose.

Notes of the Fairs.

Redding—27th District.

The annual fair of the Shasta County Agricultural Association was formally opened at Redding, Tuesday evening, Sept. 23d, with an address by Vice-President Shanahan, a large audience being present.

The *Free Press* of that week says: "The exhibition fully equals any one made in previous years, and is considered by many even better. There is plenty of room in Armory hall, hence a display is made to better advantage than formerly. The varieties of apples and grapes are especially remarkable. The grape display of Louis Schneider and of the Fish Bros. (F. W. Fish & Sons) cannot be excelled anywhere. The former has on exhibition a bunch of grapes weighing 5½ pounds. The display of fancy articles is a fine one, and flowers are abundant and nicely arranged. Geo. Groves has a splendid exhibition of flowering plants from the Del Monte gardens. The showing of canned fruits and fruit in jars is quite extensive.....There is very little live-stock on exhibition. Mrs. George introduced quite a feature with her incubator and brood of small chicks just hatched out."

From among the numerous entries we take as characteristic those of two or three exhibitors who won many of the premiums:

Sol Hufford—Forty-nine varieties apples, 6 of peaches, 6 of pears, 1 plums, 1 quince, 1 figs, 4 of grapes, 1 of ground cherry, 2 of tomatoes, pumpkins, muskmelons, mangel wurtzel beets, red table beets, carrots, cucumbers, cabbage, potatoes, onions, 6 of beans, 3 of string beans, 5 of corn, Egyptian corn, turnips, peppers, onion sets, dried corn, hops, barley, alfalfa, 2 var. broomcorn seed, sunflower, plum pie fruit.

W. H. Myers—Four varieties of wheat, barley, oats, popcorn, 9 of corn, broomcorn seed, 7 of beans, 12 of squash, 2 of watermelons, 8 of sun-dried plums, prunes, apples, peaches, pears, blackberries, string beans, pressed figs. Seeds—onions, turnips, 2 of beets, radishes, 4 of potatoes, cabbage, sweet potatoes, cucumbers, carrots, pressed hops, hops on vine, green peas, beans, 3 of tomatoes, 25 varieties apples, 6 of pears, 6 of peaches, honey in comb, butter in roll, bacon, almonds, 4 var. walnuts, peanuts, 3 of grapes, 22 of canned fruits, 7 of preserves, 4 of jelly, 8 of pickles.

J. N. Logan—Watermelons, muskmelons, carrots, 2 var. onions, cucumbers, 3 var. potatoes, beets, 13 var. apples, 4 of peaches, 1 of prunes, 4 of plums, 3 of grapes, 1 of figs, 1 of blackberry, egg plants, 2 var. green peppers, 1 of sweet corn, 1 of tobacco, 1 of tomatoes, 1 of cabbage, 1 of string beans, 1 of corn, 3 of dry beans, 2 of popcorn, 1 of bamboo, 2 of wheat, 1 each of barley and oats, 1 of walnuts, 3 of almonds, alfalfa, evergreen millet, summer squash, pumpkins, Egyptian corn, turnips, butter, bacon, lard, 8 var. canned fruit, bottle vinegar.

In looking through the list of awards, we notice that the best draft stallion three-year-old was exhibited by John Dexter, and the corresponding mare by M. T. Kite, who also took four prizes for Jersey cattle, three for graded cows, and three for chickens. J & C Diestelhorst had four premium Holsteins; R. M. Bates, Bronze turkeys, and Ben Oliver, China geese and Pekin ducks.

There was no racing this year, but there appears to have been no lack of interest in the occasion.

San Bernardino—28th District.

The second annual fair of the 28th Agricultural District opened at San Bernardino Tuesday, Oct. 21st, with a very good attendance, and had a fairly successful run during the week.

The new pavilion being incomplete, a hall in the Harris block was used for the indoor exhibits, while the stock show and races took place at the new Cole track, about three miles southeast of San Bernardino on the Redlands motor road.

The *Times-Index* says that on Thursday morning there was a goodly gathering at the track to witness the stock parade. "There were a large number of ladies present, and they were as well pleased with the horses, cattle and pigs as were the gentlemen. The display was not large, but there were some very fine specimens of thoroughbred colts, mares and stallions, also some fine cattle and pigs."

The Riverside *Press* pronounced the display of poultry (made in the rear of the hall), which included White Holland turkeys and Light Brahma, Plymouth Rock, White and Brown Leghorn, Buff and Partridge Cochin and Black Minorca fowls, "very fine."

There were also different kinds of agricultural implements to be seen on a vacant lot near the building.

At the baby-show Friday afternoon, there were 110 babies on exhibition, and the opera-house was packed so that standing-room was scarce.

The *Citrograph* remarked: "The exhibit at the hall is a very good one, but not one-fourth as large as it should be. The apple exhibit—especially James Birch's—was exceedingly fine. The dried-fruit show was very good, probably the best ever seen in the county. The honey display was also good. The balance, with painfully few exceptions, was very ordinary....The fact is, fairs in South California in the fall of the year are all wrong. It is not our season. It is too late or it is too early. The 'agricultural hoss-trot' absorbs entirely too much money and attracts a very large following of exceedingly undesirable hangers-on. Our fairs should be held in March or April; then our citrus fruits and our magnificent flowers are both in their prime. Dried fruits can be shown then as well as in the fall. Apples and pears are even better than earlier because fully ripened. Let us have a fair about the 20th of March, divorce the 'agricultural hoss-trot' altogether, put up money premiums sufficiently large to warrant men and women to take some trouble to preserve fruits and flowers, and the thing will be a success."

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

FOR WEEK ENDING NOV. 4, 1890.

439,992.—TREADLE PUMP — W. H. Anderson, Riverside, Cal.

439,832.—OPERATING KEYS OF GAS CHANDELIERS—R. F. Bridewell, S. F.

440,003.—WRENCH — W. S. Bunch, Marshfield, Ogn.

439,741.—WIRE SUSPENSION BRIDGE — H. C. Carmack, East Portland, Ogn.

439,812.—MINING—J. W. Crites, S. F.

439,933.—DITCHER AND CULTIVATOR — O. T. Davies, Brighton, Cal.

439,744.—DUST PAN ATTACHMENT — Dean & Earle, S. F.

439,815.—BARREL STAND—H. H. Fisk, Florence, Ogn.

439,649.—CIGAR HOLDER—A. Fritschi, Suisun, Cal.

439,940.—OPERATING ELEVATOR GATES — W. H. Golder, Portland, Ogn.

439,941.—STATION INDICATOR —L. Goldstone, S. F.

439,820.—MACHINE FOR MAKING SHELLS—Chas. D. Kennedy, California City, Cal.

439,959.—TELEGRAPH KEY—W. A. J. Kohrn, S. F.

440,047.—HARROW—H. L. Mack, Ellensburg, Wash.

439,966.—YARN-DYEING APPARATUS—W. Maybury, Pasadena, Cal.

439,823.—OPERATING SHUTTERS FOR ELEVATOR SHAFTS—Ranlet & Provost, S. F.

439,687. — WASH-BASIN DISCHARGE — J. W. Reid, S. F.

439,897.—CAR COUPLING—P. W. Ross, Los Angeles, Cal.

439,902.—HOSE COUPLING—F. E. Sharon, S. F.

439,982.—CAR COUPLING—J. L. Stillman, Fresno, Cal.

439,909.—RUBBER SHOE — John Taggart, San Diego, Cal.

439,755.—WINE-SCHOONER—L. Wagner, S. F.

439,989.—CHAIR ATTACHMENT—A. M. Whiteley, Sacramento, Cal.

439,917.—WATER-BACK FOR GAS STOVES—W. H. Wiester, S. F.

The following brief list by telegraph for Nov. 11, will appear more complete on receipt of mail advices:

California—Louis Benussi and K. and C. Dondero, S. F., preservative; William C. Dillingham, Los Angeles, combined job and news galley; William Fay, Oakland, carpet-cleaning machine; William H. Gunsolus, Sutter Creek, water-wheel; Silas Harris, S. F., upsetting machine; Byron Jackson, S. F., centrifugal pump; Willie C. Keithly (assignor of one-half to J. Farnham), S. F., adjustable picture-frame hanger; Ellsworth D. Middlekauff and C. D. Harsin, Stockton, gate; William W. Sherman, S. F., self-closing gas-burner; Henry Thibault, S. F., sickle-grinder.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

The Horse Sale at Souther Farm.

Gilbert Tompkins, the well-known breeder of Souther Farm, announces in our advertising columns his first sale of horses, of which an interesting descriptive article appeared on page 403 of our last issue. The Souther Farm is a fine estate near San Leandro, Alameda county, upon which breeding has proceeded upon enlightened principles for nearly four years, and the farm has become overstocked. On Thursday, Nov. 20th, practically the entire produce of the farm will be sold, the only exceptions among the young stock being two or three fillies reserved for brood mares and all of the foals of 1890, which are too young for present sale. The entire Souther Farm collection of brood mares will be sold, saving and excepting a few that are not in condition to place on the market, besides three or four kept for road use. Among this collection of brood mares are some of the best and most fashionably bred, and there are a great many individuals that produce good colts. The produce of almost every mare offered will be shown in such a manner that purchasers may judge for themselves of the worth of the mares. The purchaser will find a fine lot of young fillies by well-bred and fast stallions to breed up with.

Mr. Tompkins assures us that every animal offered will be sold without reserve, limit or by-bidding, and it will be a long time before those who are looking for brood mares will have a better opportunity of purchasing first-class stock at exactly what they will bring when fairly and squarely offered at public sale.

RABBIT PROOF AND STOCK FENCE CHEAPER and better than ever. See Judson Mfg. Co. advertisement, page 427 Their 2-foot fence is especially cheap and strong. By putting ordinary fencing above, it will turn anything.

ELLIOT'S PARCHMENT PAPER, now so popular among the Eastern dairymen, is offered in our columns on liberal terms to introduce it to our readers. Send for a sample box, which is free, and test it. We want all the best things in dairy use.

So far this year Chicago's real estate sales foot up $275,000,000.

FALL IMPLEMENTS.—Baker & Hamilton of this city and Sacramento have just issued a special catalogue of "Fall Implements," 1890, which relates especially to plows, harrows and seeders, and they have so many styles of these valuable implements that it requires 64 large pages to contain the information about them. The catalogue should hang in every farmer's toolhouse.

The Lady Godiva must have had exceptionally long hair since it completely concealed her lovely person. Since Ayer's Hair Vigor came into use such examples are not so rare as formerly. It not only promotes the growth of the hair, but gives it a rich silken texture.

RANCH MANAGER OR FOREMAN.—Albert H. Benson, Berkeley, Cal., advertises in another column for a position as manager or foreman of a ranch. He is practically acquainted with farming and has had wide experience in responsible positions, as his references show.

CALIFORNIA FRUITS

— AND —

HOW TO GROW THEM.

A MANUAL OF METHODS WHICH HAVE YIELDED GREATEST SUCCESS; WITH LISTS OF VARIETIES BEST ADAPTED TO THE DIFFERENT DISTRICTS OF THE STATE.

A NEW BOOK.

BY EDWARD J. WICKSON, A. M.,

Lecturer on Horticulture, University of California; Horticultural Editor PACIFIC RURAL PRESS, San Francisco; Secretary California State Horticultural Society; President California State Floral Society; President S. F. Microscopical Society.

Contents.

PART I: GENERAL.—The Climate of California and its Local Modifications; Why the California Climate Specially Favors the Growth of Fruits; The Fruit Soils of California; The Wild Fruits of California; California Mission Fruits; Introduction of Improved Fruit Varieties.

PART II: CULTURAL.—Clearing Land for Fruit; The Nursery; Budding and Grafting; Preparation for Planting; Planting the Trees; Pruning Orchard Trees; Cultivation; Fertilizers for Fruit Trees and Vines; Irrigation of Fru Trees and Vines.

PART III: ORCHARD FRUITS.—The Apple; The Apricot; The Cherry; The Peach; The Nectarine; The Pear; Plums and Prunes; The Quince.

PART IV: THE GRAPE.—Rise and Progress of the Grape Interest; Propagating and Planting Vines; Pruning and Care of the Vine; Grape Varieties in California.

PART V: SEMI-TROPICAL FRUITS.—The Date; The Fig; The Olive; The Orange; The Lemon, Lime, etc.; Minor Semi-Tropical Fruits.

PART VI: SMALL FRUITS.—Berries and Currants.

PART VII: NUTS. Nut-Growing in California.

PART VIII: FRUIT PRESERVATION.—Fruit Canning, Crystallizing and Drying.

PART IX: FRUIT PROTECTION.—Injurious Insects; Suppression of Injurious Animals and Birds; Protection from Winds and Frosts.

PART X: MISCELLANEOUS.—Melon Growing; Fruit Packages.

Improved Ranch
FOR SALE.

Artesian, Raisin and Fruit Lands.

Located seven miles southwest of Tulare City and three miles from Tokay Switch on the Southern Pacific Railroad. It is centrally located in the artesian belt of Tulare county, and has one flowing well, capable of irrigating 100 acres, the depth to the main flow being only 308 feet. The water is soft for washing, healthful to drink and contains no substance injurious to vegetation. A reservoir of one acre, surrounded with handsome trees, receives the water from the well. Several ditches carry it in different directions on to the land.

The whole 160 acres (quarter-section) is unusually level, is entirely enclosed with fencing, and cross-fences partition the land into several enclosures for pasturage purposes.

The improvements consist of a modern styled, two-story, hard finished house, containing seven rooms, with walled cellar, kitchen and porches additional, surrounded with elegant shade trees, etc.; a large barn, storehouse, blacksmith shop, windmill, sheds, stables, etc.

In front of the place is a row of about 40 well-grown elm and Carolina trees. There are eight acres of orchard and vineyard, mostly in bearing, 30 acres of alfalfa, several miles of ditches and 40 acres of land checked and leveled.

The soil is dark Tulare lake bottom land, very productive, grows all kinds of tropical and semi-tropical fruits, except apples, and is especially adapted to the growth of alfalfa and for stock range. Water of good quality is found at ten feet from the surface. There are three surface wells on the place.

The climate is as healthful as any part of the Sacramento or San Joaquin valleys. Adjoining lands are supplied with water for irrigation from Elk Bayou, a never-dry stream, lying one mile from these lands, and water can be had on the land from the same source.

The simple fact that abundance of artesian water can be had so cheaply on this land will soon make the water alone worth more than the land is now offered for.

The owner (not being a farmer) is determined to sell at the best price offered soon. The land is under cultivation, except necessary pastures. Terms easy.

Three hundred and twenty acres of improved land adjoining will also be sold cheap and on easy terms, in tracts of 40 acres or upward, to suit.

Also 160 acres just outside of Tulare City limits, surveyed out in five-acre lots. The whole will be sold for cash for much less than its real value if applied for soon.

Call on or address E. M. DEWEY, Porterville, or A. T. DEWEY, 220 Market Street, San Francisco.

Breeders' Directory.

8 lines or less in this Directory at 50c per line per month.

HORSES AND CATTLE.

PERCHERON HORSES.—Pure bred horses and mares, all ages, and guaranteed breeders, for sale at my ranch near Lakeport, Lake Co., Cal. New catalogue now ready. Wm. B. Collier.

POULTRY—Nearly all Varieties.

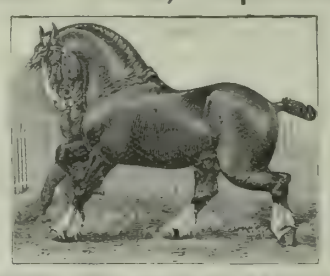
Third Edition POULTRY & STOCK BOOK, 50 cents by mail postpaid. Thirteen years experience on this coast.

Address: **WILLIAM NILES, Los Angeles, Cal.**

THE BEST FENCE YET!

Cheap, Durable, Portable and Safe.

THE SPALDING HUMANE WIRE FENCE is composed of eight No. 12½ galvanized steel wires, woven into four cables of two wires each; interwoven every five feet is a corrugated iron stay or guard, and held in place by the cables, thereby holding the cables firmly in place, preventing them being spread apart and letting stock through. The stays or guards are corrugated and an inch and three-quarters in width, making the fence as visible as a board fence, which is **a very essential point.** Write for circulars and prices. Address **BIRD-TURNBULL MFG. CO., 195 La Salle St., Chicago.**



MANHATTAN STOCK FOOD.

Saves One-Quarter of Grain Feed.

KEEPS STOCK AND CATTLE HEALTHY. Recommended by Andy McDowell, Sam Gamble, Count G. Valesin, B. C. Holly, John Wieland Brewing Co., Z. Birdsall, Superintendent of Wells, Fargo & Co.'s Stables, and thousands of others. Ask your Dealer or send to 623 Howard St., San Francisco, Cal.

Alameda County Fine Stock Farm.

MOHR BROS., Proprietors.

THE GARRETT FENCE MACHINE

— IS FOR CONSTRUCTING —

A New and Durable Fence

By weaving Pickets and Wire to Posts set in the field. It is not excelled by any other machine for Ease, Speed, and Perfect Work; 40 to 60 rods per day can be put up. The wire for a 3 or 5 (2) strand cable can be bought for from 11 to 25 cents per rod. The Garrett Fence is noted for simplicity of construction, durability of all its parts, perfect tension device, and great saving of labor and money in its construction. The machines are manufactured in Ohio, and thousands are now in use in the United States. The Fences made by them are the best, cheapest and most desirable Farm, Orchard and Vineyard Fences that can be made. The best galvanized annealed Steel Wire can be furnished at the lowest market price The machine, with the Little Giant Post Hole Digger, Wire Stretcher and Wire Cutter, etc., complete, costs about $25, with a discount where we have no local agent. Two men (or man and boy) can dig the holes, weave the wire to the pickets and posts, and easily complete the construction of the fence. Send for circulars and testimonials Address K. C. DUSSENBERG, 430 Pine Street, San Francisco, General Agent Pacific States.

S. F. Market Report

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Nov. 12, 1890.

General business after election resumed its natural bent, only to be interrupted by close money markets at the East and in England. In New York several failures were reported which unsettled affairs still more. There is not enough money for business requirements, consequently large speculators can pool their interests and bring about any movement desired to add more to their wealth. Free coinage of silver is the only remedy. Wheat at home and abroad stood up remarkably well, considering the close stringent money markets. The following is to-day's cablegram:

LIVERPOOL, Nov. 12.—Wheat—Quiet but steady. California spot lots, 7s 5d to 7s 7½d; cargoes off coast, 38s to 38s 6d; just shipped, 37s 6d; nearly due, 38s; cargoes off coast and on passage, steady; Mark Lane wheat, English, firm and foreign quiet; French country markets, quiet; wheat and flour in Paris, quiet.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per ctl. for the past week:

	Nov.	Dec.	Jan.	Feb.	Mar.	April.
Thursday	7s7½d	7s8d	7s8¼	7s8¼	7s7½d	7s7½d
Friday	7s7¼	7s8¼	7s8½d	7s8¼	7s8d	7s7½d
Saturday	7s7½d	7s7¼	7s7½d	7s7½d	7s8¼	7s7½
Monday	7s7½d	7s7½d	7s7½d	7s7½d	7s7d	7s7d
Tuesday	7s7d	7s7½d	7s7½d	7s7½d	7s6½d	7s6½d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday	38s0d	37s9d	37s9d	Easier.
Friday	38s3d	37s9d	37s9d	Steady.
Saturday	38s3d	37s9d	37s9d	Quiet.
Monday	38s3d	37s9d	37 9d	Steady.
Tuesday	38s0d	37s6d	38s0d	Quiet.

Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

Day.	Nov.	Dec.	Jan.	Mar.	May.	July.
Thursday		106¾	107¾	109¾	110⅝	
Friday		105¾	106¾	....	110⅝	103½
Saturday	103½	104⅛	105¾	....	110⅝	....
Monday	103½	104½	105¾	....	108½	....
Tuesday	103⅝	104½	104¾	....	108½	....

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

Day.	Dec.	May.	June.	July.
Thursday	101¼	107	....	....
Friday	98⅞	105½	....	....
Saturday	98⅝	105	....	....
Monday	97¾	104⅞	....	....
Tuesday	98¼	104⅝	....	....

NEW YORK, Nov. 12.—Wheat—$1.06 for cash, $1.04⅝@1.05 for December, $1.06¼ for January, and $1.08⅞ for May.

CHICAGO, Nov. 12.—Wheat—95⅝c for December and $1.05¼ for May.

California Wines at Auction.

NEW YORK, Nov. 6.—The first auction of California wines and brandies ever held in New York took place at noon to-day at 22 Monroe St. It was a test sale for the purpose of distinguishing between good and poor brands of California wines and to find out what brands New York buyers had the most confidence in. As a first sale it was pronounced a great success. Every dealer and grower in the country was interested and a large attendance of buyers was expected. There were only 50 present, including a few gentlemen from Philadelphia. Martin F. Hatch sold the goods. The red wines brought from 10 cents a gallon for unknown brands to 39 cents for known. White wines ranged from 34 cents to 43 cents a gallon, all known brands, and of the vintage of 1886. Port wines brought 70 cents for the vintage of 1885, and from 46½ to 53 cents for the vintage of 1887. Angelica of 1886 realized 72½ cents, and sherry of 1888 from 47 to 55 cents. Brandies were sold from 65 to 95 cents, vintages of 1887 and 1889.

Hops.

NEW YORK, Nov. 10.—The outward movement in hops this week will be heavy. The situation of the market here is unchanged; there is no new important demand and no pressure to sell. There is a strong indication that growers and dealers have only to be patient to win against the brewers.

Dried Fruits.

NEW YORK, Nov. 10.—California dried fruits continue irregular, with chances of higher prices in most lines of good quality. Some difficulty is expected in securing first-class stock at present prices in the immediate future.

NEW YORK, Nov. 10.—California loose Muscatel raisins have been rather more freely offered in this market the past few days, and prices averaged somewhat lower in a number of instances. Brands that enjoy particular favor appear very little affected, if at all, as the arrivals of that class of fruit are nearly all absorbed through deliveries now making on back orders, but the average quality can undoubtedly be secured at a concession on prices generally asked one week ago. The quantity of fruit offering is not very large, nor are there any indications of a general pressure to sell. London layers of really attractive quality are in moderate supply as yet, and bring relatively better prices than loose Muscatels.

BAGS—The market is dull for standard-sized at 6¾c May-June delivery.

BARLEY—The sample market has held to strong prices. Receipts have been fair. In futures, trading was light. The following are the reported sales made on to-day's Call:

Morning Session: Buyer 1890—100 tons, $1.49¾; 100, $1.49⅞. Buyer season—200 tons, $1.56¼; 200, $1.55⅝; 500, $1.55¾. Seller 1891—100 tons $1.11 ₩ ctl. Afternoon Session: Buyer 1890—200 tons, $1.50¼. Buyer season—300 tons, $1.56¼ ₩ ctl.

BUTTER—The market scored another advance, closing the week strong. Receipts are light and demand active. The East is beginning to send in some. The demand runs largely on pickled and solid.

CHEESE—The market is strong at higher prices. The demand is free while receipts are light.

EGGS—Eastern eggs continued to come liberally. Choice, fresh-laid Californian are wanted, for which an advance is obtainable.

FLOUR—The market is steady, with only a fair demand ruling.

WHEAT—The sample market has held steady prices. The offerings are moderate. In futures, trading has been light. The following are to-day's Call Board sales:

Morning Session: Buyer 1890—100 tons, $1.35¼; 400, $1.35⅜ ₩ ctl. Afternoon Session: Buyer 1891—100 tons, $1.35½. Buyer season—100 tons, $1.43⅞; 100, $1.44 ₩ ctl.

Cereals.

The local wheat market has held fairly strong throughout the week. Holders are reported as being firm in their views. They part with their holdings only under strong pressure. Continued absence of rains is considered favorable to the holding interest, as is the tonnage situation, although the latter will hardly make itself felt much before well into 1891. A. D. Logan, president of the Grangers' Bank of this city, and largely interested in farming in the northern part of the Sacramento valley, says that the acreage summer-fallowed this year is below an average. He says that the winter and spring months were too wet, and plowing at the usual time was impossible, and when the weather did change the soil dried out too rapidly to admit of much summer-fallowing. Of course his remarks apply to Butte, Colusa, Yuba and neighboring counties. The exports, flour reduced to wheat, so far this season aggregate within about 15,000 tons of the exports made in the like time in 1889. The English markets have been quite firm, as have the Eastern, and this, too, in the face of a very stringent money market abroad and at the East, which brought about a panicky feeling in stocks. So close was money at times that the percentage ran up to over 90 per cent. The condition of the money market emphasizes the necessity for free coinage of silver. The opinion prevails now that this will be secured, for the Congressional elections at the East were grounded on lower tariff and free coinage of silver. When the latter is secured all farm products will be improved in value.

Barley made another slight advance the past week, with a strong tone at the closing. The supply continues light, with a good demand reported. The consumption for feed and malting is reported to be larger than at this time in 1889.

Notwithstanding the receipts of oats have been quite free, the market strengthened slightly, under a good demand and strong holding. Oregon is sending us fair supplies, as is Washington.

Corn has made another advance. Although receipts are free, yet all appears to be taken care of by the firm which is reported to have a corner. The high prices ruling for oats, barley and ground feed are in favor of corn holders.

Rye is steady at current quotations.

Feedstuff.

The demand for ground feed continues active, and with only fair supplies prices have been advanced. Oregon is sending to us bran, shorts and screenings more freely, yet all goes into consumption. The absence of rains and exhausted pasturage are the stimulants to the market. Bran, rolled barley and feedmeal are all higher.

Hay shows continued strength, but with no further advances reported. The receipts are fair, while dealers confine their purchases as much as possible, owing to high prices and the lateness of the season. Clear weather enables more teams to run on railroad construction, levee building and similar outdoor work. Shipments hence, both by rail and sea, are light. Nevada has sent considerable into the State.

Fruits.

Grapes have crowded the market. Cold, frosty nights are said to have precipitated receipts, causing low and unsatisfactory prices. The consumption is slow, although it is stimulated to some extent by low prices. Wine grapes are also slow, with quotations hard to give correctly.

Under freer receipts of apples the market is weaker. Choice red apples fetch $1.50, but they must be good colored and choice in every respect. Bellflowers are in good supply. Oregon and upper California counties are sending in considerable. Pears are slow.

The dried fruit market has ruled dull, although light supplies keep values firm. Peaches are offering quite freely, and to effect quick sales concessions are necessary. Apples are easier. The supply promises to be large. Pitted plums are barely steady. The supply of apricots is about exhausted. Pears are in light stock, but the demand is slow. Grapes continue to meet with a fair demand. Prunes are reported essentially unchanged under limited supplies. To buy in quantity, a slight advance would have to be paid.

Raisins continue to be sent overland quite freely. Reports have been received that some consignments did not turn out well—fermentation having set in. It now looks as if the entire pack will go into consumption before another season sets in. The second crop is being secured in fine condition.

Vegetables.

Frosts the past week nipped green vegetation. Beans, peas, cucumbers, tomatoes, summer squash, etc., are in limited supply and promise to be out of the market soon. Root vegetables are fairly firm, as are cabbages. Cauliflower is scarce.

Onions are slightly easier. Oregon is sending us freer supplies, which naturally tends to weaken the market, particularly so, owing to consignees being forced to sell on the wharf so as to save expenses. The demand is somewhat restricted, due to high prices.

Potatoes have fluctuated, with some kinds slightly lower. The demand has been more urgent in some quarters, but was offset by a falling off in the call from other sections. Taking the market as a whole, it has a strong, healthy tone. The digging in all the counties is about through with. The supply to draw from is not large.

Live-stock.

Bullocks and mutton sheep are in liberal receipt. Calves are scarce and wanted. Hogs are firmer under a good packing demand. Milch cows are more inquired for. The higher price ruling for butter is said to have caused the demand. Horses are unchanged.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4½@4¾c ₩ lb; dressed, 7@8c ₩ lb.; heavy, 4@4¾c ₩ lb.; dressed, 6½@7½c ₩ lb. Stock hogs, 3@3½c ₩ lb.

BEEF—Stall fed, 6½@—c ₩ lb.; grass fed, extra, 6@—c ₩ lb.; first quality, 5¾@5¾c ₩ lb.; second quality 4¾@5c ₩ lb.; third quality, 4c@— ₩ lb.; bulls and thin cows, 2@3c ₩ lb.

VEAL—Small, 6½@8½c ₩ lb.; large, 6@7c.

MUTTON—Wethers, 7c ₩ lb.; ewes, 6½c ₩ lb.; lamb, spring, 8@9c.

Dairy Product Receipts 1890.

1889	2,363,778	2,552,020	13,350

Miscellaneous.

From the *Commercial News* of Nov. 11th the following summary of tonnage movement is compiled:

	1890.	1889.
On the way to this port	274,342	224,896
On the way to neighboring ports	21,207	11,913
In port, disengaged	19,475	25,818
In port, engaged for wheat	57,917	71,600
Totals	392,941	334,227

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to Nov. 5, 1890, the following are the exports from this port:

	1890.	1889.
Wheat, ctls	3,653,308	4,036,513
Flour, bbls	423,477	402,731
Barley	157,346	714,773

In quoting Call Board sales of grain the term "buyer" means that the buyer can call for the stuff bought at any time before the contract time expires. The term "seller" means that the seller can deliver the stuff at any time before the contract time expires. All deliveries must be made before the contract time expires.

The poultry market is fairly steady for all kinds, except turkeys, which are higher.

Beans continue to fluctuate, being governed by receipts, but the general tone is strong.

Hops are firm at full quotations. Receipts are light.

Wool is moving off more slowly, owing to some holders' advanced views. Eastern advices report a good demand, but at essentially unchanged prices.

Honey is firm at full prices. Free shipments abroad and to the East, together with an absence of rain, are in favor of holders.

Exports by sea the past week aggregate as follows: Wheat ctls, Cork, 121,455; Hull, 77,624; Dunkirk, 68,370. Flour bbls, Punta Arenas, 3295; Honolulu, 3597; Hilo, 375. Beans ctls, Punta Arenas, 100,600; Honolulu, 11,498; Hilo, 3920. Wine gals, Victoria, 1887; New York, 113,893. Wool lbs, West Concord, N. H., 19,757. Mustard seed lbs, New York, 557,968. Barley ctls, Honolulu, 3817; New York, 3134. Rolled barley lbs, Honolulu, 20,648. Bran sks, Honolulu, 2683. Dried fruits lbs, Honolulu, 3405. Raisins boxes, Honolulu, 332. Brandy gals, New York, 8962. Potatoes sks, Honolulu, 642. Onions sks, Honolulu, 162. Canned fruits cases, New York, 1080. Peach pits lbs, New York, 15,161. Hay bales, Honolulu, 631.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

WEDNESDAY, Nov. 12, 1890.

NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & CO., Publishers,
No. 220 Market St., S. F.

Two True California Stories.

"Augusta Dane, 'or the Influence of Circumstances," and "Mary Morton, or the Result of a Fashionable Education." By J. Vinson Webster, Past Master California State Grange. These two stories attracted considerable attention during their publication in the *California Patron* in 1881 and 1882. Published in book form. Being unusually interesting, they have been favorably received, and a limited number only are for sale. Printed in large, clear-faced type, and bound in cloth. Price, $1, postpaid; to subscribers of this journal, 60 cents. Address the publishers of this paper.

Let Us Know

If you fail to get this paper. We prefer to send missing Nos. Write soon and to the office direct. It is important that we should know when the paper miscarries.

THEO. SKILLMAN.

Dewey & Co.'s Scientific Press Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most *reliable* advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS U. S. and Foreign Patent Agency, the following are worthy of special mention:

TIRE-TIGHTENER.—Geo. C. Richards, Sissons, Cal., assignor of one-half to Wm. T. Tuckwell, Sissons, Cal. No. 438,362. Dated Oct. 14, 1890. This invention belongs to that class of adjustable spoke sockets in which the spoke is adjustably connected with the felly, said adjustment being controlled and operated by a nut, the effect of which is to vary the length of the spoke, whereby the tire, the felly, and the spoke are tightened. It consists in a felly having a socket, a spoke having a tenon fitting in the socket, a protecting plate fitting around the spoke-socket and extending up on each side of the felly, a sleeve on the spoke-tenon having a head provided with a concave seat which receives the convex portion at the base of the tenon, a nut upon the threaded portion of the sleeve having a flange on its under surface and a split washer between the nut and the head of the sleeve.

HARNESS.—James R. Phelps, Sacramento, Cal. No. 438,360. Dated Oct. 14, 1890. The purpose of this device is to give a trotting, pacing or running horse a proper gait and cause him to spread the hind feet when traveling so as not to interfere or overreach. It consists of a frame-work supported from the back or hips of the animal, and connections from said frame-work to the hind legs of the horse with such an elastic tension as will cause the animal to travel with the hind feet more widely separated than it would otherwise do.

VEHICLE SEAT.—D. F. Oliver, Oakland, Cal., assignor to Truman, Hooker & Co. of San Francisco. No. 439,325. Dated Oct. 28, 1890. This invention belongs to that class in which the seat is pivoted at one end, and is adapted to be turned in a horizontal plane from a position for use to a position out of the way to enable a person to readily enter the vehicle. The invention consists in a novel, simple and effective construction of the pivot joint of the seat, whereby it is readily operated, is locked in either an open or closed position, and is fully supported during its turning.

CLUTCH PULLEY.—James C. Gibson, S. F. No. 439,140. Dated Oct. 28, 1890. This invention is an improvement in belt pulleys for driving machinery. The pulley consists of a rim without a central hub, means for connecting said rim with the driving shaft or disconnecting it therefrom, so that it will remain stationary, and means for supporting said rim when disconnected from the driving shaft. More particularly speaking, the pulley consists in connection with a rotary shaft having a hub secured to it, radial guides from said hub, arms sliding radially in the guides, levers fulcrumed to the hub, and having one end connected with the sliding arms and the opposite end connected with the clutch sleeve, a means for moving the sleeve longitudinally on the shaft so as to actuate the levers and arms, and clamping segments fixed to the outer ends of the arms, said segments being adapted to clamp an interior flange on the pulley rim so as to unite the rim with the central hub and cause it to be driven thereby.

ADJUSTABLE SEAT-BACK.—Stephen C. Houghton, S. F., assignor of one-half to D. C. Branch of same place. No. 439,403. Dated Oct. 28, 1890. This invention, though applicable to any chair or seat requiring an adjustable back, is particularly designed for use in connection with piano stools. The invention consists essentially of a back connected with the stool by a hinge joint, and a thumbscrew and nut whereby the back may be turned upon its joint to be accurately adjusted to and held securely at any inclination desired. The back can be readily connected with and disconnected from any stool, and its inclination easily and accurately determined and securely maintained.

FRUIT-DIPPING APPARATUS.—David D. Jones, San Jose, Cal., assignor to W. C. Anderson of same place. No. 439,072. Dated Oct. 21, 1890. This apparatus is intended for the dipping of prunes, first into lye water and then into clear water, previous to drying. It consists of two tanks, one for the lye water and the other for the clear water. In each is a swinging dipper having a foraminous bottom, and these dippers operate alternately, the first discharging its contents into the second and the latter discharging the fruit upon a vibrating tray upon which the prunes spread themselves evenly and on which they are carried off to dry, a fresh tray being substituted.

Cough-Cures

Are abundant; but the one best known for its extraordinary anodyne and expectorant qualities is Ayer's Cherry Pectoral. For nearly half a century this preparation has been in greater demand than any other remedy for colds, coughs, bronchitis, and pulmonary complaints in general.

"I suffered for more than eight months from a severe cough accompanied with hemorrhage of the lungs and the expectoration of matter. The physicians gave me up, but my druggist prevailed on me to try

Ayer's Cherry Pectoral.

I did so, and soon began to improve; my lungs healed, the cough ceased, and I became stouter and healthier than I have ever been before. I would suggest that the name of Ayer's Cherry Pectoral be changed to Elixir of Life, for it certainly saved my life."—F. J. Oliden, Salto, Buenos Ayres.

"A few years ago I took a very bad cold, which settled on my lungs. I had night sweats, a racking cough, and great soreness. My doctor's medicine did me no good. I tried many remedies, but received no benefit; everybody despaired of my recovery. I was advised to use Ayer's Cherry Pectoral, and, as a last resort, did so. From the first dose I obtained relief, and, after using two bottles of it, was completely restored to health."—F. Adams, New Gretna, N. J.

304 MARKET STREET, SAN FRANCISCO.

Freeman's ENSILAGE AND FEED CUTTER

Strongest, Most Durable, Easiest Running, and in every way THE BEST FEED CUTTER made. All Sizes, for Hand or Power, Carrier or no Carrier. For low Prices and Large Illustrated Catalogue, address The Freeman Implement Co., Portland, Or.

THE DEERE
ORCHARD & VINEYARD PLOW.

A Great Favorite with Vine-Growers and Orchardists.

STEEL BEAM, ADJUSTABLE HANDLES.

Sizes, 8 and 9-inch Steel Bottoms; also 9-inch Chilled Bottoms.

For Vineyard and Orchard Work These Tools are Unequaled.

Cal State Library JI '90

DEERE DISC HARROW.

Sizes from 4 to 12 feet with 16 or 20-inch Discs.

One Season's Experience has Proven it to be a Most PRONOUNCED SUCCESS.

FOR PRICES AND FURTHER INFORMATION APPLY TO

DEERE IMPLEMENT COMPANY,

305 and 307 Market Street, San Francisco,

SOLE AGENTS FOR

John Deere Single Plows, "New Deal" Gang Plows, Cultivators, Harrows, Schuttler Wagons, Buggies, Carts, Etc., Etc.

THE

FIRST SOUTHER FARM SALE

WILL BE HELD ON

THURSDAY, NOVEMBER 20, 1890, AT 12 NOON, SHARP.

This Farm has been breeding and collecting TROTTING STOCK for over three years, and in that time has never offered anything for sale. It is now greatly overstocked; and the very complete barns, boxstalls and shelters are too crowded to allow for the rapid increase in the business of educating and boarding horses, joined to the demands of the space required for wintering TROTTING and RUNNING HORSES. Consequently, all the young stock, excepting the weanlings and three fillies reserved for brood mares (and two or three that are out of order) will be sold at PUBLIC AUCTION on the above date. On the same day will be sold

THE ENTIRE SOUTHER FARM COLLECTION OF BROOD MARES,

Among which will be found many well-bred and worthy individuals. All will be sold without limit, reserve or by-bidding of any sort whatever. This is an unusual opportunity to purchase first-class young stallions and gilt-edged brood mares from producing lines at what they will bring at fair and square auction.

Among the Young Stallions that will be offered are:

GRAN MORO, Blk c, foaled 1888, by LE GRANDE (sire of Grandee (three years) 2:23¼, dam SUNNY SLOPE BELLE (dam of Don Carlos (three years) 2:32), by THE MOOR [sire of dams of Bell Boy (three years) 2:19½, Hinda Rose (three years) 2:19½, etc.; also grandsire of Stamboul, 2:11½]. GRAN MORO is sound and fast, and will earn money for somebody.

JIM LINFOOT, Blk c, foaled 1888, by FIGARO [son of Whipple's Hambletonian and Emblem [sister to Voltaire 2:26½], by Tattler, 2:36]; first dam FANNY LINFOOT by ERWIN DAVIS, sire Ed, 2:26, and Carrie F., 2:27¾, and the dam of Florence B., 2:26½. JIM LINFOOT will make a race horse, and is a very handsome young stallion.

There are a number of others, Two-Year-Olds and Yearlings. They will be shown at the sale.

The following are among the Brood Mares:

VERONICA, B m, foaled 1884, by ALCONA 730 (sire of Flora Belle, 2:25, and grandsire of Silas Skinner, 2:19); first dam, FONTANA (dam of Silas Skinner, 2:19, Flora Belle, 2:25), second dam FANNY WILLIAMS (dam of Bay Chieftain, 2:29½), by ALEXANDER'S ABDALLAH 15. Sister to FLORA BELLE, 2:25.

ROSALINE, B m, by MAJOR MONO. ROSALINE is also a good road mare. Dam of ALPHEUS, 2:27.

EFFIE DEANS, B m, by WHIPPLE'S HAMBLETONIAN (sire of dams of Dawn, 2:18¾, Elector, 2:21½, and seven others with records better than 2:28). Dam of GERSTER (pacing) 2:13.

PUSS, Ch m, by SKENANDOAH 926 (Kentucky Hunter). Dam of HAVERLY (pacing) 2,25, MODJESKA (pacing) 2:32½, BELLE DAVIS (three years) 2:40.

ROSEBUD, Br m, foaled 1884, by GIBRALTAR, 2:22¼ (sire of Homestake, 2:14½); first dam, JOHNSON MARE by A. W. RICHMOND, sire of Arrow (pacer) 2:13½, Richmond Jr., 2 22¾, etc.; second dam by CRICHTON (thoroughbred son of Imp. Glencoe and mare by Wagner) sire of dam of ARROW (pacer) 2:13¼, etc. ROSEBUD showed a mile in her work at Napa in 2:40. She is a fine road mare.

And many others of First-class Breeding and Good Individuality.

THERE WILL ALSO BE SOLD SOME GOOD ROADSTERS AND GENERAL PURPOSE STOCK.

Sale Day Thursday, November 20, 1890, Beginning Positively at Noon.

It is a pleasant drive to the Souther Farm from Oakland, or from San Francisco by the Creek ferry; take county road from Oakland to San Leandro, and turn off at signboard, three-quarters of a mile this side of San Leandro. On the day of the sale an earlier train will run and all will be served with lunch at the Farm.

SPECIAL TRAIN ON DAY OF SALE, leaving foot of Market Street at 9:30 A. M., and First and Broadway, Oakland, at 10 A. M.

To drive to the Farm, take Creek Ferry Boat at about 9 A. M. Lunch will be served to all comers.

GILBERT TOMPKINS, Proprietor, SAN LEANDRO, CALIFORNIA.

Fare for Round Trip on Special Train, 50 Cents. Tickets can be obtained of KILLIP & CO., 22 MONTGOMERY ST., SAN FRANCISCO, who will furnish CATALOGUES and all desired information.

An Old Church at Granada.

At the Thanksgiving season the thought turns naturally to formal worship and to the appurtenances thereof. We introduce, therefore, a very interesting structure of great age, the cathedral at Granada, a city of Nicaragua, a country which will come into growing importance in the world's eye as the Nicaragua inter-oceanic canal progresses nearer to realization.

Granada is a city lying on the western shore of Lake Nicaragua. The towns near the lake, of which Granada and Rivas are the chief, might under happier auspices have become great centers of population; but years of anarchy and internecine strife, together with the jealousy of rival cities—Leon and Managua for example—have produced more of ruin than time itself. Many a follower of Walker could tell stirring tales illustrated by the battered walls, wrecked churches and "places stormed at with shot and shell" in Granada and Rivas. There has always been a certain jealousy between the Nicaraguan cities as to the right to be considered the capital of the State. Even to-day it is not a safe issue for a stranger to raise. In the total population of 400,000 the ancient and aristocratic city of Leon comes first with 30,000 inhabitants. Massaya comes next with 14,000, of whom, however, a large number are Indians. Then there is Granada with 12,000, and Managua, the generally reputed capital, with 10,000. Rivas, the ancient capital, has dwindled down to fifth place with 8000, but as the proposed canal will pass quite close to it, the prospects for its restoration to supremacy are exceedingly good.

Nicaragua is essentially a land of antiquities. The splendid churches and cathedrals built by the Spaniards have architectural charms and ruined glories of their own. The great cathedral of San Pedro of Leon is probably the finest religious edifice south of the City of Mexico. It was finished in 1743, at a cost of $5,000,000, occupying 37 years in construction. It is of cut stone and is one firm mass of masonry, covers an entire square, and its front extends across one side of the Grand Plaza. Like similar buildings whose ruined arches and walls may be seen in Antigua de Guatemala, this church has walls at least 15 feet in thickness, and has the solidity of a rock. Numerous earthquakes have produced no impression, and the storms of a century and a half have in no way injured its fine quality of stone. In numerous disputes between Leon and Granada, the church had often been converted into a fortress, and sustained a few bombardments from besieging forces. Thirty pieces of artillery are said to have been planted on its roof at one time and on its eastern side there are many indentations made by shot. This cathedral was once possessed of great wealth, the chancel was surrounded with a railing of solid silver, while all the altar ornaments were of gold. With the exception of the cup and plate used at mass, the church has no ornaments of precious metals now. Much was shipped to Spain, and what remained did not escape the rapacity of the soldiers, who have many times advanced and retreated through Leon.

The church shown in the engraving on this page is quite different in some respects from that at Leon to which reference has been made. It is the church of La Merced. It is ancient, massive, and in a good state of preservation considering the vicissitudes through which it has passed.

CHURCH OF LA MERCED, GRANADA, NICARAGUA.

American Pork in Europe.

The Secretary of Agriculture is in receipt, through the Department of State, of a copy of a communication from the Hon. Clark E. Carr, United States Minister Resident, Copenhagen, to the Secretary of State, in which Mr. Carr states that a petition was recently presented to the Danish Government by leading importers in Copenhagen, asking for the removal of the restrictions now existing in that country against American pork products. This petition, he says, was taken up by the Chamber of Commerce at Copenhagen, which adopted a resolution asking that American pork be admitted so soon as Germany should make the same concession. Mr. Carr adds that the opinion is generally entertained in Denmark that in the near future American pork will be admitted to all the countries of Europe, but that the Danes hesitate about removing their restrictions until Germany does so, for fear Germany would then exclude Danish pork from the Empire. He states that in spite of all that has been said and written by which unreasonable prejudice has been created against American pork, the Danes do not seem to be influenced by it, and he believes they would be glad to admit American pork for their own home consumption and thus be enabled to sell all of their own product to Germany and other countries.

Mr. Carr states incidentally that Danish pork is preferred in other countries over that raised in the United States because Danish swine are slaughtered earlier than ours, hogs usually being fattened and killed at a year old. In most European countries a hog weighing 200 pounds is preferred to those of greater weight. There is also a general belief that American pork is too fat and that it would be more desirable for table use if it were otherwise.

No Duty on Imported Cattle in Mexico.—A statement having recently appeared to the effect that the Mexican Government had placed an import duty on cattle from the United States, the Secretary of Agriculture immediately called the attention of the Department of State to this matter, with a request that the real facts be ascertained. He is now in receipt of a communication from the Department of State inclosing a telegram from the United States Consul-General at Nuevo Laredo, in reply to one from the State Department instructing him to make inquiries on the subject, in which that official states that no such duty has to his knowledge been imposed by the Mexican Government.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

A Glimpse of Ventura.

EDITORS PRESS:—In taking notes here and there of the useful and desirable which Ventura county contains, it seems fitting to notice first our capital, Ventura by the sea.

Standing on the level elevation at the head of Main street, one looks along its busy thorough fare for perhaps a mile, where may be seen many substantial business blocks of brick that would do credit to any city upon our extensive coast. At the right, parallel to Main, Poli street lies like a cable stretched across the lap of the hills. Along this elevated street are found many of the handsomest residences. Pausing here, one forgets the traffic and the turmoil just below, and the eye wanders to the islands rising abruptly from the sea or follows the sinuous line of sandy beach away to Point Magou, an abrupt headland jutting into the ocean, and which forms one boundary of the famed and fertile Santa Clara valley of the South.

The census gave Ventura about 3000 people, who feel a just pride in her broad, smooth sidewalks of asphaltum or cement; in the new electric light; in her proposed street railway, fine hotels, educational advantages, and her several pretty churches. Among the last mentioned we make special note of the new M. E. Church South, which is a gem in architecture and coloring. Fully furnished, its cost was something over $8000. The liberality of Ventura's citizens has dedicated this temple to God, recently, free from debt.

Not far from the center of the city stands the Episcopalian church, also a recent addition to the town. It is a commodious, symmetrical structure, which pleases well. Its steep, high roof suggests an ancestry from over the sea, and its walls need only to be hidden by cool, green masses of English ivy to make it a complete picture.

The Spanish Mission church, yellow with age, has yet a more modern interior than is usually found in the old Mission churches. It has been repaired with a new ceiling of wood, painted drab, and seated with 24 closed pews; its high, deep windows, which give plenty of light without allowing one to look into the outer world, produce a feeling of seclusion akin to worship.

Speaking of churches, flowers seem the most natural subject to interest next. Who that has ever had the pleasure of visiting Mrs. F. B. Shepherd's lovely garden can find words to do it justice? It is a living, blooming exhibition of what an enthusiastic, energetic woman can accomplish. Five years since, Mrs. S. began with a greenhouse costing $2.50. To-day she has all needed appliances and two acres at the home nursery blooming with choice plants in endless variety and profusion. One mile east of Ventura she has five acres more devoted to raising stock for wholesale marketing, such as callas, cannas and smilax for seed and decorating purposes.

At the home nursery we noticed a night-blooming cereus fully 35 feet in hight which has been called a national curiosity, and begonias ten feet in hight, papyrus, or Egyptian paper grass, cyclamen, bovardias, camellias that bloom from September to May, with hundreds of rare and costly novelties that we have not space to mention.

Along Main street for a distance of 200 feet, Mrs. Shepherd has planted heliotrope. The sidewalk is graded some two or three feet below this blooming bank, making this hedge a border of delight to the passer-by. Visitors constantly express amazement at this pleasing novelty, it being the only one of the kind on this coast. Mrs. Shepherd has been "written up" many times, and, as a result, is flooded with letters of inquiry which it is impossible for her to answer. She is pained many times by the contents of these letters asking for aid and advice which it is not within her power to give.

Ventura has three weeklies and one daily paper. Of these, the *Democrat*, ably edited by Mr. Jno. McGonigle, has a weekly edition of 976 copies. The *Free Press*, firm of Messrs. Leonard & Sykes, is Republican in politics, and has a circulation of 700 copies of the *Weekly Free Press* and 400 copies of the *Daily Free Press*. This is the oldest paper in the county, although its name has been changed several times in the course of its existence. The *Young Republican* has but recently started, and is Republican in politics, as its name implies. We have not learned whether it will be only a campaign sheet or whether it will continue its publication indefinitely, not having succeeded in seeing its publisher.

Six months since, there were a number of vacant houses in Ventura; now those are occupied and several new ones are in process of construction, showing conclusively that people are finding out that this is a good place in which to live.

The new Armory hall and the Masonic Block are indicative of the solid future awaiting the Gem City by the sea.

MRS. M. E. DUDLEY.

THE Woonsocket Rubber Co. has just completed and put into operation the largest rubber shoe factory in the world.

POULTRY YARD.

General Notes on the Poultry Interest.

The following essay was recently read by Mrs. Dr. Warner before the Garden Grove Farmers' Club:

In looking into the poultry question, it may interest us to know something of the earliest date which we have given us of the domestic fowl. When Julius Cæsar invaded Britain he found both the goose and fowl in a state of domestication, and they seem to have been held in some kind of religious reverence, as they were forbidden to be eaten. It is common all over the world, and it is a singular fact that the common fowl, in every way resembling that of our own country, was found domesticated among the South Sea Islanders when first visited by the Europeans. The game cock we seem to owe to the Romans. Several choice breeds were kept by the ancient Greeks, Medes and Persians. Surely we need not search further than 2000 years to show our claim to an interest in fowls, quite as legitimate as an Athenian king, although his interests were for pleasure and ours may be both for pleasure and profit.

One writer declares that the annual production of eggs equals in money value the country's annual total production of iron, and he should have added that this great industry is unprotected, being on the free list. I noticed the fact stated in a reliable poultry journal, not long since, that Canada exports ten millions of dollars' worth of eggs annually into the United States.

The annual value of the poultry and eggs consumed in the United States amounts to the sum of $475,000,000, or more than any other product, except corn, which is only about $5,000,000 more.

I think we might learn much from the prosperity of the French people and of their ability to bear the heaviest burdens without giving way under them. The secret seems to be in the extraordinary thoroughness with which they cultivate their farms, vineyards and orchards and the profits which they obtain from the seemingly insignificant products. We find this exemplified in the figures published, showing the extent and profits of chicken raising. There are in France 40,000,000 hens, valued at $20,000,000. One-fifth are marketed yearly for the table, bringing about $4,000,000. The annual production of chickens is about 80,000,000, worth in the city markets $24,000,000, and $2,000,000 are added for the extra value of capons and fatted hens. The production of eggs is estimated at 40,000,000, making the total value of eggs and chickens $80,000,000—$2.21 to every man, woman and child in France. Now we naturally ask: Why do not more people engage in this enterprise? With many there is an aversion to the carrying forward of any enterprise that needs careful and constant watching, for good care, under all circumstances and at all times, is a prime necessity to success in the poultry business. We are told that "eternal vigilance is the price of liberty," and I think it equally true for success in the poultry business. Any one who expects to succeed must use good common sense, give some heed to the wise counsels of others' experiences, and use good judgment.

It is said that women generally understand the raising of poultry better than most men. One reason is that they attend to the numerous small details which are necessary, while but few men are willing to give the time that is required, and I think quietness and gentleness in handling poultry one of the requisites to success.

One of the greatest mistakes made, by nearly all who keep poultry, is that of feeding grain as an exclusive diet. Now I think the food should be changed often. I feed soft food in the morning. If I have small potatoes I boil them, mash them and mix with wheat bread, the whole moistened with hot water, and I often put in a little salt. I believe any vegetable almost would be good cooked and mixed with bran. Then, too, fowls should have meat quite often, and I prefer it cooked for them. If attention is given to food and pure water for poultry, clean hen-houses, made so by frequent cleaning, and a liberal use of lime, carbolic acid and kerosene, with the proper change of stock, I don't see what is to prevent any one from being tolerably successful in the poultry business. I have said nothing of the numerous breeds of fowls which have their praises sung by breeders of fine poultry, as I hope this part of the subject may be taken up for another evening. My own experience has been with the Brown and White Leghorns, Plymouth Rock and Poland. This breed (the Poland) I like very much, and think I never had so many eggs from the same number of fowls as from them; and it was in Kansas, where the winters were so cold that it was not really as good a test of their superiority as it would be here. I also like the Leghorn fowls. They are so active, and lay a good-sized egg for their size. If chickens sold by the pound in California, they would be too small for profit, but as egg-producers I think they stand in the front ranks.

I saw in the *Rural Californian* a receipt for ridding the hen-roosts and pigeon-lofts of vermin. It was a preparation of sulphur and carbon, known as sulphuret of carbon. In France it has been thoroughly tested, and it is said works like a charm. A bottle containing the solution will last several days, and the cost of it is small. Put two ounces of the sulphuret of carbon in a bottle, open at the mouth, and hang it by a string in the hen-house. At the end of eight days the bottle should be refilled. The remedy is said to be infallible. If as good as claimed to be, it should be known to every farmer's wife and poultry-raiser in the land.

My young chickens I feed cooked food. For the first two or three days I feed light-bread moistened with sweet milk. After that I feed cornbread made up with sour milk, with soda enough to sweeten, and a little salt, and scraps from the table.

[The bisulphide of carbon has been advocated for years in the manner stated, and the recipe was printed in the RURAL PRESS not less than 15 years ago. We would like to know whether any Californian has found it effective used as described.—EDS. PRESS.]

Experience in Orange County.

The Garden Grove Farmers' Club is drawing out exceedingly valuable experience with poultry in its region. Last week we gave an essay read by one member, and herewith we publish an essay written by E. C. Ware and read before the same organization.

The kinds of fowls most raised in this part of the county are the Leghorn and Langshan varieties, both giving good satisfaction, the former being the best to lay when they have plenty of room to forage; but, being of a restless disposition, do not do well when confined in small yards.

The latter breed, I am told by those who have tried them, stand confinement better, are good layers, and for a large fowl are good for the table.

I have kept half and three-fourths bred Leghorns, and will give my experience with these fowls. I have found that 5½ to 6½ fowls will eat one pound of wheat or corn per day, or its equivalent, while producing eggs; that it takes feed equal to sixty pounds of wheat or corn to keep a hen a year.

In 1883 I kept on an average three hundred hens. With these I kept a strict book account. The per cent of hens that laid in each month, and average price received per dozen for eggs each month, were as follows:

January, 31.93 per cent, price of eggs per dozen, 28.6 cents; February, 31.93 per cent eggs 20¼ cents; March, 42 66 per cent eggs, 17.17 cents; April, 38.88 per cent eggs, 22.53 cents; May, 33½ per cent eggs, 26.6 cents; June, 31½ per cent eggs, 23 6 cents; July, 24.13 per cent eggs, 26½ cents; August, 19 71 per cent eggs, 30.35 cents; September, 13.83 per cent eggs, 34.55 cents; October, 14 per cent eggs, 40.30 cents; November, 9 7 per cent eggs; 36 92 cents; December, 12.4 per cent eggs, 30 29 cents—making an average for the year of 26½ eggs per day for each one hundred hens, or eight dozen eggs for each hen for the year, and the average price for the year of 24.8 cents per dozen for eggs. The cost of feed to produce eggs was within a fraction of one cent each.

The cost of feed for 300 hens for the year was $287 67, cost of feed for each fowl, 95 89 cents. There was a loss of fowls that died and were caught by coyotes amounting to $28.50, added to cost of feed makes $316 17. Amount received for eggs during the year, $597.04, leaving a net profit of $280.87, and a profit on each hen of 93 63 cents.

This lot of fowls was a mixed lot of old and young hens, such as farmers usually have on hand, so I conclude it was a fair test of the average stock of hens of the country. By having all young fowls, or by having a few in number, the results would have been better. It is a mistake to suppose you can do as well with a large flock of hens as you can with a dozen or two, at least I never could, and tests made with a few fowls of any breed mislead one as to what can be done with a large number.

I have found by keeping account of hens that died, that I have lost from 10 to 14 per cent per annum of the old stock on hand at the commencement of the year, giving them just ordinary care, about as farmers usually look after poultry.

In buying fowls, do not buy one with a bad breath; it is a sure sign of disease. I never knew a fowl with a sweet breath that was not healthy.

Now as to how these hens were fed: In the morning I gave them soft feed uncooked, and at night fed two days in the week wheat, and five, corn.

The soft feed I mixed up with water. In mixing bran and ground barley, three-fourths bulk bran and one-fourth barley; the same proportions in mixing bran and middlings; bran and cornmeal seven-eighths bulk bran and one-eighth bulk cornmeal.

A quart of the above soft feed a day, and a pint of good wheat or corn to ten fowls, makes very near a pound of feed a day to every six hens.

I also fed about ten pounds of meat twice a week, cut up with an axe. I mixed Cayenne pepper, from time to time, two tablespoons to each 50 fowls. I found it took from seven to eight days for the pepper to take effect and produce an increase of eggs, and that the effect would last about the same length of time after it was discontinued. I found it better to feed it a short time only, now and then, as when fed long at a time it seemed to lose its effect.

In a large flock of fowls there are usually some hens that never lay any eggs, although they go on the nest—probably have been injured—and are often the brightest looking hens.

Mr. Guinn of Westminster says a hen that doesn't lay never gets broody; so in the spring of the year for all hens that want to sit, he takes a pair of shears and cuts off the ends of the tail feathers, and after two or three months, all hens that have not had their tail feathers clipped he sells, and those he has killed and cut open he has always found barren as to eggs. He says he has experimented keeping fowls on cooked vegetables, with a very little grain at night, and is well satisfied with the result, getting more eggs and having less disease among his fowls; he uses a great many squashes and beets and any vegetable, and if a few onions are put in they relish it all the better.

I have kept fowls more or less in small, movable houses, and had at first the difficulty to contend with that too many fowls would crowd in one house, which was overcome by only putting roosts enough in each house to accommodate the number of fowls you wish in it; when the perches are full they are compelled to go to the next house.

I use a swing perch suspended from the roof with wire, about 18 inches from the ground; this keeps the roosts clear of the house, and the vermin cannot leave the perches as readily and spread through the house. I use the flat side of 1x3 inch for roosts, and paint these every little while with crude petroleum, which is the best remedy I have found for hen lice.

In the nest-boxes, in summer, I find unleached ashes, and nothing else, gives satisfaction, as long as they are dry, and keeps down vermin.

In handling fowls in a movable house, if you wish to turn it around, only move it about one-third in one day; if turned completely around in the same day, it confuses the fowls and they don't know how to get in it. If you wish to move the house to another part of the farm, do it by degrees, a length or so a day, and the fowls will follow it up and not notice the change.

You can buy strange fowls, bring them on your place, and if careful for two or three days can get them to roost where you want them; but I have not been successful in making fowls brought up on the place change their roosting-place.

When several hens hatch at the same time, and you wish to give the chickens to only part of the hens, give them chickens of mixed colors, as a hen that has chickens of one color is apt to kill those of a different color that come near her.

A hen that has just hatched out a brood will take chickens a week or two old in addition to her own; but after she has run with them two or three days, if you give them any more, she will usually kill them; at least that has been my experience.

It is well to mark fowls so as to know how old they are. One way is to take a sharp-pointed knife and cut the web between the toes; for instance, cut the outside web of the right foot of this year's chickens, and of the chickens raised next year cut the inside web, and the year after the left foot.

THE APIARY.

Instructive Items in Modern Bee Culture.

EDITORS PRESS:—Now is the time to begin to prepare for next spring. A golden motto for every bee-keeper is to have everything ready early and get all in readiness when it can be done with the least outlay of valuable time.

In all your manipulations with bees, remember you can handle them much easier and control them with more certainty when there is abundance of honey in the flowers.

Always see that your frames are properly spaced before hiving a swarm; they should be 1½ inches from center to center.

Make it a point to always have nice, straight combs. When handling them, shave off any bulged places, or run a sharp knife between the comb and frame and press the comb straight inside the frames, so that you will have an even surface, and you will then meet with no difficulty when changing them from hive to hive.

Large swarms of bees will build combs straight in brood frames with much more certainty than small ones.

When honey is not coming into the hives, bees are generally very cross and smoke must be freely used in handling them. Strangers often express surprise on seeing me take up bees with bare hands. There is nothing particularly brave about this, if the bees are full of honey, or at a time when a heavy flow of honey has made the bees naturally peaceable. Do not be afraid to handle your bees. Buy good frame hives, put the bees into them and become master of them and be determined to keep so.

Save all your bits of comb and render them down in tin pans. Never use an iron vessel for rendering wax; it will surely spoil it by making the wax dark-colored. Beeswax is getting

very scarce and commands a high price on account of so much being used in making comb foundation. Some of the manufacturers have paid as high as 28 cents a pound for beeswax for making into foundation this season. One firm alone manufactured over 30 tons of this article last season. I am often asked if I know of anything to prevent moths from getting into hives. The very best and surest prevention is to keep only Italian or Carniolan bees, and you will never be troubled with this pest.

Remember the old queen always goes with the first swarm. If you have Italianized your black bees, be careful that the first swarm does not get away or your bees will probably be reduced to hybrids or blacks again.

All full cases of sections or unfinished ones should now be taken off your hives and a quilt placed on top of the frames. We use a piece of burlap for this purpose, which answers very well.

A great many remedies for the cure of stings have been given from time to time, such as ammonia, tobacco wet and applied, salt and water, a raw onion cut in half and applied, mud or clay, etc., nearly all of which I have tried at different times; but the best remedy I have ever found is cold water. I had occasion to transfer a number of colonies of hybrids last spring, which proved to be veritable tigers. I found it necessary to have a pail of cold water by me to wash the honey from my hands occasionally. I received at least a dozen stings on my hands during the operation, and I found if I removed the sting immediately and plunged my hand into the cold water that I felt no effect whatever of the sting a few minutes afterward. It is hardly necessary to add that I have used this remedy ever since.

San Mateo WM. STYAN.

Comb Foundation.

EDITORS PRESS:—The invention of comb foundation ranks next to that of the honey-extractor. Not only does it lessen the labor of the bees, but by using it we have straight combs and at the same time have all worker or drone comb just as we like. If bees are put in hives that have nothing but empty frames to commence the construction of combs on, the chances are that some of the combs will be built crosswise and prevent the removal of the frames.

I think I hear some apiarist exclaim: Why don't you use a triangular comb guide and your bees will build straight combs without the use of foundation.

No; bees will not always follow the triangular comb guide. Some colonies will have tolerably straight combs, while others will have their combs joined to two or three frames; therefore, to be on the safe side and to have straight combs at all times, it is best to use foundation.

Be on the lookout at all times when fastening foundation in the frames and sections, and be sure to have it securely fastened in, so that when the bees commence work on it their weight will not break it down.

Where wired frames are used, there is not much danger of the foundation sagging or breaking, therefore if you use large frames and extract your honey, it would pay to wire your frames. In warm weather, when handling large frames filled with honey, there is always great danger of breaking down unless wired. The wire generally used is No. 30 tinned wire. After a frame is securely wired, the foundation is cut so as to nearly fill the frame, and then the wires are imbedded in the foundation by an implement made especially for that purpose and kept for sale by apiarian-supply dealers (Easterday's foundation fastener).

For brood frames, use foundation that will average about five square feet to the pound; it is about the right size to use to obtain the best results. Never use thin or section foundation in brood frames; it sags too much and causes trouble generally.

For section-boxes we need foundation that will average 10 and 11 square feet to the pound.

If too thick a foundation is used in section-boxes, the comb-honey after being finished has a kind of fish-bone in the center, which makes it objectionable to consumers.

The partition of a natural comb is, I believe, 1-180 of an inch in thickness; therefore the thinner foundation is made for surplus honey the better it is.

There are several different styles and makes of foundation, the principal ones being the Van Deusen, Dunham, Given and that manufactured on the Washburn roller-mills.

If you have only a few colonies, you had better buy your foundation instead of buying a mill and manufacturing it yourself; for it will take you quite awhile to learn to make it with any degree of correctness.

Foundation should be made of the purest wax. All impurities of all kinds should be removed from the wax before attempting to manufacture it into foundation. Impurities tend to decrease the tenacity of the wax and cause sagging.

A great many substitutes for beeswax have been tried, such as cerecin, paraffine, etc., but always proved a failure, either by the combs melting down which the bees had constructed on the foundation, or by the bees themselves tearing it down.

By the use of comb foundation we obtain considerable more honey than if we had not.

In order to determine and prove this, make two artificial swarms as nearly equal in size as possible. Give one frames filled with foundation and the other empty frames; and in a week or so make a comparison between them. You will find that the colony with the foundation already has a brood area equal in size to an old colony, sends out a full force of workers to the fields, and has a fourth more honey.

It is astonishing to see how rapidly an average-sized swarm will draw out and fill up the foundation.

By the use of foundation a new swarm will in two weeks stand on the same footing as an old one.

A noted Eastern apiarist has made the statement that bees will accomplish more in two days with foundation than they would in eight days without it; and from what experience I have had I should think they would.

By making a judicious use of comb foundation (worker size) we can do away to a great extent with the multitudes of worthless drones.

Bees will sometimes build drone cells on worker foundation, but not enough to amount to anything unless the queen is a very old one, and then, strange to state, three-fourths of the cells will be drone size. In a case like this, it is best to remove the old queen as soon as possible and insert a young one in her place, and then prune out the drone comb and fill it up with worker-size foundation.

Grizzly Flats. S. L. WATKINS.

HORTICULTURE.

Prune-Growing in San Luis Obispo.

Having chosen prunes and olives as my specialties in fruit culture, the question of a suitable location arose. Naturally a climate as nearly approaching the one where they have been produced in the highest perfection for generations—namely, the south of France—was the one desired. The nearest approach to this, according to the best authorities obtainable, is to be found in the middle coast counties of California, at a distance from the ocean varied considerably by the character of the country, but generally receding from the ocean on the north and approaching more closely toward the south. To this section must California look in the future for the finest prunes, for the reason that the prune demands for its highest perfection a long period of even temperature, and in this region only is it found. Of course the prune can and will be grown in certain localities all over California, but, as in Europe, although grown over a wide range of country, the prune from the south of France far surpasses that of colder Germany or warmer Turkey. So here the prune from the region most nearly approaching the south of France in climate will come nearest to perfection.

To this region, then, should a man turn who desires to make prune culture his business. Having disposed of the question of climate, which, after all, is the main thing, for no man can contend against an unfavorable climate, I come now to the question of location and soil of the orchard. The situation which I selected lies in the same valley as the town of San Luis Obispo, on the westerly slope of the foothills of the Santa Lucia range. I consider it an ideal one for the fruit-grower. Sloping gently to the southwest, it gets the last of the sun's rays, and retains the heat longer at night.

The elevation renders it practically frostless, which, although not a necessity, is, for the prune-grower, nevertheless, a great advantage, as the frostless spring allows the fruit to bloom early and in safety, and consequently mature early, enabling it to be placed on the market among the first, and avoiding all danger in drying from the fall rains. This slope extends for many miles on either side of the town of San Luis Obispo, and the amount of prunes which could be raised there under these most favorable conditions would be enormous.

The kind of soil required can have quite a range, owing to the number of stocks on which the French prune can be grafted. But it is well to remember that the French prune is a good feeder and requires a richer soil than many other fruits. Land that would produce a good crop of wheat or barley should do. I come now to my actual experience in this location. In March, 1887, I planted about 1000 French prune trees, two years from the bud, of the variety known as the Lot d'Ente, the prune d'Agen, etc. Although it was rather late for planting, and not a very favorable spring, being quite dry, the loss was comparatively slight, numbering about 30 trees. The growth during the first year was satisfactory. The first winter after planting (1887-8) I cut back rather sharply, determined to shape them well from the start. Next summer a few trees bore lightly, the growth being good. The following winter (1888-89) I cut back moderately. The next summer again a few trees bore lightly, the growth rapid. In the winter of 1889-90 trimmed very lightly, and lost about 20 trees from the excessively moist winter, which I consider doing very well under the circumstances, as in many portions of the State the loss ranged from ten per cent upward. This spring the trees blossomed heavily, the fruit set well, dropping little or none. I may mention here that prunes were reported as dropping badly in other portions of the State.

The crop, for the age of the trees, was very large, reaching in some cases as much as 50 pounds to the tree, and averaging 20 pounds. According to good authority, ten pounds is considered a good average for trees of their age. The fruit was fine in size, and in flavor equal to the best. I commenced drying in the sun on the 6th of August, and succeeded to my entire satisfaction, producing a dark, rich-flavored prune of good size and easily salable at current rates. The total amount of green fruit collected from 600 trees, which, as I have said, were planted in March, 1887, reached about six tons, from which I obtained 3300 pounds of dried fruit. In spite of the heavy yield, the growth of the trees has been fine. They at present are pronounced by experts unusually large for their age, averaging 12 feet and over in hight, spreading about the same distance, and with a circumference of trunk from 11 to 12 inches.

Before concluding I will say that I have found but one serious enemy to fruit culture here, namely, the squirrel. It is one that has been controlled in other portions of the State, either by concert of action or by county legislation. If this county hopes to reach the prosperity attained by the fruit centers of the State, some action will have to be taken. Fruitmen, isolated here and there, find it impossible to keep down this pest unaided. My own loss from this source, in spite of all my efforts, has been heavy. I owe the destruction of at least 50 trees to this little animal. In miscellaneous fruits and prune trees partially stripped, the amount of damage is hard to estimate. But when from 250 to 300 trees are actually denuded of every prune, as happened with me this year, it is easy to count the loss, the other trees having paid me about 50 cents apiece. In eradicating this squirrel pest in counties where grain-growing and grazing are prominent, some legislative action is necessary because concert of action is difficult to obtain except in already established fruit centers, although the benefit, not only to the orchardist, but to the grain-grower and the grazier, is far in excess of the expense incurred.—*W. B. Prichard in San Luis Obispo Tribune.*

PRUNE ON APRICOT.—F. M. Reed gives the Los Gatos *News* his experience as follows: My experience has been that the French prune does make a good union with the apricot. Three years ago last February Mr. J. G. Withey grafted 100 Moorpark apricot trees for me on my place east of town, putting in French prune scions. The trees were large, vigorous and healthy, from two to three inches in diameter, but never gave me any fruit. About 95 out of the hundred lived and started nicely. People said, they may grow well for a time, but they will not make a good union and they will all blow out with the wind. The result can be seen; they have fine large tops making a splendid growth, forming a perfect union, and not one of them has blown out. This year the grafts bore several pounds of fruit to the tree. No doubt peaches would result equally as well and I think it only need be a matter of choice with the owner as to which variety of fruit they would prefer.

THE FIELD.

Report of the Secretary of Agriculture.

Hon. J. M. Rusk, Secretary of Agriculture, has presented his annual report to the President. He expresses a distinctly hopeful view of agricultural affairs, indicating the obvious benefits to farmers of certain legislation which he specifies. By comparing the prices at Chicago for October 16, 1890, and 1889, he shows a marked increase in the values of agricultural products, and especially the cereals. Secretary Rusk asserts that without ignoring the effects of the natural causes in enhancing the values, it is evident that the economic legislation of the last session of Congress has directly benefited the farmers. The improved status of cereals, he believes, is largely due to silver legislation, which, moreover, has lessened the influence of Russia and India, our wheat competitors in British markets. Our increased export trade in cattle and animal products is another cause of congratulation. He traces this to the energetic and effective measures adopted for the eradication of pleuro-pneumonia and to the growing appreciation at home and abroad of the Department's ability to suppress or effectually control contagious animal diseases.

In line of further precaution the Department is now prepared to carry out the inspection of export cattle before their shipment, provided for by Act of August 30th. Similar energy has been directed to our pork interests, the Department having already undertaken the inspection called for by the same law. The Secretary strongly recommends an inspection law still more comprehensive for all meats slaughtered for interstate and foreign trade. The present immunity of northern cattle from Texas fever he believes to be due to a general compliance with the regulations of the Department issued last spring.

The outlook for the home sugar industry is considered favorable. The Secretary predicts that in the near future half of our sugar will be thus supplied from sugar beets. In the provisions of the Tariff bill Secretary Rusk finds what he remarks as some glaring inconsistencies, in that it gives the entire control of the sugar manufacturing and bounty payments to a subordinate officer of the Treasury Department in spite of the fact that heretofore the Department of Agriculture has been charged with the general supervision of the sugar industry both in its agricultural and manufacturing phases. The production of raw silk as an indigenous industry is referred to in not very encouraging terms, though its importance is emphasized by the reference to the imports of raw silk, which have largely increased during the year and are valued for the year at upward of $24,000,000; but the necessity for favorable legislation, as well as for improvements in machinery, is insisted upon.

Secretary Rusk believes that the recent changes in the tariff on linens will serve to encourage the manufacturers to provide a market for home-grown flax. Reference is made to the forthcoming transfer of the Weather Bureau to the Department of Agriculture with the declaration of the Secretary's desire to widen the present scope of the Bureau, so as to increase its benefits to agriculture. He also insists strongly upon the necessity for more frequent representation of the Department at the meetings of agricultural and kindred societies, not only to give them encouragement and supply information, but for the benefit of the Department workers themselves, who will thus be brought into closer contact with farmers and will become more familiar with their wants and the best means for meeting them.

The possibility of serving the corn-growers throughout the country by extending the market for Indian corn in foreign countries has engaged the Secretary's attention, with the result that he has appointed a special agent abroad, having special qualifications for this duty, to investigate and report upon the possibilities of promoting the consumption of Indian corn in European countries.

The frequent occurrence of important international agricultural gatherings is mentioned, and the fact is pointed out that at these the United States, the greatest agricultural country in the world, is most frequently conspicuous by its absence. The Secretary declares that some means should be provided by which, on occasions of great importance, such as the International Congress at Vienna last year, this country could be officially represented through the Department of Agriculture. Such gatherings, he argues, afford the very best opportunity for a properly qualified person, familiar with the conditions of American agriculture, to observe methods pursued abroad and to estimate their adaptability to our own country.

"By such means alone," he says, "will it be possible for us to hold our own in the intellectual competition which is the basis of all commercial competition."

In concluding his report he says: "I feel amply justified in expressing my general satisfaction by the condition of agricultural matters in our country," adding that, in spite of the effects of the former agricultural depression and of such local depression as must exist more or less at all times in some sections at least of so vast a country as ours, yet a careful review of events of the past year and a general survey of the agricultural field to-day betoken a marked improvement in the condition of our agriculturists and promise well for their future well-being.

He ends by declaring that he looks forward with confidence to the time when, in the high quality of its work, as well as in the magnitude of its enterprise, the agriculture of the United States shall not only lead all other industries in this country, but shall be the leader in this great industry of all other countries.

MR. DENICKE ON CAPRIFICATION.—Mr. Denicke, the well-known fig-grower of Fresno, gives the *Republican* his disbelief in caprification of the fig as follows: "The reason that caprification is desired is, as they explain, in order that the fruit may grow larger, have a better flavor, and because, as they say, the formation of fertile seeds causes the ripe fruit to drop when it is mature, also because of the alleged fact that the formation of fertile seeds assists in curing and prevents acidification while drying. Now I am perfectly well prepared to deny three of these alleged uses of caprification. The process will not give the fig a better flavor, because the ancients dropped the process simply because it gave the fig a worse flavor. The process does not cause the fig to drop when mature, because the fig without caprification will drop when it is ripe. The process will not assist in curing or prevent acidification, because the curing or souring is due entirely to causes outside of the fig itself. As to the claim that a caprified fig will grow larger and better in quality, that is something yet to be proven when the stock of capri figs in the hands of different fig-growers is sufficient to give it a thorough test in the California climate."

AN AUSTRIAN'S VIEW OF AMERICAN EXPERIMENT STATIONS.—Prof. Wilckens of Vienna visited this country last year to study American agriculture. He made his report recently to the Austrian Government, and according to the Experiment Station Record for November, seems to have found much to commend. He especially commends the generosity with which experiment station publications are distributed, and claims to be able by this means "to be far better informed concerning investigations and experiments of the American stations than concerning those of Europe."

PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

Work for All.

We consider the proposed Reform Ballot law, the passage of which will be contested in the coming Legislature, as by far the most important measure to come before that body. Every good citizen is interested in its passage. Every one who abhors "bossism," hireling votes and pernicious politicians should work with might and main in favor of the Australian Ballot System until it becomes the law of California.

The present is the all-important time for work in its favor. Let every farmer and voter confer with each member of the Legislature elected with whom they are acquainted and use their strongest influence to see that said members vote on the right side of this question; that they take an interest and use their best powers to avoid any intrigue to prevent the passage of the bill, by allowing the introduction of bad bills or bad amendments to good bills.

Let every good citizen stand as a sentinel on the lookout for evil and injudicious actions calculated to hazard the passage of a real desirable ballot law. Do not forget to talk at once with your local members of the Legislature and let them know that you feel an interest in this matter and are in earnest in demanding the passage of this bill.

Past Master Hale at Merced.

From Sister Nettie Brouse, Sec'y, we learn that Merced Grange will meet Saturday, Nov. 22d, at 10 A. M., and confer the third and fourth degrees on a class of six in the forenoon and hold an open meeting in the afternoon to which all farmers, their families and friends are invited.

This will be a fine opportunity for the farmers of Merced county to listen to the eloquent Past Master of Connecticut State Grange and confer with him on subjects relating to horticulture (semi-tropical and tropical), the census, matter of Farmers' Institutes, Grange views, etc. There should be a large turnout, and we believe none present will be disappointed. This probably will be the last public address given by Bro. Hale before returning East. He is a good writer as well as speaker, and will, no doubt, pleasantly tell us some of our faults while he advertises abroad many of the good features of California.

Resolutions of Respect.

The special committee to whom was referred the drafting of resolutions indicative of the sentiments of Temescal Grange, P. of H., Oakland, Cal., concerning the death of Dr. John T. Strentzel of Martinez, Oct. 31, 1890, beg leave to submit the following:

WHEREAS, The demise of Dr. Strentzel removes from the ranks of horticulturists not only one of the pioneers and most distinguished fruit culturists on this coast, but also one of the most industrious, steadfast and successful members of our beloved Order; therefore,

Resolved, That the example of a gentleman born in a foreign land and thoroughly educated in a foreign tongue, who deliberately chose armed opposition and subsequent expatriation rather than submission to tyranny, coming to America and to California in an early day and at once setting himself the task of learning our language and studying our resources, resulting in the acquirement of a superior knowledge of our horticultural needs and possibilities, and of a wonderful facility in expressing himself with voice and pen thereon, is worthy of high commendation and lasting remembrance by the membership of the Order which he so greatly honored.

Resolved, That the example of Bro. Strentzel in thoroughly experimenting with many kinds of fruit and ornamental trees, and his habit of promptly reporting the results in various journals and magazines, has contributed untold benefits upon a large community, and is worthy of considerate emulation.

Resolved, That the courtly manner and self-respecting dignity of our deceased brother, causing him to impress all his associates with the high purposes of his aims, coupled with the marked kindness of his heart and helpfulness of his hands, combine to form a rich legacy of eminent characteristics recognized by his neighbors no less than by the hundreds of more distant friends attracted and benefited by the voluminous writings of good Dr. Strentzel.

Resolved, That the profound sympathy of the members of Temescal Grange is hereby extended to the members of Alhambra Grange, Martinez, of which Dr. Strentzel was the first and the continuously elected Master, and to the bereaved wife, daughter, son-in-law and granddaughters, now left to mourn the loss of the loving and beloved head of the family.

Resolved, That copies of these resolutions be transmitted by the Secretary to Mrs. Dr. Strentzel and to the Secretary of Alhambra Grange; also to the PACIFIC RURAL PRESS for publication.—J. G. LEMMON, A. T. DEWEY, NELLIE R. JONES, Committee.

Adopted Nov. 15, 1890.

ALHAMBRA GRANGE will meet at 10 o'clock A. M., on Thursday, Dec. 4th, in Grangers' hall, Martinez, for election of officers for the year 1891. There will be the usual Harvest Feast, to which all Patrons are invited.—MRS. M. B. LANDER, Sec'y.

National Grange Annual Session.

NO. I.

From H. E. Hayes, W. M. Oregon State Grange.

ATLANTA, GA., Nov. 13, 1890.

Dear Brother: The National Grange convened yesterday, and at this our 24th annual session, we have already 32 States reported. At 11 o'clock November 12th, the Master called to order and appointed Committee on Credentials, etc. At 2:30, we convened at the capital attired in our regalia. The legislative hall was crowded to overflowing, and the exercises opened with the song, "My Country," followed by an address of welcome from Mayor Glenn, who extended to the members of our Order not only the hospitality of this lovely city, but assured us that we were welcome to their hearthstones and hearts. He was responded to by Col. Page of Missouri, who added honors to our Order by his able remarks.

Bro. Kimbrough was then called, and the noble Southern generosity filled his soul and mouth with welcome.

Bro. Thompson, Master of Illinois State Grange, was called, and in an able manner assured our Southern brethren that the representatives of all these States appreciated the kind feelings extended to us not only by Georgia but all of our Southern brethren. Then the Mayor, acting Chairman, introduced the Governor. Mr. Northen welcomed us to Georgia, not only as the National Grange, but as farmers and the representatives of the greatest interest in our American Government. Gov. Northen touched upon our recent unpleasantness, and assured us that the South now saw its error, and he was happy to welcome us as brethren of a common country and a common cause.

Bro. Rhone responded in an able and instructive manner, showing that the farmers are beginning to learn the art of taking care of themselves.

Col. Hawkins, W. O., was then introduced and assured the N. G. that Alabama joined Georgia in their hearty welcome, and that more than all other influences, the Grange had done more to beat the swords into plowshares. Bro. Messer of Vermont responded, assuring our Southern brethren that they could come to New England and be welcomed and received with open arms as American citizens and lovers of our grand old Republic. National Master Brigham, who is always as broad in his views as he is in stature, closed the exercises in his usual grand and noble style, cementing with hand and heart the interests of our people North, South, East and West.

In the evening the Grange held a session and received reports of officers, which show marked advancement in our Order, not only in educating our farmers, but in practical work.

This forenoon, Nov. 13th, completed reports of State Masters. The committees were appointed, but as I have not the list, cannot give them. Sunday the Grange holds memorial exercises on the death of Bro. Armstrong of New York. It is time for me to go, as it is now 1:30 P. M. H. E. H.

Pescadero Grange.

EDITORS PRESS:—On Saturday, Nov. 15th, Pescadero Grange conferred the first and second degrees on a class of three ladies, and received two applications for membership, one from a gentleman and the other from a lady.

A special meeting was ordered for Saturday, November 29th, to confer the first and second degrees. The third and fourth degrees are to be conferred on the five members at the regular meeting to be held on the first Saturday in December. At this meeting a Harvest Feast and a good social time is anticipated, to which a cordial invitation is extended to all Patrons in good standing.

Pescadero Grange is growing slowly but surely. What we lack in numbers we try to make up in good feeling. We gather inspiration from the music of the "Grand old Pacific" and anticipate sublime results.

Pescadero, Nov. 17, 1890. I. C. STEELE.

Tulare Meeting.

Bro. J. M. Moore and some other members of Tulare Grange will be absent at the time of Past Master Hale's visit, Friday, Nov. 21st, yet we trust there will be a large attendance to hear our Connecticut brother and advance the organizing movement for a Farmers' Institute. The Alliance joins in this meeting with the Grange. All farmers and their families should turn out. The organization of a Farmers' Institute is important to the city and county, and should be encouraged. Bro. Mackie and other able speakers will no doubt support Bro. Hale. Let it be a free-and-easy conference meeting for all interested.

San Jose Grange.

San Jose Grange, No. 10, initiated six members in the third and fourth degrees at its meeting yesterday, and then celebrated the event with a Harvest Feast, at which several addresses were made. The membership of the Grange now numbers 100. The organization extended fraternal greetings to the County Alliance, which was in session during the day in Rutherford hall.—*San Jose Times, Nov. 16th.*

Condensed Statement Relative to the Farmers' Alliance.

We find the following statement more nearly correct than most others published relating to the Farmers' Alliance, and give it in our columns for the benefit of all who wish to be informed on the advancing Order, which is not so new as many have supposed:

The sudden growth into political importance of the Farmers' Alliance, which in Kansas overturned both old parties and in other States performed feats almost as prodigious, has stimulated general curiosity to know what the Alliance is and what its objects are. This article, consisting mainly of material extracted from a page article published in the New York *Sun* last July, is intended to supply that information.

Many Farmers' Organizations.

But first it will be well to take a general survey of all the more important organizations of agriculturists in the country. The list is as follows:

The National Farmers' Alliance and Industrial Union, formed at St. Louis last year by the union of the National Farmers' and Co-operative Union of America and the National Agricultural Wheel. Other farmers' organizations have also been absorbed by the Alliance, and its growth within a year has been marvelous. Its officers at Washington say it has a membership of more than 2,000,000.

The National Grange of the Patrons of Husbandry, the oldest and best-organized of farmers' associations, has more than 26,000 subordinate organizations distributed through all the States and Territories.

The National Farmers' League, a new and rapidly growing organization, entirely political in its objects. It proposes to act in harmony with the Alliance and the Grange and to enter actively into every department of politics. Its membership in New York State is 40,000, and all have joined within six months.

The National Colored Farmers' Alliance and Co-operative Union is a Southern organization, with headquarters at Houston, Texas, and a membership, its officers say, of fully a million.

The Farmers' Mutual Benefit Association has about 50,000 members, with Mt. Vernon, Ill., as headquarters.

The Northwestern Alliance, with headquarters at South Dakota, is strong in Kansas and neighboring States, and is a similar organization to the National Farmers' Alliance first mentioned, with which it may consolidate.

The Patrons of Industry, with headquarters at Huron, Mich., has 90,000 members in that State and as many more in Illinois, Wisconsin, Indiana, Ohio and New York.

Origin of the Alliance.

The Farmers' Alliance is really a combination of older organizations. A Farmers' Alliance was started in Texas in 1873, and also in New York about the same year. The Alliance started in New York spread westward as a non-secret organization and became a strong organization north of the Ohio river and west of Pennsylvania. The Alliance started in Texas was chartered as a benevolent association by the State in 1880, and as a secret organization it took on its period of rapid growth and development about the year 1883. In 1887 it had a membership in that State numbering over 100,000, and united with the Farmers' Union, at that time organized in Louisiana 10,000 strong. These two organizations associated themselves together under the general laws of Congress regulating the incorporation of national trade unions, and secured an article of incorporation in the District of Columbia as a national trade union under the name of "The National Farmers' Alliance and Co-operative Union," and this Order completed its consolidation with the National Agricultural Wheel on the first day of October, 1889.

How It Works.

The Alliance is a secret organization, having its secret work in the manner of other semi-social Orders. Its membership is not strictly confined to farmers, but it takes in the rural population. Both sexes are admitted to membership, with 16 as the minimum age. Only white persons are admitted in most States, and colored delegates are barred from the National Council. The rules permit the admission of country doctors, preachers, mechanics and school-teachers. Persons engaged in the following occupations are excluded: Merchants, bankers, brokers, commission merchants, cotton, grain or produce buyers; lawyers, city doctors, preachers and school-teachers; land agents, book agents, peddlers, canvassers, livery-stable keepers and sawmill men; all dealers, speculators and gamblers, and any others whose greatest interests do not harmonize with farming. When a person is engaged in farming, and in addition thereto follows one of the occupations that are not admitted, the rule is that he cannot be admitted; but the association is allowed to make some exceptions, under conditions prescribed in the laws of the Order.

How It Was Governed.

The governing body of the Farmers' Alliance is the Supreme Council, which is composed of delegates from the State organizations. The executive officers are a president, vice-president, secretary and treasurer. The subordinate Alliances seek to provide the members with such social, educational and commercial advantages as can be gained by co-operation. They endeavor to secure the highest price for the produce raised for sale and the lowest price on the commodities that must be purchased. Of the political methods of the Alliance, one of its official declarations is:

"Our political methods are strictly non-partisan and must ever remain so, because every candidate before taking the pledge is assured that it will in no way conflict with his political or religious views. All political parties are represented in our ranks and all are expected to work in their respective parties to secure a just recognition of the rights of the farmer. All questions in political economy will be thoroughly discussed, and when the Order can agree on a reform as necessary they will demand it of the Government and of every political party, and if the demand goes unheeded they will devise ways to enforce it. The most essential reforms must come from legislation, but that does not necessarily compel the responsibility of choosing candidates and filling the offices. Such a course may become necessary, but will not be resorted to under any other circumstances."

Platform of the Alliance.

The Alliance has promulgated this platform:

We demand the abolition of national banks and the substitution of legal tender Treasury notes in lieu of national-bank notes, issued in sufficient volume to do the business of the country on a cash system; regulating the amount needed on a per capita basis as the business interests of the country expand; and that all money issued by the Government shall be legal tender in payment of all debts, both public and private.

We demand that Congress shall pass such laws as shall effectually prevent the dealing in futures of all agricultural and mechanical productions; preserving a stringent system of procedure in trials as shall procure the prompt conviction and imposing such penalties as shall secure most perfect compliance with the law.

We demand the free and unlimited coinage of silver.

We demand the passage of laws prohibiting the alien ownership of land, and that Congress take early steps to devise some plan to obtain all lands now owned by aliens and foreign syndicates; and that all lands now held by railroad and other corporations in excess of such as is actually used and needed by them, be reclaimed by the Government and held for actual settlers.

Believing in the doctrine of "equal rights to all and special privileges to none," we demand that taxation, National or State, shall not be used to build up one interest or class at the expense of another. We believe that the money of the country should be kept as much as possible in the hands of the people, and hence we demand that all revenues, National, State or county, shall be limited to the necessary expenses of the Government economically and honestly administered.

We demand that Congress issue a sufficient amount of fractional American currency to facilitate exchange through the medium of the United States mail.

We demand that the means of communication and transportation shall be owned by and operated in the interest of the people, and we favor the United States postal system.

Sub-Treasury Bill.

Throughout the South the measure which the Alliance is most interested in is the so-called "Sub-treasury bill," which was introduced by Senator Vance by request and which he does not indorse. This bill proposes to establish in every county of the United States a branch of the treasury department, to be known as the sub-treasury, *provided* 100 citizens demand it and are able to show that $500,000 worth of cotton, wheat, oats, corn and tobacco is produced in such county. A site for the sub-treasury must be donated, and the people must vote on its exact location and the selection of a manager. The grower of any of the crops mentioned may deposit the same in the nearest sub-treasury, and the Government shall loan him in treasury notes 80 per cent of the value of the crops at the market price, the said price to be determined by the Secretary of the Treasury. Special Treasury notes are to be prepared ranging in denomination from $4 to $1000. These Treasury notes are to be full legal tender. The debt is to bear interest at one per cent a year, and when any crops have been on deposit more than a year, they may be sold at auction. The managers of the sub-treasuries are to hold office two years.

Opposition to the Measure.

This radical measure has the support of the Alliance and also of the Colored Alliance of the South. It is, in fact, the pet project of the Southern farmers, and they mean to force it upon the Democracy as a party measure, or to smash things in the effort to do so. How well they are succeeding, recent reports from South Carolina and one or two other States give some indication. But in the North and Northwest the scheme is by no means so popular among the farmers at large. Opposition to it caused the Farmers' and Laborers' Union of Missouri, with its membership of 175,000, to stay out of the Alliance last winter. The Northwestern Alliance is divided on the subject and the Grange does not support it.

Officers of the Alliance.

The headquarters of the Alliance are on Ninth street, Washington, where are the offices of the President, Secretary and Executive Committee. The officers are: L. L. Polk of North Carolina, President; B. H. Clover of Kansas, Vice-President; J. H. Turner of Georgia, Secretary; H. W. Hickman of Missouri, Treasurer; Ben Terrell of Texas, Lecturer; C. W. Macune of Texas, Chairman of Executive Committee.

FARMERS' INSTITUTES.

Capt. McGlincy's Advice.

R P. McGlincy of Campbell, Santa Clara county, writes to the Tulare *Register* as follows:

I attended and took part in these institutes for several years, discussing dairy topics, and I saw the interest manifested by the farmers; and later, saw the benefits arising from such meetings, and am satisfied that there was not a single county in the State that was not benefited, until to-day, millions of dollars have been added to the wealth of the farmers. So popular have these institutes become that no candidate for the Legislature hostile to them could be elected. The meetings are attended by an average of 500 farmers, and these spread the news to their less favored neighbors, which includes some who sneer at "professional farmers," as they term those who prepare papers and take part in the meetings. Merchants and professional men are interested in the work, as all can see that the agricultural interests of the State are being greatly improved by these schools.

Recently Mr. Morrison sent me a copy of the proceedings of the record of the Wisconsin institutes held last winter, and it is an excellent volume containing some 233 pages of meaty matter for farmers. These books are handsomely printed and bound by the State, and I believe are furnished to the farmers free; outside of the State the books are sold, but I do not know the price.

If I were called upon to hold an institute in Tulare county, say, I would select the point in the county that would be most central or convenient for the farmers, or as the county is larger than those of Wisconsin I would hold two institutes. After selecting the place of meeting, I would invite the co-operation of the people of the place; have music, address of welcome, then follow with paper on grape culture, general fruit culture, preparing fruit for market, in fact devote as much time to fruit in all its details as might be necessary. Then have papers on dairying in all its branches; hog-raising; horse, cattle and sheep-breeding; wheat, barley and hay farming; in a word give each branch of agriculture an inning, and make each session so interesting that all would call for more. The household, the flower and the kitchen garden should not be neglected. In each county of this State here are specialties, and provision should be made to present them so that those who are engaged in them or who think of engaging in them would be benefited by the discussions.

These institutes are practically like teachers' institutes, and teachers who desire to succeed in their calling rarely miss an opportunity to attend these meetings, and I am fully convinced that if the farmers could once attend such a meeting they would be in favor of having them in each and every county, and eventually the law-makers would see the benefits and a State appropriation could be secured, and the institutes would become a fixed fact.

Let the *Register* agitate this question; the Grange and the Alliance, too, could help in the matter, and if Tulare county should be the first county to organize an institute, it would add to its renown, cause increased interest in its welfare, and in time add to its financial standing. Will the farmers move in the matter?

Notes in Antelope Valley.

EDITORS PRESS:—I have just returned from a flying trip to the Antelope valley, east side from Lancaster, a station on the S. P. R. R. Through the kindness and hospitality of Dr. Barber and family, I had a chance to look over the county several miles east and northeast of Lancaster.

The soil appears to be rich and very easy to cultivate, and on a good grade to irrigate. From what I saw of the vegetation, etc., I conclude the average rainfall not sufficient for general farming, but with irrigation the soil is very productive. Water can be had by artesian or surface wells in abundance. For miles, good water is plenty within 30 feet of the surface down to 8 and 10 feet. There are good flowing wells at Lancaster from 300 to 400 feet. Six miles east, Dr. Barber has a fine artesian well 500 feet. He told me, I think, that he found a good flow at something less than 400 feet. He has plenty of surface water at 20 feet and less.

The land has in many places a heavy growth of sagebrush, with here and there groves of the yuccas, called by some the "tree cactus." The land is easily cleared and leveled for irrigation. Most of the even-numbered sections are claimed under homestead, pre-emption and tree-culture Acts. Very few improvements of any kind have been made on any of the claims. All are waiting for "something to turn up," or the claimants have no means or disposition to do anything more than put up a little cabin, dig a well and scratch a few furrows in the soil. Looking at such improvements (?) does not give one a favorable impression of the country and its prospects.

The altitude is some 2000 or more feet, and there is a healthy climate; so it will be a pleasant place in which to live when rightly improved and cultivated.

Dr. Barber will gladly show any one what he has done in the short time of about two years on a few acres. What can be done on 5 or 10 acres may be done on hundreds or thousands in that vicinity. He has planted many varieties of deciduous fruit trees, which have grown well and appear healthy, and has as nice alfalfa as we ever saw and many kinds of vegetables which have done well.

Cash, with well-directed muscle, will make something better of the Antelope valley than a desert, which by some it has been so long called. O N. CADWELL

Carpinteria, Cal.

Dr. and Mrs. Strentzel on the Plains.

EDITORS PRESS:—In the RURAL PRESS of the 8th inst. I saw with sorrow the announcement of the death of Dr. John Strentzel of Martinez. Although I never had the pleasure of meeting him in California, I knew him in Lamar county, Texas, before he came to this State, and as a member of the Clarksville train in charge of Captain Griffin and Mr. Shackleford, an old Western Texan, as pilot in 1849.

Dr. Strentzel in Lamar county practiced his profession very successfully, and the poorest man there called upon him with as much assurance as the man with his thousands would. He knew the doctor never hesitated to go, money or no money. He used all his patients alike—rich and poor, the white and the black; he was always ready to do his best for suffering humanity wherever he found it.

When he joined our train at Bonham he had a wife and one girl baby—a pretty child. His wife I shall refer to again before I get through. Our train was composed of 104 men and 7 women. The doctor received the appointment as doctor of the train. We supposed that should we need his services we would have to pay for them and made no other calculations. But whenever he was called on he rendered his services cheerfully, did all he could, but would not receive one cent, not even for the medicine.

My messmate, Mr. R. Simms, was in poor health before he started, and the doctor treated him all the time until he died on the headwaters of the Colorado of Texas; and if my friend had been a brother of the doctor, he could not have been more kind and attentive to him. He was a great favorite with all the members of the train. I wanted to pay him for his services, but he would not take one cent.

Few that are acquainted with Mrs. Strentzel now could realize what she went through in her girlhood days. She was born in a "blockhouse." A blockhouse was made of logs notched close together to keep out bullets and arrows. The second story projected over the walls of the first one some eight or ten feet all round and was floored with logs, with portholes cut through at convenient distances, so they could shoot down at the enemy when they approached the lower walls. These houses were built principally for the safety of the women and children, and to fly to when overpowered by numbers of Indians. Often in her girlhood days Mrs. Strentzel had to fly to this refuge to save herself from the Indians.

On the headwaters of the Brazos river, our train was surprised by the Indians, and the report was that they were 500 in number. I passed by her wagon in the midst of the excitement. There she stood on the wagon-tongue, with her baby under her left arm and a United States dragoon pistol in her right hand, cool and collected. Never in all my life have I seen fight more plainly delineated on any countenance. In passing I made some remark to her. She said, "This is not the first time I have been in danger." While my messmate was sick, any and everything that she could do for him she did. Dr. and Mrs. Strentzel were a noble couple.

Of the 104 men and seven women that composed the Clarksville train, Mrs. Strentzel and her daughter are the only ones that I know to be living. Should there be any others left, I should be pleased and gratified to hear from them. J. L. P. SMITH.

Adelaide, San Luis Obispo County.

The African Explorers Ventilate Their Exploits.

There seems now a danger that in the Kilkenny cat fight being waged between Henry M. Stanley and his lieutenants both parties will come out badly damaged, as each appears able to tell some very hurtful stories of the other. So long as left to toot his own horn, it was an easy matter for Stanley to make himself out a hero, but with these counter-blasts these heroic proportions threaten to shrink into the dimensions of a pigmy.

Just now Henry M. is entertaining the New Yorkers with an account of his exploits, which they appear to enjoy with a hearty relish, as why should they not? A people who are ready to accept the caricatures of Harte and Clemens as veritable facts ought to be able to swallow the Munchausenisms of Stanley without undue strain of the gullet.

We venture the assertion that there can be found a thousand prospectors on this coast who, in the prosecution of their calling, have undergone more hardships and braved more dangers than ever did this much-vaunted African explorer. And yet these men would blush were they made the recipients of the fulsome praise with which this pet of the drawing-room has been beslobbered, both in this country and England.

THE VINEYARD.

A Press for Grape Juice.

EDITORS PRESS:—In your last paper I notice that "An Old Ruralist" of Santa Cruz asks for an easy, inexpensive press or squeezer for expressing the juice of grapes for immediate drinking. Well, I had no idea there lived a person in the same county with myself who would have to ask for information on so simple a matter. I say so simple a matter, for there are so many ways to do it that it would seem as though any one might hit upon some one of them. Now a woman would very soon start the juice running by breaking or mashing the grapes in a dish and pouring the crushed mass into a coarse linen sack and wringing it as she would a dishcloth. This is simple enough and not expensive by any means. But perhaps "Ruralist" would want to express several gallons at one time. If so, then I would advise him to take a good strong box, bore holes all around the sides with a three-eighth bit to let the juice out; then get a wide board, say four inches larger each way than the box; cut a groove in it about two inches from the edge to lead the juice around to the front into a tub or bucket; place the board upon a solid foundation high enough to admit of a tub or bucket being put underneath the edge. Set the box on top and all is ready for the grapes. These should be mashed so that every one is broken before putting them into the box. This may be done by putting them into a tub or a bucket, and with a stick of wood mash the whole until all the grapes are broken, then empty into the box and proceed to mash another bucketful until the box is full, or until enough are crushed to make what juice is required (it takes about 14 pounds of grapes to make one gallon of juice). Now cut some good thick boards to fit inside the box for a follower, and all is ready for the pressing. To do this in the absence of a jack-screw, place the box, etc., near the root of a good-sized tree; get a long, stout pole, pass it over the box and fasten the end to the base of the tree, so that it will be somewhat lower than the top of the box; then place a block upon the top of the follower in box, and hang all the old iron kettles, etc., which may be handy upon the other end of pole, and you have a constant pressure. This is also simple and inexpensive. I myself used this kind of a press for making the first wine made in this neighborhood 24 years ago.

I would also give Ruralist a hint with regard to keeping the grape juice from fermenting for a few days. The grapes should be gathered early in the morning and crushed and pressed when cold; then set the juice away in a cool place for awhile and it will settle quite clear; then draw it off carefully and keep in a cool place. In this way fermentation may be delayed for several days, while if the grapes are picked in the heat of the day and pressed, fermentation will begin within 24 hours.

I think that Ruralist can make an inexpensive press by following the above directions. If you see fit, you can print the same or a part of what I have written. Hoping that it may prove a benefit to him and to others, I subscribe myself RURAL.

Santa Cruz.

[This arrangement is cheap and no doubt serviceable. Perhaps, however, some would prefer a handier arrangement which can be used in the house and always be ready for expressing even small quantities of juice.—EDS. PRESS.]

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

FOR WEEK ENDING NOV. 11, 1890.

440,257.—PRESERVATIVE—Benussi & Dondero, S. F.

440,348.—PRINTER'S GALLEY—W. C. Dillingham, Los Angeles, Cal.

448,223.—CARPET-CLEANING MACHINE—Wm. Fay, Oakland, Cal.

440,353.—WATER-WHEEL—W. H. Gunsolus, Sutter Creek, Cal.

440,565.—UPSETTING MACHINE—Silas Harris, S. F.

440,252.—PUMP—B. Jackson, S. F.

440,599.—PICTURE-FRAME HANGER—W. C. Keithly, S. F.

440,177.—GATE—Middlekauff & Harsin, Stockton, Cal.

440,443.—SELF-CLOSING GAS-BURNER—W. W. Sherman, S. F.

440,283.—SLIDING GATE—G. F. Sherwood, Salem, Or.

440,337.—SICKLE GRINDER—H. Thibault, S. F.

440,212.—GLOBE AND LAMP SHADE—O. F. Wegener, Seattle, Wash.

The following brief list by telegraph, for Nov. 18, will appear more complete on receipt of mail advices:

California.—Eugene S. Bonnelli, San Francisco, exercising device for musicians; Albert E. Braker, Ventura, drop regulating attachment for seed-planters; Rockwell S. Chaplan, San Francisco, hose reel; Arthur W. Coffin, San Francisco, ticket-puncher; Albert A. Dickie, Suisun, nut lock; Thomas E. Evans, San Francisco, machine for cleaning and polishing knives; George W. Haines, Stockton, traveling thrasher and cleaner; Henry O. Harper, San Francisco, lock; Henry Knight, South Riverside, universal steam joint; Joseph Korbel, San Francisco, guard for gang-edgers; John T. McLean, Santa Cruz, device for securing extra leaves in books; Demirij Mendeleff, San Francisco, explosive; Anson L. Munson, Oakland, treating coal tar; George Rischmuller, San Francisco, safeguard for cable and horse-cars; James Rowe, San Francisco, composition for protecting piles; Philip Somerville, San Francisco, railway cable crossing; Charles W. Thompson, Tomales, automatic wagon gate; Sydney B. White, Los Angeles, stamp-canceling and dating machine; James F. Wickham, San Francisco, stencil-cutter.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

The Beet-Sugar Industry.

SIXTH PAPER.

Co operative Factories.

EDITORS PRESS:—In your last issue we followed the process of sugar manufacture to a point where we have what is termed "raw" or unrefined sugar.

The work of refining belongs to another branch of the business, yet a large quantity of "raw" sugar is consumed just as it reaches the home market, as it comes from the factory; still other sugar is produced by these same factories that is almost, if not quite, as pure and white as the granulated sugar produced by the refinery. This is accomplished by the improved methods and machines in use in the factories of the present day. It is true that to produce pure white sugar in the factory will cause a small loss of saccharine matter, but the increased price makes up that loss several times over.

Having given a brief and rather condensed description of the process of the beet-sugar industry, the question naturally arises, how will the farmer reap the benefit of this industry? It certainly cannot be expected that a community is to derive any special benefit if any of the wealthy refineries own and control these factories, as they will, to get their beets as cheap as possible.

The next plan that presents itself is co-operation. This plan alone will benefit a community in which a factory is located. In this plan the business men of any town can co-operate with the farmers and establish a factory in which the farmer and merchant can be alike interested. It is essential that enough farmers join in such an enterprise to insure a good supply of beets. The following remarks (taken from Lock, Wegner and Harland's book of sugar-growing) should apply here as well as elsewhere:

As an investment, *usines* (factories), both in Guadalupe and Martinique, are in high favor. Capital is freely subscribed to establish new factories upon a large and extensive scale. This is evidence that they return a very large profit.

Upon a crop of 300 tons, it is estimated that the *usine* (factory) would clear 200 francs ($38.60) per ton after paying the planter 6 per cent. Bearing this in mind, the planters have themselves to blame if they allow the capital of such concerns to be mostly subscribed by outsiders instead of investing their own capital in them.

The above cannot be taken as being the condition at the present time, as the estimated profits in a ton of beet roots will not exceed $6; yet the increased capacity of the modern mill will in a large measure make up this difference. In the same book we find:

The first report of the Maine Beet Sugar Co., at Portland, addressed to 1700 farmers, says that the average crop from 100 acres was 9½ tons; in some cases the return was not enough to pay cost of seed and fertilizers; the other extreme was 30 tons per acre. For 9000 tons delivered at the factory, $56,000 was paid; for storing and pitting, $6000; fuel, $10,000; labor and other expenses, $37,000; total, $107,000. The product of 900 tons (10 per cent) of sugar and molasses brought $110,000, leaving $3000 toward machinery and fixtures that cost $60,000; to this $3000 must be added the State bounty.

In the above report we find that beets cost $6.25, whereas they can be raised in this State for $4.50 per ton, which would make a difference in favor of the factory of $15,750. We also save the cost of pitting, $6000. Profit as reported, $3000. In addition to the above amounts, we can add the Government bounty of 2 cents per pound on 900 tons, or 1,800,000 pounds, of sugar, making a total of $42,750 net profit which the Maine Beet Sugar Co. could have made under the conditions offered by California at the present time.

The actual working expenses of a factory, including cost of beets, should not exceed 3¼ cents per pound of sugar produced, and in time that amount will be reduced to 3 cents. As 5 to 6 cents can be obtained, we have a profit of 2 to 3 cents per pound and 2 cents bounty, making a total of 4 to 5 cents profit. In estimating the cost of factories, we must bear in mind that the Government duty on beet-sugar machinery has been removed, making a difference of 45 per cent on the machinery, or 23 per cent of the total cost of the plant.

Previous to the passage of the tariff bill, the estimated cost of factories was $1000 per ton of beets daily capacity; that is, a factory that could consume 150 tons of beets each 24 hours would cost $150,000; at the present rate, it should cost $34,500 less, or $115,500.

The returns from 150 tons of beets should be not less than 14 per cent—21 tons of sugar—at a net profit of $630 and a bounty of $840, making a total of $1470, and a run of 100 days would raise it to a total of $147,000 in one season's run. Certainly no better paying enterprise could be expected. Let each beet-grower own one share of stock for every acre of beets that he would contract to raise, and in a short time that community would feel the effects of having prosperous farmers for neighbors.

Alameda, Cal. B. B. CHANDLER, M. E.

Thanksgivin' Pumpkin Pies.

So you bid me to Thanksgivin'! Thank you, neighbor, it is kind
To keep a plain old body like myself so much in mind,
Here I've been sittin' all alone, and a mist before my eyes,
A thinkin' like a simpleton, of mother's pumpkin pies.

Yes, I've just come home from Sarah's—come home I'm glad to say—
And here, God helping me, I mean in future time to stay—
Oh! Sarah's folks are very fine, but I felt all at sea,
And though the rooms were 'mazin' big, they seemed too small for me.

The house is like a palace, and mine's a tiny nest,
But, neighbor, I'm contented here, I like this place the best;
Just as Sarah's creams and salads, I don't know how to prize;
Her French cook costs a fortune, but—I favor home-make pies,

Like mother's; flaky, rich and brown, and toothsome with the spice;
I grew to loathe her dinners, cut in half with lemon ice;
Give me good food, biled greens and pork; and turkey now and then;
I tell you on our mountain fare we've raised a race of men.

Not spindlin' like them city folks, in dress-suits if you please,
An' mincin' in their low-cut shoes, an' bowin' to their knees—
I hate such silly airs; I like to hear a hearty word;
No! I'm not deaf, but when one speaks, why, speak so's to be heard.

In Sarah's house, 'twas "aunty this," and "aunty that," until
I saw I made a discord, let me to do my best, 'an still
I'm sure the child loves aunty, but neighbor, she and I
Are far apart and nohow could our ways again draw nigh.

She wears her black silk every day, a trailin' on the ground,
Leastwise, a trailin' on the floor; 'tis called I b'lieve, tea gowned,
An' frills an' lace, an' hot-house flowers, such waste, it worried me,
Rememberin' Jotham Peckham's kin, as poor as poor could be.

Rememberin' Jotham Peckham, I was vexed to see his child
A throwin' money here and there; it made me fairly wild;
Her house, it's just like Barnum's, with jimcracks everywhere,
When pa and me the children took to see the wonders there.

How I run on! Well, thank you, neighbor; I see you want to go;
I'm comin' to Thanksgivin'; your good old ways I know;
An' my mouth waters, dear old friend; there's tears in these dim eyes,
For I shall taste the flavor of mother's pumpkin pies.

And though I'm 'most three score and ten, an' cranky, I'm afraid,
Once more I'll feel myself a child, my mother's little maid;
And I'll be very pleased to help, in any way I can—
Good-by, dear, and my love to Ruth, a kiss to Mary Ann.

—*Margaret E. Sangster in Ladies' Home Journal.*

A Thanksgiving Party.

It was a neat, comfortable kitchen, though wholly lacking in ornament. The floor was as white as soap and sand and willing hands could make it, and was well matched by the angular wooden chairs, which had become almost ghastly from repeated scrubbings.

The brass knobs on the dresser, and even the pendulum of the loud-ticking old clock, shone like burnished gold, reflecting the beams of firelight which brightened the dusky room.

The tea-kettle sang merrily, and Aunt Esther passed to and fro, preparing the evening meal and watching for the return of her husband from the woodlot.

A little girl stood by the western window, trying to read by the fast-fading light. Her delicate face, long, shining curls, and dainty apparel formed a bright contrast to the plain room.

"What are you looking for in the almanac, my child? You'll injure your eyes."

"I'm trying to find when Thanksgiving is, but I can't see any longer."

"You'll be more apt to find it in the last paper, Lucy; but I can tell you; it is a week from next Thursday."

"Oh goody! so soon? We'll have one of those big turkeys, and a jolly time, won't we?"

"I'm afraid not, dear; what put that into your little head?"

"Why, auntie, you told me when I first came that those turkeys were for Thanksgiving. I've thought of it ever since."

"Oh, yes, I did tell you so, Lucy, but I meant that we raise them to sell for Thanksgiving. We haven't kept the day since we were first married; your uncle doesn't care for such things. I missed it sadly at first, for we always kept the holidays when I was a girl at home, but I've got used to it now, after all these years."

"I don't think I could," ventured the child, looking solemnly through the twilight at the turkeys, comfortably settled for the night on the bare limbs of the old apple tree.

"Well, don't shed any tears, yet, Lucy; if you can get Uncle Jerry to consent I'll do my part. Better not speak of it till after supper," she added in a whisper as she heard her husband's footsteps at the door.

So with what patience she could command, Lucy waited till the supper was cleared away and they were gathered around the crackling wood-fire, Aunt Esther with her knitting and Uncle Jerry with his paper.

Lucy was his only sister's child. She was spending several months with him, while her parents traveled in the South, hoping to benefit her mother's health. Two brothers and one sister were at college, and were to spend their Christmas holidays at the farmhouse. This was the first time Lucy had been so long from home, and occasionally she suffered from homesickness; and now, with the fear that the loved holiday was to be slighted, an attack of that dread malady was certainly imminent. She felt her courage ebbing away, and hopelessly she sat very still looking straight into the fire, till all the curling, writhing flames melted into one broad sheet of bright mistiness, and then—there were two big tears on her rosy cheeks.

Uncle Jerry, who, underneath his hard exterior, had a really kind heart, was watching her over his paper, and saw the tears, the sly, quick brush of two little white hands, and a brave effort to keep back a sob which was struggling to escape. "Homesick," he thought; "and no wonder, with two dull old folks like us." And for a moment he wanted to take her in his arms and soothe her as her own father would; but he had so long repressed all tender wave that he could not manifest his sympathy. But something must be done. Rising abruptly, he took a pan from the dresser and started for the cellar, saying: "Esther, hold the light for me. I want some o' them fall apples; they won't keep long."

By the time a share of the fruit had disappeared, Lucy had regained her good spirits, and, with new courage, exclaimed: "Uncle Jerry, can't we have Thanksgiving this year? I'd like to."

"Nonsense, child; what would it amount to?"

"Why, we'd have a jolly time. We always did at home."

"Yes, a big dinner one day and the doctor the next."

"It never made me sick, never in the world."

"But what's the good, anyhow?"

"Mamma thinks it's good, and she's always right. Just last year papa thought we'd better not have a dinner, for mamma wasn't strong, and we were so disappointed—I was, anyway—and mamma put her arm around me and said: 'We'll all help and do the best we can, for we mustn't miss keeping a holiday. When my boys and girls have left home and gone out into the world, I want them to have the remembrance of a happy childhood and a pleasant home to help them over the hard places they will find. It will make them better men and women, I'm sure; so order the turkey, papa.' I remember it all, Uncle Jerry, 'cause I thought mamma was going to cry, her voice trembled so, and I believe I should have cried myself if she hadn't said 'turkey.'"

"She never had many good times to remember," said Uncle Jerry, thinking of their hard orphaned life.

"Perhaps that is why she wanted her children to be always happy," suggested Aunt Esther.

"Yes, she said so once," continued Lucy, picking apple-seeds out of a core; "and I think, Uncle Jerry, if you had some little boys and girls, you'd feel different about it. But I'm your little girl this year; won't you do it for me?" She was almost frightened as she looked up and met his stern, white face.

"It is your bedtime now, Lucy," interrupted her aunt. "We'll think it over till morning." And Lucy was glad to retire to the adjoining room, wondering what she could have said to make Uncle Jerry look so—so dreadful!

An hour later Jerry Winters broke the silence, which was becoming oppressive:

"I suppose we must do something, or the child will be homesick."

"Yes," assented his wife.

"Don't see how I can stop choppin' a day, with that contract on my hands, and Jake and Steve have both begged off for Thanksgiving. I wish there were no such days. I suppose nothing less than a turkey will satisfy that child?"

"No; but we can well afford it. Who is going to have our money after we are gone? We may as well make the child happy, and have a good time once in our lives."

"She might be happy, anyhow. It seems waste to me, I must confess."

"Well, Jerry, we never wasted very much that way; and it strikes me that if we had more holidays, and had made the old farmhouse more congenial to a young, lively spirit, we would have had our son with us in our old age."

"Esther!"

"I know we haven't mentioned him for years, Jeremiah; but for all that, neither of us has lived a day without thinking of him."

"Well, I did my duty by him, if ever a father did by his child."

"We did what we thought was for his bets good; but I fear we made some mistakes."

"He was wild as a young colt; nothing could tame him!" The father spoke impatiently and scowled hard, lest his face might show the love and longing in his heart.

"He was full of life, and fiery, too; and instead of guiding him gently in traces which could not gall, we bound him, as it were, so tightly that he broke the fetters and disappeared. We wanted him to be old and steady, and his young spirit could not be subdued. I see it all now. There were no companions for him, no 'jolly times,' as Lucy says, and nothing about the old farm worth staying for."

No answer, but a smothered groan.

"There, Jerry, I ain't blaming you more than I do myself. We were wrong, and the boy was wrong, too. If we only knew where to find him, we might make it all right before we die. I'll warrant he has longed to return, but pride and fear have kept him back. He can't know how we long for him, for he never knew how much we loved him!"

"O Esther!"

"Well, father, I won't say any more. All these thoughts have been crowded down in my heart so long that I had to speak, and I think it'll do us good, after all."

She drew nearer and laid her head on his shoulder, while tears rolled down her wrinkled cheeks, and thus they sat far into the night.

The next day, among the families of the neighboring farmhouses, there was but one topic of conversation—the invitation to spending Thanksgiving with Jeremiah Winters.

The eventful day came at last. Lucy, with a dozen girls and boys, made the rafters ring with their glad shouts. Down-stairs, the best room was filled with the hum of elderly voices recounting "old times," while in the sitting-room the young people were eating apples and counting the seeds, with much zest and laughter, sly glances and blushes.

In the kitchen a long table was loaded with good things, while Aunt Esther, with plenty of help, was completing the preparations for dinner.

Uncle Jerry excitedly went from room to room, trying to appear as if this sort of thing was of common occurrence in his house. For the first time in her life, his wife had asserted her right to entertain her friends, and now he felt glad that she had persevered. He was surprised to find what pleasant neighbors he had.

It was night, and the merry-making was at its hight. The walls echoed laughter and song, and from every window lights gleamed far out into the darkness.

From the village depot, five miles away, a traveler was walking over the lonely road as if eager to join the joyous party; but when at length he came in sight of the many lights, he stopped in amazement. Nearer and nearer he came, till through the unshaded windows he saw the friendly scene within. With a glad smile on his face he turned away, and standing in the deep shadow of a pine, he watched long and patiently.

At last, after a host of thanks and pleasant "farewells," all was still, and only three sat in the deserted rooms.

A hush fell over them, and they looked thoughtfully into the flickering fire. Lucy, climbing on her uncle's knee, thanked him so prettily for the day's pleasure that he bent and kissed her. Then, holding out his hand to his wife, he said: "This little lady has thanked me, but we both ought to thank you. It has been a pleasant day to me."

This was a great deal for this man to say; and they were silent again, but each one happy through making others glad.

Then the door opened, and a stranger entered. He was tall and heavily bearded; but a mother's eyes will know her own, and with a cry which expressed the yearning of years, "My boy!" she was folded in his strong embrace, while about them both were clasped the father's trembling arms. No one knew how long they sat together—the long separated family once more united. Lucy, with wide-open eyes, enjoyed to the utmost this crowning excitement, much pleased with the tall cousin whom she had never seen.

"O John, why did you stay away so long?" ventured the mother.

"I came back once, five years ago, and saw you and father through the window. But, knowing I deserved no welcome, I feared to enter. To-night I should have entered at all events; but when I saw you with your friends about you, and, later, sitting here with clasped hands, I felt sure of a welcome—sure that you had forgiven the past and felt only pity for your wayward son. Now I mean to cancel the suffering of the past by making the future happy."

"Now, Uncle Jerry, I told you so! Thanksgiving can amount to a great deal sometimes!" and the merry laugh which followed was not less hearty because it broke through tears of joy.

HOUSEKEEPERS are aware that boiling water will remove most fruit stains, but should your little daughter stain her best white dress with peaches, rub out in clear, cold water before sending to the laundry.

Thanksgiving Day.

No other day means quite as much to dwellers in New England as Thanksgiving Day, which is now distant but a short time and for which invitations are already sent, and preparations for departure and for reception are being busily made.

Yet while to all it is a day set apart, to each it has a special meaning. In the struggling time with the early settlers, when the few last kernels of corn intrusted to the ground with prayers and fasting had yielded a goodly harvest, the little band of faithful men and women chose the day for glad, heartfelt rejoicing. It was to none of them a mere form, a simple custom to be observed. It was a genuine time of thanks to the "Giver of every good and perfect gift," but with the changing years it has come to be a day observed from custom and as such has a different meaning to each.

To those who still honor the memory of the fathers it means a holy, quiet day, a day to be spent in devotion and glad sacred reunion. To the busy toiler it means a day's holiday, a time for a little unusual fun, a little extra sight-seeing or travel. To the absent it means home, and to the child it means a large piece of turkey or something nice to eat, and so on indefinitely as far as age and circumstances present varying conditions.

Alas! to some it means a day of sacred memories, when childish laughter ringing recalls the merry voice that brightened all a year ago, and "sings among the angels now"—memories of years when the home-coming meant welcome from dear old lips, sealed today in unbroken silence; and when across the ample board one now looks in vain to catch the glad greeting from the sympathetic, loving face, never failing in response through all the years, and finds the eyes tear-filled, as the veil falls between and shuts out that face from mortal view, then the memories crowd most thickly. To these whose home circle has been invaded, the present occasion is a sad one, and turning from it memory becomes a sweet companion as back through the years they walk together, and remembering many a glad and happy festival in those other times, the thankfulness fills the heart that so much happiness was given so that there now remains so much to remember.

Dear old day! Whatever may be the cause for personal sorrow, it must be put aside for the day so that the shadow may not rest on the otherwise merry circle. The day should be made glad for the sake of those who always rejoiced so truly in its merriment. We should count them in with the reunited that gather around the family table and add to the share that is ours, the responsibility of making the occasion as merry as the ones missed would have done if present in person. Let there be no vacant chairs. Seek out some one so far removed by distance and circumstances that he cannot join in his family party. It may be hard to welcome a seeming intruder upon a genuine home day, but once done, the happiness resulting will be ample return.

Those who are still given the old homestead to go back to and whose circle of loved ones is larger and not less than a year ago, have cause for rejoicing. These should allow nothing to hinder the home-coming, and rejoice with fullest thankfulness that health and friends are theirs, letting their measure of blessing overflow so that those less prosperous may share their bounty.

But broader than the home thanksgiving is that of our great and glorious country, and in this all may join. All may rejoice that peace is still our guest, and for so long a time she has blessed our country. Rejoice that the crops of America have been so bountiful as to feed not ourselves alone but the hungry of other nations. Rejoice that industry has favored the many with her blessings and that this year is nearer than all that have gone to the grand Thanksgiving Day when universal kinship shall be acknowledged, and the great brotherhood of man shall unite in thanksgiving for prosperity which no longer causeth one to be poor while it maketh another rich, or one weak while another is strengthened, but which stands for universal peace and plenty, and hence gives it real cause for universal thanksgiving.—*Mass. Ploughman.*

Chaff.

DON'T argue with a fool, or the listeners will say there is a pair of you.

A CROSS old bachelor of our acquaintance defines marriage as the medicine which restores sight to lovers' eyes.

CASTLES in the air do not bring in any rent.

THE great art of keeping friends is to keep them in expectancy.

VARIETY is the spice of life, but steady plodding is its beef and bread.

WHY SHE WEPT.—Friend: You have only been married a week and here I find you in tears. Young Wife: Yes, but my husband has been running for office and I have been reading in the papers what an unmitigated scoundrel he is.

PHILOSOPHER—What induces the men to marry? Cynic—The girls do.

ELECTION is like a Christmas stocking. You never know what's in it, and it's full of surprises.

YOUNG FOLKS' COLUMN.

The Thanksgiving Turkey.

One of the parish sent one morn—
A farmer kind and able—
A nice fat turkey, raised on corn,
To grace the pastor's table.

The farmer's lad went with the fowl,
And thus addressed the pastor:
"Dear me, if I ain't tired! Here is
A gobbler from my master."

The pastor said: "Thou shouldst not thus
Present the fowl to me;
Come take my chair and for me act,
And I will act for thee."

The preacher's chair received the boy,
The fowl the pastor took—
Went out with it and then came in
With pleasant smile and look,

And to his young pro tem. he said:
"Dear sir, my honored master
Presents this turkey and his best
Respects to you, his pastor."

"Good!" said the boy; "your master is
A gentleman and scholar!
My thanks to him, and for yourself
Here is a half a dollar!"

The pastor felt around his mouth
A most peculiar twitching;
And to the gobbler holding fast,
He "bolted" for the kitchen.

He gave the turkey to the cook,
And came back in a minute,
Then took the youngster's hand and left
A half a dollar in it.

Thanksgiving in the Canyon.

[Written for the RURAL PRESS by ADAH FAIRBANKS BATELLE.]

"How much farther, Edward?"

"I've no idea, but we have not gone far."

"It's such a dreadful road, Edward, that I am afraid."

"I was wild to start from Mesmer's with rain in prospect. How it beats!"

The woman shivered under her heavy wraps.

"Are you cold?" asked her husband as he rearranged the robes.

"No. I was pitying you and myself."

"Anybody who is out in the rain deserves pity."

"I had forgotten the rain; it is nothing to our rain of ill fortune."

"It never rains, but it pours; so what can you expect?" asked her husband.

"It has poured for two years," she answered bitterly. "First that bank stock goes down to next to nothing, then Tom brings home his college debts. Even Sister Kate, who might marry Howard Worth and have a beautiful home of her own, must go off to the backwoods to teach school."

"Don't catalogue your troubles—it only makes them worse," he interposed; yet evidently he was ready to heap up a mountain of miseries, for after a few minutes he spoke:

"And last and worst of all, these mines are to shut up after we have put thousands of dollars worth of machinery into them. Didn't things look forsaken around the old diggings? Well, the atmosphere is azure."

Mrs. Reddick took on an injured air.

"I can't bear to hear you joke about such misfortunes. Why don't you say you feel blue?"

"Blue is azure, isn't it?"

"You have reason to, I am sure," went on Mrs. Reddick, appearing not to notice the meek question. "We are not the groaning kind, but we are perfectly excusable for not talking about the bright side and pretending to be happy when we are not. I have no patience with hypocrisy. If I am perfectly miserable, I shall say so."

"Are not you glad that there is no moralizing friend here to remind you how much worse off some people are?" asked Mr. Reddick good-humoredly.

"Indeed I am; that is the *lamest* saying. How much does it help my trouble to know that somebody else has worse? Of course some have worse trouble, but maybe they are not so sensitive as I am."

Wrapped in her sensitive nature, Mrs. Reddick shut out all pity for the rest of humanity.

Mr. Reddick shook the rain from his beard as he remarked:

"I don't object to the bright-side argument so long as I am not exhorted to be thankful for the things that I don't want."

"And for the things you can't get rid of," suggested his wife.

"Yes, it's all right for the money-kings to keep Thanksgiving Day, and poor folks are welcome to, if they want to be thankful for one square meal in the year. It's we middle-rich folks that don't need to be so thankful as to spend a whole day talking about it. You women have more time than you know what to do with, but *we* are too busy."

"It's a lack not of time but of inclination with us," remarked his wife, languidly. "Oh, it is a very pretty Puritan custom," she went on; "quite pastoral, the idea of gathering in one's harvest and returning thanks to God for the yield, but we have outgrown it."

She shivered as she spoke.

"Jessica, you are cold. How slow this horse goes!"

"Can't we stop somewhere?"

"I would not refuse if there was a place to stop."

"Is not there even a cabin on the road?"

"There was none when I came this way last June."

They rode on in silence. The rain beat the red dirt from the hillside down across the sidling road. On the bank above, trees and bushes were bending in the storm, and below them foamed a yellow stream where had been none the day before.

Suddenly Mr. Reddick half turned in the buggy to look at something just passed. With the movement of the lines the horse stopped and seemed loath to go on.

"Some prospectors have been at work here," he exclaimed. "Perhaps there is a shanty near, where we can find shelter."

He drove on slowly for a short distance; then they spied a small cabin in a canyon back from the road. The prospect of a shelter raised Mr. Reddick's spirits.

"It's a rough Thanksgiving Day," he said; "but we have something to be thankful for."

"Perhaps not, for it may be a stage robber's den," suggested Mrs. Reddick, dubiously.

"Uncle Sam's agents don't build houses by the roadside," laughed her husband. "I don't care much who it is, so we can get out of the rain."

The cabin was small and was built partly of old and partly of new boards. It stood alone, protected by the side of the canyon and by a live-oak tree.

When, in response to a knock, the door was opened, the occupants of the buggy saw a welcome sight. It was not the faces of two wide-eyed children, nor the glow of heat from the rusty stove, so much as a long table covered with a white cloth and set with covered dishes and steaming plates of food.

"Have you a place where I can put this horse, my boy?" asked Mr. Reddick after lifting his wife to the doorstep.

"Would he like a barn? We hain't got it; but you kin put him in the woodshed if he ain't 'fraid of k'yote skins."

When the horse, too wet and cold to be frightened at the coyote skins, was housed in the "lean-to" with the wood, Mr. Reddick entered the cabin to find the little girl placing a last dish on the table. Mrs. Reddick, with her wet wraps removed, was quite herself again, and was talking to the two children.

Like wild animals that have never seen man, the boy and girl showed no signs of awe. They accepted these unexpected visitors as if they had been invited guests.

"Ah, you are keeping Thanksgiving Day. That's pleasant," said Mr. Reddick, glancing at the table.

"We'll be glad to have you uns eat Thanksgiving with us," said the young host ceremoniously and with something like cordiality in his tone.

"This is a long table for two of you," said Mr. Reddick as they sat down to the table. "Are you expecting the rest of the family home to dinner?"

"There ain't no rest, except paw," replied the boy gravely as he passed a well-filled plate to Mrs. Reddick. The plate contained a piece of bacon, not fried but roasted in slices, mashed potato and saleratus biscuit.

"You are a good cook," said Mrs. Reddick, critically nibbling a bit of bacon. She did not know just what to say to these children—they seemed so dignified, so self-possessed.

There was a long pause. The little boy—he was evidently less than twelve years old—leaned over to toss a biscuit to a dog.

"Paw took most of the dogs with him," said he.

Two—a sleek spaniel and a long, lank, fierce-looking yellow dog—lay on the floor. They occupied so much space that Mr. Reddick wondered where "the most" of the dogs staid when at home.

"When will your father come back?"

"To-morrow."

The answer was given so shortly that Mr. Reddick began to wonder if the father's name could be an unpleasant theme, when the little girl lifted her large black eyes with a confiding expression. "Let's tell about it, Ab," she said, and Ab explained:

"We are havin' a Thanksgiving dinner because paw can't get home."

Mr. Reddick thought it must be that he misunderstood the boy, and said: "It's too bad that your pa can't get home. Where——"

"No, 'tain't too bad," interrupted Ab. "He went down to Pocher's yes'day, and if he come back to-day he'd be drunk. This rain's a keepin' him. He'll come to-morrow mornin', prob'ly all sobered off."

Through Mrs. Reddick's mind flashed the question: Could their children ever, under any circumstances, feel toward a parent as these children felt?

Mr. Reddick dared not look at his wife. He bit his biscuit and tried not to look amused. He was less amused than shocked, for this idea of Thanksgiving was a painful contrast to his boyhood remembrance of the day. The service in the village meeting-house, the happy faces round the dinner-table, and the twilight talk with father and mother after the guests had gone, all came back to him; and these children—what were they thankful for? Thankful that their father could not get home!

Mr. Reddick was not accustomed to giving moral instruction, but he began:

"Don't you know what Thanksgiving means?"

"Oh yes," said the little girl. "Miss Dovey told us how about them people that was so awful glad when they come to that cold country on the rock, and how they—or else the Lord, I forget which—said everybody must thank God for——"

"'T'wan't the Lord, it was the people themselves," interrupted the boy; and he went on as if his turn in a recitation had come. "They said people must thank God for giving them homes an' food an' such things, and Miss Dovey said we could give thanks for whatever we was gladdest for, and we was gladdest for paw's not bein' here, 'oos we couldn't have any Thanksgiving dinner if he was."

"Don't you love your father?"

Mrs. Reddick smiled at Mr. Reddick's severe tone.

"Yes, we do, and we would like to have him here if he'd be good like the fathers Miss Dovey used to read us about."

"Did not Miss Dovey tell you to love your father?"

"Oh yes, and then she used to kind of make you feel like a lovin' everybody."

"When paw felt good onct," explained the little girl, "he told me about a Thanksgiving that he ate, and they was lots of big covered dishes full of good grub; so we have the covered dishes and play they are full."

This explained why the tureens had not been uncovered during the meal.

"This here dish"—and she touched the largest—"is broke; but it don't show less'n you look inside. Now let's have dessert," said the host impressively, and the girl passed a dish of apples cut in slices and sprinkled with ground cloves.

When the dinner had been warmly praised by the wayfarers, and all had left the table, Mrs. Reddick turned to Ab and asked, "Who *is* Miss Dovey?"

"Why, she was our teacher last year, and we went to her school. My! didn't we have good times! She was so good and teached us so much, and she loved us and got us not to say bad words, and to be good to everybody."

Great tears were rolling down the little girl's face, and Ab stopped to say, soothingly, "You needn't feel bad 'cause we can't go to her school now."

The child's frame quivered with sobs.

"It—it ain't because she's gone; it's be—because if we'd been thinking of Miss Dovey we would of known better than to be thanksgiving—ing about paw; an' he is all the paw I have got, and I do love him. Oh, I want Miss Dovey!"

Every woman, whether or not she likes children, has a certain instinct of motherliness; and with one glance at the pathetic little face, Mrs. Reddick caught up the little girl and held her close, then petted her till the tears were dried.

Sitting on the lap of her new friend, the little girl talked freely of her teacher, while Ab closed her praises with the declaration, "Nobody could not be bad that knowed Miss Dovey."

It was plain that the year in school had been the brightest spot in their bare, somber little lives.

"Where did you go to Miss Dovey's school?" asked Mr. Reddick, and Ab replied:

"It was down to Bentley's Mills, where paw worked last year, 'fore we come here."

"I've got her picture," said the little girl, going to a small box. She took from it a photograph.

As she passed, to hand it to Mrs. Reddick, Mr. Reddick exclaimed, "Kate Duval!"

On the reverse of the card was written: "To my little friends, with love. Kate Duval."

"Well, Kate is a missionary," said Mr. Reddick.

His wife wiped her eyes. "Dear Kate," she said softly, then she glanced up. "Shall I tell them?"

He nodded, and Mrs. Reddick told them first that she knew their "Miss Dovey" and loved her, too; that "Miss Dovey" visited them often—"because she is my sister," she ended simply.

Ab's big eyes were grave with wonder. "Sis," he said, "this is Thanksgiving enough for one year, isn't it?"

His sister smiled. "Tell her—tell Miss Dovey," she said, "that we love her and always will, and we will do like she told us."

"I wish I had a present to send her," said Ab. "Do you 'spose she would like a k'yote skin?"

Mr. Reddick smiled. He could not help it.

"May I write Miss Dovey a letter?" asked the little maid, slipping off Mrs. Reddick's lap. "She used to have us copy one out'en the reader. It said, 'Dear mother, I love you—Frank;' but I could say it different if I had a pencil."

Mr. Reddick produced a pencil, and the child went to work.

Just then Ab came in, bringing not a "k'yote" skin, but three soft bits of fur of a beautiful silver-gray color.

"How lovely; what is it?" asked Mrs. Reddick.

"Moleskins," replied her husband and Ab with one voice.

"Will you give 'em to her? Tell her I didn't let 'em suffer when I caught 'em. She didn't like us to hurt things."

A gleam, not of sunshine, but of light through the gray dullness, shone in at the small window. If it had been a sunbeam, it had lost its brightness in its long journey through the gloomy atmosphere.

"We can go, Jessica, at any time," said Mr. Reddick. "If we start now, we can reach a stopping-place before dark."

So, with the moleskins and the letter of seven words wrapped carefully together, Mr. and Mrs. Reddick prepared to go.

Mrs. Reddick seemed to have lost a certain stiffness from her manner that rainy day, just in the way that some goods lose their starchiness and show the fineness of the fabric all the better for the loss. The children hung about her with an affectionate freedom as if she were their own Miss Dovey. Perhaps she tried to be all she could to them, thinking of their lonely lives and of the loving care lavished on her own children, Miss Duval's nieces and nephew.

Mr. Reddick bade good-by with warm thanks. If he gave them special cause to remember him, he is not the one to tell of that.

"Edward, we have kept Thanksgiving Day," remarked Mrs. Reddick when they were well on their road.

"With small credit to ourselves," replied her husband unsympathetically.

"Let us give those children something to be thankful for," she pursued.

"When you yourself have no reason to be thankful?" quizzically.

"Be quiet; I have. I am thankful we found them."

"And that they had dinner ready?"

"No, but that you are not like their father, even if you won't agree with me."

"I do agree with you. Send the little fellows anything you please, and I will pay the bills."

"And be thankful to do it?"

"Yes, since it is the order of the day."

"And Edward, let us keep a real Thanksgiving Day next year."

"And be a thanksgiving family forever after."

"Be a *giving* family henceforth, giving thanks to God and giving help to people who need it."

Sutter City, Cal.

DOMESTIC ECONOMY.

For Keeping and Carrying Food Hot.

To keep and carry food hot, some newly invented tanks are in use in Boston, where a cooked-food supply company does a thriving business. The tank is made with two jackets, the inner one of glass and the outer one of tinned iron, the space between them being filled with a non-conducting substance chemically prepared. This retains the heat so perfectly that the outside of the vessel loaded with coffee at 212° feels cold to the hand. So perfect is the insulation of the tanks said to be that the only heat which escapes at all gets out around the stopper at the top, where it is not possible to have an inclosed space separating the liquid from the outer atmosphere. If it were not for the slight radiation at the stopper the liquid might be kept hot for a year. Such tanks, loaded in Boston with coffee at boiling point, are said to have actually reached Omaha, 1500 miles distant, with their contents too hot for comfortable drinking. After all, these insulated coffee-pots do but represent the application of a device familiar centuries ago to the fishermen of South Normandy and the Brittany Coast. It has been for an indefinite period the custom there for those toilers of the sea to start out with their nets in the afternoon, carrying with them a warm meal for the day following. The pot containing the stew or heated delicacy is wrapped in a mattress stuffed with feathers, or inclosed in a box with feather-lined cushions, and after 15 hours the dinner is spread as hot as if it had just come off the fire, not more than three or four degrees being lost, at all events. This same idea was carried out by a man who made a little feather-stuffed box and put his newly boiled shaving water into it just before he went to bed every night. In the morning, when he got up early, and shaving water would not have been easy to get off-hand, he opened the box and took out the water, still scalding hot.—*Washington Star.*

GRAHAM BREAD.—Three-fourths pint of milk, lard of the size of an egg, an even teaspoonful of salt, one-third cup of yeast, one-half cup sugar (or part molasses). Stir in enough graham flour so that it will not run or be watery after standing. Put in a well-greased tin, let it rise even with the top, and bake in a slow oven 1½ or 2 hours.

HOME CAKE.—To 1½ cups sugar, one-half cup butter and one-half cup sweet milk, add two heaping spoons baking powder, or one even spoon soda to two of cream tartar. Use three eggs, beating yelks and whites separately, and 2½ cups of flour. Grate yellow rind of lemon and use juice also. Fruit may be added if wished.

SHINGLES.—One-half cup butter, 1½ cups sugar, one-half teaspoon soda in one-half cup hot water. Use flour enough to make them very stiff, and roll them on sheet tins. If preferred, use two-thirds graham flour and cut for cookies.

GINGER CAKES.—One cup butter, two cups molasses, a tablespoon of ginger, a handful of flour. Heat one cup of sweet milk in which is two teaspoonfuls of soda. Pour on. Stir well, add flour, and cut.

The Week.

It is the week before Thanksgiving, and we trust in all the RURAL households preparations are progressing for enjoyment of the happy occasion. It is true, perhaps, that the disposition to give thanks will be hightened if the thirsty earth gets a good draught of refreshing water before the pleasant last Thursday of November arrives, but there is no reason to let forebodings and misgivings prevent the enjoyment of Thanksgiving. It has been a year of general prosperity and progress in California. In some respects we have prospered as none could dare to hope, and experience agrees that a rainy season beginning rather late and favoring continuous growth thereafter is better than early rains with a long interval between them and the regular winter wetting.

We urge, then, all RURAL readers to give thanks. Probably no one can fail to find some occasion for the uprising of the thankful spirit. If any think he cannot, let him read the Thanksgiving story in our Young Folks' Column this week. It preaches a Thanksgiving sermon as touching as it is truthful and inspiring. The oldest child among us can profit by its lessons.

Does It Pay in the End?

It has ever been a question with casuists whether or not wealth wrongly acquired is worth what it costs. Some people think it is. Very many in fact hold that opinion, and acting accordingly, hurry off and without much regard to the means employed, "make haste to be rich." And yet there lives not a sentient being but recognizes in his inner consciousness that this doctrine is dangerously and atrociously wrong.

We took occasion not long since to comment in a mild way on some of the methods made use of by the non-producing guilds to rake in the little money dabs of the laboring classes. Alluding to that modest effort, an interior journal observes that, while these methods are objectionable in a moral point of view, they are after all simply business, not running counter to the usages that largely obtain in most commercial and trade circles. Perhaps so. Certain it is, they do not much run counter to the usages that obtain with the bunco steerer and the burglar, which crafts regard also their vocations as simple business.

It is not a hopeful sign when the public conscience can tolerate or the public journalist write with complacence about things like these. Excuse them as we may, we have an idea that the man who makes his money through recourse to these sharp and cruel practices is weaving into the web of his existence colors that will not "run;" they will prove fast enough—so fast that they cannot be washed out with any detergent soap. It may even be doubted if blood would wholly erase them. We hold that it is a perilous thing to do a wrong that cannot be repaired. This, if any, must be the unpardonable sin. And how shall the man who robs indiscriminately, who reaches out and gathers in the pittance of the poor, ever be able to make restitution, however much he may desire to do so? This can never be done. The wretch may endow colleges and churches, set aside millions for the payment of post-mortem prayers and masses; yet what can these avail, the victims of his inhumanity remaining impoverished and ruined? He may reach out and seek to rescue them, but he will find when it is too late that they have drifted away beyond his reach, and unless there shall be found in the resources of Divine wisdom some way in which these men can, in the hereafter, be enabled to make amends for the wrongs they have done, the hard old doctrine of eternal damnation will be likely to prove true enough.

The daily press having recently informed the public that a couple of convicts had made their escape from San Quentin, goes on to say there are now two violators of the law at large. It would be pleasant to believe there are only two!

Let it not be said we are sermonizing overmuch. We are simply dealing with well-known facts—performing a duty which we cannot consistently ignore.

The Wheat Situation.

The wheat market has kept pace with the decline in the price of silver until the market is lower than at any time this season. Outside of the lower prices for silver and its unfavorable influence on wheat, there is no good cause for the depression. The statistical position of the cereal the world over is favorable to holders, for there is a shortage in the supply. Outside of this, there is every encouragement in California for expecting better prices. The visible supply or stock in the State is less than at this time in 1889, while the summer-fallowed land is claimed by well-informed persons to be less than for years. The long-continued rains last winter prevented plowing, and when the rains finally stopped the land in the summer-fallow sections dried so quickly that very little could be plowed, and since then we have not had enough moisture to admit of plowing. Experienced farmers are outspoken in their belief that, even under favorable circumstances, it will be impossible to prepare and seed much more land than the usual spring acreage. Besides the above, a very large acreage has been diverted from wheat to fruit, and it is not at all likely that enough new land will be added to offset this diversion. With a smaller stock and a lessened acreage in this State, the situation ought to be in favor of the wheat interest.

The Money Panic and Its Lesson.

The past week the money centers of the world have been rocked in the throes of a stock panic that has not had a parallel for nearly two decades. The panic has been sweeping in its effect, affecting to a greater or less extent every industry. It carried in its wake the fortunes of many thousand persons, besides tottering to their very verge many moneyed institutions whose previous financial standing was firmly set in the confidence of all classes. One of these, Baring Bros. of London, England, after weathering the blast of many financial storms, was made the past week to bend in submission to the irrevocable, and had not assistance been rendered by leading banks in Europe, their failure would have followed. Such a calamity would have drawn many more into the abyss. As an example of the effect of the panic, it is authoritatively stated that the shrinkage in the value of securities held by Baring Bros. within a few short hours was over $50,000,000.

Conservative and well-informed readers of the signs of the times have looked with discredit upon the situation abroad, and held to the opinion that it could only be a question of time when a reversal had to set in which would financially swamp all who had not prepared for the worst. Speculation, particularly in England, has been rampant. Any scheme placed before the public with glittering generalities was easily floated. Trusts, syndicates, and all conceivable schemes were hatched by designing persons, and made attractive by pointing to fictitious profits. Speculation was not confined alone to private enterprises, for several countries, seeing a rare opportunity to float bonds and other securities, placed large quantities at such attractive prices that they were readily absorbed. It was the carrying of these securities that caught the old conservative house of Baring Bros.

While the many lost fortunes are to be deeply deplored, yet they leave a lesson that is easily mastered, viz.: There is not enough metallic currency in the civilized countries to safely conduct the large and constantly growing international commerce of the world. Of course the above assertion refers to mono-metallic currency. There can be no longer the question of a doubt but the stand taken by farmers, as expressed individually and through their organization, in favor of bimetallism, is thoroughly correct. The scarcity of money, based on a gold standard, has proven a magnet to draw high rates of interest to the moneyed few, besides allowing large unscrupulous speculators to successfully run corners and deals to the detriment of legitimate business and financial loss of the many engaged in farming or other industries.

It is to be hoped that at the next session of Congress the lesson of the times will be heeded and the free coinage of silver become a law. This country is rich enough in all the elements that go to constitute a leading nation to take the lead in favor of bimetallism and let other countries follow, which they will do, convinced by our prosperity that it is to their best interest.

HEAVY SHIPMENTS OF FRUIT.—There is nothing more convincing than figures, and therefore last month's shipment of California fruit by overland railroad should be convincing evidence of this industry growing in public favor. There were shipped 4986 tons of raisins, 6296 tons of dried fruit, 8983 tons of canned fruit and 5800 tons of deciduous fruit. The total shipments aggregate 21,079 tons for the month of November, requiring 2107 cars to take the fruit to its destination. Besides the above, there were shipped 3793 tons of wine, requiring 379 cars to move it. Notwithstanding the above heavy shipments, the cry comes from the East for more fruit. Already contracts for the incoming orange crop are said to be made, and at good prices. This is being done in the face of well-informed parties claiming that this year's orange crop will be the largest in California's history.

YOLO COUNTY COTTON.—The past week we had the pleasure of a call from Mrs. W. B. Reed of Winters, Yolo county, who kindly brought a sample of cotton grown by her husband from seeds furnished by this paper. The seed was planted late, owing to the difficulty of preparing the land after such an unusually wet winter. For late-planted and grown without irrigation, the cotton looks exceedingly well, and goes far to prove that under favorable circumstances, cotton-growing in the vicinity of Winters can be made a success.

An Installment of Our Debt to Australia.

We are glad to see by the last issue of *Insect Life*, the Government publication on entomology, that California has paid the first installment of her debt to Australia for the contribution of the *Vedalia*, the ladybird which has routed the cottony cushion scale in California. Prof. C. V. Riley, U. S. Entomologist, writes the following interesting note:

Some time since we instructed our California agent, Mr. Koebele, to collect and forward a number of living specimens of a common *Raphidia* which he had found to destroy the larva and pupa of the codlin moth in California, to Mr. Wight in New Zealand, as a partial return for Mr. Wight's kindness to Mr. Koebele when he was in New Zealand in the spring of 1889 collecting the insect enemies of the fluted scale. Recent letters from Mr. Wight and an article in the June number of the *New Zealand Farmer* inform us that the shipment arrived in fairly good condition, although it was opened for examination and held for ten days at the custom-house. Twenty-one specimens were sent, each one in a small box with moss, and the whole inclosed in a strong wooden box. Mr. Wight found pupæ in 16 of the boxes and a larva in one, while three were empty, probably owing to the custom-house examination. The single larva was hungry and very attenuated and it at once attacked and devoured a codlin-moth larva twice its own size. It was so stretched out and distended that at first, not discovering the absence of the codlin-moth larva, Mr. Wight thought it was entering the pupa state; but it presently resumed its usual appearance and finished several more larvæ.

We shall look forward to the result of this importation with great interest. The genus Raphidia is represented in this country only upon the Pacific Coast, and it is not at all likely that it will flourish East. We shall attempt, however, the introduction of this ravenous creature into some of our Eastern apple orchards.

Irrigation with Small Furrows.

[Written for the RURAL PRESS by A. K. J.]

I write for the benefit of new-comers—for those who are growing orchards and nurseries on sloping and uneven ground. Many suppose they have accomplished the desired end if they irrigate often enough with a copious flood of water. It is not frequency or volume of stream that does the work always. Many kinds of soil require time to get the water down deep about the roots. If the water does not go down it promotes the growth of a mass of surface roots to the detriment of the growth of the deeper roots upon which the tree should mainly depend. A tree with such a surface growth of roots will always require frequent watering, is always liable to be blown over, and will be short-lived, and in most varieties will be a shy and uncertain bearer.

In many soils it is best not to let the water come up to the tree, but to hold it off to such distance as can be stirred by the cultivator. If the soil is not stirred the ground hardens about the tree and retards its growth. A system of collar roots is apt to result, which is an injury.

The best method on sloping land is to plow your furrows with the slope of your land, if it is not too steep—about 15 to 20 inches from the tree on each side; when your trees grow larger, make two furrows each side. If the lateral action of the water is imperfect or very slow, cut little trenches with your shovel above and below the tree to let the water in.

I am writing for those soils where the water penetrates slowly and with difficulty. Divide your water into such sized streams as will require all day to run 40 rods. Take little bunches of grass or weeds, if not in seed, or eucalyptus or hedge trimmings, or anything that will partially obstruct the water, lay them in the entrance of your furrows, and with a little care you can manage 30 to 50 streams so that they will all get across within a few minutes of each other. The success of irrigation in such soils depends on getting the water deep down about the roots. This method is much better both as to labor and success than making pits about the trees.

San Fernando, Cal.

CHICAGO has packed 2,500,000 hogs since March 1. Kansas City is second in the United States with half that figure.

FLORIST AND GARDENER.

A California Rhododendron.

The beautiful flowering shrub called the *Rhododendron Occidentale* covers the hillsides of the Sierras at from 3000 to 6000 feet altitude with its masses of beautiful, showy, fragrant flowers during a large part of the months of June and July. Its leaves are deciduous. It attains a hight of a dozen feet. In its magnificent display of flowers it surpasses the finest oleanders in beauty and profusion. The artist in the accompanying cut has shown perfectly the form of flowers and leaves. The flowers are from two to three inches in diameter and are borne in masses of hundreds that completely cover the bushes for weeks during the time of flowering. The bush is of easy cultivation and deserves a place in every home that makes any pretension to floral ornamentation. Like the oleander, it is poisonous if eaten by children or animals. But no bad effects ever result from handling it or using the flowers for bouquets.

The common name "laurel" is given both to this and its near relative, the evergreen *Rhododendron Californicum*, which is also well worthy of cultivation. In my visit to Yosemite last summer, I met many collectors of flowers, those who made it a business to collect and press flowers for sale to tourists. Much to my regret I found them selling this rhododendron under the incorrect name "azalea." The line of demarkation between the species rhododendron and azalea is well defined. Such as wish to investigate this matter will find this flower correctly classed and described on page 458, Vol. 1, Geological Survey of California.

California has the grandest flora in the world, and Fresno county, extending as it does from the frigid high Sierras to the marshes of Fish slough nearly down to sea level, with a flora peculiar to each intervening locality, has a more diversified flora than any other part of California. Why cannot our public-school children make a Fresno county collection of flowers and plants for the World's Fair? Let each teacher press and preserve the finest specimens gathered. Give common and botanic name of each flower, and also give name of pupil and school presenting it. Let our Board of Education offer a prize to the district furnishing the best collection. Let every child in the county understand that he can thus contribute something distinctive, valuable and beautiful to the World's Fair, and that every child contributing will receive due credit, and after the fair present the collection to some high-grade educational institution of our country. Should this suggestion meet with favor, I will give directions through the columns of the *Republican* how to press and preserve the flowers collected; and I will also aid all teachers to give the correct botanic name to such flowers as they are unable to name.

I consider it a shame that the beautiful, rich, varied, distinctive and unique flora of our State was ignored in the preparation of our State series of school readers. Our native flowers should have been illustrated in our readers and should have formed the basis of a number of descriptive articles that would gladly have been contributed by competent scientists of our State. This would have popularized and given direction to the study of our native plants, and helped to give them recognition for their beauty, economic or medicinal uses.—*W. A. Sanders in Fresno Republican.*

[Prof. Sanders' suggestion for the schools of his county is of course applicable to the schools of all counties and should be carefully considered.—EDS. PRESS.]

Southern California Floral Society Exhibition.

[Written for the RURAL PRESS by CLARA S. BROWN.]

It is only three months since the Southern California Floral Society was organized by a few energetic people who realized the possibilities of flower culture in the climate of this section, and aimed to inculcate in the public mind a love of the beautiful in vegetation.

The idea was well received both by professional and amateur florists, and every encouragement was given the society. It now has over 150 members, and invites all earnest flower-growers in the six southern counties to co-operate with it, not wishing the association to be a purely local one. Meetings are held bi-monthly in the Chamber of Commerce rooms at Los Angeles, when essays are read and discussions held that cannot fail to be of value to the florist.

RHODODENDRON OCCIDENTALE.

The first annual exhibition of the society is now taking place at Hazard's pavilion, and is a wonderfully creditable display. Nothing has been received from Orange, San Diego, San Bernardino, Ventura or Santa Barbara counties (it takes time to create a general interest in new movements); yet the exhibit is one of the finest in the floral line that has ever been made in Los Angeles. mounting to over $1100 in cash. If the attendance continues good, the society will be able to pay them from the net proceeds. The fair was opened on Tuesday evening, the 11th inst., by Mayor Hazard, who introduced Col. G. Wiley Wells as the orator of the evening. Arend's orchestra renders a program of popular music each night.

One of the largest exhibitors is C. H. Hovey of the Raymond Nurseries, Pasadena. He wins the first premium for decorative plants, the second for general collection of chrysanthemums, the first for ferns, the third for cut chrysanthemums and first for carnations. His collection of ferns is very large and beautiful, and the admiring visitors are sorry not to find any labels. A fine Rex begonia won first prize.

The Park Nursery Co. of Pasadena, Byron O. Clark manager, has probably the largest single exhibit of all and takes first premium for collection of chrysanthemums, second for palms, first for conifers, first for specimen palm tree (*Cycas revoluta*), best 25 varieties Japanese chrysanthemums, best 15 ditto of 1890, best white incurved chrysanthemums (Molly Baron), best old gold and red ditto (Mrs. C. H. Wheeler), and best light pink (Lilian B. Bird), which was also pronounced the best chrysanthemum of any variety. A beautiful specimen ranging from apricot-yellow to white in color, with compact petals like the dahlia, was brought from England, where it won the first prize last year; its name is Mrs. S. Coleman. Mr. Clark's collection of conifers embraces Italian and Golden Monterey cypress (a new seedling), Araucaria excelsa, A. Braziliensis, A Bidwelli, A. Cunninghami, Arboritae compacta, Douglas spruce, Pinus Lambertiana (sugar pine), P. ponderosa, P. pima, Irish and Japan juniper, Cedar dodara, Thuyœpois dolabrath varigata, Retinospa phemosa, Casaurina erecta, Cryptomeria Japonica, etc. The camphor tree, rubber tree, strawberry guava and others made up a mass of foliage which filled one side of the stage. I had read of the Japanese dwarfing of trees, but never saw an illustration of it until I beheld it in Mr. Clark's exhibit. He has an evergreen tree—Retinospora—*twenty years old* which is only seven inches high. It is a sturdy little thing, perfect in shape, with a spread at top of ten inches.

J. C. Harvey, treasurer of the Floral Society, although an amateur has the finest collection of exotic plants in the building. There is Areca lutescans from the East Indies, Adiantum trapeziforme, A. cuneatum from Brazil, A. L. grandi (hybrid fern), A. amabile from Mexico, Stalobium cicutarium from the West Indies, Nephrolepis davalliodes from Java, Hypolepis repens from Mexico, Microlepia hirta cristata from Polynesia, Asplenium viviparum from Mauritius. Seven varieties of delicate stove plants, a broad leaved plant generously mottled with white called Alocasia machroriza variega from Ceylon, another mottled ornamental plant called Ficus parcelli from Polynesia and other curious specimens form a beautiful bed that is constantly surrounded by students of floriculture. He has a magnificent orchid in bloom, the Cattleya labiata, from South America. It is an exquisite lilac, the size and much the shape of an iris, with a center formed like the pitcher plant, richly shaded with royal purple, maroon and yellow. It is conceded that Mr. Harvey has the rarest ferns, but there are not enough of them to admit him to competition for the premiums, so he receives only "special mention." His New Zealand tree fern (Dicksonia antartica) is thought to be the largest of that variety in the country. He was awarded the second premium for specimen palm.

The Germain Fruit Co. of Los Angeles, seed and nursery department, has a mass of shrubbery, ornamental plants, etc., at the left of the stage and a number of beds in which statuary is placed, besides a room filled with baskets, implements, pampas plumes, dried flowers, etc., making a very large exhibit. The group of palms is adorned with the blue ribbon, the conifers carried off the second premium, and a beautiful bed of ferns is marked "third premium." The company has a large collection of Australian trees. I am not able to give an extended report of this exhibit or of some others, because the only labels were small wooden ones stuck in the pots, most of which were out of reach or not easily discernible, and I found none in charge to question. It adds greatly to the interest of such displays when everything is correctly and clearly named.

E. D. Sturtevant, formerly a well-known Eastern florist, now living at Edgemont, in the Cahuenga foothills, has on exhibition a tank of his celebrated water lilies, which received "special mention." A cream-colored beauty is Nymphœa dentata, a deep purple one is N. Zanzibarensis, an exquisite rose-colored variety, very large, is N. Devoniensis, N. Marliacea chromatella is yellow, N. Zanzibarensis azuera is blue. Mr. Sturtevant wins first premium for lawn vase filled with ornamental plants. He has Ceroxylon niveum, Livistona rotundiflora, Strelitzia augusta, Cycas Neo Caledonia, Ceroxylon andicola (wax palm), Gleichenia flabellata (a lovely fern) and other choice plants.

Ravenswood nurseries, Highland Park, C. G. Packard, proprietor, take the third premium for decorative plants. Among them were Ficus macrophylla (rubber tree) Phœnix canariensis, magnolia grandiflora, Dracaena terminalis, Araucaria excelsa, banana tree and a large number of begonias. There are also chrysanthemums, carnations and roses.

The Central Park Floral Co. of Los Angeles entered a large exhibit in all the classes and show very artistic work in bouquets, baskets, designs, etc. These florists take second premium for decorative plants, second for ferns, third for light pink, also for old gold and red chrysanthemums, first for white ditto, second for cut fall flowers, first for cut roses, second for seedling carnations, second for cut chrysanthemums, and several first premiums for designs.

J. H. Tomlinson, the courteous manager of the fair and a gardener by profession, has a miniature landscape garden adorned with the

Baer, Photo.

VIEW OF PRESCOTT, ARIZONA.—See next page.

blue ribbon. The beds, made of flowers of all hues, are separated by what looks like pure white snow, and surrounded by lawns in which are corner beds of larger flowers. He calls the design "the lovers' knot."

Mrs. O. W. Childs, Los Angeles, exhibits choice chrysanthemums, winning several premiums. Mrs. J. E Clippinger receives special mention for 45 varieties of cactus.

Th. Roussinet, Oriental nursery, Los Angeles, makes a good display of chrysanthemums, for which he obtains third premium. W. Barclay of Compton is awarded first prize for cut fall flowers, having many varieties.

Redondo Beach is as usual to the fore with an elaborate arrangement of flowers and ferns, covering a table 20 feet long. The first premium for cut chrysanthemums goes to the enterprising company that owns the hotel, wharf, and other Redondo property; also first premium for seedling carnations

Peter Henderson & Co., New York, exhibit the new pink "Ostrich Plume" chrysanthemum, Louis Boehmer.

A. Kravhvk, Los Angeles, has third premium for cut fall flowers.

The State Board of Forestry, represented by Wm. S. Lyon, Forester, makes a very interesting exhibit of shade and ornamental trees, embracing over 30 varieties of eucalyptus, acacias, pines, etc. Among the eucalypti are E. marginata, E. diversicolor (giant gum), E. calophylla and E. occidentalus, from Southwest Australia; E. siderophloia, D. punctata, E eugenoides, E. resinifera. E. melliodora, E. paniculata, E. pilularis, E. leucoxylon, from New South Wales, Queensland and Victoria; E. amygdalina (broad-leaved), E Stuartiana and E. viminalis, from Southeast Australia; E. gunne and E. obliqua, from Tasmania and Victoria; E. piperita from Gippsland. There are Sterculia diversifolia and Pittosporum undulatum (mock orange) from New South Wales and Queensland; Cupressus Guadalupensus (blue cypress) from Guadalupe Island; Taxodium distichum (bald cypress) from Eastern U. S.; Pinus pinaster (cluster pine) from Southern Europe; acacias from Australia, South Africa, Victoria (the true black wattle—A. decurrens), and other foreign trees in this instructive collection.

James W. Jefferis has a table covered with cut roses, also a lot of French cannas and chrysanthemums trained on trellises.

Designs in cut flowers are numerous and very artistic, a special invitation having been issued for them. The first day the flowers were arranged for social purposes, such as dinners, balls, presents, etc. Next came wedding designs; the third day, those suitable for church, hall, stage and parlor decoration, followed by the last sad tribute we pay our friends—funeral designs. An arm-chair 150 years old is upholstered with magenta and palest pink chrysanthemums and stands on a carpet of the same blossoms. The Central Park Floral Co. takes first premium for a large picture exquisitely wrought. The raised frame is of yellow chrysanthemums, the background of white ones, and on this rests a vase filled with delicate ferns and blossoms. A great American eagle of white chrysanthemums soars aloft with a child in its talons. Lovely center-pieces for the dining table, harps and hearts, a cornucopia, immense butterfly, bow and arrow, etc., attract much attention in this department. Of baskets, bouquets, etc., there are no end, and altogether the display of flowers is very large for this season of the year.

The florists are wondering how ladies can procure of them the varieties of chrysanthemums that they fancied in the fair held two weeks ago, when only the Japanese names were used then, and the florists use the American labels. They think the change will create great confusion.

The officers of the Floral Society are: Eli Snyder, president; C E. Brydges, vice-president; H. W. Kruckeberg, secretary; John Franklyn, recording secretary; J. C. Harvey, treasurer. Executive Committee—J. H. Denham, J. G. Marlev and J H. Tomlinson.

Los Angeles, Nov. 14th.

Cosmos.

[Written for the RURAL PRESS by L. GREENLEE.]

The Cosmos flower, so fashionable in Washington City this autumn, has an interesting history which is thus told by Mr. Small, a florist of that city:

"It is indigenous to Mexico, where it grows wild in fields, as the daisy does in this climate. About four years ago, a German florist in Hoboken, N. J., propagated some of the plants from imported seeds and introduced the flowers in New York. Then the plant appeared in the Soldiers' Home gardens at Hampton, near Fortress Monroe, where it was found that it would bloom as late as January or February, on account of the milder climate. A gentleman near Alexandria, Va., then secured a quantity of the seed and commenced to grow the plant for the market, meeting with such success that he has now several acres covered with Cosmos blooms and ships an immense quantity to New York daily. It cannot be grown with great success as an outdoor plant farther north than this city."

This is the first year that the Cosmos has become common, but just now great branches of it adorn the windows of every floral establishment, and can be bought cheaply at markets or of boys in the streets. The flower makes a beautiful indoor decoration, and if placed in water when freshly cut will remain perfect for a week or more.

In shape it is much like a single dahlia, only not usually so large nor nearly so coarse looking. In color the flowers run through many shades from crimson to pure white. White ones are much the handsomer, reminding one of golden hearted white narcissi or ox-eyed daisies. The plant is of strong growth, having a tuberous root like the four o'clock or dahlia, and elegant plumy foliage something like cypress-vine or asparagus. Mr. Small is mistaken about its not succeeding farther north than Washington City, for plant notes from several Northern States speak of it as the chrysanthemum's rival, still bravely defying the first autumn frosts after other plants are withered and dead. Planted in pots and brought inside to flower, like our tender chrysanthemums, they are grand; still, in the Southern States, the warmer climate undoubtedly enables it to bloom longer and finer than north of Washington.

When grown from seed they should be started in the garden in March or April and protected by a mulch of leaves. Push their growth by frequent watering and stimulants until August, when if you have not pinched them back they will be tall, spindling plants four or five feet high; but frequent pinching spreads them into handsome, compact plants, that from August till November will be covered with hundreds of blooms, many of them three inches across.

Prescott, Arizona.

On the preceding page we give an illustration of Prescott, the leading town in Northwestern Arizona, and county seat of Yavapai county, the largest political division of that Territory. Prescott was formerly the capital of Arizona, since removed to Phœnix, Maricopa county. Though deprived of this advantage, Prescott remains the most populous town in the Territory and a place of much business importance, being the center of an extensive mining and agricultural region. There is also located here the military post known as the Whipple Barracks, the garrison at which serves to enhance the business and enliven the town.

Prescott enjoys the further advantage of being the southern terminus of the Prescott & Arizona R. R., a line connecting with the Atlantic & Pacific road, which it joins 74 miles to the north. As will be seen by the cut, the town is regularly laid out, the streets being straight and crossing each other at right angles. There are a number of handsome buildings in the place, some of which are not without architectural pretensions. The courthouse with its tall tower, seen near the center of the picture, is a fine edifice, having been built at a cost of $75,000. Prescott is increasing rapidly in both business and population, its future prospects being equal if not superior to those of any other town in Arizona.

THE SMALLEST FLOWERING PLANT.—The smallest flowering plant is *Wolffia microscopica*, a native of India. It belongs to the duckweed family. It is almost microscopic in size, destitute of proper stem, leaves and roots, but having these organs merged in one, forming a frond. There is a prolongation of the lower surface, the purpose of which seems to be to enable the plant to float upright in the water. The fronds multiply by sending out other fronds from a slit or concavity, and with such rapidity does this take place that a few days often suffice to produce from a few individuals enough similar ones to cover many square rods of pond surface with the minute green granules. Small as these plants are, they bear flowers. Two are produced on a plant, each of them very simple, one of a single stamen and the other of a single pistil, both of which burst through the upper surface of the frond.

A Humane Wire Fence.

The illustration presented on this page will give RURAL PRESS readers some idea of the usefulness of the Spaulding Humane Wire Fence, manufactured by Bird, Turnbull & Co., Chicago, Ill. The fence is built especially to resist horses and cattle, without laceration, and from testimonials it does its work most effectually. It is composed of eight No. 12½ galvanized steel wires woven into four cables of two wires each, and interwoven every five feet is a corrugated iron stay or guard, and held in place by the cables, thereby holding the cables firmly in place, preventing them being spread apart and letting stock through The stays or guards are corrugated and 1¾ inches in width, making the fence as visible as a board fence, which is a *very essential point.*

The wires or cables are held firmly together so that any great strain is resisted by the whole fence. The spans thus securely bound will stand a pressure of 8000 pounds.

The fence is visible, as the guards are 1¾ inches wide and are placed every five feet; and, being visible, stock will avoid it, and if driven into it by accident or otherwise, it cannot mutilate or injure them any more than a board fence. The horse and cattle fence is placed 20 inches from the ground, thereby preventing horses from striking their feet over the lower wire, and making a fence 4 feet 4 inches in hight. It will turn horses and cattle better than any barbed wire fence of double the number of wires, for the reason that the cables are held firmly in place every five feet, thus preventing stock from getting through between the wires.

Being composed entirely of steel, and either galvanized or well painted, it is practicably indestructible; it cannot be burned or broken by any fair usage. Being put up in rolls of about 20 rods each, it can be unrolled and stretched out at a single pull. A hundred rods can be taken down, rolled up and moved in a few hours. It is light, only weighing about five pounds to the rod. The manufacturers say:

Taking into account the number of posts required, it is the cheapest wire fence in the market, besides being light and free from wind obstruction. We advise putting the wooden posts not less than 50 feet apart, thereby giving the fence an elasticity that prevents accident to both fence and stock—a feature of much value, and one that a rigid fence cannot have.

We also manufacture a seven-wire fence, the five lower wires being five inches apart and the two upper wires ten and a half inches and of the same hight as the four-wire fence, being 52 inches. For sheep fencing, railroad fencing, and in fact for all purposes where a fence is required, this fence cannot be excelled.

From the strong points presented in favor of this fence, it is surely worthy of a trial. Write to the manufacturers for any further information.

A FEW EVENINGS ago we received a copy of the PACIFIC RURAL PRESS, published by Dewey & Co. The PRESS is one of the best agricultural and horticultural journals in the State, and is particularly adapted to the wants of the fruit-grower and stock-raiser.—*Palermo Progress.*

AN ILLINOIS FARM SCENE—A HUMANE WIRE FENCE.

THE VETERINARIAN.

A Popular Work on Animal Diseases.

The Department of Agriculture has now in press a bulletin prepared under the direction of Dr. Salmon, Chief of the Bureau of Animal Industry, on "Diseases of the Horse." It is stated in the letter of transmittal that "the need of a work on the diseases of the horse which could be distributed to farmers as a safe and scientific guide in the treatment of this species of our domestic animals, either when affected with slight disorders or serious illness, has long been felt. This obvious want has led to the preparation of the present volume, which is designed as the first of a series to cover the diseases of all varieties of farm animals."

The authors of the various articles were duly advised of the popular character it was designed to impart to the work, and an effort was accordingly made by them to present the matter treated of in as simple language as possible. Dr. Chas. B. Michener contributes three articles on Methods of Administering Medicines, Diseases of the Digestive Organs, and Wounds and their Treatment. Dr. James Law writes on Diseases of the Urinary Organs, Diseases of the Generative Organs, Diseases of the Eye, and Diseases of the Skin. Dr. W. H. Harbaugh contributes an article on Diseases of the Respiratory Organs, and Dr. M. R. Trumbower writes on Diseases of the Nervous System and Diseases of the Heart and Blood Vessels. Lameness is treated of by Prof. A. Liautard. The other articles are Diseases of the Fetlock, Ankle, and Foot, by Dr. Holcombe; Contagious Diseases, by Dr. R. S. Huidekoper; and Shoeing, by Dr. Wm. Dickson.

The work will be illustrated with 44 carefully prepared plates. An extra large edition will be issued of this bulletin in anticipation of a very large call for the work. At the same time, experience in reference to the bulletin on Parasites of Sheep, of which a second edition has already been called for, indicates that those who are anxious to obtain a copy of "Diseases of the Horse" at an early date should apply for it at once, addressing either the Secretary of Agriculture or Dr. D. E. Salmon, Chief of the Bureau of Animal Industry, Washington, D C.

Cinchona Cultivation in India.

[Written for the RURAL PRESS by LORENZO G. YATES, F. L. S.]

From the Annual Report of the Government Cinchona Plantations in Bengal for the year 1889-90, we learn that at the end of the year the number of cinchona trees of various ages under cultivation at the plantation amounted to 4,682,401 and a nursery stock of 264,000 seedlings.

The crop of bark collected during the year amounted to 304 705 pounds, from which was manufactured 6393¾ pounds of febrifuge; 1252 pounds of quinine, and 34 pounds of crystalline febrifuge which was distributed to the various medical depots and Government officers and upon which the Government realized a handsome profit—the result of careful and skilled cultivation and management by the superintendent and his associates.

Santa Barbara, Nov. 12, 1890.

THE Northern Pacific Railroad is preparing to erect coal bunkers at Sprague to cost $10,000.

AGRICULTURAL NOTES.

CALIFORNIA.

Butte.

EXTENSIVE TREE-PLANTING.—Oroville, Nov. 16: Quite an extensive planting of fruit trees will occur during the coming winter along the Feather river. S. B. Hutchins will set out an orchard of 300 acres; W. R. Strong & Co. will plant between 300 and 350 acres six miles south of Oroville; Harmon & Alexander will put out about 300 acres; John D. Tufts & Son will plant on the east side of the Feather river about 275 acres: a 200-acre olive orchard will be planted in Palermo; there will be many additions to Palermo and Thermalito; P. R. Welch will plant a fine orchard south of Oroville; Dr. W. E. Mack will plant 35 acres of orange trees; E. Boalt and B. F. Corwin of Palermo will extend their orange groves during the coming winter, and Judge Collins of Santa Cruz will plant a five-acre tract in oranges. The oranges are ripening rapidly in the neighborhood of Oroville, and by the end of the year there will be a great quantity ready for the market.

FRUIT SHIPMENTS —Palermo *Progress*, Nov. 15: Three thousand pounds of dried fruit were shipped from Palermo depot Tuesday morning to Sacramento, by Geo. Wheeler and John Watkins, who raised the same on their places between Palermo and Wyandotte. This is the first large shipment of dried fruit Palermo has made, although several smaller shipments of both green and dried fruit were made during the past summer. Next season we may expect to ship a large quantity of fruit, as a large proportion of the deciduous fruit trees will come into active bearing, while several orange groves in Palermo will produce considerable fruit for shipment this winter, the trees in many places being loaded down with oranges. This speaks well for a three-year-old colony.

Humboldt.

POTATO PROFITS.—Eureka *Standard*, Nov. 13: A farmer living near Rohnerville last year raised and sold from five acres potatoes which brought him $702 80, after reserving what his family needed for the year. His crop netted him $140.60 per acre, besides what he used at home. This will serve to demonstrate that such land is not dear at $150 per acre.

Inyo.

CAUTION AGAINST CODLIN MOTH.—Independence *Independent*, Nov. 14: Parties coming into Owens valley by rail frequently bring along a few apples to eat by the way. Many of these apples are affected by codlin moth. There is great danger that in this way the pest may be introduced here. It will inflict great damage and loss if it ever gets started in the valley.

Kern.

AGITATION FOR IRRIGATION. — Bakersfield *Echo*, Nov. 13: Some of the farmers on the Weed patch are preparing to plant vineyards next spring and irrigate them from wells. The marked success enjoyed by Messrs. Smith & Swain last year has encouraged others to try the same plan. Still we hear that the idea of an irrigation district is growing in favor and it seems probable that within a short time the necessary petition may be circulated for signatures.

Lassen.

FARM NOTES.—Susanville *Advocate*, Nov. 13: T. Ashby of Secret was in town this week on more legal business. His little strip of land, watered by a few springs in the midst of the most desolate sagebrush country, does some wonderful things in the way of crops. This year he has oats that weigh 48 pounds to the bushel; potatoes that weigh three pounds apiece. Three years ago he raised 10,000 pounds of potatoes from three sacks of seed, and six of the potatoes weighed 32½ pounds. This is without irrigation, the natural moisture from the seepage of the springs being all the ground needs. Sam Alexander has a few acres of garden on his ranch at the foot of Antelope grade, which is quite a pavilion in itself, so far as agricultural exhibits are concerned. He has raised this year cabbages 40 pounds in weight, solid, and white as snow to the heart, he has beets weighing 20 pounds; turnips weighing 20 to 30 pounds, and carrots standing two feet out of the ground. On August 21 he sowed some white flat turnips, and to-day they are three times as large as the ordinary Eastern turnip, and just as sweet.

Los Angeles.

THE WINE-GRAPE CROP.—Pomona *Progress*, Nov. 13: The wine-grape crop in this valley has been gathered and sold for this season. It has been the largest ever known here, and at the lowest estimate has brought $18,000 to the pockets of the growers. Some people estimate the sum at about $21,000. The crop consisted of over 1600 tons. Of this amount, Eli W. Keller bought and shipped to the Stearns & Sons winery, in Los Angeles, 550 tons; the Pomona Wine Company bought 520 tons; Cook & Langley or Leo Park bought and dried 340 tons, and G. Mirandi handled, at his winery, over 150 tons more.

Monterey.

LARGE ACREAGE BEING SOWN.—San Miguel *Courier*, Nov. 13: The farmers of the Upper Salinas valley have been busily engaged in plowing and sowing grain during the past month. Thousands of acres of summer-fallow have been seeded, besides a large amount of dry plowing. The acreage of wheat in this region the coming season, judging from what we have been told and from present appearance, will be fully twice as much as that of any previous year. Especially is this the case in the Cholame valley. Many of the extensive farmers in that section already have more land sown to grain than they put in last year, and they will put in fully as much more. The settlers generally will sow twice as much as usual. The introduction of improved farming machinery enables them to get over a large acreage in a short time.

Orange.

FRUIT NOTES.—Santa Ana *Blade*, Nov. 13: The industry of orange-growing has never been so bright in this county as it is now. The crop is larger than ever before, and buyers are at hand to take the entire crop on the tree at advanced prices. In fact, most of the crop has already been sold. The estimated output of oranges in Southern California is 3400 carloads. Many groves begin to show the need of fertilization. Those fertilized already show the good results. The crops of apricots, peaches and prunes were never before so large as they were this year. The apple and pear crop were badly injured by the codlin moth. On the east side of the Santa Ana river they were ruined.

Placer.

ORANGE AND FIG CULTURE.—San Francisco *Alta*, Nov. 16: Mr. H. E. Parker of Penryn, Placer county, is on a visit to our city. He reports that horticultural matters in his section are looking well. Orange trees are laden with fruit, which is now assuming the golden hue. The opinion seems to prevail among orange producers that this city is the proper place to hold the State Citrus Fair next January. The new settlers in Placer county are getting excited over oranges, and are planting them in every available space. Nearly all these trees do well and give promise of an abundance of fruit. A rocky ridge near Penryn has been terraced for over a mile, and orange trees planted where a few years ago nothing but rock was perceptible. The Smyrna fig trees are bearing heavily in that vicinity this year. The fruit is white and tender and packs well.

Sacramento.

BRANNAN ISLAND RECLAMATION —Rio Vista *News*, Nov. 15: Negotiations are pending for the transfer of a portion of Brannan island property to some enterprising capitalists who will give their attention to the organization of a thorough reclamation district. The only drawback to Brannan island is the absence of a thorough reclamation, and now that the prospects are good for a strong organization, Brannan island will probably soon be under cultivation and in a prosperous condition.

ISLAND NOTES.— *Record-Union*, Nov. 13: The people of the upper portion of Andrus Island are building larger levees, and intend cutting a canal and putting in pumping apparatus in the near future to relieve that portion of the island of the water that came in last winter. The affairs of Land District No. 3 are in a very prosperous condition. In another month or so the levees will be completed, and they are of so complete and solid a character that the embankments built in former years bear no comparison to the present ones. There is a large dredger now engaged in digging a canal from the pump, at the lower end of Grand Island, up through its center. The canal is nearly 40 feet wide, and 10 or 12 deep, and when excavated about a mile farther the pump will make short work of what little water remains in the center of the island. Many persons are taking long leases of land on the island, some paying from $5 to $10 cash per acre per year rental, and others paying one-fourth of their crops. This is for raw tule land. Tom Williams is getting his land in shape, either to sell or rent, and in all probability the greater portion of the island will be under cultivation the coming season. The swamp land-owners everywhere are getting rich, as is evidenced in the activity in building levees, roads, and handsome houses.

San Bernardino.

ORANGE PRICES.—S. B. *Times-Index*, Nov. 15: It is reported that orange buyers are already here offering $1 50 on the tree for Seedlings, $2 for Mediterranean Sweets and $2 50 per box for Navels.

San Diego.

FARM IMPROVEMENTS —Otay *Press*, Nov. 13: The prospects for this surrounding agricultural section were never better; over 800 acres of ground is now being cleared and made ready for the plow, and farm improvements are rife on every hand and a vast amount of soil will be turned over this season. The work of preparing 120 acres for the planting of orange trees and for the sowing of grain is progressing on the Chula Vista tract; about 20 teams are grading and harrowing the ground. A walnut orchard of 30 acres is to be planted in the Sweetwater valley as an experiment. Twenty acres will be put out by the Sweetwater Fruit Company and 10 acres by Dr. S. F. Dickinson, who will plant peach stock with walnuts alternating, the peach trees to be taken up when the walnuts come into bearing.

LARGE POTATO FARM.—*San Diegan*, Nov. 14: Mr. Walker, the strawberry man, has purchased a carload of Burbank potatoes to be used for seed on about 100 acres of ground to be planted in January.

TREE PLANTING.—Escondido *Times*, Nov. 13: Our tree men all report large orders for both deciduous and citrus stock for the winter plant. They are having considerable difficulty to supply the demand for prunes. Three years of experience with orange trees has satisfied every one in this valley that Escondido can produce just as fine oranges and lemons as any other locality in Southern California.

ANOTHER PACKING-HOUSE. — San Diego *Union*, Nov. 13: Mr. Richards has realized 50 tons of raisins this year from his 200-acre vineyard in Cajon, and by next year the vines will all be bearing. He informed a San Diegan Saturday that he should add another packing-house to the valley next season. In a day or two the packing activity will have ended.

FOOTHILL CORN.—San Diego, Nov. 13: In new ground, merely cleared and plowed, D. W. McKay last season sowed "Yankee yellow" corn. He has just harvested a large crop, the ears averaging a foot.

Santa Cruz.

BEET-SUGAR MILL TO START UP.—*Pajaronian*, Nov. 13: Owing to scarcity of beets, the crushing was stopped at the factory last Saturday night. A large supply of beets is now coming in from the Moro Cojo and the mill will start up in about one week.

FIRST COTTON SHIPMENT.—Perris *New Era*, Nov. 10: The first cotton to be marketed from Perris was sent last week by G. A. Chandler to a San Francisco firm, who ordered 3000 bolls to illustrate this subject in school. This cotton was raised without irrigation on Mr. Chandler's place, north of Perris.

Sonoma.

OLIVES ON RUSSIAN RIVER.—EDITORS PRESS: Without knowing much about olives, I wish to note what the *Italian Swiss colony* are doing in the way of cultivation—thus making a record of what these experienced men know. About seven years ago they planted, say, 1000 small trees in their grounds here, on a plateau rising from perhaps 50 to 150 feet above Russian river. Soil good for vines—a clay loam, in places gravelly. The trees have grown, say six feet, and now the owners have manured heavily with stable manure.—J. B. A., *Cloverdale*.

MUST SHIPMENTS TO LONDON.—Healdsburg *Tribune*, Nov. 13: The Must Condenser Co. of Geyserville completed operations last Friday after consuming nearly 2000 tons. The extract is now being shipped in 50-gallon barrels direct to London. The shipment will require about 80 cars.

Tulare.

A PROFITABLE CROP.—Porterville *Monache Tidings*, Nov. 15: Last June S. L. Welton planted on the Pioneer tract, one mile from Porterville, three-eighths of an acre in sorghum after taking off a crop of wheat. He fed out the young stalks to stock quite freely, consuming fully half the total product. He recently cut it all and made it into syrup, making 63 gallons, which is worth from 80 cents to $1 a gallon. It still continues to furnish fodder for stock, and he has gathered eight sacks of seed for next year's planting. With proper cultivation, Mr. Welton thinks he can make 250 gallons of syrup to the acre, and he proposes to put in five acres or more next year.

A SPECIMEN VINEYARD.—Porterville, Nov. 15: Mr. Oliver Henry, who shipped his raisins from his five acres of five-year-old vines just east of town, reports that for the 15 tons he received $1.75 per box of 20 pounds each, or the neat little sum of $2625, of which he estimates that fully $2000 is clear profit. He packed them himself and did not sell them in the sweat-box, as many do. This is no more proportionally than what others have made elsewhere in this county off of raisins.

PROFIT IN TURKEYS.—Traver *Advocate*, Nov. 13: Mrs. John Bare, wife of our road-master, has this year, as she has for several years past, made a snug little sum by raising turkeys. She raised 200 of the fowls this year, and they were as fine a lot of turkeys as we ever saw as they were brought into town Monday, H. Brownstone, the Traver merchant, having purchased a portion of them. They were half-breed Bronze turkeys—large, fat and healthy looking. The average weight of the flock was 15 pounds, and some of the birds would weigh 18 and 20 pounds—good weight for turkeys hatched last spring. The price paid by Mr. Brownstone for those he bought was 15 cents per pound. When it is taken into consideration that Mrs. Bare raised these turkeys at small expense at her colony tract just northeast of Traver, and tended to them besides performing her household duties, and that a large amount of alfalfa and fruit was raised on the place at the same time, it is easy to see that she has been well paid for her trouble.

ROOTED GRAPE —Traver, Nov. 13: The price of rooted grapevines is gradually falling. Some time ago they were worth $15 a thousand, but the price has gradually come down, and we heard on good authority yesterday that some lots were being sold at $8

EXPERIMENTAL HAY SHIPMENT. — Visalia *Times*, Nov. 13: David Toomey of this city last week sold 90 tons of grain hay to Joseph Clark of Tulare, and the latter-named gentleman is shipping the same to San Francisco. Hay commands from $8 to $8 50 per ton here. Should this experiment of shipping to San Francisco prove profitable, 500 tons of hay will be shipped there from this city by Mr. Clark.

DATE TREES.—Visalia, Nov. 13: E. T. Ragle has two date trees growing on his ranch, 14 miles east of this city, that are now 18 years old. One of these trees is bearing fruit for the first time this year. These are probably the only date trees in the San Joaquin valley, though several more were planted at the time Mr. Ragle secured his. The bearing tree has about 50 dates on it.

Yolo.

HOW ALFALFA PAYS. — Winters *Express*, Nov. 13: J. H. Hill believes alfalfa to be a paying crop, and is making an effort to grow it in sufficient quantity to help keep his stock. He has two or three acres growing now which gives support to hogs, calves and cows; and he has leveled, checked and sowed four or five acres more, intending soon to increase the patch to about eight acres.

GRAPE SYRUP.—Woodland *Mail*, Nov. 15: Messrs. Snavely & Baker, the proprietors of the Woodland winery, disposed of 10,000 gallons of syrup this season at a larger price than that received last year. A new still costing $70 has been put up in the place of the one that was blown up some weeks ago, and the brandy department of the winery is now running in full blast.

ARIZONA.

MARICOPA FRUIT NOTES.—The annual report of the Governor of Arizona contains the following: There are few counties that possess a soil and climate so well suited to the business. Already farmers are discovering that there is more money in fruit than in the raising of grain and grasses. The rapid growth and marvelous yield is a prime factor in inducing people to engage in the pursuit. In the Gila and Salt River valleys the produce is ripe and ready for market fully a month before that of Southern California. Fruit-raisers can readily see the advantage which this gives them. Fruit from these valleys can be laid down in the seaboard cities earlier than that of any other section of the Union. This means a ready sale and high price. The yield is phenomenal. The fig, which succeeds in so few places in the United States, seems to be indigenous to the valleys of Arizona, and grows as strong and as thriftily as the cottonwood tree. It yields two, and sometimes three, crops a year. This seems hardly credible, but it is an actual fact. The fruit is large, rich and luscious, and has only to be tasted to be appreciated. Grape cuttings from California will bear in eighteen months, and two crops a year is not uncommon. During the present season apricots have been shipped from the Salt River valley to Los Angeles a month before the fruit was ripe in that section. One of the most profitable fruits grown in the United States is the raisin grape. Few localities are adapted to its cultivation. The curing of the fruit requires a dry climate, and this Arizona possesses. There are only two or three places in California suited for raisin-making, and even on them the conditions are not altogether satisfactory. The largest raisin producer in the United States has recently visited Southern Arizona, and after a thorough examination, declares that there is no part of the United States to equal it for raisin-making. He secured an extensive tract of land which he will plant next season. When it is remembered that 90 per cent of all the raisins consumed in this country are imported, the opportunities here presented will be fully understood. Besides the orange and the lemon, the olive and banana thrive in Maricopa county. Grape-picking begins 40 days earlier in the Salt River valley than in California, and the first raisins packed anywhere in the United States this season have been packed in this county. Both figs and raisins are now being packed for export. One party alone has a fig farm containing 640 acres, and there are many smaller ones where figs are raised in abundance. The fruit, when prepared for shipment, presents as fine an appearance as any to be found in the world. It is large, rich and juicy, and as good as it looks. Raisins are being dried and packed in large quantities. They are excellent in quality and can be grown and prepared for market at the minimum expense, on account of superior climatic advantages.

NEVADA.

NORTHERN CATTLE.—Reno *Gazette*, Nov. 13: Dr. Patterson had a band of 500 beef cattle arrive from the northern country last Friday. Ayers & Poor have a drove of 300 head to arrive Tuesday or Wednesday, and R. W. Minto has 150 that will be here in a week or ten days. These lots, with about 100 head to come in from Jess valley, will about clean up the fall cattle from the Surprise Valley country. The stockmen of that section have plenty of hay this season and will feed some at home. Dr. Patterson will feed at his home ranch about 400 head which will be driven this way during the winter or early spring.

RESPIRATION OF INSECTS.—Mr. Contejean has studied in the grasshopper the little known phenomenon of the respiration of insects. He finds that, contrarily to what occurs in vertebrates, the movement of inspiration is passive, while that of expiration is active. The air is expelled from the insect's body by a contractile effort. The result is, that if the animal be wounded, we observe blood to flow at every expiration. Decapitation does not arrest the respiratory movements, no more than does the absorption of curare, which in man produces an immediate cessation.

When, from any cause, the digestive and secretory organs become disordered, they may be stimulated to healthy action by the use of Ayer's Cathartic Pills. These Pills are prescribed by the physicians, and are for sale at all the drug stores.

Hair Balls in Stomachs of Animals.

A collection of these interesting deposits has been placed in the University museum and described by the *Occident* as follows:

Aegagropile is a name given to certain felted balls of hair that occur occasionally in the stomachs of cattle and some other animals. During the seasons when the shedding of the old coat of hair takes place is the period which is productive of increase of the hair ball in the stomach, for some of the loose hair gets mixed with the food that the animal partakes of, but the greater quantity gets into the stomach through the primitive method of combing and brushing their hair with their tongue. The hair being indigestible, it remains in the stomach and becomes a massive ball of felted hair. The museum contains six examples of these curious aggregations. The first series of these was presented by Mrs. J. West Martin of Oakland, who presented two, both of which were from the stomachs of cows; the circumferences of these balls are 6 inches and 14 inches respectively. One was added by Dr. Bonte, who found it on a mountain near Summit, Nevada. This is a small one, and probably from the stomach of a deer. Its measurement gives but 4½ inches in circumference. Another was found by Curator Rivers on the bay shore near Batchertown, Berkeley, and gives a circumference of 5½ inches. The next and largest ball was donated by Mr. John Tuohy of Berkeley, who brought it from his ranch at Lewes Creek, Tulare Co., Cal. This example furnishes the measurement of 17 inches circumference, and was from the stomach of a hog. The last to be mentioned was recently donated by Miss C. J. Cornwell, who brought it from Napa City. This is a very peculiar specimen and not at all spheroid, but had felted in the shape of the animal's stomach, that of a hog, and its measurement may be given as 7½ by 5½ inches.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos, $1; 10 mos., $2; 15 mos., $3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Newspaper Agents Wanted.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & Co., Publishers,
No. 220 Market St., S. F.

"Battle of Gettysburg."

The celebrated Panorama of the Battle of Gettysburg and Museum, corner Market and Tenth Streets, San Francisco, is a wonderful production. It has captured the entire State, doing a great deal of good. There is no better way of passing an hour or so, and in studying American history, than by visiting this Grand War Panorama. If any of our readers have not seen it, it will pay them well to do so.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

THE GARRETT FENCE MACHINE

— IS FOR CONSTRUCTING —

A New and Durable Fence

By weaving Pickets and Wire to Posts set in the field. It is not excelled by any other machine for Ease, Speed, and Perfect Work; 40 to 60 rods per day can be put up. The wire for a 3 or 5 (2) strand cable can be bought for from 11 to 25 cents per rod. The Garrett Fence is noted for simplicity of construction, durability of all its parts, perfect tension device, and great saving of labor and money in its construction. The machines are manufactured in Ohio, and thousands are now in use in the United States. The Fences made by them are the best, cheapest and most desirable Farm, Orchard and Vineyard Fences that can be made. The best galvanized annealed Steel Wire can be furnished at the lowest market price. The machine, with the Little Giant Post Hole Digger, Wire Stretcher and Wire Cutter, etc., complete, costs about $25, with a discount where we have no local agent. Two men (or man and boy) can dig the holes, weave the wire to the pickets and posts, and easily complete the construction of the fence. Send for circulars and testimonials. Address K. C. DUSSENBERG, 430 Pine Street, San Francisco, General Agent Pacific States.

FARM MANAGER.

A THOROUGHLY EDUCATED MAN WITH WIDE farming experience desires a place as manager or foreman of a stock or fruit ranch. Highest references. Address ALBERT H. BENSON, Berkeley, Alameda Co., Cal.

Are You Good Company for Yourself?

Do you have interesting thoughts? Are you dependent upon others for enjoyment, or have you resources all your own? In either event, do you not want to enter the Chautauqua Circle this winter? The course in English History, Language and Literature is unusually attractive. Send for an application blank, receive the membership book with full details, outlines of the course by the month or week, suggestions for reading, question papers for review, &c. Remember that Chautauqua has been directing this work for a dozen years. The system has been steadily improving, and now is known the world over. Address John H. Vincent, Drawer 194, Buffalo, N. Y.

Educational.

CHESNUTWOOD'S BUSINESS COLLEGE SANTA CRUZ, CAL.

BEST EQUIPPED ON THE COAST. INDIVIDUAL instruction. No classes. Ladies admitted to all departments. Board and room in private families, $16 per month. Tuition, six months, $42.
J. A. CHESTNUTWOOD, Box 43, Santa Cruz, Cal.

THE PIONEER COMMERCIAL SCHOOL.

Established 1858 — **PACIFIC Business College, 320 POST ST. SAN FRANCISCO.** — Oldest and Best.

LIFE SCHOLARSHIPS, $75.
NO VACATIONS. DAY AND EVENING SESSIONS.
Ladies admitted into all Departments.
Address: T. A. ROBINSON, M. A., President.

HEALD'S BUSINESS COLLEGE,
24 POST ST., S. F.

FOR SEVENTY-FIVE DOLLARS THIS College instructs in Shorthand, Type Writing, Bookkeeping, Telegraphy, Penmanship, Drawing, all the English branches, and everything pertaining to business, for six full months. We have sixteen teachers, and give individual instruction to all our pupils. Our school has its graduates in every part of the State.
SEND FOR CIRCULAR.
E. P. HEALD, President.
O. S. HALEY, Secretary.

WIDE AWAKE CHOIRS,

CHORUS SOCIETIES and all MUSICAL ASSOCIATIONS will do well to send for lists and catalogues of our Chorus, Anthem or Glee Books, Church Music Books, Singing Class Books, Oratorios, Cantatas, Quartets, Chorals, Octavo Pieces, &c., &c.

JEHOVAH'S PRAISE ($1, or $9 doz.) Emerson. Is a large, first-class Church Music book, full of the best Metrical Tunes, Anthems and Singing Class Elements and Music.

EMERSON'S EASY ANTHEMS, (30 cts., $7.20 doz.) GABRIEL'S NEW AND SELECTED ANTHEMS, ($1, $9 per doz.) EMERSON'S NEW RESPONSES, (60 cts., or $6 doz.) DOW'S RESPONSES AND SENTENCES, (30 cts., or $7.20 per doz.) SANTORAL, $1, or $9 per doz.) Palmer and Trowbridge.

Are new and thoroughly good books

CARL ZERRAHN'S ATLAS. ($1, or $9 per doz.) EMERSON'S CONCERT SELECTIONS. ($1, $9 doz.)

Are excellent for Conventions.

FOR THE CHILDREN'S CHRISTMAS.
Caught Napping. (30 cts., $3 per doz.) Lewis.
Mary's Stocking. (20 cts., or $1.80 doz.) Shogren.
Jingle Bells. (30 cts., $3 per doz.) Lewis.

BEST'S TRACTION ENGINE HAULING GRAVEL.

Best's Traction Engines.

During the last ten years the trend of population has been toward our villages and cities. The increase of this population, as compared with the growth of the country, has been far beyond anything in the history of our nation. It is an economic question that has given food for thought to our political economists and statesmen, and as yet they have found no remedy to change the status of affairs.

With the growth of the villages and cities it has invited a spontaneous effort to adapt sanitary regulations and improvements and attractions that should make city life conduce to longevity, and with the advantage of schools and associations, it seems that this system will continue to enlarge rather than diminish.

The city of Sacramento is built upon a level plain, and during the winter months the streets have been almost impassable on account of the sticky, adobe mud. Recently, by an almost unanimous vote, a large amount of money has been appropriated to make the road-beds and streets of Sacramento equal to, if not superior, to any city on the coast. Fortunately for them, about four miles out is one vast gravel-bed made up of pebbles from the size of a walnut to a hen's egg, without any bowlders and with just enough dirt intermixed to form a cement that makes a road-bed that is always firm in wet weather and smooth and well adapted for carriage driving.

Recently the trustees have employed all the teams they could hire to improve the streets, but finding the old method too slow, they have called into requisition the services of "Pathfinder," one of the traction engines built by Daniel Best.

The accompanying cut is a good reproduction from a photograph taken at Sacramento while at work in hauling earth from the gravel-bed, four miles out from the Capital City. This train is run night and day, making from six to seven trips at a cost so low that the authorities are contemplating the project of graveling the streets generally in the city.

We quote the following publication concerning this valuable invention:

It was declared at the late California State Fair, held in Sacramento, after a three days' plowing contest, that the Best traction engine has no superior, the first prize of $500 having been awarded to its inventor and manufacturer, Mr. Daniel Best of San Leandro. Up to the year 1887, field locomotives had been partial failures. It is to the credit of Mr. Best that, of twenty-five or thirty engines built at his manufactory in San Leandro, each one has been in continual and practical use ever since. He has recently received three orders for engines to work in the Sierra Nevada mountains, hauling lumber, ore, etc. One of his machines has invaded the Sandwich Islands, where it is engaged by day in plowing sugar and cane fields, while by night it runs a dynamo at the factories, for the purpose of furnishing electric light. In Sacramento his premium engine, "The Pathfinder," is employed in hauling gravel to pave the streets of the city. During the fair his engines were used to convey people to and from the park. We quote the following from the State Fair Daily 1890:

"Have you seen the Best steam harvester in operation on the vacant lot adjoining the pavilion? If not, attend to the matter at once and you will witness one of the grandest sights of the nineteenth century. You will see a mammoth traction engine, with a huge combined harvester attached, rushing about, now turning sharp curves, now backing as swiftly as it moved forward, now stopping suddenly, now starting, now reversing with as much ease as a locomotive, and in general exhibiting all the traits necessary to the complete success of a steam traction engine. Crowds are daily witnessing this great spectacle. Best's steam harvester may be utilized as a stationary threshing outfit by simply bringing the machine to a standstill whenever desired, and throwing in the material to be threshed. It will plow and harrow, haul grain, lumber, wood, coal, ore, etc.; run any apparatus connected with it, and assist to grub and clear land. It has a steady, uniform motion, travels at the rate of three miles an hour, plowing an average of 50 acres per day, and harrows 125 acres a day."

A RURAL representative visited the Best Agricultural Works at San Leandro, last week, and found a full force of men engaged on traction engines. There were six on the stocks and one nearly completed for filling an order for plowing this season. The gold medal awarded by the State Agricultural Society has been forwarded to our genial inventor, Mr. Best, who is naturally proud of his successful contest.

Christian Socialism.

The phrase "Christian Socialism" has been heard so much of late that it is worth while to ask the purport of the movement which it represents.

Socialism, rightly so-called (we mean the genuine, not the sham)—true socialism contemplates the reconstruction of society, with a more just and equitable distribution of property and labor, "substituting the principle of association for that of competition in every branch of human industry." (Brande.)

Those who have banded themselves together under the name of "*Christian* Socialists," according to their Declaration of Principles, adopted in Boston, April 15, 1889, believe that all social, political and industrial relations should be based on the Fatherhood of God and the Brotherhood of Man, in the spirit and according to the teachings of Jesus Christ. They hold that the present commercial and industrial system is not thus based, but rests rather on economic individualism, the results of which are:

(1.) That the natural resources of the earth and the mechanical inventions of man are made to accrue disproportionately to the advantage of the few instead of the many. (2.) That production is without general plan, and commercial and industrial crises are thereby precipitated. (3.) That the control of business is rapidly concentrating in the hands of a dangerous plutocracy, and the destinies of the masses of wage-earners are becoming increasingly dependent on the will and resources of a narrowing number of wage-payers. (4.) That large occasion is thus given for the moral evils of mammonism, recklessness, overcrowding, intemperance, prostitution, crime.

And their avowed objects are:

(1.) To show that the aim of Socialism is embraced in the aim of Christianity. (2.) To awaken members of Christian churches to the fact that the teachings of Jesus Christ lead directly to some specific form or forms of Socialism; that, therefore, the Church has a definite duty upon this matter, and must, in simple obedience to Christ, apply itself to the realization of the Social principles of Christianity.

The society has an organ in the shape of a neat little magazine, *The Dawn*, edited as a labor of love by Rev. W. D. P. Bliss, with such contributors as Rev. E. E. Hale, Rev. Heber Newton, Rev. Washington Gladden, Lawrence Gronlund, Prof. Rich. T. Ely, Edward Bellamy, Mary A. Livermore and Frances E. Willard. Sample copies may be had for the asking* by any one who would pursue the subject further or feels moved to co-operate with the society.

*Address *The Dawn*, 36 Bromfield St., Boston, Mass.

AS AN indication of the increasing business of the country, the Baldwin Locomotive Works are driven with work and are hardly able to fill orders; they are also sending many to Central and South America. The newly invented compound locomotive is a novel feature of this industry. The great advantage to be found in this style of engine lies in the fact that the steam which is exhausted at high pressure is used again at low pressure, causing an economy in freight and heavy passenger service of about 20 per cent as compared with an ordinary engine. In express trains, where economy is sacrificed to speed, the difference is not so noticeable. Orders for 190 engines for American roads are now being filled. The new shop is rapidly nearing completion. The two new cranes being built for it will be the largest twin cranes in the world.

WHAT CURES?

Editorial Difference of Opinion on an Important Subject.

What is the force that ousts disease; and which is the most convenient apparatus for applying it? How far is the regular physician useful to us because we believe in him, and how far are his pills and powders and tonics only the material representatives of his personal influence on our health?

The regular doctors cure; the homœopathic doctors cure; the Hahnemannites cure; and so do the faith cures and the mind cures, and the so-called Christian scientists, and the four-dollar-and-a-half advertising itinerants, and the patent medicine men. They all hit, and they all miss, and the great difference—one great difference—in the result is that when the regular doctors lose a patient no one grumbles, and when the irregular doctors lose one the community stands on end and howls.—*Rochester Union and Advertiser.*

Nature cures, but nature can be aided, hindered or defeated in the curative process. And the *Commercial's* contention is that it is the part of rational beings to seek and trust the advice of men of good character who have studied the human system and learned, as far as modern science lights the way, how far they can aid nature and how they can best avoid obstructing her.—*Buffalo Commercial.*

It is not our purpose to consider the evils that result from employing the unscrupulous, the ignorant, charlatans and quacks to prescribe for the maladies that afflict the human family. We simply declare that the physician who knows something is better than the physician who knows nothing, or very little indeed about the structure and the conditions of the human system. Of course "he does not know it all."—*Rochester Morning Herald.*

I have used Warner's Safe Cure, and but for its timely use would have been, I verily believe, in my grave from what the doctors termed Bright's Disease.—D. F. Shriner, senior Editor Scioto *Gazette*, Chillicothe, Ohio, in a letter dated June 30, 1890.

Easy Binder.

Dewey's patent elastic binder, for periodicals, music and other printed sheets, is the handiest, best and cheapest of all economical and practical file binders. Newspapers are quickly placed in it and held neatly, as in a cloth-bound book. It is durable and so simple a child can use it. Price, size of Mining and Scientific Press, Rural Press, Watchman, Fraternal Record, Masonic Record, Harper's Weekly, and Scientific American, 75 cents; postage, 10 cents. Postpaid to subscribers of this paper, 60 cents. Send for illustrated circular. Agents wanted.

First Shipment of Oranges.

VACAVILLE, Nov. 18.—Mrs. C. Martel to-day made the first shipment of oranges for the season from her ranch in the Vaca valley. They were of the Navel and Mediterranean sweet varieties and were remarkable for their size. This shipment is about 18 days later than last year. The last carload of green fruit will leave here in a few days for Eastern points.

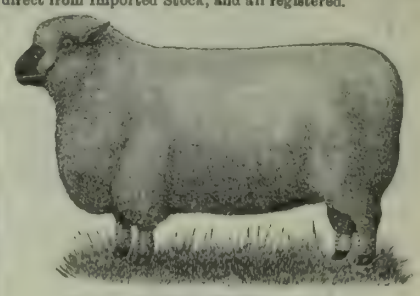
—IMPORTERS AND BREEDERS OF—

Red Polled Cattle.

We have 19 head of Imported Stock.



Young Bulls and Crossbreds on Devons for sale.

H. MECHAM,

Importer and Breeder of Shropshire Sheep

They were all imported from England in '88, or bred direct from Imported Stock, and all registered.

H. MECHAM,

—BREEDER OF—

American Merino Sheep Without Horns.

The only flock in the United States. When we bought our sheep East 20 years ago, among them was a ram without horns. He grew to be a large fine sheep, shearing at 2 years old, a 12 months' fleece, 35 lbs. of long white wool.

I have bred from him and his get ever since and have never made an out-cross and never used the same ram but one year on the same flock. My rams at 2 years old will weigh from 160 to 180 lbs.; have a strong constitution, without wrinkles, and will shear on an average about 25 lbs., a 12 months' fleece, of long white wool. Rams and Ewes for sale. **P. O. Address:**

Stony Point, Sonoma Co., Cal.

R. R. Station, Petaluma.

S. F. Market Report

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Nov. 19, 1890.

Trade the past week in farm products has been fair. The advanced season necessarily lessens the number of articles dealt in, still the list is quite long. The money market has been working closer, which interferes with trading in cereals. The wheat markets abroad and at the East have shaded off. This is largely due to the close money markets in London and in New York, and also to lower prices for silver. The following is to-day's London cablegram:

LIVERPOOL, Nov. 19.—Wheat—Depressed. California spot lots, 7s 4d@7s 6½d; cargoes off coast, 38@38 6d; just shipped, 37s; nearly due, 37s 6d; cargoes off coast and on passage, slow; Mark Lane wheat, slow; French country markets, steady; wheat, and flour in Paris, quiet.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per ctl. for the past week:

	Nov.	Dec.	Jan.	Feb.	Mar.	April
Thursday	7s6d	7s6¾d	7s7¼d	7s7½d	7s8¼d	7s8½d
Friday	7s7d	7s7½	7s7¾	7s8¼d	7s8½d	7s8¾d
Saturday	7s6¾d	7s6¾d	7s6¾d	7s8d	7s8¼d	7s8¼d
Monday	7s6¾d	7s6¾d	7s6¾d	7s6¾d	7s6¾d	7s6¾d
Tuesday	7s6¾d	7s6¾d	7s6¾d	7s6¾d	7s6¾d	7s8½d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday	38s0d	37s6d	38s0d	Steady.
Friday	38s0d	37s6d	37s9d	Easier.
Saturday	38s0d	37s6d	37s6d	Quiet.
Monday	38s0d	37s6d	37 9d	Quiet.
Tuesday	38s0d	37s6d	37s9d	Dull.

Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

Day.	Nov.	Dec.	Jan.	Mar.	May	July.
Thursday	104	103	104¼	107	107⅝	...
Friday	99½	100⅜	101¼	104⅛	105⅛	103¼
Saturday	98½	99⅛	101	....	104⅝	...
Monday	100	101⅛	102¼	104⅜	105⅝	...
Tuesday	98⅛	99	100⅜	103⅛	104⅝	...

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

Day.	Dec.	May.	June.	July.
Thursday	96	102¼	...	...
Friday	94⅛	101⅛	....	....
Saturday	92⅝	100	....	....
Monday	93⅝	101⅛	....	....
Tuesday	91⅝	98⅝	....	....

NEW YORK, Nov. 19.—Wheat—98¼c for cash, 97⅜c for December, 99c for January, $1.02⅜@1.02½ for May, and 97⅞ for July.

CHICAGO, Nov. 19.—Wheat—89¾c for December and 97⅛c for May.

Foreign Grain Review.

LONDON, Nov. 17.—The *Mark Lane Express* says: English wheats are steady. Foreign is weak, owing to heavy Russian shipment. Foreign flours in the Scotch markets have dropped 6d, and in the English markets are flat and unchanged. Corn is firm. Oats are up 6d. At to-day's market English wheats were weaker and foreign were down 6d for California, Australian and Russian, but Indian was firmly held. American flour was steadier; corn was dull, and oats were in demand at a further advance of 6d.

Department of Agriculture Report on California Products.

WASHINGTON, Nov. 15.—The report of the Department of Agriculture on crops for November, issued to-day, says: The season has been the worst for fruit that the Department has reported. The extraordinary mildness of the winter, causing winter blooming and great tenderness of bud growth, rendered the frosts of March almost universally destructive. Peaches have been almost unknown in many parts of the growing sections, and apples are a rarity in great apple-producing sections, such as the Missouri river Bluffs and contiguous areas. The Ben Davis variety, which some people regard as better than nothing, is the mainstay of many markets. Pears have been almost equally scarce and necessarily high in price.

This dearth of fruit has brought into unusual prominence the products of California, which must always be considered separate and apart from the rest of the country. Millions have gone into the coffers of the growers of California peaches, plums, grapes, and citrus fruits. The raisin industry is driving Spanish raisins out of the country, and the olives of the Pacific Coast are competing with those of Spain.

The Florida orange crop is reported to be about two-thirds of a full yield. Pineapples, bananas, guavas, and other sub-tropical fruits are increasing their areas. It should be admitted that grapes are fairly abundant and prices reasonable.

The State agent says that hops in California have been a fair to medium crop of excellent quality and growers expect about 35c a pound for them, which will make the crop very remunerative. Beans are gaining in importance every year as a staple crop and the product has been up to the full average. The crop of peaches, apricots, cherries, plums, and prunes has been about 5 per cent of a general yield, the deficiency being caused by the unusually wet winter. The deficiency, however, has been fully made up by the higher prices obtained.

Figs are becoming more and more prominent and promise to be one of the leading fruits of the State. Almonds and walnuts have produced good crops and are very remunerative to producers. Oranges and lemons promise a full crop, and as the crop of this State comes in just when Florida's goes out, it bids fair to be a very paying industry. The grape crop has turned out better than expected, and the product has been very fine. The vintage is put down at 18,000,000 gallons, while large quantities of wine grapes have been dried, and the raisin crop will exceed that of last year.

Breadstuffs and the Panic.

NEW YORK, Nov. 16.—Few Exchange items escaped the financial blizzard that raged more or less during the week. Exhausted margins, frantic haste to realize or unload and peremptory selling advices from numerous mill producers caused some line or another of breadstuffs to suffer a semi-panic each day. The exporters took some advantage of the turmoil and secured considerable wheat and corn, but no legitimate demand could have absorbed the volume of property pressed for sudden sale, and in the uncertain outlook prices could not be attractively adjusted for speculation to any material extent.

Hops.

NEW YORK, Nov. 15.—Hops are reported in slightly better demand, chiefly for export account, but the offers made are invariably low, and little business has resulted. The absence of any pressure to sell under existing adverse conditions in financial circles is taken as strong evidence that dealers have confidence in the situation, and growers have only to follow the policy of city dealers to keep the values steady until the money situation changes for the better. With money easier, hops would very probably find freer movement. The foreign hop market is unchanged. The situation is about the same as here.

Visible Supply of Grain.

NEW YORK, Nov. 17.—The visible supply of grain is as follows: Wheat, 23,197,000 bushels, an increase of 497,000; corn, 5,658,000, a decrease of 726,000; oats, 3,971,000, a decrease of 14,000; barley, 4,765,000, an increase of 43,000.

Dried Fruits.

NEW YORK, Nov. 14.—The *Commercial Bulletin* says: No less than six packers of California raisins have already withdrawn quotations on strictly first-class loose and layers. In other words, they are out of the market apparently for the balance of the season. The packers referred to in some instances state plainly that it is impossible to fill all the old orders in full. Nearly everything coming forward is taken up for delivery on contracts, leaving very little supply here outside what may be held by jobbers, and a few of the latter have more goods than their trade requires. The lower grades of raisins are in fair supply, and the chances are there will be a considerable quantity of the same here before the holiday season closes, and that such goods may eventually become rather cheaper later on, while the tendency of values for first-class stock is just in the opposite direction.

NEW YORK, Nov. 15.—California hurrying forward her products in fulfillment of contracts causes some pressure in shipments, but many lines of produce for winter and spring use are yet to be made, and it is advancing close to the uncertain season for transportation. The Sunset route by way of New Orleans put three steamers on these specialties to arrive this week. Two are here, and the other will be due Saturday. Within two days there have been delivered here 1389 bales of wool, 1524 bales of hops, 19,638 boxes of raisins, 9480 cases and sacks of dried fruit and prunes and 20,000 cases of canned goods. Most of the raisins were consigned directly to New England. Despite the assertions of Pacific Coast papers of a large supply of California raisins and prunes, the fact is denied here, and it is reported several packers are making cash settlements on three brands. Prunes sold ahead early in the season, instead of guaranteeing deliveries later on. It is said nearly everything in the line of first-class raisins and prunes that arrives goes for delivery on back orders, but buyers are very exacting and reject goods not up to expectations.

NEW YORK, Nov. 16.—Common California raisins neglected and easy, Valencia drawing off the trade. Prime, firm; clusters, $2.60; three-crown, $2@2.15; selections, in a small way, $2.25; bags, good order, 8¼c; useful rain-damaged, 6c. Three Sunset route steamers landed 29,719 boxes of raisins, 1500 bbls. of flour, 57,000 boxes of dried fruit and prunes, 2833 bales hops, 2961 lbs. wool, and about 30,000 cases of canned fruit. The raisins were chiefly for New England. Unpeeled dried peaches are decidedly sick; 15c, best price for best goods. Apricots, nominally quoted at 18@18½c in sacks, 19@20c for boxes. Fair inquiry for a prime quality of prunes; no better prices.

NEW YORK, Nov. 15.—A carload of 3-crown loose California raisins in bags is reported to have been sold at 8c ₩ lb. to arrive. A cargo of first-class California evaporated apricots is held at 20c ₩ lb. Supplies in first hands here are moderate at present. Genuine California Sultana raisins in boxes have sold as high as 12c ₩ lb. on the spot. Seedless Muscatels can be bought much lower.

The *Mercantile Journal* continues its complaints on the delayed railway service from California.

NEW YORK, Nov. 18.—The distribution of California raisins, prunes, apricots, peaches, etc., in delivery on back orders continues to absorb the greater portion of the supply going forward from primary points, and now a satisfactory settlement having been made in instances where weather conditions have placed packers at some disadvantage, it is presumed matters in this branch of the trade will proceed smoothly during the balance of the season. There are at present no signs that the supply of first-class goods will turn out larger than indicated one week ago. The indications are, however, that the relation of supply and demand, independent of a speculative movement, will hold values firm.

Eastern Wool Markets.

NEW YORK, Nov. 14.—*Bradstreet's* will say tomorrow: Since the election a quieter feeling has prevailed in the wool market. There is a better demand for the finer grades than for medium or lower grades of wool. During the past week sales of Ohio X and fine long staple Wyoming wools have been made at higher figures than at any time during the year. Manufacturers are showing more care in their selections of wools. They are accepting quotations on fine wools, but they are not paying the price asked for inferior wools. There is a good steady demand for Ohio and Michigan wools, and prices are ruling very firm. Territory are still selling well. There are few Texas wools to be had, and values are very high for those which dealers happen to have. California wools are moving well. Sales of Australian wools have not been large. Advices received from Melbourne state that the supply in market is light and the quality is below the average. Carpet wools are quieter. There is some call for pulled wools. Quotations have not been changed.

New Mexico's Wool Clip.

ALBUQUERQUE (N. M.), Nov. 17.—Now that the wool season is over in New Mexico, local dealers estimate that the entire crop of the Territory will foot up to 15,000,000 pounds, divided as follows among the dealers here: Eisemann Brothers, 4,500,000; George Oberne & Co., 2,225,000; H. M. Hosick & Co., 2,000,000, and Benjamin McLean & Co., who deal principally in hides and pelts, 300,000 pounds. The four dealers named have handled over 9,000,000, and it is safe to state that at least 200,000 pounds more were purchased and shipped by private individuals. The next largest market is Las Vegas, but Albuquerque buyers have this year controlled that market; then comes Santa Fe, Springer, Los Lunos, Raton and the San Juan country.

BAGS — The market for standard-sized hand-sewed continues dull and easy at 6¼@6½c for May-June delivery.

BARLEY—The sample market has made another upward move under light supplies and a steady demand. On Call, trading has been more active, with a slight advance recorded. The following are to-day's reported sales:

Morning Session: Buyer 1890—100 tons, $1.52; 200, $1.51⅞. Buyer season—400 tons, $1.57; 100, $1.56¾; 300, $1.56½; 100, $1.56⅜; 100, $1.56⅝ ₩ ctl. Afternoon Session: Buyer 1890—100 tons, $1.51⅝; 100, $1.51¼; 200, $1.51⅜. Buyer season—100 tons, $1.56⅜; 300, $1.56⅜; 100, $1.56¾; 300, $1.56¼; 200, $1.56⅛ ₩ ctl.

BUTTER—The market shows another slight advance for choice to gilt-edged. The supply is light, while the demand is free. Gilt-edged pickled sold as high as 35c the past week. Many dealers are using solid butter in preference to roll.

CHEESE — The market continues to creep up under lighter receipts and a fair demand.

EGGS—There is a good holiday demand, which keeps prices well up in the face of free receipts. The receipts of Californian the past week were larger than for some time past.

FLOUR—The market is weaker, with concessions said to be obtainable.

WHEAT—The sample market has been dull, with buyers naming lower prices. Large holders are indifferent sellers, preferring not to offer on such a market. In futures, trading has been light. The following are the reported sales made on to-day's Call:

Morning Session: Buyer 1890—200 tons, $1.31; 100, $1.31⅛; 500, $1.31¼; 300, $1.30¾. Buyer season—200 tons, $1.40⅞; 300, $1.41; 200, $1.40⅝; 100, $1.40¾; 200, $1.40⅝ ₩ ctl. Afternoon Session: Buyer 1890—400 tons, $1.31; 300, $1.31⅛. Buyer season—200 tons, $1.41; 100, $1.41⅛ ₩ ctl.

Cereals.

The local wheat market the past week ruled dull and inactive. The stock panic abroad and at the East has much to do with the present condition of the world's wheat market. The difficulty of securing liberal accommodations on cargoes for shipment throws the burden of purchases upon large financial, speculating firms who are never slow in reaping a harvest of low prices when given the opportunity. Until the present panic subsides, it will be hard to give correct information on the markets abroad, so as to guide us more intelligently in outlining the probable course of prices here. It now looks as if exporters will hasten their shipments of wheat so as to clear up their holdings to take advantage of any forced sales due to sellers raising money to meet their annual taxes. The wheat situation throughout the world is undoubtedly in favor of holders, yet temporary inconveniences (close money markets being the principal) are against them. It now looks as if these will be removed before the turn of the year, after which better prices ought to obtain. The tonnage situation with us is against wheat in the immediate future, but as the supply afloat is quite large, larger than at this time in 1889, there appears to be a silver lining for those who do not sell at present.

Barley has moved up another peg. The demand continues quite strong. It appears to be based legitimately and not speculatively. The high prices have been instrumental in keeping large speculators from loading up, fearing they were fictitiously founded. Speculators not buying, goes far in confirming the general opinion that the slow but steady up movement may continue for a time at least. The dry weather is in favor of holders. Oregon and Washington are sending us fair supplies, but in those States the visible supply is said to be light.

As intimated by this paper over a month ago as liable to occur, oats have steadily appreciated in prices, with quite an advance the past week. The consumption or feeding of oats is steadily enlarging on this coast. This is natural, as attention is drawn to the breeding of thoroughbred horses. In this city the majority of owners of fast animals are reported as confining their feed as much as possible to oats in preference to other cereals.

Corn has made another up move. Judging from appearances it looks as if a successful corner is being run by one or more large firms in this city. The crop in this State did not turn out as well as was expected, while the demand has been uniformly good.

Rye is steady at full prices. Holders do not appear to be pressing the market.

Buckwheat is without essential change.

Feedstuff.

In ground feed there is a continued free demand. Middlings have shaded off some, but rolled barley, cracked corn and feedmeal are stiff at a slight advance. Oregon and Washington are sending us liberal supplies of bran, screenings, and fair supplies of middlings.

Choice to extra choice hay holds steady, although there is a movement to break prices. The scarcity of cars has unquestionably had much to with the market, yet it is doubted by some that a free supply of cars for shipping hay to market will have now any material effect. This opinion is claimed to be founded on advices that the stock to be drawn from is light.

Fruit and Canned Goods.

The shipments of fruit and canned goods to the East by rail in October were as follows:

From	Canned Goods	Dried Fruit.	Green.
San Francisco, lbs.	8,872 810	982,440	20,930
Los Angeles	25,110	98,780	73,440
Sacramento	2,966,490	3,339,190	6,497,070
San Jose	4,549,900	4 646,150	3,482,430
Marysville	1,286,230	480,470	129,150
Colton	304,190	613,230	.....
Stockton	325,040	2,168,660	698,440
Oakland	136,950	252 480	697,680
Totals	17,966,720	12,581,400	11,599,440
July	4 839,930	2,869,140	13,194,260
August	14,965,470	5 410,850	20.768 260
September	18,489,460	10,710,360	17,559,840
Since July 1	56,261,570	31,571,750	63,121,800

The total shipments of raisins from the State in the past month were 8,973,670 lbs. against 3,478,780 in September. None were sent East in July or August. During the four months ending Oct. 31, 1889, the shipments were as follows: Canned goods, 24 462,490 lbs.; dried fruit, 25 414,420 lbs.; green fruit, 38,281,100 lbs.; raisins, 10,886,380 lbs.

The totals for the past ten months compare as follows with the shipments in 1889:

Articles.	Ten Months 1889	1890.
Canned Goods	30,102,230	70,161,490
Dried Fruit	28,174,900	33 966,450
Green Fruit	62,319,910	84,587,030
Raisins	11,575,790	14,029,470
Totals	132,072,880	202,744,440

Showing the following gains for 1890: Canned goods, 40,159,210 lbs.; dried fruit, 5,791,550; green fruit, 22,267,120; raisins, 2,453,680.

Fruits.

Frosts the past week touched, in some localities, the grapevine, but as the season is drawing to a close no damage is expected. Lighter receipts of grapes caused the more choice good keepers to strengthen toward the close. Free shipments were made up north during the week. Wine grapes are so far out of season as to cause quotations to be nominal, consequently they are withdrawn.

Apples are fairly steady. The market remains remarkably steady considering the heavy receipts; it is only at times that concessions are necessary to close out a consignment. The above refers to the more choice, as common and defective are hard to place at any time. Choice northern and foothill Spitzenbergs command, at present, the highest prices.

Pears are virtually unchanged.

Raisins continue to go East on contract purchases. The shipments so far this season aggregate over 850,000 boxes. This indicates that the pack this year will be all of 1,500,000 boxes. Taking the pack as a whole, it grades better than it did in 1889. There has been better curing, grading and packing. It now looks as if the pack, large as it is, will go into distribution before the spring months are passed.

Vegetables.

Frosts have killed the different vines, making quotations for several kinds of vegetables worthless, consequently they are withdrawn.

Cauliflower is large sized, but with heavier frosts it will soon be of the past. Celery is in fair receipt. Cabbages continue to come in fairly free. The demand is good. In root vegetables there is nothing new to report.

The receipts of onions continue light, but as the demand is only fair, prices do not show any material change. Oregon is sending us small consignments.

The receipts of potatoes have been quite large, yet the market held up fairly well. Many of the consignments consist of poor potatoes which always have an unfavorable influence on the market. Choice Burbanks from Oregon and choice Peerless from Salinas are said to command the highest prices. The shipments by overland rail have fallen off, which is against the market. There has been some buying of seed potatoes.

Live-stock.

Bullocks continue easy. Interior roads being remarkably good admit of free marketing of cattle. Their condition is said to be better than at this time last year. Mutton sheep are offering fairly free. Hogs continue firm for the block and also for packing. Lambs and calves are firm under moderate offerings. In milch cows and horses there is nothing new to report.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS — On foot, light grain fed, 4½@4½c ₩ lb; dressed, 7@8c ₩ lb.; heavy, 4@4¾c ₩ lb.; dressed, 6½@7½c ₩ lb. Stock hogs, 3@3½c ₩ lb.

BEEF—Stall fed, 6½@—c ₩ lb.; grass fed, extra, 6@—c ₩ lb.; first quality, 5¼@5¾c ₩ lb.; second quality 4¾@5c ₩ lb.; third quality, 4c@— ₩ lb.; bulls and thin cows, 2@3c ₩ lb.

VEAL—Small, 6½@8½c ₩ lb.; large, 6@7c.

MUTTON—Wethers, 7c ₩ lb.; ewes, 6½c ₩ lb.; lamb, spring, 8@9c.

Miscellaneous.

In quoting Call Board sales of grain the term "buyer" means that the buyer can call for the stuff

bought at any time before the contract time expires. The term "seller" means that the seller can deliver the stuff at any time before the contract time expires. All deliveries must be made before the contract time expires.

Exceptionally heavy receipts of poultry from points on the Missouri river broke the market and caused low prices to obtain throughout the week, although toward the close there is a firmer tone, owing to the market being cleaned up. There is a Thanksgiving demand for turkeys and large, fat chickens.

Dried peas are higher and strong at the advance.

Beans are in steady demand, with bayos strong at a slight advance.

All kinds of game are in heavy supply, causing an unsatisfactory market.

Hops are firm at full prices. Receipts are light. The demand is fair. The stringent money market at the East and abroad has not, so far, had any depressing influence on the market.

Wool is quiet but steady. A change in the cut of men's wear caused a slightly improved demand for some grades of wool to meet the demand for men's cloth goods. The feeling here is hopeful of a fairly active demand next season, but no improvement in prices is looked for, owing to the high tariff on necessary foreign wools for mixing.

Honey and beeswax are firm, with a good demand ruling for the season.

The exports by sea the past week aggregate as follows: Wheat, ctls, Fleetwood, 58,923; Cork. 129,050; Liverpool, 85,695. Flour, bbls, Nanaimo, 265; Honolulu, 217; Japan, 2317; Manilla, 500; Central America, 3237; Panama, 402; Victoria, 111. Beans, lbs, Sydney, 2436; Auckland, 675; China, 1948; Boston, 35,384. Canned fruits, cs, Auckland, 75; Townsville, 145. Corn, ctls, Central America, 1034. Raisins, bxs, Auckland, 75; Nelson, 25; Honolulu, 20; Central America, 914; Victoria, 60. Dried Fruits, lbs, 4450. Hay, bls, Honolulu, 211. Wine, gals, Japan, 2400; New York, 39,782; Central America, 779.

The railroad shipments last week aggregate as follows, in pounds: Beans, 4,581,350; brandy, gals, 407,390; canned goods, 17,966,720; fruit, dried, 12,581,400, deciduous, 11,599,440; hops, 1,518,190; mustard seed, 74,830; potatoes, 1,813,430; raisins, 8,973,670; wine, gals, 6,587,090; nuts, 541,010; honey, 150,350; wool, grease, 2,209,860, pulled, 125,570, scoured, 929,260.

From the *Commercial News* of Nov. 18th the following summary of tonnage movement is compiled:

	1890.	1889.
On the way to this port	279 013	211,665
On the way to neighboring ports	17,358	10,409
In port, disengaged	16,741	26,963
In port, engaged for wheat	48,170	78,440
Totals	361,282	327,467

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to Nov. 12, 1890, the following are the exports from this port:

	1890.	1889.
Wheat, ctls	3,979 461	4,282 999
Flour, bbls	427,785	421,316
Barley	160,459	778,603

Dried Fruits, Etc.

The quotations given below are for average prices paid. Something very fancy fetch an advance on the highest quotations while poor sells slightly below the lowest quotations.

Prices named, unless otherwise specified, are for fruit in sacks. Add for 50-lb. boxes ½c per lb., and for 25-lb boxes ½c to 1c per lb.

THE JUDSON WIRE & PICKET FENCE.
Cheaper & Better than ever. The Coming Fence.
Rabbit Proof, 2 ft. high, 3 double Steel Cables, 36c per rod, in carload lots. Put barbed fencing wires above it and it will turn rabbits and pigs or any stock whatever.
All of our Fence is COLORED RED by boiling in a chemical solution that preserves the wood. Rabbits will not gnaw them.
Address, JUDSON MANUFACTURING CO., 14 & 16 Fremont St., San Francisco.

THE RAPIDITY OF THOUGHT.—Much speculation has been set on foot in regard to the rapidity of thought; but Prof. Donders of Utrecht has recently made some interesting experiments in this direction by means of two instruments which he calls respectively the "neomatachograph" and the "nernatachometer." His experiments thus far show that it takes the brain one sixty-seven hundredths of a second to elaborate a single idea. He says: "Doubtless the time required for the brain to act is not the same in all individuals. I believe, however, that these instruments may be so far perfected that we shall be able to determine the mental caliber of our friends without our friends knowing that we are testing their aptness." And again: "For an eye to receive an impression requires seventy-seven hundredths of a second; and for the ear to appreciate a sound, one hundred and forty-nine hundredths of a second is all that is necessary, which, however, acts with nearly double the rapidity of the eye."

A SCIENTIFIC MOSQUITO BAR.—Word comes from Paris of the invention of what may be called the alternating mosquito bar. This consists of a mosquito net made of extremely fine copper wire woven into a cloth, which is strong and at the same time almost as pliable as a netting made of vegetable fiber. This net is made in the usual form of a canopy and falls in shining folds about the bed. In the dome of the canopy hangs a small electric lamp. Wires connect the netting with a weak pile battery placed under the bedstead, and by means of a converter are carried into the lamp. The lighted lamp attracts the attention of all the mosquitoes in the neighborhood, and they come sailing over and light upon the wire canopy. The battery presses the button, and the mosquitoes do the rest. M. Scherer, the inventor, says that on the first morning after his net had been put into use, his servant took up 3.22 litres, or nearly three quarts of dead mosquitoes.

A TIDE-LAND DECISION.—The United States Circuit Court at Tacoma, in the tide-lands case there, holds that under the land laws of the United States the line of high tide is the boundary between land and water, and that an Act of Congress cannot be construed so as to authorize the entry of mud flats on tide lands bare at low tide, but subject to daily overflow.

From a Recent Letter.

"Please find inclosed Wells-Fargo order for the sum of $6 for two years' subscription on the PACIFIC RURAL PRESS; and I wish to say it is always welcome in my home, and I think it is too good a paper to be without."

A CHICAGO firm lately received an order for $130,000 worth of machinery for China.

"Are n't you ever going to grow old, like the rest of us?" asked a man of an acquaintance he had n't seen for some time. "Well, not so long as I can purify my blood with Ayer's Sarsaparilla," was the apt reply. This man knew what he was talking about.

$500,000

BUGGIES, Buckboards, Spring Wagons, Surreys and Road Carts. Write for our new catalogue. Baker & Hamilton, San Francisco and Sacramento.

FOR DYSPEPSIA,
Ayer's Sarsaparilla

Is an effective remedy, as numerous testimonials conclusively prove. "For two years I was a constant sufferer from dyspepsia and liver complaint. I doctored a long time and the medicines prescribed, in nearly every case, only aggravated the disease. An apothecary advised me to use Ayer's Sarsaparilla. I did so, and was cured at a cost of $5. Since that time it has been my family medicine, and sickness has become a stranger to our household. I believe it to be the best medicine on earth." —P. F. McNulty, Hackman, 29 Summer st., Lowell, Mass.

FOR DEBILITY,
Ayer's Sarsaparilla

Is a certain cure, when the complaint originates in impoverished blood. "I was a great sufferer from a low condition of the blood and general debility, becoming finally, so reduced that I was unfit for work. Nothing that I did for the complaint helped me so much as Ayer's Sarsaparilla, a few bottles of which restored me to health and strength. I take every opportunity to recommend this medicine in similar cases." —C. Evick, 14 E. Main st., Chillicothe, Ohio.

FOR ERUPTIONS

And all disorders originating in impurity of the blood, such as boils, carbuncles, pimples, blotches, salt-rheum, scald-head, scrofulous sores, and the like, take only

The Whole Country Needs Fertilization

ADMONITION TO FARMERS!

GUAYMAS, MEXICO, September 9, 1890.

R. B. CUNNINGHAM, ESQ., Agent Mexican Phosphate and Sulphur Company—DEAR SIR: In answer to your inquiries as to the value of phosphates for worn-out lands, I will state that it is my opinion the lands of the older settled portions of California afford a good field for the use of phosphates. These lands have been cropped for years without any restoration of the chemical constituents necessary for an abundant crop. They therefore show plainly that they need assistance artificially to produce crops good in quantity and quality, let the crop be whatever it may.

Take, for instance, San Joaquin and Santa Clara valleys, and what do you see? Many crops that are so imperfect in quantity and quality that the eye at once detects the defect. The only relief that can be resorted to must be infused into the soil to replace the chemical properties that have been extracted by previous crops, and the writer is of the opinion that a liberal supply of phosphates will accomplish this.

The attention of the cultivators of the soil is sharply turned to rotation of crops, hoping thereby to get wealth out of their lands without fertilization. Some have turned their attention to beet cultivation in soil worn out by other crops. Beet or other seeds will not grow successfully unless the soil will nourish them.

This summer I saw several crops of beets on excessively cropped lands, the majority of which showed that there was something wanting to complete the plants to ample size and in quantity that should be expected of sugar beets under favorable circumstances. If a good crop is not obtained, there is deficiency in profit. It costs as much to cultivate soil deficient in chemical properties as it does if ample nutrition was in the soil. Under the former condition a deficient crop is certain, while under the latter condition he may reasonably expect an ample crop with profit.

Fields often are allowed to go to weeds, supposing thereby to enrich the soil. This is an uncertain method and not profitable. Your weeds have grown up and seeded: the dead stems can only add a limited addition to fertilize the soil, while the seeds of the same will cause much expense to exterminate them from the future crops. Besides, while thus only weeds as a crop, no profit was realized, while if a supply of phosphates had been applied to the soil, a profitable crop of beets or corn would be had. Besides, the weeds would have been exterminated during the cultivation of the said crop. I am, Sir, your obedient servant,
EDWARD PALMER, M. D.

THE "TRIUMPH"

ALL METAL

Spading Harrow.

Cal State Library 21 '90
62199

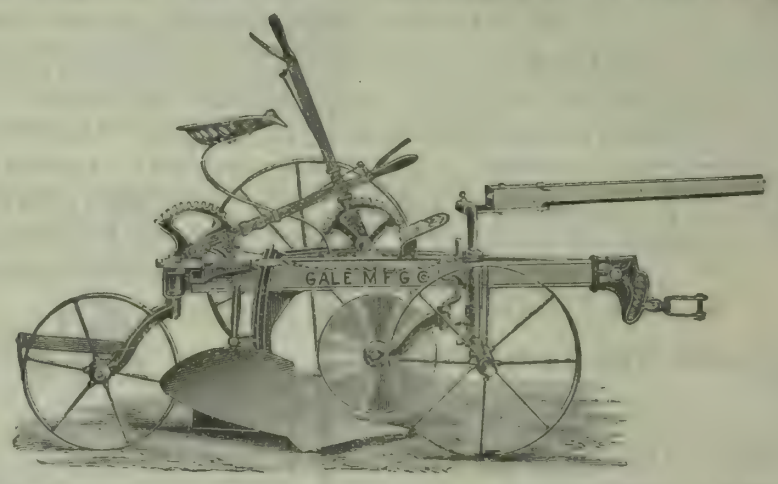
The Best Pulverizer in the World!

JUST THE THING FOR WORKING SUMMER FALLOW LAND.

Specially Adapted for Orchards and Vineyards.

FOR TWO HORSES. Works the soil about six feet wide. Angle of teeth adjustable to work the soil at desired depth. THIS HARROW is something entirely new. IT IS THE GRANDEST ACHIEVEMENT of its inventor, C. LA DOW, who is the recognized authority on Harrows, there being but few leading Harrows at the present time not built under his patents. We have made exclusive arrangements for its sale and it can be obtained only through us or our agents.

THE NAME "SPADING" refers to its action on the soil. The action of each cutter is like that of a small spade, lifting and turning the soil from a depth of four to six inches, doing more perfect work than is possible with any other Harrow in the world. THE BLADES are made from spring steel, in operation vibrating and shaking off sticky soil. IT NEEDS NO SCRAPERS to clean the revolving cutters.



Considering the immense amount of labor done, the draft is very light, as the pulverized soil passes through the gangs of revolving cutters, being left smooth. THE GANGS are so arranged that the most uneven ground is thoroughly harrowed and left level. IT LEAVES NO FURROW or ridge; when the field is harrowed it is all left smooth. 10, 12 and 14-ft. sizes in stock. Send for circular.

TWENTY-PAGE EDITION.

Vol. XL.—No. 22. SAN FRANCISCO, SATURDAY, NOVEMBER 29, 1890. DEWEY & CO., Publishers, Office, 220 Market St.

Ayrshire Cattle.

We have often held in these columns that the Ayrshire breed is less heard of than its merits and adaptations demand. It is true that the Ayrshires stand well as dairy cattle and are generally respected, but the same tact and energy in popularizing the breed which promoters of other breeds have resorted to, have not been employed. And yet the breed has intelligent and earnest advocates and they have an association and registry—though far less active and effective than those of other breeds. No doubt something more can be done with the cattle at the leading shows, and by means of judicious advertising in the agricultural press with something of the same results which breeders of other popular breeds have attained, for the Ayrshire has merit and a field for wider usefulness in this country. We have a few breeders in California to whom we are always glad to give a lift in their efforts to spread the fame of the Ayrshire, and there are Eastern breeders who have animals with style, beauty and records which must command attention.

We display upon this page a very handsome herd picture showing animals owned by Robert M. Carrons of Washington, Pa., a prominent Eastern breeder. The cows in the drawing have earned an enviable reputation both as producers and as prize-winners. The white cow Juniper 4th, first on the left of the picture, has produced 52 lbs. of milk per day, 1436 lbs. in 30 days, and over 8000 lbs. in 10½ months; by actual test her cream producing 17 lbs. 11 oz. of butter in seven days. The next cow, Mollie Pender, has taken more premiums at the leading State and district fairs than any other Ayrshire cow in the country, having traveled from Pennsylvania to Missouri on two triumphal tours, besides being shown nearly every year at some of the leading State fairs, always with first honors. Besides being a wonderfully successful prize-winner she has made herself profitable in the dairy, giving over 7500 lbs. of milk in a season and making 15 lbs. of butter in a week. The cow Rosie Lorain made 12 lbs. of butter per week; she was a good second on one of the tours through the West. Bessie Bell 3d has a milk record of 8000 lbs. per season 15, lbs. 4 oz. butter in seven days. She also has been the rounds of the fairs with an enviable record in the ring. Duke of Hamilton 5th headed this herd of show cows at four different times in the show rings of the West Virginia State Fair and the Western Pennsylvania Fair, winning first honors and sweepstakes.

The engraving should attract attention to the breed by the beauty and capacity which these representative animals are clearly shown to possess.

ENGLISH SHIRE HORSES—PRIZE-WINNERS AT GREAT WESTERN FAIRS.

AYRSHIRE CATTLE—A GROUP OF HIGH-BRED ANIMALS.

Shire Horses.

The English Shire horses are getting a good foothold in California, as they are in other progressive sections of the country. We have often alluded to the breed and its leading characteristics, which are well brought out in the portraits on this page of two animals belonging to the well-known importers W. M. Field & Bro. of Cedar Falls, Iowa. The mare in motion is the three-year-old Spruce 2200, winner among the two-year-olds at the Iowa State Fair and also at the American Horse Show. The bay imbred Honest Tom stallion Tom 2d (6495) has run quite a career as a prize-winner. He was foaled in 1886, got by Griston Tom (2797) out of Griston Brisk by Royal Tom (1904), and has to his credit winnings at local shows as a foal and yearling, as well as a prize at the Brussels Exposition. After his importation, when in ordinary form, he was placed second to the great Sharp at the Iowa State Fair in 1888, in a ring of two-year-olds the equal of which has not since been seen on that ground. Last fall he headed his class at Des Moines and stood in the short leet in the hot fight among the three-year-olds at the American Horse Show.

The Stable

Breeding Roadsters.

Two writers for the *Rural New Yorker* give suggestions concerning the breeders of good roadsters, which will be read with interest and profit. Of course their specific advice in some directions is not applicable to this climate, but the well-informed local horseman can apply the principles to his own conditions.

Few lines of live-stock husbandry are more remunerative or hold out better inducements for the future than roadster horse-breeding. The fact that the work will necessarily be restricted as to men who can successfully engage in it, makes it all the more promising to the favored few. The roadster horse is not and never will be the product of hap-hazard breeding, careless feeding or thoughtless handling. Few men "build better than they know" in the production of fine live-stock. While I believe that in the near future we shall breed for and produce a certain degree of speed among our roadsters, as surely as we now produce weight among our drafts, I do not wish to say anything that might induce the average horse-breeding farmer to make *speed* the sole object in his breeding. Indeed, I would say, "go slow" to the hundreds of our American farmers who to-day are anxious to raise Axtells, Sunols and Nelsons. Thousands will fail here where one succeeds, and the risk is not worth taking.

In breeding roadsters, one should rather aim for a combination of qualities that can rarely fail to give him good results. Size, finish, style and a movement that is "trappy" if not rapid, are properties comparatively easy to obtain, and always recognized in our best markets. It matters little whether the horse trot in 2:40 or four minutes—neither rate of speed of itself makes him specially desirable or otherwise—but if his movement is stylish, and he is sound and smooth, of good disposition, and weighs from 1150 to 1300 pounds, he makes more money for his owner than if he had trotted a few seconds faster, but had no other specially desirable qualities besides his speed. The basis of good work is a careful selection of mares for breeding. I know men who in their anxiety to raise trotters are breeding grade draft mares to little 900-pound flyers. Others are breeding 900 and 1000-pound mares to stallions of about the same weight. These men are simply adding to the undesirable, unsalable class of horses already much too large upon our farms.

Select well-bred, well-formed roadster mares, sound and docile, of good style and action, and weighing from 1100 to 1300 pounds. Mate these with standard-bred roadster stallions of the best quality obtainable, weighing from 1150 to 1300 pounds. Don't let $5 or $10 in the service fee lead you to use an inferior animal. If the result be a 2:30 colt you are very fortunate. If not speedy, you have a fine carriage horse selling at good figures, or, failing in this, an animal of sufficient size to be useful in farm work. The draft colt can be raised with as little care and anxiety as a steer. This is not true of the roadster colt. He must be kept free from barbed wire cuts, blemishes and unsoundness to which his active, restless nature makes him more liable than his slower-going, quiet draft cousin. He should be generally fed oats, wheat bran and good hay for development of bone and muscle, and be allowed plenty of exercise in a yard or roomy paddock. He has no need of exposure or starvation to keep him sound and healthy. Keep him growing from birth until he is fully developed. The handling of him should be commenced early. Teach him not to fear you, but to submit to restraint and handling. I am inclined to believe that the early driving of the colt in harness often leads to abuse and injury, perhaps not necessarily, but through the ignorance or thoughtlessness of the driver. While growing, exercise should be of a character to develop rather than overtax the energies of the youngster. The successful roadster breeder must himself have been bred to the business. If he is not an appreciative, intelligent lover of the animal he proposes to handle, he can hardly hope for a full measure of success in his enterprise; but with this added to patient, careful study, and enthusiastic, systematic push, he cannot fail to aid in producing that noblest representative of the equine family—the American roadster.

The Son of a Well-Bred Trotter.

Another writer says: A first-class roadster is the product of a thoroughbred trotter of good size and an active, compact, stylish and spirited mare weighing 1000 to 1100 pounds. The sire must be in the flush of his power, not under three or over ten years of age, and to obtain the best results he must be limited to 40 mares each season. All necessary precautions must be taken to keep him in the very best condition for service in order that his leading characteristics may be transmitted in full to his offspring. Over-service or neglect will result in the rapid diminution of his potency, and his get will partake chiefly of the characteristics of the dam and come far short of the required standard.

The mares are driven or kept at light work up to about three months of foaling, when they are given the run of a large yard or small pasture in fine weather, and stabled at night and when the weather is bad. They are fed only enough to keep them in good, lively condition and are groomed regularly. After foaling they are allowed to run on pasture until the foals are about three months old, when they are taken up and put to light work, the foals being halter broken and tied or shut in box-stalls four to six hours a day, and fed a few oats. Water is kept before them, and they soon learn to drink and to nibble at the oats. At night both mares and foals are turned out to pasture. The foals are weaned when about six months of age, and as cold weather is then coming on, they are kept in a warm stable connected with a roomy yard and given all the oats and good, bright hay they will eat. Whenever the weather is rainy or very cold, the stable doors are closed. In fine weather they are kept open and the foals have the freedom of both stable and yard. The main object is to keep them in healthy, growing condition. If neglected or exposed to inclement weather at this time, they are sure to be stunted, and, instead of making roadsters worth $250 apiece, they become simply common plugs worth about $80.

In spring they are turned out to pasture and kept there until autumn. If, owing to drought, the pasture gets short in the latter part of summer, they are fed a ration of oats twice a day. In the pasture is a good dry shed to shelter them from severe storms. In the fall they are taken up, stabled, groomed, handled and well fed by careful, experienced hands. In fine weather they run in a large yard, but are kept in the stable whenever it is rainy or very cold. As spring approaches they are bitted and harnessed and taught to drive single and double, to draw a light wagon, walk and trot and carry their heads properly. If two are well matched they are always educated together; each is taught his place, which is never changed, and they soon learn each other's gait and to start, travel in a straight line, turn, stop and back together. All others are taught to drive both single and double.

If not sold they are kept on pasture the greater part of the season, and as autumn comes on they are taken up and driven whenever the roads will admit of it, and exhibited whenever they are likely to find a buyer. They are bred and trained for market, and are generally bought by regular buyers from the large cities. The demand is always good and the prices quite remunerative. The education of roadsters cannot be begun too early. They are always spirited, and the chief object is to make them safe, reliable and stylish. They are especially taught not to be afraid of guns, trains, bands of music, running horses, etc. They are taught to pass other horses on the road and to be passed without breaking or shying. The first-class roadster is a strong, stylish and reliable animal. In color he is bay or black—not that there are no No. 1 roadsters of other colors, but bay is invariably the first choice, followed closely by black. He is spirited, carries his head well up without effort, has strong, muscular legs, good knee action, a long stride, and can take a buggy containing two persons right along without any difficulty. He is not a racer, but he is able to take a light buggy fast enough to make the air smell fresh, and to create a market for his class by riling the man who drives a four-minute charger.

The Dairy.

Gilt-Edge Butter-Making.

The possession of a pure-bred dairy herd of cows is a decided advantage, yet native or grade cows in good health, with good care, feed, and abundance of pure water, will furnish milk from which first-class butter can be made, although probably in smaller quantity per cow than from a better breed, says Ella Rockwood in *American Agriculturist*. The milk should be drawn from the cows quickly and quietly, after the udder has been well cleaned. No noise or confusion can be allowed, much less harsh words or blows. The cows must be kept quiet and contented to secure pure milk, the first requisite in the manufacture of good butter. Remove each pail from the stable as soon as it is filled, as every moment it remains exposed to odors of any kind injures the flavor of the milk. Strain as soon as possible into deep cans, either in a creamery or tank. The cans should not be more than six inches in diameter, and four is better. After the milk has stood 12 hours at a temperature of 44 degrees or thereabout, the cream will all have risen, and should be drawn off to ripen. A can made of heavy tin, provided with a close-fitting cover with a small hole in it to allow of ventilation, should be used for the cream. It should be large enough to hold the entire quantity for a churning, and it is better to keep it where the cream will remain sweet until enough is obtained for a churning. Then it is allowed to sour slightly, stirring it frequently to insure evenness of acidity. Be very careful that the cream does not become too sour, nor too warm. In my experience, if the cream rises much above 65° it does not make butter that will be firm and solid. It soon becomes soft and sticky when exposed to warm air. Do not add cream to that to be churned less than 24 hours before churning. It will not ripen perfectly and much of that added last will be lost. Use a churn with no dasher or paddles inside. They injure the grain of the butter. Have the cream at 62° in summer and 64° in winter. Don't guess at it; have a thermometer. This costs but a trifle, and is indispensable in making good butter. As soon as the butter begins to grain, test it with the thermometer. If it is too warm, which it is quite likely to be in summer, put in lumps of ice until the temperature falls to 60°. Then revolve the churn slowly until the granules of butter are the size of wheat kernels. Draw off the buttermilk, or as much of it as possible without the butter; add a pailful of cold water, revolve the churn a few times, draw off again, and repeat this process until the water comes away clear. Then add a handful of salt to a pailful of cold water, pour it over the butter, let it stand a few minutes, draw off and let the butter drain. Take out the butter either in a butter bowl or butter worker; if the former, take only a few pounds at a time, sprinkle salt evenly over it at the rate of 1½ ounces to the pound or according to taste. Press the butter with the ladle, chop the salt in well, turn and press again. Pour off the accumulated brine, and work lightly by pressing with the ladle, always bearing in mind that the granules of butter must not be broken. When the salt is sufficiently incorporated with the butter, pack it away at once. No further working is necessary. After the package is full, cover the top with a circle of parchment paper wet in cold water, press smoothly to exclude the air, and cover the whole with salt, wet to a "slush" with cold water.

The Model Cow.

Mr. Gregg, Superintendent of Farmers' Institutes of the State of Minnesota, is a man of very large and long-continued experience in the handling of dairy cows. He has also a strong propensity to penetrate as much as possible to the causes of what he sees, and for this reason his talks at Institute meetings are full of interest and practical suggestion. At the Institute held on the fair ground at Hamlin, in the second week of September, he gave a most interesting compendium of his views, that is thus reproduced by a "Nor'west Farmer." He started out by saying that, so far as he had been able to discover, it could be told pretty nearly how much milk a cow was likely to give, but not how good that milk may be. That can only be learned from actual test, and even in cows with well-ascertained points, those points may be to some extent better or worse than the actual performance, just as any animal with good pedigree or of no pedigree at all may excel or come short of the quality and performance of the parents. The milk form and quality of one parent may assert themselves in the offspring over inferior qualities that the other parent is likely from its points and pedigree to transmit, so that on every line of breeding, heredity and selection, with in the case of dairy cows actual test added, they are the final test to which alone appeal can be made. Still, there is very much in form. It may be stated at the outset that the points in form rightly approved by the beef judge are just the points that a first class dairy judge would at the outset be compelled to reject. A Guernsey cow that at one glance could be distinguished as possessed of a rare combination of dairy points was then put on the platform, to show the leading points which are conspicuous in a good cow of any breed. Her mouth was broad and clean cut, the jaw the reverse of meaty, the eyes full, intelligent, soft and expressive, head broad at the eyes. The horns were very neat at the base, no coarseness or swelling there, the ears velvety, and the head set clean on the neck, which was thin and rather long, but not weak. The shoulder was thin and fine, running softly up to the apex. The pitch of the ribs over the heart in this, as in about all cows of true butter conformation, was steep, though the width at the heart was quite good. This pitch, Mr. Gregg pointed out, was, with the formation of the vertebræ at the same point, a main criterion by which he would judge the permanence of milking power. A cow that conformed here to the beef type might give for a few months a fair amount of milk, but would never make a sustained yield such as he would expect from a cow like that before him. The space between the front and back part of the vertebræ would show more in a milker than in a beefer. The opening between the short rib and the next would be very great in a dairy cow, and the muscle sustaining the paunch strong and easily felt. This was explained on the principle that the cow is a machine that makes milk out of bulky food and on the Darwinian principle of adaptation; the ample stretch of the latter ribs, the strong muscle and draw of the ribs forward and downward, causing the space he referred to between them and the short rib, could all be explained. They are the natural conformation of an animal that to make plenty of milk out of bulky food and at the same time reproduce her species must be built exactly on this pattern. The loins, the pelvis and the organs of maternity generally would be spacious, for the milk-giving quality presupposes an object, and the first object was the nourishment of the offspring. The yield outside of that was largely artificial and a secondary thing. The flank would be lean, and the quarter rather thin but not weak, the tail fine, and the run from the loin to the hips more hollow than was at all allowable in the beef form. Fleshiness and coarseness here are fatal to dairy success. The milk-vessel is of course a main feature of the cow. The veins in the cow before him were large, soft but fairly defined, and ran well forward, entering the chest there by well-defined holes that any tyro could feel. Ample circulation to and from the udder explained this conformation, and no scrub cow would have it as far forward as it was regularly found in the true dairy breeds. The udder must have an ample network of circulation and nerve-power; in fact, nervous power in all its manifestations was the characteristic quality of the true dairy type. Going behind, the spacious, flexible and velvety quality of the udder was conspicuous even in a dry cow, and the same form and quality would be found in young females. The same class of points all over would be found in the male as in the female, depth from front of loin, open twist, the nervous as distinguished from the lymphatic or meaty temperament would prevail, and no matter what his pedigree, a bull that filled the eye of a beef judge was more or less an abomination to a true dairy critic. In short, he would put form first, pedigree second, performance next. It took all three to make a first-rate dairy type, and though there were frequent deviations in practice from the lines laid down, these lines were still reliable and would continue to assert themselves in every-day experience.

The Field.

Drawback on Bags.

The order of the Treasury Department of September which repealed the law allowing exporters of bags a drawback, has been vacated. The re-established law reads as follows:

Article 970. Whenever a manufacturer of grain bags, made from imported materials, shall reserve to himself the benefit of drawback under Section 3019 of the Revised Statutes by an appropriate and permanent inscription upon each bag, he shall be permitted to make the export entry and receive the drawback, upon compliance with the regulations relating to exportations for drawback under said law, and he shall be deemed the exporter of such bags, whoever may be the owner of the bags and grain therein shipped to foreign ports.

Drawbacks shall only be allowed upon such bags, so described, as can be officially identified, inspected and counted in the manner required by the general regulations.

The manufacturer concerned shall bear all extra expenses which may be incurred in the administration of these additional regulations.

The re establishment of the article will only apply to such raw material as was in or on the way to the United States prior to the adoption of the McKinley Act. Previous to the passage of the Act a 20-per cent duty was placed on the article, but the present tariff admits it free. Collector Phelps has forwarded a letter to the Custom-house officials which reads:

Exporters under the new law can give six hours' preliminary notice to the Surveyor of the Port before landing, and that official will detail an officer to supervise the placing of the same on a vessel.

The return of a lading officer and the clearance of the vessel may be accepted as proof of the exportation of the bags when exported filled with grain in lieu of the bills of lading presented for other merchandise.

Should the entry or preliminary notice embrace more bags than are actually found on inspection and shipped, drawbacks will only be allowed on the quantity actually shipped, as shown by the certificate of the lading officer, and should drawback be required on the quantity or number returned as short shipped, they must be embraced in a subsequent entry.

District officers and inspectors in charge of vessels loading grain for stiffening, etc., may note the character of the bags being taken on board, so that when an entry or notice of intent to ship subsequently reaches them they will be prepared to certify to the facts concerning the shipment.

A Harvester Combine.

CHICAGO, Nov. 19.—There was organized in this city during the past few days one of the largest corporations in its line in the world. The charter was filed in Springfield to-day and the new company will be known as the America Harvester Co. for the manufacture of harvesting machinery, with a capital of $35,000,000. Among the directors will be Cyrus A. McCormick, William Deering, Walter A. Wood, Lewis Miller, A. L. Conger and A. S Bushnell.

Colonel Conger, when questioned by an Associated Press reporter this evening, said the present demoralized condition of the harvester business necessitated the formation of the new company. Many failures have occurred in the past few years, entailing immense losses. The cost of materials has been advancing, so it became necessary to raise the price of the machines to farmers, or, through economy, to produce and distribute them more cheaply, as it is the purpose of this new organization to do. It is no less to the interest of the binder manufacturers than of the farmers themselves that the latter should obtain binding twine at reasonable prices, and the hope of effecting this object is one of the important reasons for the formation of this company. We do not expect to check competition, but shall possibly carry on the manufacture of the present machines at several different works.

MIXING NATIONALITIES.—The present Russian Chancellor is a Swede; the late Persian Embassador in London was a Scotchman; an Irishman was three times Prime Minister of Spain, and a Celt, MacMahon, was President of France. The Russian Embassador at Paris is a German, the French Embassador in London is an Englishman, and the Italian Embassador in Berlin is a Frenchman. The chief consulting Admiral of the Turkish fleet is an Englishman, as was also the late Admiral of the fleet.

SHEEP AND WOOL.

An Address to the North Pacific Coast Wool-Growers.

EDITORS PRESS:—In your issue of October 25th you mention a prospective address to the wool-growers of the North Pacific Coast. As requested, I send you herewith a copy, which I hope you may consider worth a place in your columns.—JOHN MINTO, *Salem, Oregon.*

The Address.

Members of the North Pacific Sheep-Breeders' and Wool-Growers' Association: It gives me great pleasure to be able to say to you that you meet under more promising auspices than have heretofore surrounded your interests since you formed yourselves into a business association three years ago. You at that time were suffering a decline of market values in the chief product of your labors from a diversity of causes, the chief of which may be mentioned as:

First, the steady and rapid increase of the general wool crop of the world.

Second, a slight change in your laws regulating the duties upon imported wools—the product of countries where the conditions of climate, cheap lands and cheaper labor were more favorable than your own to cheap production.

Third, a false and injurious construction placed upon your laws regulating duties upon imported wools and goods made of wools but commercially named worsteds.

Of these three main causes of injury to American sheep and wool growing interests, it is safe to say the construction of the laws by officers of the Government which permitted large quantities of clothing wool to enter your market under the low duties on carpet wools, and millions of dollars' worth of the finest, most thoroughly cleansed worsted wools to be imported under the names of "ring waste," "garnetted waste," and other terms, have been most potent for harm against your interests and against the interests of honest importers and manufacturers also. The causes thus briefly alluded to reduced the number of sheep kept in the United States from 50,626,626 in 1884 (when the effect of the change in the tariff laws made in 1883 made itself manifest) to the present number of 42,599,079, a decrease of over 8,000,000 sheep, instead of a ratio of increase like that of the five years preceding 1884, which would have given us at this date nearly or quite 65,000,000. The world's supply of wool in the meantime has been steadily increasing, having increased since 1860 from 955,000,000 pounds to 1,955,000,000 pounds in 1889. For this reason we cannot expect any sudden or extraordinary rise in the price of wool as a result of the protection given our interests in the McKinley law, although an upward movement has already begun. The measure will do wool-growers good service if its effects revive hope and confidence in sheep industry by giving home labor the first chance in the home market.

A Field for American Wool and Mutton.

A close inspection of the world's markets for other staples of human consumption will show us that there is no more inviting field of production than that open for wool and mutton, to secure and enlarge which for the American husbandman is one of the main purposes of the McKinley law. Two years ago the National Grange of Patrons of Husbandry asked the question of the Department of Agriculture, "If there was a reasonable prospect of an increasing foreign market for breadstuffs produced in the United States?" The answer was, in substance, that there was not—the wheat from India, Russia, Australia, and South America is already in such close competition with the wheat and corn of the United States that to market another million bushels more than we do market would be to rapidly reduce prices.

That already the grain farmer of the Northwestern States was in the position of a "mere missionary furnishing cheap bread to the manufacturing laborers of Great Britain and so enabling British capitalists to keep down the wages of labor." That the best prospective market for the American farmer is to so vary his products as to supply his own home market with products now imported which can be produced here, but which are now imported to a value nearly equal to products of agriculture exported. Among imports of nearly $400,000,000 agricultural products is wool and woolen goods equivalent to about 370,000,000 pounds of unwashed wool, or the product of 70,000,000 of foreign sheep. Over $52,000,000 at importers' valuation ($100,000,000 at buyers' prices) were imported as woolen goods. This item of imports alone represents $9,000,000 more in value than the export of wheat in 1888. To induce the planting of that additional value of woolen manufactures west of the Rocky mountains might be reasonably estimated as worth more to the general welfare of this nation than the value of her wheat exports in adding to our consuming population by subtracting from those now engaged in overproduction of unprofitable exports. The policy, then, underlying the McKinley Act is to secure to American laborers all possible benefits of a diversified industry so that one class of workers may become the best customers to other lines of labor.

The cause of change in the tariff of 1883, which may now be classed as a national disaster, is briefly indicated in a letter of Secretary Rusk of the Department of Agriculture, written in answer to the question whether or not this nation can produce the different qualities of wool necessary to meet the wants of all branches of its woolen manufacturers. The secretary replied in part as follows:

This inquiry is suggested by the following quotation from the Providence *Journal* of a recent date; "We have tried all sorts of wool tariffs in years past, and never yet have they caused the production here of certain kinds of wool that are absolutely necessary to give the required finish to woolen and worsted fabrics and to make carpets. We never can accomplish the feat. It is physically impossible. Certain wools require for their production conditions of climate and soil which we do not possess, and that settles it."

This country possesses a marvelous range of climatic conditions, having 24 degrees of latitude between 25 and 49 degrees, with altitudes compassing levels from the semi-tropical to those of perpetual snow, and ocean currents modifying the climate of both coasts. Soils range from those of geological formations of the early geologic ages to the alluvium of the present day. A continent so broad, so varied in soil and climate, is properly designated as the Western World, and the United States compasses all its possibilities, except those of strictly tropical and absolutely polar areas.

It can therefore produce, with no limitations of practical importance, all the races and breeds of sheep in the world.

Secretary Rusk's Statements Indorsed.

Every intelligent breeder and wool-grower knows the secretary is correct and that he is ably supported in his statement. The distinguished president of the National Association of Wool Manufacturers, William Whitman, Esq., in his letter of Nov. 22, 1889, to another eminent manufacturer, Jesse Metcalf, Esq., of Providence, said:

The American staple wools are better adapted for the fabrication of satisfactory clothing for the American people than any other wool grown. We may invoke the teachings of Darwin in support of the same view. The environments which determine the character of wools are chiefly breeds of sheep, soil, climate, food, and husbandry. Within our borders we have substantially every variety of these to be found on the globe. * * * The carpet-wool product of the United States is almost exclusively the fleece of sheep of Mexican origin, which are raised chiefly in Texas, New Mexico, Arizona, and certain of the Territories of the mountain region of the country situated between the Mississippi valley and the Pacific Slope.

I take both these extracts from page 33 of the speech of Hon. J. H. Mitchell to the U. S. Senate Aug. 14, 1890. I can as a practical shepherd familar with sheep of the Mexican type introduced to Oregon from California in 1842, bear witness to the fact that, were it necessary, we could produce the inferior kinds of sheep and wool here (or anywhere else in the United States for that matter) because both sheep and wool are only degenerate representatives of the long-wooled European sheep, left for hundreds of years in the care of ignorance and sloth.

The breech and belly wools from the British mutton breeds cultivated as extensively as the highest agricultural interests of the Middle West and Southern States call for would produce all the lowest grade of carpet wools required, and I know of no law (natural or artificial) against the very best long and middle wools making the very best carpets.

Adaptations of this Coast for Wool Production.

The sheep-breeders of the North Pacific Slope have the stock and all the climatic conditions necessary to produce all the varieties of sheep and wool necessary to mutton consumers and wool manufacturers in the United States. This was proven at the Centennial Fair held at Philadelphia in 1876, when Oregon received awards for excellent coarse combing wools, strong and sound middle wools and "fine clothing wools closely resembling the Australian wools," and for fancy cassimeres and blankets, and through the exhibit of the Mission mills of California (then using Oregon wools), blankets, carriage blankets, lap-robes unsurpassed in excellence of fabrication, softness of finish and tastefulness of "borders." What Oregon did in 1876 in her exhibits of wool and wooler goods she can far excel (if her people so will) at the great fair to be held in Chicago in 1893. Meantime the citizenship of the North Pacific should lose no opportunity of impressing upon their fellow-citizens of the Atlantic seaboard that tariff laws are made to subserve the general welfare, including the wool-grower on the arid lands of the Pacific Slope, as well as the carpet manufacturer of the Atlantic side.

While there is no gleam of encouragement for the resident of the range country to place his dependence upon wheat cultivation in competition with the wheat-growers nearer the seaboard on both sides of the American continent and with the cheap lands and labor of the South American Republics, the Australian Colonies, India and Russia, the McKinley law should give him much to keep on in the production of wool and mutton.

The following letter to Hon. Justin Morrill, for use in the U. S. Senate, will emphasize this statement:

U. S. DEP'T OF AGRICULTURE,
DIVISION OF STATISTICS,
WASHINGTON, D. C., Feb. 13, 1890.

Sir: Your contention that the low price of agricultural products is due to increase in production throughout the world is measurably correct. It is certainly a primary and prominent cause.

Every nation is seeking to produce its own food supplies, and as far as possible its so-called raw industrial material, and is compelled to do so by the instinct of self-preservation. This furnishes the motive for the corn laws of Germany and other continental countries and the laws of European countries prohibiting the introduction of our pork products.

Ten years ago this country seeded 14,000,000 acres for foreign demand, and the breadth of last year was 10,000,000 more than is required for home consumption, though the average demand for nine years has been less than that of 1879-80 by 65,000,000 bushels.

The production of meat has also been increased more rapidly than population. In 1880 the number of cattle of all kinds on farms and ranches was reported as 39,675,533, and the numbers as now estimated are 52,801,907, or 33 per cent more. Beeves are brought to maturity more rapidly than formerly, and more meat is made in proportion to numbers, so that the beef supply is greater than in 1880 in proportion to population.

It is proper to say that all farm products are lower to producers and higher to consumers than they should be by reason of the army of middlemen, who take for a day's handling as much as the producer gets on his capital and his season's labor. The evil has become so serious that a necessity has become a scourge.

Prices are also lower elsewhere, and the agricultural depression in England, France, Germany and other countries is the subject of rural complaints, of economic discussion and governmental inquiry. This is the case in both protective and free-trade countries, and in those with both monometallic and bimetallic currencies. Yours respectfully,

J. R. DODGE, Statistician.

HON. JUSTIN S. MORRILL,
United States Senate.

Recognizing as true the facts set forth in this letter, the policy of occupying our own market and of increasing it by a more diversified industrial system will serve the double objects of making us less dependent upon foreign grain markets and reducing the number and cost of middlemen.

We as a people have been going in that direction with results which draw the admiration of the leading statesmen of the Old World and inducing all people with independence enough to shape their own commercial policies to follow our example. All the English-speaking colonies of Great Britain except Victoria adopt the policy of the United States as a means of "self preservation." Ireland does not, because she is held in subjection. India does not, because its population is an aggregation of diverse peoples and tribes kept apart by national and religious prejudices; affording the world the spectacle of tens of millions being held in trade bondage to units of millions.

Encouragement to Stand by the Sheep.

In view of the foregoing facts there seems to me no encouragement for any citizen who is favorably situated for the pursuit of sheep husbandry to seek to change his occupation at this time. One of the most immediate effects of the anticipated passage of the McKinley bill was the starting up of many idle woolen-mills. I quote from the *American Economist*, Oct. 31:

A noteworthy improvement in New England woolen manufacturing has come about during the past month. This is sufficiently indicated by the activity of the wool market as it appears in large sales and an advance in price. Various mills which have been shut down for longer or shorter periods are resuming operations. This is also said to be the case in Philadelphia. The dress-goods manufacturers in particular report their business to be in a very healthy condition. They say that its orders which they are now trying to fill are for larger quantities and in greater numbers than at any other time during the year, and will keep them busy for the next three months. Some of the large woolen-mills are running on extra time. A number of new factories are now in course of construction in New England and several of the old mills are being enlarged.

A communication to the same conservative and reliable trade paper announces the movement of several of the leading firms in worsted and plush manufactures of Bradford, England, as making arrangements for establishing departments of their works in the United States. This is the way to bring consumer and producer close together and lessen the expense paid by one or both to middlemen. By this process the manufacturer contributes to support American institutions and the labor employed subsists upon the diversified products of the American farmer, among others, mutton.

As a second item of income to the flock-owner, meat production has in the past three years saved many North Pacific flock-owners from utter failure.

As "feeders" there are no better sheep than the grade merino wethers, bred and reared on the ranges east of the Cascade range and purchased for driving or shipment by rail to the vicinity of markets east of the Rockies immediately after the second shearing. These wethers are mainly taken with the least possible expense to some good corn-raising district in the Western States, and from thence put into market the next spring.

Oregon Sheep in Dakota.

I am sorry to say that since President Cleveland forced his partisan friends to vote for free wool the deportation of sheep from Eastern Oregon has not all been wethers for mutton. One firm of brothers published the purchase in 1888 of 20,000 head of stock sheep from Eastern Oregon and the driving by them to Northern Dakota, where they gave fleeces the next season of over ten pounds average.

Dakota buyers were successful bidders for a lot of 800 head of stock sheep 10 miles south of Salem, in Western Oregon, this last summer. With wheat under 70 cents per bushel, with no reason to expect higher prices but by some unforeseen calamity in some other country, it behooves the Willamette valley farmer even, "where spring-time and harvest never fail," to calculate a little and see if he cannot do better with his land and labor by keeping more sheep than raising wheat for export. The testimony of farmers themselves is uniform to the fact that there is barely wages and interest on working capital, allowing nothing for the use of the land under present prices for wheat. The testimony is nearly as uniform that where a small flock of sheep are kept on a farm as aids to clean cultivation, the income derived from them comes the easiest of any the farm yields. Last year I was compelled by the drouth to bring a small flock of ewes out of Crook county into Marion and let them to a firm of inexperienced young men who had determined to try meat and wool production instead of wheat. The terms were an equal division of the income from wool and the increase of the flock. My share from 160 ewes was $114 for wool and 50 lambs. The parties are willing to keep them another year, believing they can do still better, as I have no doubt they will.

Successful Wool Producers.

At the hazard of making this address too long and going into particulars, I give a few experiences of others.

The Hon. John B. Waldo, when he retired from the bench of the Supreme Court of the State to his farm a few years ago, found himself the owner of a flock of 150 head of long or coarse wooled sheep, so much neglected that they were almost eaten up by parasites. He sought advice of friends and cleaned them—reduced their number and gave them good keep. This last season he sheared from 52 head more wool than he got the season before from 150 head. His little flock cast 40 lambs, and he raised them, every one. Before shearing he refused $6 per head for 11 two-year-old wethers. After shearing them he sold them to a dealer for $7 per head. They averaged 166 pounds live weight. The feed given was pasturage and green cut oats hay. They are grade Cotswold sheep.

William Stuart, a neighbor of Judge Waldo, is not learned in the law as a jurist, but is a good judge of sheep thrift. Two years ago he gave me the account of 18 strong graded, coarse-wooled ewes, as rearing 32 lambs and giving fleeces nearly averaging eight pounds. This season he sold four four-year-old wethers at $7.50 per head. The heaviest fleece weighed 16½ pounds.

As commonly estimated, the money received for these sheep as mutton was clean profit to the producer. It is a difficult question to settle exactly, but I have no doubt of the correctness of Judge Waldo's estimate:

"That sheep so kept pay three times as much profit as any other stock kept on the farm."

Judging by the sales effected by sheep-breeders at the late State Fair held at Salem, those keeping sheep in Western Oregon are giving most attention to the earliest maturing mutton breeds. That I believe is a wise course to take, provided, always, that care is taken to provide the pasturage and feed such sheep require. The time seems close at hand when the mutton market on the Pacific side west of the Cascade range will have to depend on the country west of that range for its mutton supply. The increasing demand for feeders in the corn-growing States seems to point in that direction. I had inquiries for such sheep from farmers in Indiana last spring. On the other hand, the increase of woolen manufactures on the North Pacific points to an increased local consumption of wool, the finest of which is purchased in Eastern Oregon.

If the great expectations at present impelling the extensive investments in city and railroad building in the State of Washington are well founded, the near future will call for greatly increased supplies of mutton as well as woolen clothing. Altogether I believe sheep husbandry in all its branches is on the eve of a period of renewed prosperity, not only on the North Pacific Slope but all over this broad land where the increasing density of population does not preclude the use of the land for pasturage.

In conclusion I desire to compliment this association for its advocacy of a policy of protection to its special line of industry—not from a narrow and selfish point of view, as I well knew, but from a belief that it is one of the most important agencies of general prosperity and national industrial independence. Of first importance, not merely for its great money value, but because its preservation is an essential part of successful agriculture on the one hand and the woolen manufactures on the other, in addition to contributing to the food supply of the people at large in a very important degree (15,694 sheep were received at the Chicago stockyards on Sept. 30, 1890). JOHN MINTO.

WATER WASTE.—It is estimated that water leaking through a hole just large enough to pass a needle through, during 24 hours, at a 14-pound pressure, would be sufficient to supply a house for a day. The waste through a one-inch pipe under the same conditions would be 1140 gallons.

AMONG the industries of New York there are women who can make tins, tools, trunks, trusses, harness, saddles, traveling bags, pocket-books, jewelry, coffins, wooden boxes for cigars and grocery supplies.

PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

The Postal Telegraph.

EDITORS PRESS:—A special dispatch from Washington to the New York *World*, under date of the 19th inst., says: "Postmaster-General Wanamaker has about finished his annual report, which the President will submit to Congress, together with his own annual message, on Dec. 1st."

The dispatch further states that "Many pages of the report are taken up with the discussion of the postal-telegraph system, which Mr. Wanamaker has lost no opportunity of urging upon the attention of Congress. The scheme is completely outlined, and in support of its practicability Mr. Wanamaker quotes liberally from the last annual report of the Postmaster-General of Great Britain. It is evident that Mr. Wanamaker has given much thought to the details of the plan he favors.

"His scheme, as finally digested, consists in the establishment of 'a limited post and telegraph service' as a bureau or part of the Post-office Department, and postal-telegrams are to be received at the postoffice, transmitted by telegraph, and delivered through the medium of the postoffice service. All postoffices in places where the free-delivery service now exists, or may hereafter be established, shall be postal-telegraph stations, and the Postmaster-General shall from time to time designate as postal stations postoffices in other places where, in his judgment, the wants of the public may be thus supplied. * * * Nothing in Mr. Wanamaker's scheme shall prohibit any telegraph company from performing general business for the public the same as is now done. * * * The charges in any one State shall not exceed 10 cents for messages of 20 words or less, counting address and signature, nor over 25 cents for any distance under 1500 miles, nor over 50 cents for any greater distance."

Here is a proposition, coming from a Cabinet officer, of great concern to every citizen; a proposition much discussed within the last few years; a proposition indorsed by the late annual session of California State Grange, and one that the Farmers' Alliance and many labor unions are committed to.

Here is an opportunity—one such as seldom occurs. The nerve of a Cabinet officer to strike a death-blow at a great and ruinous monopoly is without precedent, and should be backed up by a wall of public opinion deep and high. To strike at the enormities of the present management of the telegraph system is to strike at Jay Gould, and to strike at Jay Gould is to strike at the combined railroad and telegraph interests of the United States. Any one who knows the power of money in Washington, where men fall under its influence as fall the autumn leaves, can appreciate the nerve of Mr. Wanamaker in this slap in the very teeth of the dragon that appears to be pulling the nation down to perdition. Many jestingly call Mr. Wanamaker a Sunday-school crank, a literary fanatic and a Kreutzer Sonata strangler. It may be so, but he is manifestly in earnest all the time. Wherever he strikes it hurts.

With an iron nerve and fearing nothing, he strikes to kill, and whenever his sledge-hammer strokes come down upon a subject we have been hitting at for years, why not join hands with him? If our declarations and resoluting on this subject mean anything, let us all strike together! Here is the entering wedge to the heart of an adamantine monster! How will Congress stand on this question? "The gods help those who help themselves." We have the leader. Where is the following?

Congress is the creature of circumstances. Monopolies, trusts and combines have the whip hand over it at the present time; but let it be known in Washington the coming winter that the next Presidential election shall turn on this single question, and the hold of Jay Gould, Vanderbilt and Huntington will loose its grasp. Why should not this postal telegraph system, outlined by Mr. Wanamaker, be made the chief issue until adopted by Congress? Let the Grange, the *Farmers' Alliance* and trades unions take this matter in hand. Let Mr. Wanamaker feel that he has these elements to back up his proposition, and it will go through in spite of money-bags and boodle. If neither Republican nor Democratic statesmen will take hold of this matter in earnest, let the fiat go forth that the next President of the United States shall be either a farmer or a trades unionist, and a controlling element in Congress of the same order!

The chief trouble with the farmers and other labor organizations is that they attempt too much, commit themselves to impractical and inexpedient propositions and thereby excite derision and contempt—in fact spread themselves out so thin that they never get in tangible shape for direct and positive action.

If sufficient influence can be brought to bear on Congress to adopt this postal-telegraph system, it will certainly regulate and control the whole service in rates and methods. This is all that is needed to secure equitable administration.

After this will inevitably come the building or condemnation by the Government of a few trunk lines of railroad for like regulation and control of the carrying trade.

This consummation is inevitable; it must come sooner or later, otherwise these combinations will certainly *regulate* and *control* the *Government*. There is no escaping this conclusion.

A civil revolution in the methods and control of the Government is yet possible, and Mr. Wanamaker has sounded the bugle-note for a general rally. If we fail him in this emergency, we need not hope for a like opportunity for years. He has got the monstrosity by the throat, and we should at least take tail-hold while he skins.

One trouble is the farmer "hasn't time" to attend to getting up petitions and memorials to Congress. It is more congenial to "resolute," then go home and go to bed, as did the people of Foxopolis, after resoluting against the frogs in the millpond for disturbing their slumbers.

Who has got anything to say about Mr. Wanamaker's proposition? Let the matter be thoroughly ventilated, and if we are agreed, let us go to work for the measure. One thing at a time, and that well done, should be our shibboleth. There is power and danger in *concentrated forces*. They have won all the battles of the world, physical, civil and religious. Then if we propose to win any paramount issue, first let us be fully agreed, then move in solid phalanx up to the ramparts of the enemy.

Creston, Nov. 25, 1890. J. V. WEBSTER.

Still It Moves.

The following interesting article, from the pen of National Lecturer Mortimer Whitehead, is clipped from one of our Eastern exchanges:

Land money is growing in favor, and the finance questions are becoming better understood. By discussion we will one of these days get the best plan. Here are some good thoughts for thinkers: Government loans direct to the people are no experiment; like State railroads, they have been tried and have proven a success. Under the leadership of Benjamin Franklin, and at his suggestion, the people of the then colony of Pennsylvania gave the plan a thorough trial a hundred and fifty years ago. Money was tight, interest was high. The bankers had their grip on everything. Business was dull. Farmers were discouraged; mortgages were eating them out of house and home, when the State stepped in and loaned them its credit at rates which enabled them to pay both principal and interest for less than the money-loaners were getting for interest alone. Money was no longer "tight," because any solvent man knew that he could get it if he needed it and at reasonable terms. People saw that they were getting out of debt and became energetic and pushing because they were hopeful again. Taxes were light, for the interest on these public loans went into the public coffers—the interest they paid, paid their taxes. The people were prosperous as never before—nor since, for that matter, though the bankers mourned and fought it bitterly. With the war of the revolution, and the more pressing questions of confederation and union, the people lost sight of Benjamin Franklin's system of finance, and the bankers of other States combining with the bankers of Pennsylvania, took good care that it didn't come to the front again.

What the colony of Pennsylvania did successfully for upward of forty years for its citizens, the United States can do even more successfully and profitably for its people. The conditions are alike. Money is tight now—cornered by the banking trust. Taxes and interest absorb the whole net surplus of the country and more too—they are eating the farmers out of house and home. Ben Franklin's remedy is the remedy now as it was then. The people must become their own bank. Money is a creation of the people for the convenience of the people in the matter of exchange. Whatever profit comes from the handling of money should accrue to the whole people and not to a special class only. Those who handle money for profit regulate the value of money now, but the Constitution says that Congress shall "regulate the value thereof." Let Congress, then, do the duty it has left undone for a hundred years. Let it provide for the establishment of a United States postal bank, and tax every private bank out of existence as it taxed the State banks out of existence to make room for the National banks. Let it enact general laws by which any citizen who can give proper security can obtain money, and this 65,000,000 people need no longer be burdened with taxes and interest, for the interest will pay the taxes, and we need pay no higher interest than just enough to pay the taxes. Let that be done and the same results will follow as did in Ben Franklin's time—an enormous increase in general prosperity. The Constitution gives the power, nay, more, it lays the duty upon Congress. There is lacking only the act of Congress. But there can be no act of Congress till the farmers of the United States send men who will act.

Talk about it, think about it, and then act upon it, and brighter and better days will come. Fraternally,

MORTIMER WHITEHEAD.

GOING to press one day early, on account of Thanksgiving, cuts off some of our Grange items and correspondence this week.

The Master's Desk.

E. W. DAVIS, W. M. S. G. OF CALIFORNIA.

National Grange.

[Our readers will be glad to hear from our Worthy Master E. W. Davis, and hope, although he left the State in bad health, that he will return freshened and decidedly better from his trip to attend the National Grange.—EDS.]

Dear Brother:—From San Francisco to Atlanta in eight days is a short-long trip—short in time but long in distance. I arrived here about two hours before the time fixed for opening the National Grange, having been delayed 12 hours *en route*. Found Bro. H. E. Hayes of Oregon here, and he kindly promised to write to the RURAL and allow me time to wash and rest. No doubt you have had and published his letter, and therefore I shall only state that Bro. Brigham opened the National Grange in ample form in the sixth degree, "on time." All but four States were present at roll-call. The usual committees were appointed and have been busily at work. Having sent you a copy of a daily paper each day, which gives a partial summary of our doings, I shall not attempt to send an epitome of the same in this correspondence.

The reports from the various representatives show the Order to be in a flourishing and growing condition. Gains everywhere are reported.

Many amendments to the Constitution have been proposed, but very few of them will be adopted. The Committee on Constitution and By-laws, after hearing your representative, have agreed to report favorably on the amendment proposed by the California State Grange.

The report of the Executive Committee is a magnificent paper. The address of Worthy Master Brigham also deserves special mention; and the report of the Committee on "Woman's Work" is a jewel of the greatest value.

It would do your heart good to be here with this sturdy band and hear the many kind words and the increasing compliments they have for California and Californians. Truly it is an honor to be a member of the National Grange and to come from California.

New York is one of the States whose representative is unknown to many of you. The late Bro. Armstrong's State is well and ably represented by Bro. Gifford. We have no *Hale* with us at this session, but I know you are catching *Hale* in California. His "Nutmeg State" is cleverly and very intelligently represented in this session by Bro. Bowen. Indiana's representative was not able to get to California last year, but Bro. Trusler, with his gray hairs and years of experience, is a valuable member at this session. Bro. Thompson of South Carolina and Bro. Chowen of Minnesota are both prevented by sickness from attending. Each sent a splendid letter and each reports the grand old Grange as doing well. Tennessee is ably represented by Bro. Nelson and wife.

Memorial exercises were held Sunday afternoon (Nov. 16th) in respect for our departed brothers, W. A. Armstrong, P. M. of New York State Grange, and Victor E. Piolette, P. M. of Pennsylvania State Grange. The services were most impressive and affecting.

Bro. J. W. A. Wright, P. M. of the California State Grange and author of that immortal document, "the Declaration of Purposes," spent one day with us. He made a beautiful and telling speech, and was cheered to the echo. By the way, he has promised to write often for the RURAL. Brother Wright is now president of the Ladies' Normal school of Southern Alabama.

Brother W. A. Saunders, one of the founders of the Order and the *first* Master of the National Grange, has also been in attendance. He is here representing the Department of Agriculture for the U. S. Government.

Brother Mortimer Whitehead, the Worthy Lecturer, is as bright and pleasant as he was when in California. The same for Brothers Woodman, Rhone and Chartters of the Executive Committee.

Brother Brigham is not feeling at all well, but he has always time, the way and the inclination to be "awfully nice."

Bro. Hawkins is as zealous as ever, and sends "regards to all."

Brother John Trimble and his able assistant, Brother Moore, please everybody and make us wish the National Grange might sit more frequently than once a year.

Brother McDowell holds the *cash* as guardedly as ever, yet all say he is the right man for the place.

Brother Hall of Nebraska makes the Hall ring when he speaks, and we all wish he would talk more frequently.

The Worthy Chaplain, Brother Rose of Texas, has more friends than he knows of; he is truly the "Rose of Sharon" in the National Grange, and the Gatekeeper, Brother Page, is as full of fun and obliging as though he had nothing else to do. But he turns the Page often in the discharge of duty.

Worthy Ceres, Worthy Pomona, Worthy Flora and the efficient Worthy Lady Assistant are each as dutiful and charming as it is possible for the female form to be.

Bro. C. J. Cressey, our Worthy Treasurer, was here but a short time. His health is poor, and this sultry climate did not suit him. So after making one of his best speeches, he bade us good-by and started for away-off Maine. Everybody likes Bro. C., and the young ladies especially *dote* on him.

How I should like to tell you about Hayes, Russell, Booth, Kimbrough, Knott, Marrs, Carr, Thompson of Ill., Stateair, Peckham, Messer, Bancroft, Williams of N. C., Bailey, Ellis, Blackford, Simms, McDaniel, and their good wives. Unfortunately, there are a few here whose wives are not present, and a *limited few* who have no wife to bring along. In fact, it is said some are looking for a better-half.

Among the new faces are Bro. and Sister Nelson of Tenn., Bro. and Sister Gifford of N. Y., Bro. and Sister Murray of Md., Bro. and Sister Prince of Maine.

Among those who are very much missed are Bro. and Sister Robie of Maine, Bro. and Sister Luce of Mich., Sister Wasson, and Bro. and Sister Clardy of Kentucky. More soon.

Atlanta, Ga., Nov. 15, '90. E. W. D.

Farmers Want to Effect Many Reforms.

SPRINGFIELD (Ill.), Nov. 20.—The Farmers' Mutual Benefit National Association to-day agreed to resolutions demanding the revision of the patent laws; the abolition of the national banking system; that the circulating medium be confined to gold, silver and copper coins and United States Treasury notes; favoring loaning money by the National Government to citizens in sums not exceeding $1000 to any person and properly secured at interest not exceeding 4 per cent per annum; favoring the issue and sale at par of United States bonds of $10, $20, $50 and $100, bearing two per cent interest and redeemable at the option of the holder and the Government.

The resolutions further demand the regulation of corporations by law; favor the election of the President, Vice-President and United States Senators by a popular vote; oppose the civil-service laws and fix the tenure in office of United States Judges not to exceed nine years. The election of Postmasters and Railroad and Warehouse Commissioners by a popular vote is also urged. Pensions to soldiers and sailors are approved and a revision of Government officials' salaries is recommended, as is also a reduction of taxation on necessities and conveniences, and the regulation of immigration and the manufacture of adulterated foods. The resolutions concluded by making provision for the establishment of a national organization to attend the coming sessions of the Legislatures throughout the country in the interest of farmers' organizations and calling upon representatives of the association to keep aloof from both old parties.

Santa Rosa.

At the meeting of Santa Rosa Grange held on Nov. 22d, it was decided to hold a special meeting on Dec. 4th (at 10 o'clock) and celebrate the birthday of the Order.

There will be a Harvest Feast and an open meeting in the afternoon at which there will be a musical and literary program given.

All Patrons are cordially invited.

The election of officers for the year 1891 will take place on Dec. 13th, at half-past one P. M.

F. L. GAMBLE, Sec'y.

Anniversary Day at Lodi.

To the Officers and Members of Lodi Grange, and Patrons in general: There will be no meeting of Lodi Grange on Wednesday, December 3d, it being postponed until the 4th—that being the anniversary day of the Order—commencing at 10 o'clock A. M. sharp.

All Patrons in good standing are cordially invited to be present. Yours fraternally,

MISS FLORENCE HUFFMAN,

Lodi, Nov. 22, 1890. Sec'y Lodi Grange.

WOMAN'S work in the Grange! Through her silent influences and helpings, the Order of the Patrons of Husbandry is *an educator* and encourages *each one* to improve himself or herself to their best ability, and by improving ourselves individually we help to influence the community in which we live. This means more power and a higher influence in the State. The better the State the better the nation composed of States; hence by developing *all the best everywhere*, we not only improve but we send an influence abroad which uplifts the world.—*Ex.*

SUCCESS cannot be obtained without many discouragements, says the *Southern Cultivator*. Some of the best Granges in the land, subordinate and State, are those that have encountered severe trials, during which their lives have almost gone out, but the pluck and energy of the faithful few kept them in existence and infused such new life and vigor as enabled them to become strong and abundantly prepared for future activity and usefulness.

NORTH BUTTE GRANGE will no doubt have a splendid time Saturday, Nov. 29th. Past Master S. T. Coulter—*sterling* by name and sterling by nature—will no doubt give the Patrons one of his best speeches. Bro. George Ohleyer and wife expect to be present. Brother O. is the General Grant of the anti-debris movement and one of our most solid Patrons—with tongue and pen.

FARMERS' ALLIANCE.

State Organization Perfected at San Jose.

THURSDAY—First Day.

A nearly full delegation from the several county Alliances of the State met in the Grand Army hall this morning in answer to a call issued by Col. J. S. Barbee of Santa Barbara, who is acting under instruction from President Polk of the National Farmers' Alliance.

Col. Barbee explained the object of the call, which was for the purpose of forming a State Alliance for the State of California. The following temporary officers were appointed until the permanent organization:

President, M. Cannon of Ventura; Vice-President, S. K. Schilling of Santa Barbara; Secretary, J. M. Sharp of Ventura; Chaplain, J. M. Moore of Tulare; Steward, C. W. Martin of Santa Barbara; Doorkeeper, H. N. Rhyne of San Luis Obispo; Assistant Doorkeeper, J. B. Rigdon of San Luis Obispo (now residing at San Jose).

The State Organizer examined the credentials of the delegates present and admitted the following delegates:

Monterey—David Reed, S. O. Pugh, D. G. Wright.

San Luis Obispo—H. W. Wright, James H. Allen, J. G. Stevenson, H. O. Rhyne.

Tulare—John Roth, J. N. Wright, J. M. Moore.

Merced—Mrs. J. B. Pemberton, D. M. Wood, Mrs. S. H. Wood.

Santa Clara—J. W. Hines, J. W. Lovell, Joseph Rice.

Santa Barbara—Ira Winget, Charles M. Martin, James Morgan; S. K. Shilling, Alternate.

Ventura—M. Cannon, J. M. Sharp, F. M. Senteney.

San Benito—Henry Chase, E. C. Fuller, J. F. Prewett.

Fresno—John S. Dore and J. L Gilbert.

Yolo—J. B. Nixon, Peter Roth, C. Hatcher.

Los Angeles—P. K Wood, E. M. Wardall and P. S. Durfy.

Stanislaus—Mrs. James Kinnear, Mrs. J. S. Witherell, J. S. Witherell.

Colusa—Jesse Poundstone, J. S. Taylor and T. A. Gallup.

The following were then appointed a Committee on Constitution and By-laws: I. N. Wright, F. M. Senteney, John S. Dore, John Roth, F. P. Cook and E. C. Tully; after which the convention took a recess for dinner.

Afternoon Session.

The Committee on Constitution and By-laws submitted the following as a preamble:

"Declaration of Purposes—Profoundly impressed that we, the Farmers' Alliance, united by strong and faithful ties of financial and home interests, should set forth our declaration of intentions; we therefore resolve:

"First—To labor for the education of the agricultural classes in the science of economic government in a strictly non-partisan spirit.

"Second—To indorse the motto, 'In things essential, unity, and in all things, charity.'

"Third—To develop a better state, mentally, morally, socially and financially.

"Fourth—To create a better understanding for sustaining civil officers in maintaining law and order.

"Fifth—To constantly strive to secure entire harmony and good-will among all mankind and brotherly love among ourselves.

"Sixth—To suppress personal, local, sectional and national prejudices, all unhealthful rivalry and selfish ambition.

"Seventh—The brightest jewels which it garners are the tears of the widows and orphans, and its imperative commands are to visit the homes where lacerated hearts are bleeding, to assuage the sufferings of a brother or sister, bury the dead, care for the widows and educate the orphans; to exercise charity toward offenders, to construe words and deeds in their most favorable light, granting honesty of purpose and good intentions to others, and to protect the principles of the Alliance unto death. Its laws are reason and equity. Its cardinal doctrines inspire purity of thought and life. Its intentions are 'on earth peace and good-will toward men.'"

The remainder of the afternoon was passed in considering each article of the constitution, and at 5 o'clock the convention adjourned.

The Banquet.

At St. James hotel, Thursday evening, by the kindness of the San Jose Alliance, a splendid banquet was given to the delegates, visiting members and invited guests. It was a spirited affair ably presided over by J. W. Hines. Toasts, brief, pertinent and inspiring speeches were made by many of the leading members.

FRIDAY—Second Day.

The forenoon session was called to order promptly at 8:30 A. M. by Marion Cannon, President pro tem. The minutes of Wednesday were read and approved of, and the credentials of A. A. Weber of Fresno; J. C. Drew, D. M. Rice and E. R. Childers of Santa Cruz were presented and they were given seats in the convention.

Peter Roth of Yolo county was appointed Sergeant-at-Arms.

G. B. Johnson of San Jose was appointed doorkeeper instead of H. W. Rhyne, excused. The Committee on Resolutions was appointed, consisting of J. W. Hines of San Jose, John Roth of Tulare county, J. B. Nixon of Yolo county, H. W. Rhyne of San Luis Obispo county and P. S. Durfy of Los Angeles county.

Afternoon Session

The following officers were elected:

President	MARION CANNON, Ventura
Vice-President	PETER ROTH, Wheatland
Secretary	C. W. PEDLAR, Gilroy
Treasurer	J. W. HINES, San Jose
Chaplain	MRS. J. KENNEAR, Modesto
Lecturer	J. L. GILBERT, Fresno
As't Lecturer	P. K. WOOD, Los Angeles
Door-Keeper	J. B. JOHNSON, San Jose
As't Door-Keeper	MRS. M. A. TALCOTT, San Jose
Serg't-at-Arms	C. W. MARTIN, Santa Barbara

tate Bus. Man'g'r, J. M. MOORE, 297 Linden Ave., S F. Executive Com., JNO. S. DOVE, Fresno; JESSE POUNDSTONE, Grand Island (Colusa Co.); JAS. MORGAN, Santa Barbara; E. M. WARDALL, Monrovia (Los Angeles Co.); DAVID REED, Santa Cruz

NATIONAL DELEGATES—J. S. BARBEE, Santa Barbara, and D. C. VESTAL, San Jose. [Session of 1890 opens at Osceola, Fla., Dec. 2d.]

Organizing Deputies.

J. B. RIGDON for Alameda county.

Each officer as elected appropriately responded. The newly elected officers were installed by J. S. Barbee, who in a brief speech expressed satisfaction with the work accomplished and his belief in a grand future for the Order. This finished his labor of organization in California.

Mrs. J. S. Witherell moved a vote of thanks to Mr. Barbee. Unanimously carried.

Short speeches were made by J. B. Rigdon, Mrs. K. L. Squire and other members.

Evening Session.—The Committee on Constitution and By-laws made its report, which was discussed.

The next session will be held in Los Angeles on the third Wednesday of October, 1891. Out of the 40 votes, Los Angeles received 21 and San Francisco 13.

SATURDAY—3d DAY.

Forenoon Session.

Duly called to order by President Cannon in Grand Army hall. The Executive Committee reported by its selection of officers: J. S. Dore, chairman; E. M. Wardall of Los Angeles as Vice-President, J. M. Moore of Tulare Treasurer, Jesse Poundstone of Colusa Secretary. That they had placed the bonds of the State Secretary and Treasurer at $5000 each, and the bonds of the State Business Manager at $25,000.

Voted that the headquarters of the State Business Manager be at San Francisco, and the committee hold its next meeting in San Francisco in January, 1891.

The Committee on Constitution and By-laws finished their report and it was adopted.

The President appointed the following committees:

Judiciary—J. S. Withrell, Stanislaus; J. G. Stevenson, San Luis Obispo; J. C. Drew, Santa Cruz; T. A. Gallup, Colusa; J. M. Sharp, Ventura.

Legislative Committee—E. C. Tully, San Benito; E. M. Piercy, Santa Clara; John Roth, Tulare.

The Platform Adopted.

Edmund Burke, the great English orator and statesman, never uttered a wiser and more truthful sentence than when, in the midst of one of his grand and noble speeches, he exclaimed: "When bad men combine, the good must associate, else they will fall one by one an unpitied sacrifice in a contemptible struggle."

By vast combinations of capital and its unprincipled and oppressive manipulation, this dread alternative has been squarely placed before the laboring people of this country. While our wealth has been increasing with the most wonderful rapidity, the astonishing spectacle is presented of the producer of that wealth as certainly and as rapidly growing poorer. The cause of this unnatural condition of things we are most honestly and earnestly endeavoring to ascertain. To do this more easily and effectually we are striving to bring the people together and encourage them in the interchange of thought. No conclusions are desired or sought but those that are founded in truth. No remedy is expected or wished for that is not dictated by perfect justice. The associates, whose aid we are hoping to secure, are all those in whose hearts there continues to burn the pure fire of patriotism and love of humanity. The man or woman who will coldly turn away from our appeal must have lost from their remembrance the deeds and virtues of the patriot dead.

Already we have learned a few facts that are of deep and vital interest to all our people. We have found that in 1889 5,200,000 men and women in the United States of America worked for an average of less than $200 per year, while the farmer of this country did not receive on an average over $300 per year for the labor of himself and family. We have learned also that Wall street and the National banks are the most powerful factors in shaping our national legislation, and that those highest in authority bend in the most abject subserviency to the narrow and selfish demands of a purse-proud oligarchy; that at the dictation of a foreign money power our currency has been destroyed and a bonded indebtedness made to take its place, whereby untold millions of interest has been forced from the hands of honest toil, while commerce has been made to languish, manufactures cease, and all classes of industry and improvement move with an uncertain and unsteady tread; that the farms and public lands of the nation are passing with frightful rapidity into the possession of syndicates and alien landlords, thus breaking down the strongest bulwarks of liberty—the independent home and the common school; that the elective franchise is fast being debauched by intimidation and bribery; that the liquor saloon—that foul octopus whose hydra head, upreared in every peaceful hamlet, brings sorrow, discord and destruction, and whose slimy arms would drag down every virtue and strangle every industry—has become a dangerous factor in politics as well as morals; that one-half of our citizens, and they the very best, purest and most law-abiding—our own true wives and mothers—are deprived of the rights guaranteed them by our great charter that says: "All just governments derive their powers from the consent of the governed."

And further still have we seen that our State Legislatures are, as a rule, composed of idlers and non-producers, and the Congress of the nation is filled with lawyers and bankers, numerically the smallest class of our community, giving them the absolute veto power of all legislation, which power they have used for the enrichment of the favored few and the impoverishment of the masses.

But, brothers, the light is now breaking, the morning beams come streaming over the eastern hills, presaging the speedy coming of a brighter and a better day. Like a great, grand, mighty, irresistible tidal wave, the Farmers' Alliance and Industrial Union is sweeping over the nation, until to-day from threescore thousand schoolhouses, those cradles of patriotism and intelligence, there comes one firm and determined protest against a longer continuance of these crying wrongs, and a united demand for the immediate introduction of better conditions. And to this end, as prominent features of the new Order, we demand:

First—The entire abolition of National banks and the substitution of legal-tender Treasury notes, issued in sufficient quantity to enable the business of the country to be transacted on a cash system; that such notes be made to rest upon any good security and be a full legal tender for all debts, both public and private, and bear a rate of interest not to exceed 2 per cent per annum.

Second—Government ownership of all the agencies of public transportation and communication, and that they be operated in the interest of the people at actual cost.

Third—The restoration of all unearned land grants to the public domain, and legal provisions made to prevent the securing or holding of large tracts of land by either corporations or aliens for speculative purposes.

Fourth—The adoption by our next Legislature of what is generally known as the "Australian ballot system of voting," to the end that intimidation may cease and the purity and secrecy of a freeman's ballot may be secured.

Fifth—We hereby approve of the declaration of the Farmers' Alliance and Industrial Union held in the city of St. Louis, December 6, 1889, when it said, "We are opposed to the saloons and liquor business in all its forms."

Sixth—The election of President, Vice-President and United States Senators by a direct vote of the people.

Seventh—That while we continue the coinage of gold and silver as money, they shall sustain a perfect equality as to coinage and tender.

Eighth—That a proper and safe educational qualification for the exercise of the elective franchise should be adopted, but no discrimination on account of sex.

Ninth—That our present public-school system shall be maintained, and its efficiency increased more and more as the exigencies of the country may demand, that they shall forever remain non-sectarian, and that text-books used in the public schools be furnished by the State at cost.

Tenth—That we would recommend such changes in the State law that in the event of the death of the husband the wife has the same right to conduct and carry on the business as the partner has, without the long and tedious course of law usual in such cases.

Eleventh—That we favor a change in the State law making taxes payable semi-annually.

The following resolution was unanimously passed:

Resolved, That the question of State organization be referred to the State Executive Board and that they be requested to give it as early attention as possible.

A vote of thanks was then tendered to F. B Cook for his efficient work on the Committee on Constitution and By-laws.

An Impressive Scene.

Mr. Peter Roth of Yolo county having hastily collected from the members of the Alliance a sum sufficient for the purpose, a handsome gold-headed cane, appropriately engraved, was purchased and presented to J. S. Barbee, the State Organizer. Mr. Dore of Fresno made a speech appropriate to the occasion which was received with cheers. Mr. Barbee responded in a manner that evoked cheers and drew tears to many eyes, thanking the brothers and sisters for their kindly recognition of his services. He said that with two or three exceptions he had been everywhere kindly received and considerately treated by people of all political shades. Those exceptions were where, on account of his having been in the Confederate service, he received cold treatment and overheard unkind remarks. He had traveled and labored incessantly, day and night, and often traveled in the dark to fulfill his engagements until he felt that he must now have rest. He called Mr. J. G. Stevenson, a member of the G. A. R. of San Luis Obispo, to the central pedestal in the hall, and standing on the opposite side, obliterated the imaginary sectional line that once divided them, shaking hands and declaring that they were now soldiers marching together in the same great cause for the liberation of all men and women from mental and industrial thralldom. Mr. Vestal of San Jose, the other State delegate to the National Convention, indorsed all the brothers had said in a very neat speech, having himself served on the Federal side. The whole proceeding was received with rounds of prolonged applause.

Resolved, That we view with disfavor any attempt to advance the interests of candidates for offices before this Alliance; especially for candidates for the high position of President of this republic, and we can assure the people that the farmers of this nation are not looking for a Cæsar or Cromwell or millionaires, but for a Cincinnatus, and when he is found we shall know him by the character he bears and the work he has performed. Adopted.

Further items will be given hereafter and our report continued in our Grange Edition of this week.

Farmers' Alliance in Maricopa County, Arizona.

President Broomell is required to bring before the society's notice then, the sub-treasury grain bill now pending in the 51st Congress. It provides Government warehouses for wheat, rye, corn, cotton and tobacco. Upon storing these products, treasury receipts are to be issued for 80 per cent of their local value. The notes draw one per cent interest.

Thus a currency will be supplied when most needed, with which to move or handle the crops. All goods stored must be sold within a year and the treasury notes issued against them must then be redeemed.

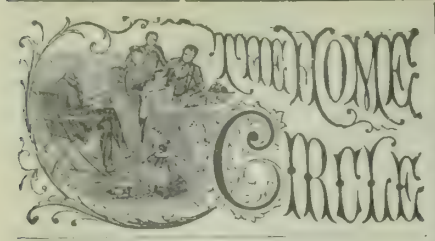
The farmers hope in this way to protect themselves against a money stringency which now usually pinches them at the hardest times.

Districts that have raised $500,000 of above crops for two years can invoke the aid of this bill when finally made a law.

Our local Alliance will be called on to secure an amendment extending the bill's operation to barley and reducing the minimum yearly production to about $200,000.

The organization of such clubs is doing great good in familiarizing farmers with economic, industrial and fiscal laws and in enabling them to make their united action felt upon National and State Legislatures.

Mrs. Annie M. Livingston.



EDITORS PRESS:—Four Sabbaths ago there was buried from Trinity Church in this city, one of our most useful and gifted workers in the cause of charity. Her illness was not of long duration and her death is deeply mourned by all who knew her. Many will miss her from the "Woman's Educational and Industrial Union," where she was an active and patient attendant. She was a true type of that large class of Christian women who by their good works help to give a notable name to San Francisco as a city, where humane and Christian societies abound, and like a large majority of that class she valued most practical and merciful deeds more than denominational creeds.

Mrs. Livingston was of German and American parentage. She was born in the little village of Hope, New Jersey, in the year 1837, but most of her girlhood and young womanhood years were spent in Philadelphia, where her advantages of education were signally favorable to culture and to the development of true character. In both her father and mother she found an ideal for a sacrificing and unselfish life; they both lived void of offense, devoted to religion and to good works. The family moved to Illinois, where she married at Bloomington Mr. I. H. Livingston, and during the war she acted as nurse in the field and in hospital. She heroically followed as closely as possible the fortunes of her husband, who was an officer in the army. She afterward entered the lecture arena and for some years successfully and mostly in the Middle States, appeared upon the rostrum. Finally she studied for the stage and made her debut at Wallack's theater in New York City, where she was a member of the Woman's Sorosis. She met with good success in the profession, attaching to herself a large circle of friends; among those devotedly her friend was Laura Keene.

In the year 1880 she came to California, followed shortly after by her only son, Wm. B. Livingston. She loved to live on this coast, the climate was "so favorable to habits of industry"—habits which her own life exemplified in a remarkable degree.

This brief notice is not intended to utter undue praise, but to render a deserved expression of regard for a worthy character, a noble woman, one whose nature grew deeper and more perfect even amid disheartening struggles, illustrating as she did the beautiful words of Grimke, who wrote: "Happy indeed are they whose intercourse with the world has not changed the tone of their holier feelings, nor broken the musical chords of the heart, whose vibrations are so sweet and melodious in the nightfall of age."

B.

A Parable of the Gates.

BY JOAQUIN MILLER.

"How shall man surely save his soul?"
'Twas sunset by the Jordan. Gates
Of light were closing, and the whole
Vast heaven hung darkened as the fates.
"How shall man surely save his soul?" he said,
As fell the kingly day, discrowned and dead.

Then Christ said, Hear this Parable:
Two men set forth to journey fast
And reach a place ere darkness fell
And closed the gates ere they had passed.
Two worthy men, each free alike of sin,
But one did seek most sure to enter in.

And so when in their path did lay
A cripple with a broken staff,
This one did pass straight on his way,
While one did stoop and give the half
His strength, and all his bread did nobly share
Till they at sunset saw their city fair.

Then he who would make sure ran fast
To reach the golden sunset gate,
Where captains and proud chariots passed,
But lo! this proud man came too late!
The gate was closed, and all night long he cried;
He cried and cried, but never watch replied.

Meanwhile the man who cared to save
Another, as he would be saved,
Came slowly on; gave bread, and gave
Cool waters; and he stopped and laved
The wounds. At last, bent double with his weight
He passed, unchid, the Porter's private gate.

Hear then this lesson; hear and learn:
He who would save his soul, I say,
Must lose his soul; must dare to turn
And lift the fallen by the way;
Must make his soul worth saving by some deed
That grows and grows, as grows a fruitful seed.

What Shall Women Do?

[Written for the RURAL PRESS by MARGARET B. HARVEY.]

Since my last article in the RURAL appeared, the question has been asked me, "If you don't want women to cook, what would you have them do?"

I must confess that the question struck me with a sort of a shock. Like an Irishman, I must answer with another question, "Where are people's eyes?" Why, the world is perishing because women are not doing the very things that they ought to do, and cookery is the one great hindrance in the way of women fulfilling their true mission!

"But women were intended to be wives and mothers," say my critics. Precisely; did I not admit as much? Did I not say that women were intended to be something else besides cooks—that cooks could be hired, but wives, mothers, counselors and friends, never? Just because the majority of women were intended to be wives and mothers, they ought to be in better business than cookery!

The fact that any rational being, at this late day, could ask me such a question as that quoted above—this very fact, say I—is sufficient proof that there is abundant need for such an article as my last, and a hundred more. Like thunder-storms, articles of this kind are going to make a noise and clear the social atmosphere.

We have nothing in nature or revelation to show us that men were ever intended to be mothers, nor have we anything in nature or revelation to prove that women were intended to be cooks. That women *can* cook or *have* cooked argues nothing but accident. It is *not* an accident that men can cook as well or even better, while they cannot be mothers at all. The mission of a mother is providential—the business of a cook merely conventional. At any rate, whatever it means to be a cook, the word "cook" is not synonymous with the words "wife" and "mother," nor is cookery a necessary consequence of the office of either. To say that it is, degrades both.

The calling of a wife and mother is nothing less than a holy priesthood. Now, those of you who have imbibed "high-church" ideas ought to understand what is meant by that. You reverence the office of a priest and recognize the validity of the sacraments as administered by him, but it would never occur to you to say that he could not properly baptize an infant unless he first dug a well and pumped the water with his own hands; nor would you think of asserting that he must actually bake bread and make wine for the purpose before he could intelligently administer the holy communion. Rightly enough, the priest leaves wine-making and bread-baking, pumping and digging, to persons who earn their living in those ways, while he does what they cannot do and which only he is authorized to do.

Now, what does the unregenerate, Philistine world expect of its royal priesthood of women? I maintain that a true woman's office is nothing less than sacramental, and those not consecrated to humanity as she is should bring her bread and water. Nor am I the only one to maintain such a thing. Women all over the land are feeling the great truth in the air, even though they may be somewhat vague in expressing themselves. This unrest in the household, this soul-hunger for better things, is found everywhere from the Atlantic to the Pacific. The "servant-girl question," with its concomitants, is becoming so serious that it must soon require the combined wisdom of sages and legislators to grapple with it.

Since my last article for the RURAL was written, the author of "In the Redwoods" hit the nail on the head when she said that she was waiting for the "co-operative cook-wagon." Well, sister, say I, thousands of your country-women are also singing "Wait for the wagon," and I can tell you that the wagon has already appeared in Boston, and that wagon is going to be the very wagon that Emerson advised us to hitch to a star—it is going to be the common wagon transformed into a chariot of the gods! For it is going to be the earthly salvation of womankind.

This last paragraph is somewhat of a digression. Just as sure as fate, co-operation is going to take cookery out of private hands—we cannot avoid the inevitable if we would. Understanding this much, let us proceed.

What would I have women do if I could have things my way? To begin with, I would have them study just as long and as hard as if they expected to teach. Those who *do* expect to teach in the public schools are required to pass a rigid examination before they are permitted to take charge of other people's children. Why should not any woman be just as well prepared to take charge of her own children? Unfortunately as things are today, she can take upon herself the responsibility of children of her own without examination.

I consider it a perversion of the natural order of things when a mother does the cooking for her family and sends her children to a teacher, so early as is the present custom. Why does not the mother do the teaching and hire the cooking done? True, the mother may not be competent; but if women were properly trained for their true vocation, the mother would be competent. If I had children, they should never leave my side until the age of fifteen. I should consider it my duty to be able to instruct them at least this long. I would rather confess that I was incompetent to cook, particularly when I could hire a negro man who was more proficient than I. Let mothers learn kindergarten methods, let mothers keep track of the latest educational progress. Teachers should only be called upon in special cases, until the "higher education" period is reached. We have had enough of torturing little ones in primary schools, which are scarce more than day nurseries to relieve lazy mothers.

I do not see how any mother could want to deprive herself of the pleasure of watching the development of her child's intellect and intrusting it to an indifferent person or a stranger. You may be very sure that she cannot lightly shift the responsibility.

(Going back a little, how successful do you suppose a mother is going to be, in her proper work of instructing her children, if she has to run, every whip-stitch, to look after a pot or a kettle? You wouldn't expect that of a paid governess.)

A teacher must pass an examination, so must a physician. A doctor must know the location of every bone in your baby's body before the State will allow him to put his hands upon it. Yet he may not touch it five minutes—you can touch it any time and all the time. Do *you* know where its bones are? Why will the State allow *you* to put your hands upon it? How came you by the responsibility of its care at all?

I tell you no woman is fit to be a mother until she has studied anatomy and physiology. A true mother is a physician as well as a priestess—more than this, she is an artist and a scientist. Instead of bothering with cookery, every girl who expects to live to be a woman should spend at least two years in studying anatomy and physiology. Yes, she should attend regular lectures and dissect the human body, if possible. After that she should spend two years more in drawing the human figure, painting from plaster casts and life and modeling in clay. Let her do all this as part of her education, even if she never expects to marry. Something will be gained when the majority of our women know what the human form really is. We shall then live in an artistic atmosphere.

You have but to look around you to see that the majority of women do *not* know what the human form really is. Whence came the exaggerated busts and hips and the pinched waists? They were never copied from any Greek statue or any living model. No woman ever naturally grew into the shape of a fashionable corset. Once give a girl a certain amount of anatomical and artistic knowledge, and she reverences the human body as what it is—a temple of the Holy Ghost. She would no more tamper with it than she would actually violate a temple. To adopt a hygienic form of dress, she would consider nothing short of a solemn, religious duty.

Just here I would like to call the reader's attention to an article by Dr. Sargent of Harvard, which appeared in *Scribner's Magazine* last year. He says, among many other valuable things, that from observations made in Harvard gymnasium, he concludes that the majority of the men of to-day have not attained their due amount of strength because they have inherited the weakness of their mothers. He then makes an eloquent plea for athletic training for girls and a rational mode of dress for all women, not only for their own sakes but also that the children of the future may not be prematurely weakened. Dr. Sargent also says that for fifty years women have been deceiving the physicians as to the feminine mode of breathing. Women do not naturally breathe higher than men—this is an acquired habit, produced as the result of generations of corset-wearing. Now I, as a woman, dare go a little farther than Dr. Sargent. I believe that the so-called feminine habit of breathing is not the only thing concerning which women have long been deceiving physicians. If my simple testimony is worth anything, I unhesitatingly declare that woman's "natural ills" are not natural at all. If women banished corsets and tight belts and knew *why* these should be discarded, the name and the memory of old-time evils would pass away—and with them a great deal of degrading superstition.

Can you begin to realize what it would mean if all women knew what the human body was? Why, they could not endure the proximity of anything ugly or hateful—they would surround themselves with forms of beauty. No hideous deformities should be permitted to shock their senses or influence their children. The women of our day and land would dwell in an atmosphere of loveliness as the early Greek women did. According to Ruskin, painting the human figure is the perfection of art. In the glad, new day, we shall indeed have art in the household—houses then shall be true homes and temples, not mere lodging and eating places.

We shall have an end of the convenient, lazy, ignorant fashion of blaming a deformity upon "the mysterious dispensation of Providence." We shall never be called upon to shrink in horror at the mention of nameless crimes against the unborn, for such heathenish iniquities could never be. No rational human creature could then conceive of motherhood as a dreaded martyrdom or wifehood as legalized slavery. And in that day men as well as women shall understand what the mysterious sin against the Holy Ghost is—it is maltreating, oppressing or hurting a child. You know what our Lord said concerning him who incurred this guilt—it were better for him that he had a millstone about his neck and were sunk in the depths of the sea. Against what other sin did our Savior ever so loose the vials of His righteous wrath?

As a high means to a holy end, you begin to see why women ought to study painting and anatomy, even if they never become what the world calls great in these lines. Now I am ready to add that for a similar reason every woman ought to study botany. As every woman naturally loves flowers, this ought not to be a very difficult task. I believe that the study of botany suggests the easiest way by which a true mother can perform a high moral duty.

It is a mother's place to enlighten her children, boys as well as girls, concerning the hidden, solemn mysteries of their own natures. Any mother who would dare delegate this sacred responsibility to any other is not fit to be a mother at all. I know it is the custom to leave such instruction to the chance innuendoes of ignorant, low-minded hired girls, but such mock modesty is nothing short of murderous. No wonder our society is tainted—no wonder the community is so often startled by unspeakable horrors. Say what you will against wicked men and women; these wicked men and women were once innocent children, probably with timid mothers who shirked their sacramental, priestly duty and spent their golden hours in coaxing the pot to boil.

Now in many respects the vegetable kingdom resembles the animal. Indeed a plant may be described as an animal, refined, etherealized, spiritualized. What in a lower animal might strike us as coarse, in a flower becomes purely idealized, akin to the heavenly operations of the human soul. It is impossible for any one to study botany without reasoning from analogy. More than this, his reasoning results in his exaltation. Any one who knows anything of real science will bear me out in the assertion that knowledge purifies, while ignorance taints.

Any mother who is alive to her full duty and who truly values the divine gift of modesty; who wishes to have her children enlightened and keep them pure, should just as early as possible place in their hands a copy of Gray's "How Plants Grow." And she should look upon flowers as angels, messengers of healing and mercy from the heavenly kingdom, miraculous object-lessons, spiritualized models for human imitation. The true "language of flowers" is purity.

Do you not begin to believe that if women lived as they should, they would have quite enough to do without wasting their God-given powers over the pot and the frying-pan?

"All roads lead to Rome." All the agitation about "woman's rights," all the talk about "higher education," all we have lately heard about "social purity" and "dress reform," "the art revival," "heredity" and "co-operation"—all are tending in the same direction. The evolution of the ideal woman, for whom the world has long waited, and then the uplifting of all humanity.

Instead of "every woman her own cook," we shall ere long have "every woman her own artist." No, I do *not* ignore the idea of economy in the household, nor do I expect that everybody must be rich before an era of better, higher living shall be inaugurated. If cookery can be done by co-operation or professional aid very much more cheaply than it is generally done now—if time and strength and nerves and youth, even life, may be saved in consequence—may we not call the result the best economy? And if the generality of women can furnish their own pictures and embroideries, their own flowers and music, is not that making the ideal life, or something akin, possible for all? No, my dear, this will not antagonize the work of artists and scientists; it will only create an audience and an atmosphere for them and make their efforts more fully appreciated.

The world is just beginning to discover the real significance of the story of Mary and Martha. It was *Mary*, apparently doing nothing, who received divine commendation—*not* Martha, who was troubled overmuch with household cares. In direct defiance of the record, the world has long been upholding Martha as an example. The twentieth century will give Mary her chance. And this is not the only particular in which we shall go back to apostolic times.

In those days originated the story of Beffana. Did you ever hear it? The Lord was expected to pass by her door, but she was so absorbed in her household cares that she could not look out in time to see Him. When at last she did look, her Lord had gone by. Stricken with remorse, she started to follow Him, crying: "Lord, come back!" But He has never turned His head, and Beffana still wanders through the world crying and hurrying to overtake Him. But she never can.

How many Beffanas have we in our midst to-day? They will leave their household cares when it is too late—their Lord has passed by!

Cupid on a Wood-box.

[Written for the RURAL PRESS by LUPA.]

"Ellen!"

"Yes, Annie."

"This is a lovely spot!"

Ellen turned her dissatisfied face toward the window. To the right and the left were hills, large and small, low and waving in outline or high and steep, bare on one side, bare on two sides perhaps, except for the black, sharp-edged bottle rock strewn so thickly over the surface that it glistened in the sun as if the old wine-drinking gods had indulged in a long debauch, and as the bottles were emptied, dashed them to pieces on the earth. (Had the ground been cursed since in consequence?)

No, not quite bare. Foraging parties of red-skinned, green-uniformed manzanita bushes and scattered scouts of greasewood waving tiny purple plumes, or thorny oak bush, ventured cautiously out from the shelter of the redwoods in the depths of the canyon where the creek turned somersaults in the dark all day and all night; away from the slender arms of the willow; past the stately, fragrant bay laurel and the orange and green brightness of the madrona; around the base of the hill and up the zigzag crack in its side. What had they found—what would they ever find should they reach the top? On other hills, every member of the chaparral family seemed to cluster, lock arms, and twined around themselves and each other the wild hop, grape and brilliant love vine—that dainty thing without root or leaf, any expression except slender, yellow, tangling stem and tiny, pale blossoms. By sweeps and angles and sudden stops, the hills made way for the ridge on the north, which never seemed to return the politeness but attended strictly to its own business of raising cedar for fence-posts, pines to be fed to the great, hungry saws of the mills, black oaks for wood and rails, and the great, branching live oaks for beauty—a beauty that slowly matured and waited for some tidal wave to make a seaport of an inland town and waft its stateliness across the sea.

The symmetrical, cone-like form of the red-bud bush on the slope in front, being so near, seemed to make two of the one little valley that lay to the south and was now as attractive as fresh young grass and many-hued wild flowers could make it. You have found many such hiding-places in the Golden State, and they are pleasant to see.

Ellen looked it all over lingeringly, for she loved beautiful things, then glanced at the stacks of newly ironed clothes airing on chair-backs by the kitchen stove, then out through the open back door; and the dissatisfied look came again.

"Yes, it is pretty enough; but you know there was a serpent even in Eden."

In the pause that followed, a strong young voice came up from the garden, singing or almost shouting, "Dear! dear! what can the matter be?"

"So I ask," said Annie, half laughing, "what has gone wrong this morning more than usual?"

"Nothing unusual. That is what makes it so tormentingly aggravating. Those two long words don't begin 'to 'p'ess my feelin's,' as little Katie said. It is because the annoyance is on the spot all the time and is likely to stay that is so hard to bear. It always makes me angry to have people or circumstances say, 'You cannot help yourself; so what is the use in fretting?' If I could get out of a swamp I wouldn't stop to fret about being in it."

"But where is the swamp?"

"Exactly in the middle of that green patch

that you call a lovely valley. It is a nasty, muddy, treacherous place, and the frogs croak there all summer long."

Then, seeing the puzzled look on her friend's face, brought the old merry expression into her eyes and curved the corners of her lips up instead of down, making them much more attractive.

"You don't see it? Well, then, we'll keep to plain facts. 'Facts is what we want,' as Schoolmaster Squeers said. What do you see on those chairs?"

"Clean clothes just ironed."

"Exactly. Do you see what time it is?"

"Fifteen minutes to eleven."

"Right again. Now what do you see beyond that door?"

"Nothing in particular."

"Just so. Nothing but two great logs, for I scraped up every stick and chip for the ironing fire. Father and the boys will expect dinner just at twelve, and how am I to get it?"

"They seem to be very busy about their planting."

"Yes, the spring is late and sudden and the seeds must be in very soon or nothing will be raised. I know it all better than you can tell me, and I wouldn't complain if it hadn't always been so ever since I can remember. Everything else is more important than the wood, so only an armful or two, or possibly a day's supply, is cut at a time. I have known mother to go a quarter of a mile into the woods to pick up chips around a stump where a tree had been chopped down, and have done it myself, too. I would never marry the best man in the world unless I was sure he would keep a shed full of wood. I don't like to continually ask for it, as if I was an every-day beggar. They are good, good as they can be;" and her tone softened as the big, musical brother called out "Catch!" and tossed a great bunch of white lilac through the window, and her father asked, while he straightened his bent back and rested his hands on the hoe-handle:

"Ellen, girlie, will you bring out a pitcher of ginger drink?"

She stepped to the door, held the pitcher under the pipe from the spring till the flowing of the cool water over her hands reminded her that it was more than brimming full, dreamily added sweetening and ginger with a spoonful of home-made vinegar, then stirred and stirred, while over and over in her mind ran the words, "These things ought ye to have done and not to have left the other undone."

"Are you stirring yourself to sleep, mesmerizing yourself or something?" asked Annie, when the minutes went by and there were no signs of a stop.

"Yes—no—I don't know." Then she carried pitcher in one hand and a goblet in another, out to where her father still waited.

"You needn't have brought that glass thing, child. The tin dipper is good enough for me."

"'These things ought ye to have done and not to have left the other undone,'" she repeated, this time aloud without knowing it.

"What things, girlie?" asked her father, surprised at the words.

"Wood-pile, chip-pile, shavings," she answered, merrily, coming to herself again.

"Is the wood all gone? Well, I'll come and cut some. It seems to me we never *shall* get this planting finished so we can do anything else."

Evening came. The two girls still loitered at the table after the rest had left the room and all was quiet. Ellen had turned her cup and was twirling it round and round in its saucer as she had before twirled the spoon, then she lifted it and suddenly reaching across, startled her friend with:

"Tell my fortune, Annie."

Annie took the cup, held it up, down, sidewise, close to, and at arm's length, then said:

"I see a road. Half-way between the beginning and end of the road is a little boat, and in that, one person. You are going somewhere alone. You seem to be rowing straight ahead as if you knew just where you wanted to land, so you pay no attention to what you are passing. On that side is a big basket or box, full of something that looks like sticks, and on the top an odd-looking, chubby little figure. Oh, I see. It is Cupid on a wood-box, and he is aiming a long, straight arrow directly at you. You are not noticing him, but you will certainly be hit."

"What a tragedy! Thank you, my dear! Before it happens these dishes must be washed and then comes the milk to be strained."

A year afterward, a letter from Ellen to Annie ran like this:

* * * * * *

"Haven't you again grown tired of the city, you poor, overworked school-ma'am? Come spend the vacation with me—*us*, I mean. Bring your strongest dresses, or make one of drilling, bed-ticking—anything tough, so you can climb the pines, crawl under the bushes, chase squirrels and hunt wild berries. 'Snakes?' No, I didn't mention such a thing, but we can kill them if they get too familiar. Now I have gained your attention, I am going to ''fess.'

"You know I went over to Blue Lakes last summer after mother came home from the East; you know I went to help Mary Lawrence out of her summer troubles because she had such a houseful of boarders and company; but you don't know about one of them—a great, shy, silent fellow who seemed somehow to be always there when he was needed, but never in the way, so I didn't give much attention to him one way or another; besides, Mary had oceans of work to do and there was no time to fool away on young men except in the line of regular business, which seemed to be nothing but satisfying their appetites.

"After the summer was about half over and some of them had left, I had time to notice that Mary's wood-box was never empty. When I had wondered long enough, I asked her what it meant. She smiled and said:

"'Jim Carlton takes care of that. He is a perfect treasure.'

"'He must be,' said I, and thought no more about him; but the evening before I left he seemed to have changed places with some one else, for then he was 'always there' when he wasn't wanted and continually in the way when I was gathering up my belongings to pack. He wouldn't keep still and he wouldn't go off, and he looked as Dick does when he wants to say something and is afraid I will box his ears, till finally I asked:

"'What *is* the matter with you? What *do* you *want?*' Then the secret came out, tumbling over itself in *such* a funny way. I made out of it all that he wanted me and no one else to make life wretched for him, and I thought a minute and then laughed. The more he looked astonished and hurt the more I laughed, but when I could catch my breath I said:

"'Cupid on a wood-box! Yes.'

"So here I am, not a day's ride from the old home and in as pretty and wild a spot as that. 'Come and see.' ELLEN.

"P. S.—My wood-box has never yet been empty and the woodshed is almost as big as the house, *full*, too. E."

YOUNG FOLKS' COLUMN.

Jerry.

[Written for the RURAL PRESS by CLARA S. BROWN.]

Jerry was the best loved of all my cats. I first saw him sitting on the porch looking through the screen-door into the dining-room, and sniffing the nice dinner that was just ready to put upon the table.

Such a scraggly, wretched, half-grown cat he was! "You poor thing!" I exclaimed, "where did you come from?"

"Meow," he answered faintly, and I knew it meant, "I'm so hungry! Please give me some of that good dinner."

I had a nice kitten, but I could not refuse this appeal. I went right out and took him up in my arms, and it scared me to feel how very light he was. He must have been starved for a long time, and he was ill besides, with a kind of influenza. It was several months before we felt sure that he would live, though he was nursed very carefully. I never heard any creature sneeze as he used to; it would have made you laugh. Really, I was almost afraid his head would jerk off in some of the spells he had.

When he discovered that he could lie in my lap, he was very happy. He had seen Tom, my other cat, lie there, and one day he very timidly jumped up. From that time until the end of his life, he showed me the utmost gratitude and affection, in his quiet way.

Tom soon died of fits, and then I was glad that I had Jerry to pet, especially as he became a very handsome cat, dark gray and black, striped like a tiger, and very large.

When we moved to a new home, every one said Jerry would run away, for cats cared more for the places that they knew than for people, but he never thought of leaving us. For a few days he would not eat unless he was in my lap because he was much frightened at the new place.

Jerry had some odd tricks. When he was in the house and wanted to go out, he never went to the door and mewed, as most cats do. If he could find a window shade down in any room (and in the night he always could), he went to it and tapped on it with his paw.

When he wanted to come in, he never asked, but always jumped up on a window and sat there patiently until I went to the door and called him.

He never cried for anything; no matter how hungry he was, he would not mew, but he would get into the chair nearest the pantry and look at me as I passed back and forth with eyes that said as plainly as meows, "do give me something." If he heard me rattle a paper or take a knife out of the tray, he would run to me as fast as he could, thinking I was unwrapping meat from the butcher or was going to cut it. Even when he appeared to be sleeping soundly these sounds would always arouse him.

Sometimes we caught a mouse alive in a trap, and then we opened the trap in the bath-tub, so the mouse could not get away, and called Jerry. At first he was afraid to get into the tub and struggled violently when we put him in. After he found out what it meant, he would run for the tub and jump into it as soon as he saw me coming with the trap. Often a little noise in the bath-room would bring him flying to see if it wasn't the trap.

He was very fond of lying in bed with me. When let into the house, early in the morning, he always came right to the bed, and was not satisfied to lie on it, but must get in it, as close to me as he could snuggle. If I did not let him in, he picked at the clothes with his claws, trying to pull them down.

I forgot to tell you that, although he did not say a word, he fairly *danced* when he knew I was cutting meat for him. He had lost nearly all his teeth except the tusks on account of being sick so long, and I had to cut his meat fine. While I was doing it, he stood on his hind paws and with his fore paws reaching nearly to my waist, stuck his claws into my dress as fast as he could work them, first one paw and then the other. It seemed as if he couldn't hardly wait for the nice lunch that was coming.

He spent a great deal of time sitting in a chair looking out of the window; he never sat on the floor.

Jerry did not like at all the first kittens he ever saw, and spit at them. If they tried to play with him, he growled and walked off.

I took one of the kittens for my own, and after awhile Jerry began to let it play with him. Soon he became as nearly a mother to it as a dignified Tom-cat could be. He let it snuggle up against him and sleep with its head on him, and he washed it all over every day, even after it became nearly full grown. I think that was a remarkable thing for a father cat to do.

He often tried to follow me when I went away, and came quite a distance to meet me.

Alas! one night when roaming around he ate something that had been poisoned, and after a sickness of four days, he died. He never complained once, but sang every time I touched him, right up to his last conscious breath, though he could scarcely hold his head up.

I had him nearly four years, the longest I ever kept a cat, and he was so gentle and affectionate, and had suffered so much when he ought to have been a happy kitten, that I loved him dearly.

I think a great deal of Tommy, the cat he helped to bring up, but he is not so peculiarly lovable as Jerry was.

Now let me beg you to be kind always to kitty. She will be nice, and sleek, and pleasant to have around, if she is treated well and fed plentifully. A cat is a beautiful creature when it is used right, and knows much more than many people think it does.

Kicks, cross words and starvation make cats wild and vicious, and their fur so rough that there is no beauty in it; but if the people who drive them away and say they do not see how any one can pet the hateful things would be less cruel and think what a dreadful thing it is never to have half enough to eat, they would see a great change for the better in them. Be good to kitty, and see how good she will be to you.

DOMESTIC ECONOMY

RICE WAFFLES.—Beat three eggs separately. Add to the yolks a teacupful of boiled rice, a lump of butter. Sift in 1½ pints of flour, add a pint of sweet milk, a little salt, and lastly whites of eggs. Bake in waffle irons.

MOLASSES DROPS.—One cup of molasses, one-half cup of butter, one-half cup of warm water, three cups of flour, one teaspoonful of soda and two teaspoonfuls of ginger. Drop from a spoon into well-buttered tins and bake in a quick oven.

DRESSING FOR TURKEY.—Take stale bread-crumbs, moisten with hot water, season with pepper, salt and butter and a chopped onion, if liked, or a few raw oysters. Some like sage and summer savory for seasoning, and add one-half mashed potato to the crumbs.

IRONING NOTES.—Embroidery should be ironed on flannel, placing the flatiron on the reverse side. This brings out the figure and makes the embroidery look like new. Lace should be pulled into shape repeatedly while drying. It does not need ironing. Iron very dark calicoes (especially indigo) on the reverse side. If the blue calicoes require stiffness, *blue* the starch.

CREAM CORN SOUP.—One can corn, three cups boiling water, two cups milk, one tablespoonful butter, two tablespoonfuls of flour, one egg, pepper and salt to taste. Drain the liquor from the corn and chop the latter fine; cook it in the boiling water for an hour, rub it through the colander and return it to the fire. Have the milk hot in a farina kettle. Thicken it with the flour and butter; season; and pour a little at a time upon the beaten egg. Stir this in with the hot corn *puree*, and serve at once.

TAPIOCA CREAM.—Soak three heaping tablespoonfuls of tapioca over night in just milk enough to cover. In the morning add it to one scant quart of new milk and boil about ten minutes, being careful not to burn. Beat the yolks of three eggs and one-half cup of sugar well together and add to the boiling milk, let it boil up, then take from the fire; flavor as desired. (I use one teaspoonful of vanilla.) Pour in a pudding dish, spread over it the beaten whites, and set away to cool. Serve as cold as possible.

TOMATO CHUTNEY.—Bake the tomatoes in a pan till tender, pour away the liquor, add to one pound of pulp one pint of vinegar, one ounce of salt, three-quarters of an ounce of garlic, one-quarter ounce ground white pepper, one teaspoonful of cayenne. Boil all together till the garlic is tender, then press it through a sieve; add to every pound one pound of sliced apples, one-half pound stoned raisins, one-quarter pound moist sugar and the juice of three lemons. Boil all over a slow fire till the raisins are tender, turn out of the saucepan, and when cold, put it into jars closely covered with bladders.

GOOD HEALTH

The Consumption Cure.

Nothing in the progress of medical science has excited such a sudden and world-wide interest as the recent discovery of Dr. Koch of a cure for consumption.

Dr. Koch has been seeking a cure for consumption for several years. He has conducted his inquiries from the first on the theory that consumption was caused by micro-organisms, although his medical confreres were at first disbelievers in the germ theory; but the doctor kept right on in that line. He began by pure cultivation of the bacillus, and found ethereal oils, tar pigments, mercurial vapors, salts of gold and silver, and especially cyanide of gold, efficacious in destroying the germ, *but this could not be done* in the *body* of animals without also destroying the animal.

"I continued my search," he said in a recent address, "and at last *found what I sought!* Susceptible as the guinea-pig is to the tubercle bacillus, it proved *non-inoculable* when treated with the substance in question. Even when the disease was *far advanced*, it could be brought to a standstill by this means."

This fact may give occasion to search for similar effective remedies in other infectious diseases also, and here lies the field for an international contest of the highest and noblest kind.

His preparation for this cure is a transparent liquid, which is injected subcutaneously, at first in infinitesimal, but gradually increased quantities. When taken into the stomach, it has no effect. The effect of the injection is to produce necrosis, or mortification of the tubercular tissue, in other words, to kill the bacilli in the lungs or in whatever organ attacked. Once killed, nature tries to expel the corpses, as it does with all dead tissues; and here the aid of the physician or surgeon may be required to complete its purpose. When the necrotic matter is expelled from the system the patient is cured, though the treatment should be continued for awhile in order to prevent fresh settlements of bacilli. Dr. Koch is careful to say that his system is only likely to succeed in the early stages of tuberculosis; where there are large cavities in the lungs, in which bacilli are lodged in great numbers, he doubts the power of the fluid to expel them; but in the earlier stages of the disease he is inclined to be confident of the efficacy of his remedy.

The doctor keeps to himself the secret of his discovery. He has not revealed the material employed in its manufacture, or the method of its preparation.

It is said that patients who have been treated in the early stages of consumption have been freed from the morbid symptoms within from four to six weeks, when they may be regarded as healed. Consumptives with large cavities in their lungs will probably experience a benefit from the new remedy only in exceptional cases. In all cases, Prof. Koch emphasizes the necessity of early treatment. Only in the incipient stages of the disease, he declares, can the remedy fully develop its efficacy. He deprecates the mechanical and indiscriminate application of the remedy, holding it preferable that the treatment should be applied in suitable institutions where careful observation is possible.

This cure received its first great impetus during the World's Medical Congress which recently met at Berlin, and was attended by physicians from all parts of Europe and America. Since that time hundreds of medical men, not attendant upon the Congress, have visited Berlin to acquaint themselves with the treatment. Hospitals are also being established in many of the large cities in Europe and this country for this special treatment. It is said that there were some 1500 foreign physicians in Berlin on the 16th instant.

This treatment has been tried for lupus of the face—a variety of cancer—but has not proved altogether successful. In one case, treated by the doctor himself, it has again reappeared, as it generally does after treatment with the knife.

Can Cancer Be Cured?

Prof. Billroth holds that Koch's method places beyond a doubt that a remedy will be found before long for cancer. If the medical faculty of this State would only do its duty, it would be able to prove to the world in less than a month that there is already a "cure for cancer" in this city—that scores of cases which have been pronounced as unmistakably cancer by the leading physicians of this city and State and by many such in New York, Washington, and other Eastern cities, have been cured without the use of the knife or plasters.

Objection is made to investigation here for the reason that the practitioner, although a regularly licensed physician, refuses to divulge her secret. The medical faculty of Europe does not place such a hindrance in the way of investigation; for Dr. Koch, like our San Francisco physician, also refuses to reveal his secret.

Dr. Koch is not without his doubters, although about the only criticisms thus far have come from French medical men, some of whom advise incredulity until the *nature of the remedy is fully known* and scientific proof given of its effectiveness—thus following the footsteps of our San Francisco physicians. The cancer cure discovery which now in a great measure lies dormant in this city, will soon be brought more prominently before the public.

The Week.

The RURAL goes to press one day earlier than usual this week to allow the employes of the office an opportunity to give thanks on the National holiday. The markets as well as the homes and the churches show the signs of Thanksgiving week. The country has contributed liberally of thanksgiving cheer this year, and the result is poultry prices more pleasant to consumers than to producers.

Signs of a turn in the weather are hailed with satisfaction, though they are so far exceedingly faint. Slight showers have fallen in the upper coast region, but generally the dust holds undisputed sway and nothing but dry work can be done in field or garden. A good storm is needed to awaken activity and banish foreboding. The sooner it comes now the better.

The Fruit-Growers' Convention at Santa Cruz was a great success in every way. The hosts were untiring and cordial, and the guests were happy. Good, solid and interesting work was done at the meetings, as our reports from week to week will show.

MUST DIE BY ELECTRICITY.—The Supreme Court of the United States has affirmed the judgment of the Supreme Court of the State of New York in the case of Shibuya Jugiro, the Japanese murderer who is condemned to be executed by electricity.

Greatness of the Dairy Interest.

We are becoming so accustomed to statistics of the fruit industries that we are perhaps apt to lose sight of the greatness of the leading branches of agricultural production. The large figures of cereal crops are received as a matter of course and excite little interest except as the statistics play an important part in fixing market values, and one seldom thinks of exclaiming about them. The statistics of the poultry interest are magnificent and do excite wonder at their vast aggregate, made up as it is of so many small and little noted items. The greatness of the dairy interest of the United States is very seldom thought of.

The forthcoming results of the census of 1890 will ere long give us new and, we trust, more trustworthy data than are now current concerning all our agricultural specialties and will fix California's place among other producing States. Of course in cereals and fruit we shall expect a high place, as in some other specialties which we export largely. Our dairy interest has not yet been built up in this way, although there are directions in which such extension would seem practicable. However, all engaged in dairy production will be interested in the following general review of the interest of the nation, which is given in the *American Analyst*, the source of the data for the estimates not appearing:

There are $2,000,500,000 invested in the dairy business in this country. That amount is almost double the money invested in banking and commercial industries. It is estimated that it requires 15,000,000 cows to supply the demand for milk and its products in the United States. To feed these cows 60,000,000 acres of land are under cultivation. The agricultural and dairy machinery and implements are worth $200,000,000. The men employed in the business number 750,000, and the horses over 1,000,000. There are over 12,000,000 horses all told. The cows and horses consume annally 30,000,000 tons of hay and nearly 90,000,000 bushels of cornmeal, about the same amount of oatmeal, 275,000,000 bushels of oats, 2,000,000 bushels of bran and 30,000,000 bushels of corn, to say nothing of the brewery grains, sprouts and other questionable feed of various kinds that are used to a great extent. It costs $45,000,000 to feed these cows and horses. The average price paid to the laborer necessary in the dairy business is probably $20 a month, amounting to $180,000,000 a year. The average cow yields about 450 gallons of milk a year, which gives a total product of 6,750,000,000. Twelve cents a gallon is a fair price to estimate the value of the milk, at a total return to the dairy farmers of $810,000,000, if they sold all their milk as milk. But 50 per cent of the milk is made into cheese and butter. It takes 27 pounds of milk to make one pound of butter, and about ten pounds to make one pound of cheese. There is the same amount of nutrition albuminoids in 8½ pounds of milk that there is in one pound of beef. A fat steer furnishes 50 per cent of boneless beef, but it would require 24,000,000 steers, weighing 1500 pounds each, to produce the same amount of nutrition as the annual milk product does.

These are certainly great figures and can be examined with interest by one who knows something of the dairy interest of the United States a quarter of a century ago, when exports of dairy products were but beginning and when, except in a few localities in the extreme East, dairy work was done in the rudest manner and the commercial product was a by-word. In all our agricultural progress probably nothing has been greater than the advance in dairying. Everything from the pasture to the package has been improved and advanced almost out of sight of its original type and form.

THE EASTERN BARLEY SUPPLY.—The Albany, New York, *Journal* announces that the reported visible supply of barley is a myth. There was no doubt at the commencement of the barley season that over 1,000,000 bushels was brought forward on the books without verifying the amount. Then again two-thirds of the barley on the lakes and canals counted in the visible supply has been sold to arrive. And again more or less reported in the visible is now in malt. And again thousands of bushels in the elevators counted in the visible have been sold to maltsters and brewers and never will come on the market except in the way of malt or beer.

MENDOCINO STATE ASYLUM.—The cornerstone of the Mendocino State Asylum for insane will be laid by Governor Waterman, assisted by the Masonic Lodge of Ukiah, on December 9th next. The site of the institution is about three miles southeast of Ukiah, near the Russian river, and in a grove of live oak trees. There will be eight buildings, which will accommodate 500 patients, and these will cost about $290,000.

A Jersey Peach Story.

Evidently the Eastern newspaper writers grow weary of the greatness of California fruit stories and have started in upon yarns located nearer home. The following was telegraphed from Flemington, New Jersey, on Monday of this week:

Hunterdon county has one farmer, Edward Warden, to whom the peach crop this year was not a failure. He has a little 30 acre farm that is not worth over $2000, but next Thursday he will give thanks for $15,000 in cold cash that his little stretch of land has just brought him. Most of the farm is devoted to peach culture, and for several years he has been somewhat unfortunate in its limited productions, but this summer it surpassed the history of any farm in the country. It was the only farm in the State that gave an abundant crop. While other orchards were entirely devoid of fruit, its trees were loaded down. The good farmer read newspapers and occasionally visited neighboring farmers, and when some New York speculators found him out and told him that peaches were a drug on the market, he listened attentively and said nothing, but bought some double-barreled shotguns for himself and his three sons. Night and day these four men divided up the watch and kept vigilant eye over that precious ripening fruit, till at last the peaches were safely harvested, and the wily speculators, convinced that the farmer was no moss-back, laid down $15,000 in crisp American gold certificates and the entire crop became theirs. In this way the Hunterdon county farmer reaped a profit of 750 per cent on the actual value of his land, which is doing well for a Jersey farmer this year.

This is a touching tale. It is, of course, possible that there may be a backbone of truth supporting the structure, but it must exist in the face of all signs to the contrary. That one farm should be loaded while "all other orchards were entirely devoid of fruit," is of course possible, but unlikely. The picture which the writer gives of the harvesting and transfer of the crop will strike the fruit-grower as not quite true to nature. It would appear that all the peaches from 30 acres were picked, packed and stacked up under cover of four shotguns until the speculator brought out his $15,000 in greenbacks—"and the entire crop became theirs." We could believe that the speculators might have bought the crop on the trees and then handled the shotguns themselves while the fruit was being picked, packed and shipped in ordinary course, but the way the thing was done as described by the reporter, though possibly correct from a dramatic point of view, hardly seems probable from any other. We hope the Jerseyman got the peaches and the money, and if so we advise him to come out and invest it in good California, where he can sleep and enjoy himself while the peaches ripen and not be marching around amid the malaria and mosquitoes for fear of losing his crop.

A Country Worth Looking After.

A bill providing for the exploration of Alaska and appropriating $100,000 for that purpose has been placed on the calendar of the House of Representatives. By the provisions of this bill a detail from the army is to be stationed in the interior of the Territory and there retained for such length of time as will enable the same to be thoroughly explored and its mineral and other natural resources ascertained, as far as may be. This bill ought to be enacted into a law as soon as possible.

While the exploration of most other portions of the public domain may be left to be effected by private enterprise, this will not do with Alaska. With its rigorous climate, long winters and short summers, with its mountains, morasses and rivers, its extent and remoteness, neither individuals nor small parties, nor yet large companies, are equal to the task of exploring this vast and gloomy region. This is a business that will even severely task the resources of the General Government, if it is to be soon accomplished and with much thoroughness.

The work is one of great difficulty and appalling magnitude. The climate and conditions throughout are about as bad as they well can be. The weather is more or less stormy most of the year, frequent and heavy rains in the summer and deep snow falls during a good part of the other months. The cold is intense, ice forming on the lakes and all but the larger streams to a great thickness. The distances to be traversed are frightful to contemplate. The Pribyloff Islands, the center of the seal fisheries, lie 500 miles to the westward of the Alaska Peninsula, which in turn is a thousand miles west of the long coast strip, site of the gold mines now being worked. But this strip, though nearly a thousand miles long and comprising an area larger than all the New England States, constitutes a mere outlying fragment of the main Territory.

This distant province is becoming an important portion of the republic. The exports for the past year amounted to $10,000,000, $2,000,000 of which were gold. The output of the mines will be likely to increase rapidly hereafter, coal, lead and copper coming in to supplement the product of the precious metals. After a time lumber will be exported and possibly ice, the curing and canning of fish expanding meantime into an immense industry.

In view of such probable growth, the boundary line between this country and British Columbia should be ascertained and fixed as soon as practicable. A regular form of government should also be provided for the Territory, to the end that the inhabitants be enabled to enact such local laws as may be needed and otherwise manage their home affairs. Alaska is worth looking after and should in no vital particulars be neglected by the General Government.

A Reported Squeeze on the Northern Wheat-Grower.

If reports are true, there is work for the Interstate Commerce Commission in the Palouse country of the new State of Washington. It is hard to believe that the policies charged in the account we shall print below could be held and put in practice in this enlightened age, and yet we know only too well that the only way to guard against such things is to make them impossible. We find in the Portland *Oregonian* the following:

COLFAX, Nov. 19.—Circumstances are continually coming to light in corroboration of the story that a gigantic wheat ring has been formed and is now in the act of consummating. This belief is general throughout the Palouse country, and is not confined to individuals. It is believed by the most substantial business men that it is based on known and irrefutable facts, notwithstanding the denials of railroad and elevator officials.

The facts and suspicious circumstances are as follows: Fewer cars are being furnished by far in this section than at the same time last year, notwithstanding the much greater demand this year. The elevators are not buying except to advance to the holders of warehouse receipts at 40 cents per bushel in a few instances. Nobody else is buying because transportation facilities are denied and every warehouse is full. The price has already sagged to 42 cents and some sales have been made for less. A resident of the Palouse of good standing recently returned from the East and says that he saw acres of idle cars in the yards of the Northern Pacific at St. Paul. Offers have been made by local dealers from Denver and St. Louis which would have enabled them to pay farmers at least 55 cents a bushel, notwithstanding the high tariff rates. These are only a few of the facts. The Palouse farmers don't care which way their wheat goes, so that it is transported to some available market. When the grain fleets come to Portland and Tacoma the wheat will go out from there much more rapidly, but cars will not be furnished to transport it East out of the hands of the elevator companies, and when the wheat goes to Portland and Tacoma at normal prices it will belong to the railroads and elevator companies. The Portlander who wanted to find wheat at 45 cents could have bought it to-day for 42 cents, and to-morrow will probably be able to get it for 41 cents.

It is little wonder that farmers are restless and determined, in fact almost desperate, when such robbery is practiced upon them. It may be expected, too, that they will have the support of the whole fair-minded community in their efforts to protect themselves against such highwayman-like proceedings. The only hopeful thing about the occurrence is that grasping greed may speedily overreach itself and work its own cure. The tide in our public affairs seems to be strongly turning toward the securing of producers' rights, although glaring instances of the opposite, like that described above, are still too frequent. The cure will be just regulation of public servants so that they shall not be instead public masters. This can be gained by co-operation and association of the people to secure their rights and to maintain them by legislation. The realization of such a blessing and benefit cannot be long postponed,

HORTICULTURE.

The Fruit-Growers' Convention.

The Fourteenth Convention of the California Fruit-Growers assembled Tuesday morning, Nov. 18th, at Y. M. C. A. hall, in Santa Cruz, under the auspices of the State Board of Horticulture.

President Ellwood Cooper called the convention to order, after which Rev. Mr. Perkins of Alameda offered prayer.

Col. W. H. Aiken of Highland and Dr. H. H. Clark, president of the Board of Trade of this city, were chosen vice-presidents. Mayor Bowman of Santa Cruz was introduced by Mr. Cooper and made a brief address of welcome in a very happy vein. Another address of welcome was delivered by Mrs. W. H. Aiken of Highland and very well received.

President Cooper presented his customary opening address, which we will lay before our readers at another time. These exercises, with interesting remarks by Dr. J. A. Stewart on olives and W. H. Aiken on the World's Fair, occupied the time allotted to the morning session.

California Prunes.

At the afternoon session several interesting essays were presented. One by W. H. Aiken on the prune; another by Robert Hector of Placer county on the cherry, and a third by Luther Burbank of Santa Rosa on new fruits. The following is Mr. Aiken's essay:

The prune-growers of California have reason to feel encouraged at the present and future prospects of their great industry.

They have to be congratulated especially upon the protection of two cents per pound the new administration has granted in the new Tariff law, in answer to their persistent efforts and petitions to Congress for many years.

This Government aid is proper and timely as a protection to the American prune against the foreign prune raised and prepared for our market in great and increasing quantities by cheap labor. Unaided in competition with foreign prunes for the American market, Americans would fail to make a living and pay American wages.

As to the policy of protecting by high tariff manufactories, there may be honest doubts, but there should be no reasonable doubt as to the propriety and justness of the protection of the prune, a product of our soil, requiring so much skillful and expensive labor in this country.

The soil and climate of this State is better adapted to the growth and preparation of the prune than any other State in the Union, and upon this great growing industry our country can depend for a sufficient quantity of this healthful food fruit at such reasonable prices as are consistent with a just reward for the enterprise and expense.

With a reasonable certainty of permanent protection we can safely enlarge our prune orchards, increase the care and expense of prune culture and preparation for the market of the United States without much fear of overproduction.

Increase of production and competition will no doubt result in cheapening the fruit and increasing the consumption, the demand ever in advance, as we believe, of the production, thus assuring the producer good profits.

The crop of prunes in 1890, comparatively light, will not supply much more than one-tenth of the demand for California prunes at reasonable prices, so there can be no immediate danger of overproduction.

The Prune of Commerce.

The prune of commerce in France, known under the name "Prune d'Ente," first grown in California at San Jose by Louis Pellier in 1857, has become the prune of commerce in California, and is successfully competing with its French ancestor for dominion in the prune market of the United States.

The California prune is already the favorite at an advance of about two cents in price, owing to its rich, fruity flavor and bouquet, and especially to its endurance or quality of keeping for years without much if any loss of weight and condition.

The foreign secret of preserving and packing prunes is practically unknown to us, and they may keep it if they wish, as we do not need or care to know what it is.

One thing is certain, we have built up a trade and demand for the California prune in this country, and foreigners are actually trying to get our trade away from us by an imitation of our simple methods of preparation and packing for market.

The California prune is simply a dried fruit, not a foreign cooked fruit.

Our prune is prepared and marketed usually in this manner: The fruit is gathered when ripe and placed upon drying trays in the open air after having been dipped in hot lye-water and rinsed in clear water in order to crack the skin and cleanse the fruit. A week of our usual September weather will dry the prune sufficiently for the bin, when, after sweating for about two weeks and dipping in pure hot water, it is bagged or boxed for the market. The fruit should be perfectly ripe and perfectly dried; the process is simple and can be easily and neatly accomplished. By "perfectly dried" is not meant dried to kill, but only dried to cure. Driers are used when sun-drying is not practicable. Grading the prune either before or after drying is quite generally practiced, and is advisable.

The prune grown in California is no doubt the true prune of commerce grown in France: the slight differences in color, taste and size are owing to the heat, moisture and soil where grown. The tree is hardy and prolific in annual crops and can be profitably grown in most of the fruit districts of the State. There are no doubt prune districts where soil and climate combine to produce an abundance of fine, large, rich fruit, and where sun-drying is successfully practiced. The number of such favored spots have increased year by year and are now too numerous to mention. The root on which the prune should be grown depends upon the nature of the soil and lay of the land. The prune budded upon the peach root is preferred for planting in light, warm, well-drained soil, while the plum root is usually grown in land not adapted to the peach root.

The loss of trees from excessive moisture has resulted mainly from planting the peach root in soils not adapted to such a soft, spongy root, and also from planting the root too deep in the ground.

The heat of our spring sun warms the soil about the root, the natural flow of sweet, healthy sap starts the tree into a thing of life, of beauty, of blossom and of profitable fruit. Whenever you have doubt about your land being suitable for successful prune culture, owing to death of the tree or failure to bear in the vicinity, you had better raise some other kinds of fruit that have been successfully grown.

The training of a tree, year by year, in the way it should grow, requires thought and industry. No definite rule of action can be given as to the pruning of the prune tree, grown as it is in such a variety of soils and climates.

Beauty of form, bearing space and strength of limbs are of first importance, and any system of pruning that will lead to these results and not crowd the tree with too much wood and consequent small fruit is worthy of careful study and practice.

Having read a paper before the Sacramento Convention in 1885 upon prune culture in California, in which the uses and values of the several kinds of prunes were fully discussed, it is not deemed advisable at this time to speak of any prune other than the one known to the trade in this country as a "prune."

The essays by Mr. Hector and Mr. Burbank we hope to give at another time.

Insects and Their Repression.

Wednesday morning was occupied with essays and discussions about insects. Mr. Wickson spoke on "Entomology in the Public Schools," Mr. Alexander Craw on "Insect Friends and Foes," Mr. H. K. Snow on the "Gas Treatment for Scale Insects." Some of these we hope to present hereafter. The feature of the morning, however, was the formal recognition of the services of Albert Koebele, the discoverer of the scale-destroying virtues of the Australian ladybird, and to this proceeding we will now give such space as we can command.

Honors to Albert Koebele.

President Cooper announced that he would vary the program a little. He called for Albert Koebele, who stepped forward to the platform. Mr. Cooper then read the following address:

I have been requested to make a presentation at this convention—the occasion and subject being considered of sufficient importance to have the ceremony recorded and have it appear in our horticultural literature.

In the month of August, 1888, Mr. Albert Koebele was sent to Australia for the purpose of searching for and procuring a parasitic insect to destroy the Icerya purchasi, commonly called the white scale, or in the hope at least that one might be discovered that would counteract the ravages of this terrible pest. The result of that voyage is too well known to most of our fruit-growers for me to enter into details of what has since taken place. Those who may not be acquainted with the history, I refer to the biennial report of 1885–86; pages 379, 380 to 397; the annual report of 1889, pages 207, 208 266 to 271 and 385; and the report of 1890, pages 53 to 558.

It may be well for me, however, to speak briefly of the actors that have brought about such wonderful results. The Australian beetle, "Vedalia Cardinalis," was classified and named many years ago by Mulsant. The function of this beetle was discovered by Albert Koebele. While it was known in Australia that some parasite was destroying the white scale, its disappearance was attributed to an entirely different insect. So that to Albert Koebele alone is due the honor of discovery. His name will live in this connection as long as our civilization exists.

The circumstances leading up to the mission of Albert Koebele are fully laid down in the essay of Geo. Rice to be found in our report of 1890, pages 53 to 58. A vote of thanks was tendered by the fruit-growers at the Los Angeles convention to the Hon. Frank McCoppin (see page 61 of this report). When an important commission is tendered to an individual having the confidence of Government and accepted, if the service performed renders great good to the country, we call it statesmanship; and certainly the part that the Hon. Frank McCoppin took in furthering the discovery, the fact of his earnestness to serve his country well and his foresight in consulting and advising with his friends that he might serve all, entitles him to an honorable consideration.

Let us consider that, although for more than ten years our most experienced, most intelligent and most determined citrus-growers were fighting the white scale, communities quarantining against it, it was gradually increasing and spreading so that devastation appeared certain, all our efforts baffled, our hopes on the verge of despair and ourselves ready to bow to the inevitable and admit that we were powerless in the hands of this insect, when a few of these little ladybirds placed in our orchards, with their marvelous work, silent and unseen, in a few short months completed the extermination. Do we realize it? Can we realize it? Can we comprehend the wisdom of such a provision in Nature? Has this lesson been seriously impressed upon our minds? A short period since, this pest engaged the attention of fruit-growers more than any other one thing. To-day we have forgotten it, and not a thought is given to what was the most alarming enemy of the fruit-grower. Will we profit by this experience? If so, we will have without delay competent agents searching for parasites to destroy all the insect pests that disturb our fruit and fruit trees.

I was much impressed by the article written by Burnet Landreth, president of the Pennsylvania Forestry Association, published in the *Garden and Forest* in December, 1888, pages 500 and 501. The substance of this article is pertinent to the subject I am considering. Mr. Landreth was a member of a firm owning 5000 acres in Eastern Virginia, on the Lower Chesapeake. About two-thirds of this land was covered with the original and second-growth pine, some hardwood interspersed. Among the native deciduous trees were found chestnut, walnut, ash, oak and others. These gentlemen concluded to try forest planting on this tract. In 1870 and 1871 100 acres were planted with black walnut and eight acres in chestnuts. In 1872 to 1879 they planted 150 bushels of black walnuts, 34 bushels of chestnuts, 4 bushels of black locusts, with 105,000 seedling trees, 5000 Southern cypress, 5000 European larch, with 1½ bushels of seeds, 10 bushels of hickory nuts, 3 bushels of tulip poplar, 3 bushels of pecans 10,000 ailanthus, 16,000 white ash, 1 bushel of white oak acorn, 17,000 catalpas and 10 bushels of seeds. Besides the above, some white pine, Douglass spruce and Douglass fir were planted.

They report "black locust" as follows: Some of them were 12 feet high. They gave promise of a fine locust forest. One September the locust-tree borer descended in swarms, laying millions of eggs, which produced myriads of grubs, and by next midsummer every tree was ruined. We cut them down and pulled out the roots, at an expense of $25 per acre. The European larch gave out in the trunk, the main stem breaking off at about 12 feet. The southern cypress next failed. The hickory and pecan nuts were to a large extent stolen by squirrels, woodchucks and field mice. Those that did grow were plowed out and the ground replanted with catalpas. The tulip poplar was not a success, as the rabbits and field mice during the winter ate off from the tender seedlings the sweet, juicy bark and destroyed nearly every plant. The white oak acorns were largely stolen by animals, which also ate the bark of the young seedlings. In short, with us, black locusts, deciduous cypress, European larch, hickory, pecan, tulip poplar, white oak, osage orange, wild black cherry, ailanthus, white ash, mulberry and some others have all failed. Of the catalpa we have abandoned several tracts, and, after most serious ravages by stray cows, half-wild pigs, rabbits, squirrels, mice and fire, have about 200,000 trees left. Two years ago every tree was denuded of its leaves, within a period of a month, by the ravages of the catalpa sphinx.

This certainly is a very discouraging record and is a matter for serious reflection. When Nature plants a forest she makes no mistakes. She plants the right trees in the right place. In the forest she plants flowers, animals, bulbous roots, flowering shrubs and vines. All flourish in their beauty and grandeur. No enemies, insect or animal, materially disturb it, at least until invaded by man. If we wish to succeed, we must follow nature. We have in the above an example where capital sought investment, the ultimate object being increase. On the other hand we find capital going into our mountain regions, covered with dense forests, in localities unsuited for farms or homes; and with mills and machinery, the owners cut down the forests and reduce them into merchantable lumber, devastating whole regions merely that the investment may be largely increased, and have no care for the consequences. We permit it.

Evidences prove that intelligent races, which once flourished, are now extinct, having disappeared from the face of the earth. Historians tell us that they were overrun by barbarians. I dissent from that opinion. It was wrongdoing, wrong living. They destroyed themselves. Do you believe that any portion of the earth's surface, before it was invaded by man, was ever devastated by floods or drouths? I do not. These things come by man's destroying the equilibriums. All things were created for our use, our development, but we must make proper use of them. We witness from year to year great climatic changes from the former condition of even a hundred years ago, unprecedented storms, tornadoes, floods and drouths. In society are even more formidable destructive elements, monopolies, syndicates and trusts, accumulated capital with its power tampering with the very vitals of our republic. The pests are among us, and if we do not live rightly our destruction will surely come.

Mr. Albert Koebele, you will please rise. It gives me great pleasure to present you with this token of appreciation on the part of the State Board of Horticulture and the donors of your services in the discovery of the Australian lady-bird. It is more than probable that you will be invited to make other voyages in search of parasitic insects. Your vocation, your profession and your experience fit you especially to do this work. That your life and health may be preserved and that whatever mission you are called upon to undertake may be as fruitful as your mission to Australia, is the earnest prayer of the fruit-growers.

President Cooper then extracted from his pocket an elegant gold watch which he presented to Mr. Koebele in behalf of the fruit-growers of California, and a pair of diamond earrings neatly incased for Mrs. Koebele. The balance of the fund which has been donated for the testimonial and not expended was also presented. Mr. Koebele very graciously accepted the testimonials, and on motion a recess was taken to enable the fruit-growers present to personally meet Mr. Koebele and express their appreciation of his work.

When the convention was again called to order, the session was thrown open to the discussion of insect pests and kindred topics.

FLORIST AND GARDENER.

The Eschscholtzia.

[Read before the California State Floral Society by Miss B. M. PRATT.]

In 1814 Count Romanyoff, a Russian nobleman, fitted out the ship Rurick for an exploring expedition, and the same year it left Russia in charge of Captain Otto von Kotzebue. After two years spent in exploring, mainly with a view to finding a Northeast passage, they sailed south, and in October of 1816 we hear of them in the bay of San Francisco, where our interest in their voyage and discoveries really begins. Among the party was Adelbert von Chamisso, a naturalist and writer of note, who discovered our beautiful California poppy and named it in honor of his friend, Dr. J. F. Eschscholtz, the physician of the ship, who was himself a naturalist and thought the discovery of sufficient importance to publish, upon their return to St. Petersburg, a special paper in regard to it before making their full report of the voyage, making this one of the first, and probably the very first, of our California wild flowers to be named.

Which of all our famous beauties is more worthy to represent our State than this hardy little native, which stood on the cliffs overlooking the ocean and saw the first ship come in sight, pass and enter the Golden Gate, and has since welcomed so many strangers from all parts of the world, for it is among the first to greet them at almost any time of the year, growing nearly to the water's edge at the Golden Gate up to the high Sierras and north or south, helping to give those wonderful first impressions and a reason for the name of the Golden Gate. The sight of a field in full bloom, with their reflection in their spotless beauty of our bright, cloudless sunshine and clear atmosphere, glowing with such an intense color that the field seems on fire, is as impossible to forget and as much a part of the memories of a California trip to a visitor as the Golden Gate, Cliff House, fields of wheat, the Big Trees or even the Yosemite.

Or to our old friends and neighbors who are living now in other countries, what other flower will bring so clearly a memory of their former home, of a trip to the country in the early springtime, or perhaps a camp in the mountains later in the year, than this little blossom, which, though yielding readily to cultivation and blooming now in nearly all parts of the world, is still a Californian and always has a homesick look when abroad, which a fellow-feeling in its countryman easily recognizes. Even in its budding and unfolding one can read a part of the history of the State, for the calyx does not slowly open as the flower expands, showing us gradually the opening flower, but gives us almost its first hint of the beautiful golden petals hidden within the little cap by throwing it off and appearing before us a fully developed blossom—as sudden a change as the other discovery of gold brought to the State, which has since been such a wonder to the older and more slowly developing country.

Like those early Franciscan Fathers and the pioneers, who, with their energy, patience and courage overcame difficulties that would have seemed impossible to others and who have helped so much to make our pleasant homes, our little friend takes life as it finds it, making the most of its situation, blooming bravely on in the most unpromising places until rain and prosperity come; then, with the ready generosity which its people have learned, springing into fuller bloom, deepening its color, and adding happiness and beauty to all.

In choosing a floral emblem for a State, it is desirable that the flower should be a native, and not only widely distributed but striking, so that everybody may thoroughly know it, and that it will be among the first to attract the attention of the children and so connected with their earliest memories, but that it should be beautiful, easily represented in paintings, carvings or architectural designs; and for this State it seems specially desirable that the

flower should be golden in color. All these requirements this little blossom fully satisfies. The typical flower is found only within our borders, though varieties occur as far north as Washington and southeast to Texas—about 10 in all, varying in manner of growth, color or both, one of them having been found by Prof. and Mrs. Lemmon of Oakland and named for them; but the Eschscholtzia, as we know it, is never found outside of our State. One has only to watch the children coming home from a trip to the country to see which flower they love best. It is one of their greatest delights to pick a whole armful, and the quantities the florists gather and bring to the city show that the older people fully appreciate their choice. No other California wild flower is so widely known or so highly prized as this, and surely no other has been painted so many times. In a trip through the art gallery of the last Mechanics' Fair, I counted nine paintings of Eschscholtzia and one each of several other varieties of wild flowers, and probably every artist or gallery in the city has at least one.

Both flower and foliage are well adapted for carving or decorating our buildings or banners, and who can describe its color? All the golden emblems of the State combined seem to be needed to give this wonderfully glistening, brilliant, intense coloring, which after all can never be represented, and, like so many other wonders, people must come here and see to fully appreciate.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

GRAPE SHIPMENTS.—Haywards *Journal*, Nov. 22: Thirty carloads of dried grapes—560,000 pounds—have been shipped from Livermore this season. During the past month there have been shipped from Livermore 43,750 gallons of wine and 168,330 pounds of green grapes.

Butte.

CATTLE STEALING.—Gridley *Herald*, Nov. 20: While gathering cattle together on their Butte creek range, Doc Evans discovered that 110 head of choice beef steers were gone. Since that time, now over three weeks, an active search has been made for the stock, but in vain. A stockman south of R. & E. range lost about 35 head at the same time.

ORANGE NOTES.—Oroville *Mercury*, Nov. 21: Last night Frank A. Howell, representing W. R. Strong Co. of Sacramento, arrived in this town to purchase all the oranges possible. He will purchase them on the trees and pack them himself, or purchase them laid down in Sacramento. His company desires to ship a carload of Oroville oranges to Chicago in time for Christmas if possible. If so, he promises to carefully wrap the fruit and brand them "Oroville oranges." J. R. Jackson and Frank A. Howell have been among all the bearing orange groves in and about Oroville, and they estimate the crop at 1800 boxes or six carloads. They believe that Jos. Gardella has at least 350 boxes on 85 seedling trees—about one acre. Thus we have an idea of the value of an acre of Oroville seedling oranges, and some of Jo's trees are bearing their first crop.... Oroville *Register*, Nov. 21: Major A. F. Jones has some of the finest orange trees in Oroville. This week we noted a number of large and thrifty orange trees planted in the spring of 1886. The seedling trees were fully six inches in diameter near the ground, and were loaded down with fine oranges. He has Mediterranean Sweet trees planted the same year that are marvels to behold, and a number of Washington Navels that are fairly bending to the ground with their crop.

BIG BEND CANAL.—Oroville *Mercury*, Nov. 21: A. K. Beatson, Superintendent of the Big Bend mine, informed a *Mercury* reporter that he had just completed the survey for the immense canal that is to be. "I started in three months ago at the mouth of the big tunnel, with a crew of men, and I have made a most complete survey of the proposed, and what I think the most feasible route for the irrigating canal. The canal will be four feet deep, four feet wide at the bottom and six at the top. One and one-half miles of the ditch are already dug, but this was done some time ago. The proposed route covers about 32 miles and comes down from the Big Bend country skirting to the north and east and finally south of Oroville to the vicinity of Wyandotte."

Colusa.

THE IRRIGATED PEACHES.—Willows *Journal*, Nov. 22: Wm. Clark has a few trees on his place in town. He has a few peach trees, and up to this season concluded that variety of tree and the climate and soil of Willows were not suited to each other. His fruit was very small and bitter and in fact not fit for use. This year he concluded to irrigate, and to say that the results have been satisfactory is mildly expressing it. His crop was heavy, and in place of the little, bitter peaches of former years, he had large, luscious ones, many of which were ten inches around. Mr. Clark is a firm advocate of irrigation.

El Dorado.

DRYING GRAPES A SUCCESS. — Placerville *Democrat*, Nov. 22: The demand for grapes for wine-making, and the rapid growth of the industry of drying grapes for Eastern shipment, to be there made into wine, has opened a market this year for all the grapes raised in the county, which have been sold to outside buyers at about $10 per ton for the Mission variety. Heretofore there has been no market for grapes in this county, and grape-growers have been discouraged, but this year they inform us that there has been a market for their grapes, though the price is small, and that hereafter they will begin to take care of their vines, in the hope of a steady market and increased prices.

Inyo.

THE BIG CANAL. — Independence *Inde*x: Chief Engineer Brooks and his party of surveyors, including Messrs. Carroll, Bailey, Slack and others, completed the preliminary survey of this end of the Owens River and Salt Wells Valley Canal on Saturday last. Commencing at Haiwee, Sept. 30th, they ran up the valley on the west side on a grade of six inches to the mile, striking Owens river at Wm. J. Lake's place, just above Independence Station, Nov. 1st. The length of the canal will be 51 miles, and in size it will be eight feet deep and no less than 60 feet wide. This will carry an immense volume of water, the surplus of which will be stored in great reservoirs at Little Lake and other convenient points below Haiwee for the irrigation of Salt Wells valley. It is even thought that more water will be obtained than sufficient for that purpose and that a considerable surplus can be carried to the Mohave desert. The great canal will be built on the best known plan, smooth and clean, and the banks planted with grass and useful and ornamental trees, such as fruits, nuts and timber. These will be rented by sections and are expected to yield more than enough to pay current expenses of running the canal and keeping it in repair. Another feature of this great scheme is the placing of steamboats in the canal for the carriage of passengers and freighting, it being estimated that from 15 to 20 miles an hour can be made easily and cheaply.

BLACK WALNUTS —Bishop, Nov. 13: David Olds of Round Valley raises many bushels of the regular old black walnuts every year from trees raised from nuts he planted in his dooryard some 20 years ago. These trees have grown splendidly, and even now would do for lumber, and of the most valuable kind originating from American forests. Mr. Olds will run furrows along his fence lines and elsewhere in suitable places, in which he will plant bushels of these walnuts, and there, ere many years, will doubtless stand hundreds of trees both handsome and valuable, yet costing no more trouble to raise probably than so many comparatively valueless black willows.

Kern.

ANOTHER FRUIT FARM.—Bakersfield *Echo*, Nov. 20: For several years Sol. Jewett has owned a fine section of land a few miles west of Bakersfield, which has been almost entirely seeded to alfalfa. Of the 640 acres at least 100 acres will be prepared this winter for fruit. The handsome profit realized by the peach-growers will cause him to plant the largest peach orchard so far on the delta, and about 50 acres will be planted to raisins. Besides the orchard and vineyard to be planted, some nursery stock will be propagated. In time this will be used for extending the planting on the ranch.

Lake.

LARGE YIELD OF CORN.—Lakeport *Democrat*, Nov. 21: John Marsh of Scott's Valley left some samples of white and yellow corn on our table that for size of ear are above the average. While the yield of the yellow went up to 150 bushels per acre, the white, a fine bread corn, was something less.

Los Angeles.

ORANGES SOLD.—Downey *Champion*, Nov. 22: C. A. Coffman of Rivera informs us that the firm of Porter Bros. has purchased the crop of several growers in his vicinity, his own among the rest. Among those selling, he names Frank D. English, estimated at 10,000 boxes; A. H. Doulap, 12 000 boxes, and E. H. Boyd. Mr. Coffman has two acres, 180 trees, which he estimates will yield 1200 boxes. The fruit was contracted at $1.25 per box, delivered at the station.

Mendocino.

HUCKLEBERRIES.—Mendocino *Beacon*, Nov. 22: The "Huckleberry Farm" picked in all 3600 pounds of berries. Samuel Stewart declares that if the section of the country where the berries grow was newly burned over, thousands of dollars worth of berries would grow there.

Placer.

FRUIT PROFIT. — Auburn *Republican*, Nov. 19: W. J. Wilson's ranch between Auburn and Newcastle affords a very good illustration of the profits to be derived from fruit-growing in the Placer foothills. Mr. Wilson has about 30 acres in bearing orchard and vineyard. This past season his vines yielded $2000. In his orchard are 300 cherry trees, five years old, of the Oregon and Tartarian varieties, and those trees have this year produced $2000 worth of cherries. Peaches are the principal fruit grown, and the whole 30 acres have netted Mr. Wilson $7000 for the year 1890. These figures do not include his orange crop sold last spring which brought handsome returns. The oranges on Mr. Wilson's trees are now yellow and are ripening, and he will have an immense crop this season.

Sacramento.

CITRUS FRUITS.—*Record-Union*, Nov. 23: The past summer has been unusually favorable for the growth and development of oranges and lemons. The trees are all heavily laden with fruit. Both oranges and lemons have attained an unusual size this season, and—unlike the fruit produced in some portions of the southern citrus belt—it is perfectly free from all taint of smut. There is now scarcely a garden in Sacramento that is not ornamented by from one to a dozen orange or lemon trees, most of which are loaded down with fruit. Sacramento should be well represented at the approaching Citrus Fair, wherever it may be held; and in order to do so, citizens should not pick and dispose of their choice fruit too early in the season, as is generally done. There are now oranges enough grown in this city and county to make up a display sufficiently large to constitute an exhibition in itself; and if the fair should be held in San Francisco this winter, there is no reason why Sacramento county should not have as fine an exhibit as any in Northern California.

San Diego.

BIG SHIPMENT OF HONEY.—S. D. *Union*, Nov. 20: The largest single consignment of honey ever forwarded from this banner bee region went to San Francisco on Saturday. There were three cars loaded with extra choice white sage comb and extracted honey, aggregating 60,000 pounds.

THE COSMOS FLOWER.—San Diego *Union*, Nov. 20: The cosmos flower, which grows so luxuriantly in San Diego, is now a competitor with the chrysanthemum in the East. It was brought from Mexico about four years ago by a Hoboken florist, who introduced the flowers in New York, and from there it spread.

San Joaquin.

HORSES IN TRAINING.—Lodi *Sentinel*, Nov. 22: There are now in training at Lodi Trotting Park about 50 horses, and before the winter is gone that number will be doubled. All the stalls have been spoken for and it is probable more will be erected before spring.

Siskiyou.

APPLE CROP.—Yreka *Journal*, Nov. 19: It is estimated that Siskiyou county will furnish not less than 500 carloads of apples this season, counting those purchased by dealers and forwarded by residents to friends below and elsewhere.

Solano.

THE FUTURE OF NORTHERN SOLANO.—Dixon *Tribune*, Nov. 22: J. D. Johnson has purchased a 40-acre tract of land near Silveyville, and will set it to fruit trees the coming season. This is probably the beginning of a movement which will in time revolutionize farming in Northern Solano. R. E. L. Stephens has an orchard and vineyard adjoining the tract above referred to, from which he has obtained results which should convince any one of the future of fruit-raising in that locality. Peaches, apricots, prunes, almonds and every variety of grape grow without irrigation and obtain a size and flavor unrivaled in any section of the State. West of Silveyville, where the soil contains more or less adobe, the Bartlett pear grows to perfection and invariably nets the owner large returns. The trees will stand any amount of moisture. Dr. Wells' pear trees stood for almost seven months last winter and spring in water varying from two inches to two feet in depth and yet produced their usual good crop. It is claimed that they will stand a dry season almost as well. Mr. Stephens' almond orchard is now about eight years old and has been in full bearing several years. He realized this year $400 an acre from the sale of his almonds. Nearer the creek, the almond tree matures earlier, often bearing a full crop in its third year. C. C. Agee has a four-year-old orchard which has been bearing for two years and produced a heavy crop this season.

COTTON-GROWING A POSSIBILITY. — Dixon, Nov. 22: Should all of Northern Solano's varied resources fail, our farmers could safely embark in cotton culture. G. W. Foster of Tremont has been experimenting with the cotton plant with marked success. He finds that it grows readily in this soil and climate and requires no unusual attention. The plants are hardy and the bolls are large and well-filled. The cotton is said to be of as good quality as any grown in the best sections of the Southern States.

LARGE WINE-CELLAR. — Dixon, Nov. 22: Henry Peters has a force of ten men at work excavating a wine-cellar at his vineyard in Vacaville. The walls of the cellar are to be bricked and it will have a cement floor. The work will be completed in a few weeks. The cellar will be large enough to store about 150,000 gallons of wine.

Sutter.

FINE FIGS.—Yuba City *Independent*, Nov. 21: We were shown by H. C. Clark some samples of Sutter county cured figs which are hard to beat. They were of the White Adriatic variety, and grown by A. B. Van Arsdale near Yuba City. In size, color and general appearance they were fully equal to the best imported article, while in flavor they were simply delicious.

AS TO DRAINAGE.—Yuba City, Nov 20: Last spring several meetings were held in Yuba City by land-owners and farmers interested in the subject of drainage, to confer and see if some plan could be devised by which land which had suffered from surface-water could be drained. At the last meeting of the kind a committee was appointed to investigate the whole matter, and if found expedient to formulate a law to be submitted to the Legislature. As that body will meet in less than two months, the attention of the committee is called to the matter. If anything is to be done it should be attended to at once, so that a full understanding may be had before the Legislature meets.

TREE-PLANTING.—Marysville *Appeal*, Nov. 21: Such an impetus has been given to vine and fruit-tree culture that a much larger acreage will be planted in Sutter county this season than ever. Peaches, pears and grapes seem to lead in favor. The soil and climate are all that could be desired, and these, together with the small cost of handling and the comparative certainty of good yield, make these fruits especially desired. The Sutter Orchard Company will plant 160 acres to pears and peaches, as will also B. F. Walton to peaches and almonds. B. G. Stabler will devote 40 acres to peaches and vines, and J. P. Onstott a similar number to Thompson's Seedless. Williams & Davis will set out 20 acres each to figs and vines; B. Hicock, 40 acres to vines and Bartlett pears, and Marcuse Bros. considerable to vines and mixed fruits. R. C. Kells will plant 10 acres to peaches and prunes; Leonard Schou 20 acres to peaches; C. S. Wilcoxon 12 acres to walnuts and almonds, and M. E. Sanborn 8 acres to figs. Much of the Johnson tract will be planted, but by whom and the kinds of fruit we have as yet not learned. On the Sacramento river, Ira Wood, Lon Summy, J. F. Jones and W. O. Wood have each contracted for pear trees for 10 acres, and George Beatty will plant 40 acres to mixed fruits. The section of the country here spoken of includes a very small portion of the county, and the report does not cover more than one-third of the acreage that will be planted to fruits and vines in Sutter county this year.

Tulare.

GRAPES AND IRRIGATION.—Traver *Advocate*, Nov. 20: William Ross, who owns a colony tract about a mile northeast of Traver, has reason to be well pleased with the way his vines bore this year. He has 400 three-year-old vines on his place and they averaged 40 pounds of grapes to the vine, or 16,000 pounds. Forty pounds of grapes to the vine is a large yield, and Mr. Ross states that it was the result of his keeping his vines pruned close. He has learned to irrigate his land only once a year by artificial means, and that during the spring, just after pruning. Close pruning and little irrigation will make the vines yield much heavier than where they are left to grow as they please and are frequently irrigated, as was proven by the contrast between the bearing of Mr. Ross' vineyard and that of some of his neighbors during the past summer.

PROFITABLE FARMING.—Visalia *Times*, Nov. 20: A. I. Weston raised 55 tons of hay on 30 acres of his ranch, two miles north of Visalia, this year. After the hay was harvested he planted the same ground to corn and pumpkins, from which he will harvest 1500 bushels of corn and about 250 tons of pumpkins. The hay harvested is worth $600, the corn, $840, and the pumpkins not less than $500—thus making the receipts from the 30 acres for this season $1940, or an average of $64.66 per acre.

Ventura.

LARGE FRUIT ORCHARD. — Ventura *Free Press*, Nov. 21: There are now planted and under successful cultivation about 2000 acres of fruit on the Piru ranch, consisting of about 340 acres in oranges, 375 in figs, 50 in olives, 140 in Muscat grapes, 300 in apricots, and the balance in pomegranates, peaches, pears, citrus lemons, etc.

Yolo.

RAIN WANTED.—Woodland *Democrat*, Nov. 20: The farmers are beginning to grumble a little at the continued dry weather. The storms held on so long last spring that there was a large amount of land left uncultivated. In the adobe districts it was impossible to summer-fallow all of it, and even the sandy land was left for hay in a great many instances. As a result, the crops were short and the farmers are now anxiously waiting for enough rain to allow them to get the land plowed. The summer-fallowed land is in most instances already seeded. A few sections here and there, which were plowed late, are too foul to be seeded without replowing. The most of the summer-fallowed land, however, is ready for the rains, and the sooner they come the better the farmers will be pleased.

PROFITABLE SEASON.—Woodland *Mail*, Nov. 22: A well-known vineyardist said to a *Mail* reporter yesterday that the yield of fruit, and especially grapes, this season was astounding. He said that every sweatbox in the county is in use and many more could be used if they were to be had. This has been a profitable season for fruitmen, and thousands and thousands of dollars have been brought into this county from Eastern States in payment for the fruit that has been sent out.

NEVADA.

BEET SUGAR.—*Lyon County Times:* Mr. Spreckels has had an agent in our valley looking over the situation with a view of establishing a beet-sugar factory in this section. We only hope the news is true. There would be no doubt as to the success of the undertaking, as the finest sugar beets grown in the wide world are produced in Honey Lake valley..... Along the Carson river there are thousands of acres of land that will produce from 15 to 26 tons of beets to the acre, while in Mason valley there are hundreds of thousands of acres that will produce on an average the same quantity to an acre, and it is believed that some of the land will produce 40 tons to the acre. There is at Dayton a good water-power, and a factory here could be run as cheaply as anywhere.

FRUIT PRESERVATION.

Pickling Olives.

Rev. C. F. Loop, of Pomona, writes for the Pomona *Times* of recent date on the subject of curing green olives for table use as follows:

Gather ten gallons of olives when the yellow appearance indicates the filling of the oil cells, and the first streaks of color show maturity. Cover with cold water until you are ready to give the alkaline bath. Take one pound concentrated lye (American Lye Co.); dissolve the lye in one gallon boiling water; let the solution boil until the lye is fully dissolved; add four gallons cold water; stir well until the alkali is well diffused. The keg or barrel to be used must have a faucet or plug at the bottom. Put ten gallons of olives in a barrel and pour over them the prepared solution. Five gallons of the solution will cover ten gallons of olives. This part of the process should begin in the morning and should be done in a darkened room; the barrel well covered to exclude the light. Stir with a smooth paddle every 15 minutes, until night. At the end of 24 hours, test the fruit to see if the lye has penetrated to the pit. Secure three or four olives from the top and the bottom of the mass, washing carefully, and then breaking or cutting, you can see by the bright yellow color just how far the lye has penetrated. Where the lye has not penetrated, the pulp is white like milk. If you are not satisfied with one trial, take more olives and make another examination. If the lye has penetrated the pit in some, in others three-fourths of the distance toward the pit, open the faucet, draw off the lye, immediately cover with cold water, changing every few minutes for an hour; then every hour for the rest of the day. The alkaline bath has been used to discharge the bitterness; now we must discharge the alkali. In the condition the olives are now, exposure to the sunlight will cause them to turn a dark color. After the first day the water should be changed two or three times each day until the lye is discharged from the pulp. If careful attention is given to the work, the alkali will be discharged in six days.

If you find on examination that the lye has not penetrated more than half-way to the pit, let them stay in the lye one day longer, and then begin using water.

Now we come to the third point in the process—that is, curing with salt to make them palatable. The fruit must be removed from the keg or barrel used for the alkaline bath.

When a crop of olives is to be cured, three sets of barrels are used, the first for the alkali bath, the second for washing out the lye and the third for salting. Cover with brine made by boiling of the purest salt. Keep the olives well covered with water until you are ready to apply the brine.

The European direction for the brine is one volume of salt to 14 of water.

Examine carefully berries taken from the mass after the brine has been applied one day. If traces of lye remain, it will now be easily noticed in the fruit, and if pronounced to the taste, draw off the brine and apply cold water until you are satisfied by testing that the lye is all discharged; then apply brine.

When the salt has penetrated to the pit, the olives may then be bottled with brine prepared in the same way as the ripe fruit, or put into kegs with the salicylic acid added to the brine to destroy the vegetable germs of fermentation, and sealed up for sale or safekeeping.

HOT WATER ON TAP.—In Paris in districts settled with poor families there are to be found nickel-in-the-slot stands, into which a 5-centime piece (equal to our copper cent) can be dropped, which will allow a button to be pressed that will immediately cause a stream of boiling hot water to flow until nine quarts have been delivered, when it stops. This is found to be a great opportunity for economy with poor families—the cost of hot water so obtained being much less than it would be if a fire had to be made to heat it. Water is thus obtained chiefly for washing. The water is also thus used by Paris hackmen in cans, to keep the feet of their customers warm in cold weather.

TO CLEAN LACE, fill a bottle with cold water, draw a stocking tightly over it, securing both ends firmly. Place the lace smoothly over the stocking and tack closely. Put the bottle in a kettle of cold water containing a few shavings of soap and place over the fire to boil. Rinse in several waters and then drain and dry. When dry, remove and place smoothly in a large book and press with weights. Very nice lace can be made to look like new by this process.

PROGRESS OF THE ENGLISH LANGUAGE.—Ninety years ago the seven principal languages of Europe—English, French, German, Russian, Spanish, Italian and Portuguese—were spoken by 162,000,000 people. Only 21,000,000, or 13 per cent, spoke English. Now these languages are spoken by 400,000,000 people; and 125,000,000 of them, or 31 per cent, speak English.

Weakness of sight is frequently the result of general debility. When the blood is impoverished every organ and sense suffers. As an effective, powerful, and economical tonic alterative, Ayer's Sarsaparilla may be relied on every time.

A DOCTOR'S CONFESSION.

He Doesn't Take Much Medicine and Advises the Reporter Not To.

"Humbug? Of course it is. The so-called science of medicine is a humbug and has been from the time of Hippocrates to the present. Why, the biggest crank in the Indian tribes is the medicine man."

"Very frank was the admission, especially so when it came from one of the biggest young physicians of the city—one whose practice is among the thousands—though he has been graduated but a few years," says the Buffalo *Courier*. "Very cozy was his office, too, with its cheerful grate fire, its Queen Anne furniture and its many lounges and easy-chairs, He stirred the fire lazily, lighted a fresh cigar and went on."

"Take the prescriptions laid down in the books and what do you find? Poisons mainly and nauseating stuffs that would make a healthy man an invalid. Why in the world science should go to poisons for its remedies I cannot tell, nor can I find any one who can."

"How does a doctor know the effect of his medicine?" he asked. "He calls, prescribes and goes away. The only way to judge would be to stand over the bed and watch the patient. This cannot be done, so really I don't know how he is to tell what good or hurt he does. Some time ago, you remember, the Boston *Globe* sent out a reporter with a stated set of symptoms. He went to eleven prominent physicians and brought back eleven different prescriptions. This just shows how much science there is in medicine."

There are local diseases of various characters for which nature provides positive remedies. They may not be included in the regular physician's list, perhaps, because of their simplicity, but the evidence of their curative power is beyond dispute. Kidney disease is cured by Warner's Safe Cure, a strictly herbal remedy. Thousands of persons every year write as does H. J. Gardiner of Pontiac, R. I., August 7, 1890:

"A few years ago I suffered more than probably ever will be known outside of myself with kidney and liver complaint. It is the old story—I visited doctor after doctor, but to no avail. I was at Newport, and Dr. Blackman recommended Warner's Safe Cure. I commenced the use of it and found relief immediately. Altogether I took three bottles, and I truthfully state that it cured me."

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

H. KELLEY—Modoc and Lassen Cos.

H. G. PARSONS—Nevada.

"ENTIRELY SATISFACTORY RESULTS."—This is the expression given by the Nathan Hall Cattle Co., Socorro County, New Mexico, in referring to that well-known remedy, Gombault's caustic balsam. Mr. Nathan Hall says: "The caustic balsam arrived in good shape. We are using nearly 200 horses here, chiefly under the saddle; the result is, many horses with sore backs, terminating frequently in poll evil, fistula, etc. I have used the caustic balsam in various cases, and always with entirely satisfactory results." This great French remedy is well-known to a majority of our horsemen, for it has been recommended and used by our veterinary surgeons for over 20 years, and it is guaranteed that one tablespoonful of it will produce more actual results than a whole bottle of any liniment or spavin cure ever made. It is in every case warranted to give satisfaction. Ask your druggist for it, or send direct to the American agents, Lawrence, Williams & Co., Cleveland, O. Price, $1.50 per bottle.—*Spirit of the Times.*

NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & Co., Publishers,
No. 220 Market St., S. F.

"Battle of Gettysburg."

The celebrated Panorama of the Battle of Gettysburg and Museum, corner Market and Tenth Streets, San Francisco, is a wonderful production. It has captured the entire State, doing a great deal of good. There is no better way of passing an hour or so, and in studying American history, than by visiting this Grand War Panorama. If any of our readers have not seen it, it will pay them well to do so.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER

THUNDER CLOUDS.—The explanation of the peculiar density of thunder clouds is said to lie in the fact that the vapor is partially condensed into drops by the electrical action.

GOOD LAND TO RENT.

Terms Unequaled.

SEVEN ACRES OF BEARING ORCHARD, FOR CASH OR ON SHARES, SEVEN MILES FROM TULARE.

IMPROVED LAND.—160 acres within half a mile of Tulare City; 160 acres seven miles from Tulare; 320 acres adjoining the last named.

FOR LOW CASH RENT, or Reasonable Share, the above will be let.

UNPLOWED LAND.—Very level and easily tilled. 160 acres 1½ miles from the last named; good soil; water at small cost if desired. Rent free first year and preference given for second. Also, one section (640 acres) of similar land three miles S. W. of Pixley on the same terms as last named, but without irrigation. Will rent in subdivisions if necessary.

Inquire of E. M. DEWEY, Porterville, Tulare Co., or at the office of this paper

NOW READY:

GRANGERS, STOP AND THINK!

What is the Use of Spending your Coin for a Wood Harrow when you can get the Champion All Steel Harrow? It lasts a life-time by renewing the Teeth for the Same Price.

THE CHAMPION ALL STEEL HARROW

Owning the Patent for the Pacific Coast States and Territories for this, the Best and Cheapest All Steel or Wrought Iron Harrow made (cheapest because it can be made cheaper than any other all steel or iron Harrow). The following are some of the advantages it has over other harrows:

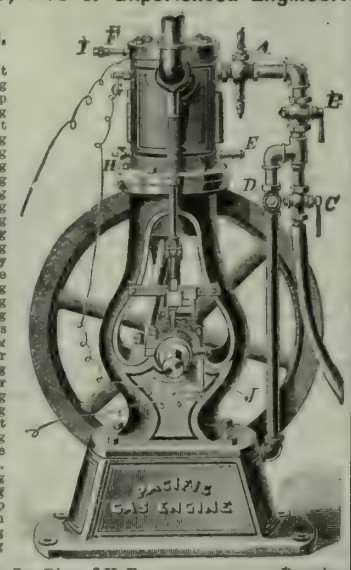
1. It is all made of steel or wrought iron; all of the bars are straight, and are lighter and stronger than bent bars.
2. The teeth are driven into clips which unite the bars rigidly together; every tooth forms a key or wedge; they can be driven out, sharpened, and put back as easily as in the wood harrow.
3. There are no holes in the bars to weaken them; there is NOT ONE BOLT, NUT, SCREWED CLIP or SET SCREW to get loose and twist off when the teeth want sharpening or lightening.

These harrows are made in sections of 15 and 24 teeth each. Buyers can have any size harrow they want. The 15-tooth sections can be used for vineyard and orchard. We also furnish, when ordered, the Patent Side-hill Attachment to draw bar for side-hill harrowing—which is very important for side-hill work, as a harrow will not cut the same both ways on a side-hill without changing the draft at the turn. With this arrangement it changes and adjusts itself by turning the team.

Price List:

15-Tooth Section, weighs 40 lbs., cuts 3 feet	$ 8.00
24 " " " 70 " " 4 "	11.00
Draw Bars and Connections for 3-15 Tooth Sections	3.00
" " " " " 3-24 Tooth Sections	4.00
For each additional Section more than above described	1.00

Remember these harrows are no experiment. There have been over 25,000 sections sold in the Eastern States and Canada in the last five years, and more of them sold here in the last two years than any iron harrow in the market. Send your orders to



J. STANLEY, Mission San José,
Or 957 Broadway, Oakland, Alameda County.

LADIES' COSTUME.

Fashion Notes.

Ladies' Costume

The illustration herewith is of a ladies' costume represented as developed in spotted India silk, with Vandyke lace and ribbons for decoration. The skirt is in the popular four-gored style, and a small bustle may be worn, if desired. Overhanging the skirt to the lower edge is a full drapery that is arranged in forward-turning plaits at each side of the center of the front, back of which a shallow, back-turning plait is laid; the back is drawn by gathers, and a belt finishes the top. The drapery is lifted stylishly at each side by upward-turning plaits, and the skirt is disclosed for a short distance at the bottom far back at the sides.

The stylish basque has a fancy front that is adjusted over the right fitted front of lining and lapped over the left front, which is similarly fitted, the closing being made invisibly. The fulness of the fancy front is collected in gathers at each shoulder edge, and also at the lower edge for a short distance back of the closing, producing soft, pretty folds. A full back, which is drawn closely by shirrings at the waist-line, is arranged over a fitted back of lining, and under-arm gores complete the adjustment. The lower outline is pointed at the front and back and well arched over the hips. An upward-turning row of Vandyke lace decorates the lower part of the basque at the right side, and at the lowest point of the closing is secured a bow of ribbon, the ends of which reach nearly to the bottom of the skirt. At the neck is a standing collar, which is decorated with Vandyke lace, the points of which rest upon the basque; and the leg-o'-mutton sleeves are gathered at the top and arranged over coat-shaped linings, the wrists being trimmed with Vandyke lace.

The costume will develop handsomely in a great variety of dress goods, such as Surah, India or China silk, Bengaline, figured or plain cashmere, imperial serge, brilliantine and camel's-hair. Vandyke-point lace or passementerie, moire, grosgrain or velvet ribbon or any preferred garniture may be added. When ribbon is selected, several rows of it may be arranged at the lower part of the drapery, and rosettes of ribbon may be very effectively placed at the top and bottom of the closing and over the plaits at each side. The basque may also be trimmed effectively with ribbon, which may be arranged in diagonal rows at the fronts and encircle the sleeves all the way to the elbow.

The stylish straw hat is prettily wreathed with flowers.

PERCHERON SALE.—**Capt. W. B. Collier, whose fine breeding farm near Lakeport was recently described in our columns, reports the sale of six of his excellent Percheron mares to A. W. Foster, to be installed at Mr. Foster's ranch near Hopland.**

All those heating and itching humors of the scalp, so troublesome to many persons, are effectually cured by the use of Ayer's Hair Vigor. If not attended to in time, these diseases are very liable to result in the loss of the hair.

FASTIDIOUS.—**The man who takes an Eastern weekly paper with less than ten pages of reading matter and complains of advertisements in the RURAL PRESS, which always contains from 12 to 16 pages of reading matter.**

Use of capital letters, etc., etc. Making in all a handy and reliable companion for those who desire to "LIVE AND LEARN." 160 pages, bound in leatherette cover. **Price** ..... **25 cts.**

Wilford's Original Dialogues and Speeches for Young Folks.—Being by far the most complete of its kind ever issued. This work supplies that palpable need, which has so long been evident in books of this class, that of *Dialogues* and *Speeches* adapted to the natures of children. This work contains **19 Original Dialogues** and 53 Speeches, especially adapted for children between the ages of 5 and 12 years. 160 pages.

Paper cover, Price.....25 cts.

Brudder Gardner's Stump Speeches and Comic Lectures. Containing the best hits of the leading Negro delineators of the present day, comprising the most amusing and side-splitting contribution of oratorical effusions which have ever been produced to the public. The newest and best book of Negro comicalities published. 160 pages. Bound in illuminated paper covers. Price.....25 cts.

Burdett's New Comic Recitations and Humorous Readings. A new volume of comic and humorous selections, compiled by the celebrated humorist, James S. Burdett many of which have never before been published in book form. In addition to the new and original pieces here contained, this book has the advantage of *bringing together into one volume* all of the very best selections of a comic nature which have hitherto attained a wide popularity through the public representations of the most renowned humorists of the day. It is the newest, handsomest and choicest book of its kind. Price.....25 cts.

The Candy Maker. A Practical Guide to the Manufacture of the various kinds of Plain and Fancy Candy. The fullest directions are given for getting up the most exquisitely beautiful looking candies, as well as the most alluring to the palate; while equal attention is given to all the plainer kinds, so universally liked by the "little ones." Every Direction, every Recipe, every Concoction of which Sugar, Spice and Essence are the ingredients, is given in such a plain way that a child can understand them. Large 12mo. Price.....50 cts.

Wilson's Ball-Room Guide and Call-Book.—The most complete published, containing full and requisite information for the giving of Receptions, Parties, Balls, etc., with clear directions for calling out the figures of every dance, together with thirty-eight pages of the latest and most fashionable copyright music, and containing nearly one hundred figures for the "German." Bound in illuminated board cover, with

Bound in illuminated paper cover, Price.....50 cts.

Dunbar's Complete Hand-Book of Etiquette.—This work presents, in a clear and intelligible manner, the whole art and philosophy of Etiquette. Among the contents are: Bodily Deportment, Speak Grammatically, Self-respect, Pedantry, Social Characters, Traveling, Useful Hints on Conversation, Forms of Invitation, Letters of Introduction, Bridal Etiquette, Ball-room Etiquette, etc., etc. Bound in Boards, cloth back.

Price.....50 cts.

Carpenter's Manual.—Instructs in the use of tools and the various operations of the trade, including drawing for carpenters, forms of contracts, specifications, etc., with plain instructions for beginners, and full glossary of terms used in the trade. Also gives plans and specifications for building a number of frame houses. Illustrated.

Price.....50 cts.

Ropp's Commercial Calculator.

A Practical Arithmetic for Practical Purposes, containing a complete system of useful, accurate and convenient tables, together with simple, short and practical methods for rapid calculation.

Bound in Cloth, Price.....25 cts.

A portion of the above works will be sent from our office direct, while some will be ordered from other publishing houses, requiring some two weeks longer time.

N. B. The above prices include the prepayment of postage by us.

THE BEST FENCE YET!

Cheap, Durable, Portable and Safe.

THE SPALDING HUMANE WIRE FENCE is composed of eight No. 12½ galvanized steel wires, woven into four cables of two wires each; interwoven every five feet is a corrugated iron stay or guard, and held in place by the cables, thereby holding the cables firmly in place, preventing them being spread apart and letting stock through. The stays or guards are corrugated and an inch and three-quarters in width, making the fence as visible as a board fence, which is **a very essential point.** Write for circulars and prices. Address **BIRD-TURNBULL MFG. CO., 195 La Salle St., Chicago.**

MANHATTAN STOCK FOOD.

Saves One-Quarter of Grain Feed.

S. F. Market Report

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Nov. 25, 1890.

General trade the past week in farm products was quiet in all branches excepting those having a holiday call. The close panicky money market at the East caused heavy shipments of coin from this city to New York, which has temporarily produced a stringency here. The transfer of coin aggregated over $5,000,000. At the close, money is setting this way. Wheat, after going down with silver, is stronger in sympathy with an advance in that metal. The following is to-day's cablegram:

LIVERPOOL, Nov. 25.—Wheat—Firmly held. California spot lots, 7s 6d@7s 6¼d; cargoes off coast, 38@38 6d; just shipped, 37s; nearly due, 37s; cargoes off coast and on passage, quiet but firm; quantity on passage to Continent, 648,000 qrs; wheat and flour on passage to Cork, U. K., 2,375,000 qrs; English country markets, quiet; weather in England, frosty.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per ctl. for the past week:

	Nov.	Dec.	Jan.	Feb.	Mar.	April.
Thursday	7s6½d	7s6d	7 6d	7s6d	7s6½d	7s6½d
Friday	7s6d	7s6½d	7s6½d	7s6½d	7s6½d	7s6½d
Saturday	7s6d	7s6d	7s6½d	7s6d	7s6½d	7s6d
Monday	7s6½d	7s6d	7s6½d	7s6d	7s6½d	7s6½d
Tuesday	.....	.....	.....	.....	.....	.....

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday	38s0d	37s0d	37s6d	Firmer.
Friday	38s0d	37s0d	37s6d	Firm.
Saturday	38s0d	37s0d	37s6d	Quiet.
Monday	38s0d	37s0d	37s6d	Steady.
Tuesday	.....	.....	.....	

Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

Day.	Nov.	Dec.	Jan.	Mar.	May.	July.
Thursday	97½	98½	99½	102½	103½	...
Friday	99½	100⅝	102½	104½	105½	...
Saturday	102	102½	103½	105⅝	106½	...
Monday	104½	104½	105⅝	107⅝	107½	...
Tuesday	...	...	...	...	...	...

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

Day.	Dec.	May.	June.	July.
Thursday	90	97⅛	....	....
Friday	92⅜	99⅜	....	....
Saturday	94½	101	....	....
Monday	94½	102⅜	....	....
Tuesday	...	...	....	....

NEW YORK, Nov. 25.—Wheat—$1.05¾ for cash, $1.04⅛ for December, $1.05¼ for January, $1.07⅜ for March, and $1.07⅜ for May.

CHICAGO, Nov. 25.—Wheat—96c for December and $1.01½ for May.

Dried Fruits.

NEW YORK, Nov. 21.—California Lima beans on the spot are reported weaker at $2.90 ₩ bushel. Two carloads of Forsyth's Imperial California raisins, due in a few days, have been placed at $2.57½ @2.60 delivered. A fancy quality of California evaporated peaches is quoted, spot, at 17@17½c. Clover Leaf California prunes, in boxes, are quoted at 12½@13½c. This brand commands the best trade.

NEW YORK, Nov. 22.—The *Commercial Bulletin* says: Upward of 50 carloads of loose California raisins in bags have been sold in the Eastern market thus far this season. The total is greater than during any previous entire season, and the movement may be classed as one of the prominent features of the market at the present time. The persistent efforts of some local commission firms to encourage the handling of goods in this form by Eastern jobbers has doubtless contributed in no mean degree to the favorable results, but the successful introduction of the carton 1-pound and 2-pound packages has played a conspicuous part. These packages have been gotten out in a neat form and attractive appearance. The best fruit has been secured, and particular care has been taken by the most prominent packers that there shall not be the slightest shortage in weight. Already unmistakable evidence is given that the carton is becoming popular with retailers, in avoiding waste incidental to weighing ordinary boxed fruit, and effecting a saving of time in handling.

NEW YORK, Nov. 23.—Good to prime raisins are steady. The supply is evidently sufficient for November wants, including the trade for Thanksgiving. London layers, $2.50@2.60; best loose, $2. Many rejections have arrived, some lots approaching fermentation.

Prunes were quiet. The French get a good deal of the early trade this season.

White nectarines were quiet at 22c.

Unpeeled peaches, bags, 16@18c; boxes not above 21c.

Apricots were steady at 18@19½c, the latter for boxes.

Canned fruits are sought for. There are none here in first hands.

The best grocers are sorely put about for a substitute for California packed peaches.

Hops.

NEW YORK, Nov. 20.—Cablegrams confirm the advance of 15@20 marks in hops in the German market. The situation there is reported as strong. London is unchanged and trade seems to be holding its own under the trying money stringency. Trade here is still restrained by the financial condition. The brewers continue buying cautiously, but local dealers are not specially alarmed, except those whose stocks are small.

NEW YORK, Nov. 22.—There was a weakish feeling in hops. A few holders, however, were willing to meet the buyers' cheapened views. New State, common to choice, 38@45c; Pacific, 39@43c. The week's exports were 1624 lbs.

Wool.

NEW YORK, Nov. 22.—The movement in wool at the seaboard is comparatively light, but the week has been interrupted by the spirited election and previous purchases will carry many mills for some time. Trade is said to be checked somewhat by disproportionate prices asked for low-grade wools. General quotations remain strong. The holdings of Western and Interior are regarded as light. Sales—14,000 lbs. Spring California, and 3000 lbs. scoured, private terms; 210,000 lbs. Spring Texas, 19@24c; 22,000 lbs. Fall, 18@20c; XX and above, 34½@35c; fine delaine, 36½c, and 127,000 lbs. domestic, 65c. Sales—56,000 lbs. foreign, private terms; Boston sold 120,000 lbs. of foreign and 3,187,000 lbs. domestic. There was a light offering from California and late prices were ruling. The Philadelphia market is quiet and strong.

Complaints of the Wheat Blockade.

TACOMA (Wash.), Nov. 24.—The Chamber of Commerce, at a special meeting to-night, adopted a resolution calling on the railroads to furnish more cars to transport the wheat from Eastern Washington and Oregon to the seaboard. There is a very large wheat blockade in Eastern Washington where the crop was enormous this year. Every depot and warehouse is full and much is piled in sacks about the stations but slightly protected from the weather. The residents of the Northern and Union Pacific lines were telegraphed to, asking that measures be taken at once to afford relief and save the farmers from loss.

BAGS—The market is dull at about 6¾c for standard size, for May-June delivery.

BARLEY—Very heavy receipts, with Oregon and Washington sending us large quantities, have caused a weaker tone. On Call, futures have ruled dull, with more sellers than buyers. The following are to-day's Call Board sales:

Morning Session: Buyer 1890—200 tons $1.46¼; 100, $1.47. Buyer season—100 tons, $1.49¾; 400, $1.51; 200, $1 50¾; 600, $1.50⅞. Seller 1890—100 tons, $1.44. Seller 1891—100 tons, $1.10 ₩ ctl. Afternoon Session: Buyer 1890—100 tons, $1.47. Buyer season—100 tons, $1.51⅞; 100, $1.51¾; 100, $1.51½; 100, $1.51⅝. Seller 1891—200 tons, $1.10; 300, $1,09⅞. Buyer 1891, after Aug. 1st—100 tons, $1.14; 100, $1.14¼; 200, $1.15¼; 200, $1.15 ₩ ctl.

BUTTER—The market is easy at lower quotations. Free receipts of Eastern creamery in tubs are against our market. Many retail dealers are said to be taking the latter in preference to Californian.

CHEESE—The market holds strong under light receipts and a good demand.

EGGS—Stocks are large, with receipts heavy. Considerable Eastern has gone into cold storage. The market shows an easier tone at shading prices.

FLOUR—The market is weak at a slight reduction.

WHEAT—The market for sample parcels fell off quite sharp, but at the close it is stronger. On Call, trading in futures has been light. The absence of attractive fluctuations is against free operations. The following are to-day's Call Board sales:

Morning Session: Buyer 1890—200 tons, $1.31¼; 300, $1.31½. Buyer season—1300 tons, $1.41½ ₩ ctl. Afternoon Session: Buyer 1890—300 tons, $1.31¼; 200, $1.31¼. Buyer season—800 tons, $1.41¾; 200, $1.41⅝ ₩ ctl.

Market Information.

Produce Receipts.

Receipts of produce at this port for the week ending Nov. 25th, were as follows:

Cereals.

Wheat has held to weak prices throughout the week. Buyers do not appear disposed to anticipate their wants. Oregon and Washington are sending considerable to this market, which meets shippers' current wants for stiffening and topping off. The extraordinary large crops in Eastern Oregon and Eastern Washington are an important factor in keeping prices with us lower than they should. Late advices from Australia report coal vessels receiving quick dispatch, which assures large wheat tonnage after the turn of the year. There is a disposition on the part of exporters not to buy any more wheat than to meet current requirements. This they do in expectation that considerable will be thrown on the market so as to get money to pay taxes.

Barley has sagged off under heavy receipts from up north and threatening weather, although at the close it looks as if we will have more clear weather. The consumption in the State is falling off, owing to about all the fruit being marketed, and no increase in farm work until rain sets in. With general outdoor work the demand for barley will be quite active. An engagement of freight room has been made for 600 tons of barley to New York.

Oats are not quite so strong. The higher prices and weaker tone for barley are against the market. Oregon is sending us only fair supplies.

Corn is coming in quite freely. The quality this year is good. The tendency of the market at this writing appears to be lower prices.

Rye is firm at current quotations.

Buckwheat is barely steady.

Sonoma's Hop Crop.

John McMinn, Jr., reports to the Santa Rosa *Democrat* that the hop crop of 1890 was as follows:

SANTA ROSA TOWNSHIP.

	Acres.	Bales.
Harry Hall	10	67

Miller & Purrington	31	149
GUERNEVILLE.		
R. S. Drake	12	40
W. McPeak	7½	73
Total number bales		5491

The amount realized from the hop crop of the county this season will aggregate $250,000, and the bales are several hundred short of the yield for 1889. Of the 5491 bales, only 700 remain unsold, and the holders of these are expecting an advance in prices.

Feedstuff.

Heavy receipts of hay and the lateness of the season are against the hay market, although the dry weather causes considerable apprehension and necessitates freer feeding.

In ground feed, bran and middlings are easy at a slight reduction in prices. Oregon continues to send us fair supplies of the former. Ground or rolled barley is lower. Feedmeal is barely steady. The demand for feeding is fairly active.

Fruits.

There is a good holiday demand for apples. The better and more attractive kinds clean up well. Some mountain apples in barrels are on the market. They are of good size and flavor.

Pears move off freely. Winter Nelis fetch top prices.

Grapes are meeting with better prices under lessening receipts. The highest quotations are only reached by the more choice Tokays and Cornichons.

The first receipts (35 boxes) of Navel oranges from the southern part of the State came to hand to-day (Tuesday)—Messrs. Lusk & Hughes being the consignees. They were shipped from Villa Park, Orange county, by J. S. Bond, J. Lyons and J. M. Smith. They are being sold at $3.50 a box. Messrs. Evelett & Nash will have a carload in to-morrow from Riverside.

Dried fruits are essentially unchanged. The only kinds in fair offering are peaches. At the lower prices it looks as if they will soon go into distribution. Latest Eastern advices report an improving market for peaches.

Free shipments of raisins overland are still in order. There appear to be fewer complaints regarding the fruit this season than ever before, which speaks well for packers and the reputation of their pack. Receipts at this port are about double what they were during the like time in 1889.

Vegetables.

Garden truck is scarce. Cabbages and root vegetables are in liberal supply.

Onions have come in quite freely. The higher prices appear to be attracting supplies from nearly all sections. Oregon is a liberal contributor.

Notwithstanding receipts of potatoes continue free, the market holds remarkably strong. The demand is said to be both speculative and consumptive. The speculative demand is due to a belief that with rains receipts will fall off, when still higher prices will obtain. Choice Salinas and Oregon potatoes command top prices.

Live-stock.

Bullocks are in free offering, which keeps prices down, notwithstanding an increase in the consumption. Mutton sheep are steady. Lambs and calves are firm. Hogs show an easier tone. Fresh milch cows are in better inquiry, but buyers are slow to pay much of an advance over $30 to $40 for fair to good dairy cows. In horses there is nothing new to report.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4½@4¾c ₩ lb; dressed, 7@8c ₩ lb.; heavy, 4@4¼c ₩ lb.; dressed, 6½@7½c ₩ lb. Stock hogs, 3@3½c ₩ lb.

BEEF—Stall fed, 6½@—c ₩ lb.; grass fed, extra, 6@—c ₩ lb.; first quality, 5¼@5¾c ₩ lb.; second quality 4¾@5c ₩ lb.; third quality, 4c@— ₩ lb.; bulls and thin cows, 2@3c ₩ lb.

VEAL—Small, 6½@8½c ₩ lb.; large, 6@7c.

MUTTON—Wethers, 7c ₩ lb.; ewes, 6½c ₩ lb.; lamb, spring, 8@9c.

Miscellaneous.

From the *Commercial News* of Nov. 25th the following summary of tonnage movement is compiled:

	1890.	1889.
On the way to this port	280.954	204,418
On the way to neighboring ports	17,269	9,447
In port, disengaged	13,561	25,015
In port, engaged for wheat	53.893	80,540
Totals	365,677	318,420

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to Nov. 18, 1890, the following are the exports from this port:

	1890.	1889.
Wheat, ctls	4,414.188	4,508,119
Flour, bbls	447,544	439,785
Barley	160,940	784,686

The poultry market is in a demoralized condition, due to heavy receipts of both Californian and Eastern. It looks as if shipments had been kept back for Thanksgiving, and the business overdone. Hens and roosters broke in prices and then followed dressed turkeys. Damp and otherwise unfavorable weather is against dressed turkeys and many consignments of good stock had to be sold at 16c. If, after Thursday, receipts continue free, prices for dressed may go off still more.

Beans are moving off fairly well at very few changes in quotations.

Honey is coming in quite freely, but prices hold strong. The New York market is reported firm at a slight advance.

Wool is reported unchanged. Close money market at the East and the near approach of annual settlements are against the market.

Hops continue firm under limited supplies and a fair demand.

Seeds are dull. Quotations are unchanged.

Exports by sea the past week aggregate as follows: Wheat, ctls, Liverpool, 96.952; Cork, 188,610; Dublin, 5521; Havre, 66,932. Flour, bbls, Dublin, 17,700; Central America, 6715; Panama, 200. Beans, lbs, Victoria, 3807; Central America, 51,876. Dried fruits, lbs, Victoria, 2325; Central America, 975. Barley ctls, Honolulu, 1040; New York, 3769. Bran, sks, Honolulu, 750. Hay, bls, Honolulu, 667. Wine gals, Honolulu, 20,447; New York, 18,080; Central America, 3555. Raisins, bxs, Central America, 379

Dried Fruits, Etc.

The quotations given below are for average prices paid. Something very fancy fetch an advance on the highest quotations while poor sells slightly below the lowest quotations.

Prices named, unless otherwise specified, are for fruit in sacks. Add for 50-lb. boxes ½c per lb., and for 25-lb boxes ½c to 1c per lb.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, *to those who pay fully one year in advance of date*, IF REQUESTED the following articles (while this notice continues), at the very greatly reduced figures named at the right:

2.—Beautiful Poetic Review, entertaining and instructive; 35 pages (a handsome and pleasing present) ..... .25
3.—Dewey's Patent Elastic Binder (cloth cover), name of this paper stamped in gilt ..... .50
4.—Niles' Stock and Poultry Book for Pacific Coast, pamphlet, 120 pages, illustrated ..... .25
5.—Kendall's Treatise on the Horse and Diseases, 89 pages, instructive illustrations ..... .05
6.—To NEW Subscribers, 12 select back Nos. of the RURAL PRESS, "good as new" ..... Free
7.—Any of Harper's, Frank Leslie's and most other first-class U. S. periodicals, 15 per ct. off regular rates.
9.—Pacific Coast and Eastern Dailies and Periodicals, *except special publications*, we can usually give 10 to 15 per cent off advertised retail rates.
10.—March of Empire, by Mallie Stafford ..... .25
11.—Life Among the Apaches, 322 pages, stiff cloth .25
12.—$1 worth of choice seeds, to be selected from a list of 107 flower and 82 garden seeds, as previously published, or which list we will send on application .25
14.—Dewey's Pat. Newspaper Fileholder (18 to 36 in.) .25
15.—European Vines Described, 63 pages ..... .05
19.—Webster's Dictionary, 634 pages, with 1500 illustrations; very handy and reliable ..... .50
23.—Ogilvie's House Plans, 60 pages ..... .15
24.—Mother Bickerdyke's Life with the Army; patriotic and ably written; 166 pp., cloth, $1.00 ..... .50
25.—Ropp's Commercial Calculator, cloth, 80 pp ..... .25
26.—How to Tell the Age of a Horse ..... .05
27.—Percheron Stud Book—French—bound in leather, 192 pages (full price, $3) 1.00
28.—What Every One Should Know; a cyclopedia of valuable information; 510 pp.; cloth; (full price $1) ..... .50
29.—Knitting and Crochet, by Jennie June; 144 pp., 200 illustrations ..... .25
30.—Needle Work, by Jennie June; 12 pp., 200 illustrations ..... .25
31.—Ladies' Fancy Work, by Jennie June; 152 pp., 700 illustrations ..... .25
32.—The Way to do Magic; illustrated, 60 pp ..... .10
33.—The Taxidermist's Manual; illustrated, 64 pp ..... .10

THE PROPOSED TUNNEL BETWEEN IRELAND AND SCOTLAND.—A public meeting, convened by the Mayor of Belfast, has been held to consider a scheme for constructing a tunnel between Ireland and Scotland. Mr. Barton, civil engineer, submitted his scheme, which is to construct a tunnel from the junction of the Belfast & Northern Counties Railway, four miles inland from Whitehaven, on the Antrim coast, to the center of Wierston Hill, in Wigtonshire, also about four miles inland, the whole length to be about 34 miles. The scheme has the support of Sir Douglas Fox, engineer of the Severn tunnel, Sir Benjamin Baker, the Forth bridge engineer, and Sir John Hawkshaw of London. He estimated the total cost at £8,000,000, and the tunnel could be completed in 10 or 12 years. The meeting passed resolutions recognizing the importance of the scheme, urging the Government to render financial assistance, and appointing a committee to consider and report upon the whole question.

PLANTING IN COLUSA.—The Fruto Land and Improvement Co. of Elk Creek, Colusa Co., proposes to largely extend its fruit area by this winter's planting. We learn from a letter from Robt. Watts, manager, that holes have already been dug on 40 acres for French prunes, and in all 50 acres of this fruit will be planted; also 100 acres of raisin grapes, 10 of Bartlett pears and 5 of peaches.

HORSE-COLLAR TRUST—A BIG HOLE MADE IN IT No Collar Trust! No Leather Trust! No Labor Trust! Competition is the life of trade, and Trusts kill competition. A business house which becomes fossilized to the point of requiring a Pool or Trust to hold it up, should be left severely alone, and those not leaning on Pools or Trusts be preferred. What chance has the rising generation for a fair share of this world's goods if they are hampered and shut out from many undertakings by Trusts? To all persons interested in Harness Goods: Please take notice that the firm of W. Davis & Son withdrew from the Collar Trust on Sep'ember 13, 1890, and can, therefore, furnish Horse Collars at a Big Reduction on the Trust Prices, as we are the only Wholesale Saddlery House in San Francisco not tied up with High Prices. The Best Record Yet.

So say Marvin, Hicock, Gamble, Holly, McDowell, Dustin and Goldsmith. When such skillful conditioners indorse the Manhattan Food it must have merits. By its use all the advantages of a season on grass are obtained, besides having the horse constantly at work. When buying Manhattan food ask for the Red Ball brand. Fraudulent parties have been selling an article, claiming theirs to be the same, and, in order to mislead, have added a prefix to "Manhattan." The genuine food is called simple "Manhattan Food," with the Red Ball brand, as advertised in this paper.

THE JUDSON WIRE & PICKET FENCE.

Cheaper & Better than ever. The Coming Fence.

Rabbit Proof, 2 ft. high, 3 double Steel Cables, 36c per rod, in carload lots. Put barbed fencing wires above it and it will turn rabbits and pigs or any stock whatever. All of our Fence is COLORED RED by boiling in a chemical solution that preserves the wood. Rabbits will not gnaw them.

Address, JUDSON MANUFACTURING CO., 14 & 16 Fremont St., San Francisco.

THE SMOKEBALL IN WAR.—In the sham fight at Portsmouth in honor of the Emperor William, an advancing column was so affected by the fumes of the smokeball, which was used to raise a cloud of impenetrable obscurity under which they could advance, that the men had to keep their hands to their noses to avoid suffocation. It is now proposed that the smokeball shall receive a further development. It has occurred to some military men that instead of half suffocating their own troops, it would be better to follow the example of the Chinese pirates with their stinkpots, and asphyxiate the enemy. A Vienna scientist has accordingly invented a bomb of such power and virulence that every one who is within a certain radius of it when it explodes is rendered unconscious. Devices such as these would soon modify the art of war, and probably the next development will be an anti-asphyxiating bomb, whose fumes will neutralize that of the other. It is said that many years ago a scheme based on the throwing of poisonous gases over a tract of country was put before the War Office in England, for the purpose of devastating the country in the face of an invading army, but the agency employed was so terrible in its effects that it was not made public, and was consigned to the secret records of the War Office.—*Ex.*

STATISTICS OF STEAMBOAT TRAVEL. — Inspector-General Dumont of the Steamboat Inspection Service has made a report to the Secretary of the Treasury of the operation of that service during the fiscal year ended June 30th last, of which the following is a recapitulation: Total number of vessels inspected, 7065; net tonnage, 1,390,389 55; number of officers licensed, 33,237; increase in number of vessels inspected over preceding year, 338; increase in tonnage, 74,953 48; increase in number of officers licensed, 1615. During the year there were 1882 applicants for pilots' licenses, of which number 1738 passed a successful examination for color-blindness and 44 were rejected. There were 34 accidents, resulting in the loss of 245 lives—a decrease of 56 as compared with the preceding year. Of the accidents, 17 resulted from collisions, and 102 of the lives lost were by drowning. Of the number of lives lost, 65 were passengers and 180 were officers or persons employed on the steamers.

A RAILROAD TO ALASKA is one of the sure things of the near future. The latest information in this direction is that arrangements have been concluded and capital raised by a syndicate of St. Petersburg, Russia, capitalists and some prominent New York railway magnates, among whom are Henry Villard, to build a railroad from Puget Sound to Alaska. There have been many wild transpacific and transatlantic schemes, such as bridging Behring straits and establishing a steamship line to Europe from Hudson's bay; yet none a few years ago appeared more chimerical than the proposition to build a paying railway through the frozen wastes of Alaska. But now considerable interest is manifested in schemes of this kind. Alaska has many enthusiastic admirers who look on it as the coming land of wealth and promise. What Jay Cooke did in booming the Lake Superior country, Villard and his friends propose to do for Alaska. Engineering parties have been in the field all summer, and it is expected that the line will be located next spring. The company has a capital of $1,500,000.

The Use Of

Harsh, drastic purgatives to relieve costiveness is a dangerous practice, and more liable to fasten the disease on the patient than to cure it. What is needed is a medicine that, in effectually opening the bowels, corrects the costive habit and establishes a natural daily action. Such an aperient is found in

Ayer's Pills,

which, while thorough in action, strengthen as well as stimulate the bowels and excretory organs.

"For eight years I was afflicted with constipation, which at last became so bad that the doctors could do no more for me. Then I began to take Ayer's Pills, and soon the bowels became regular and natural in their movements. I am now in excellent health."—Wm. H. DeLaucett, Dorset, Ont.

"When I feel the need of a cathartic, I take Ayer's Pills, and find them to be more

Effective

than any other pill I ever took."—Mrs. B. C. Grubb, Burwellville, Va.

"For years I have been subject to constipation and nervous headaches, caused by derangement of the liver. After taking various remedies, I have become convinced that Ayer's Pills are the best. They have never failed to relieve my bilious attacks in a short time; and I am sure my system retains its tone longer after the use of these Pills, than has been the case with any other medicine I have tried."—H. S. Sledge, Weimar, Texas.

The Whole Country Needs Fertilization

ADMONITION TO FARMERS!

GUAYMAS, MEXICO, September 9, 1890.

R. B. CUNNINGHAM, ESQ., Agent Mexican Phosphate and Sulphur Company—DEAR SIR: In answer to your inquiries as to the value of phosphates for worn-out lands, I will state that it is my opinion the lands of the older settled portions of California afford a good field for the use of phosphates. These lands have been cropped for years without any restoration of the chemical constituents necessary for an abundant crop. They therefore show plainly that they need assistance artificially to produce crops good in quantity and quality, let the crop be whatever it may.

Take, for instance, San Joaquin and Santa Clara valleys, and what do you see? Many crops that are so imperfect in quantity and quality that the eye at once detects the defect. The only relief that can be resorted to must be infused into the soil to replace the chemical properties that have been extracted by previous crops, and the writer is of the opinion that a liberal supply of phosphates will accomplish this.

The attention of the cultivators of the soil is sharply turned to rotation of crops, hoping thereby to get wealth out of their lands without fertilization. Some have turned their attention to beet cultivation in soil worn out by other crops. Beet or other seeds will not grow successfully unless the soil will nourish them.

This summer I saw several crops of beets on excessively cropped lands, the majority of which showed that there was something wanting to complete the plants to ample size and in quantity that should be expected of sugar beets under favorable circumstances. If a good crop is not obtained, there is deficiency in profit. It costs as much to cultivate soil deficient in chemical properties as it does if ample nutrition was in the soil. Under the former condition a deficient crop is certain, while under the latter condition he may reasonably expect an ample crop with profit.

Fields often are allowed to go to weeds, supposing thereby to enrich the soil. This is an uncertain method and not profitable. Your weeds have grown up and seeded; the dead stems can only add a limited addition to fertilize the soil, while the seeds of the same will cause much expense to exterminate them from the future crops. Besides, while thus only weeds as a crop, no profit was realized, while if a supply of phosphates had been applied to the soil, a profitable crop of beets or corn would be had. Besides, the weeds would have been exterminated during the cultivation of the said crop. I am, Sir, your obedient servant,

EDWARD PALMER, M. D.

Arizona Everbearing Strawberry.

BY PLANTING QUITE A NUMBER OF THE LEADing varieties of Strawberry together for five years, I have produced a variety unlike any of the former. I have picked the fruit daily since April 20th to the present time, October 18th, and the vines are still full of bloom and berries. Roots are long and stand the drouth well. The berries are large, fine flavor and high color, and resemble the Jessie in shape somewhat. I am prepared to furnish them in small lots at $1.50 per doz., post paid. R. E. FARRINGTON, General Nurseryman, Phœnix, Arizona.

TREES FOR SALE.

PEACH, PRUNE, WALNUT AND OTHER TREES for sale. Guaranteed to be entirely free from all insects. Peach and Prune grown without irrigation. Address,

THE GARDEN.

The Gopher.

The following instructive essay on the common gopher of this [illegible] was prepared for the *Great Southwest* by F. Stephens of Santa Ysabel, Cal. It should be read and preserved for reference:

The pocket gopher (*Thomomys Talpoides*).—Color varying from reddish-brown to nearly black, lighter below and darker about the mouth; inside of pockets light-colored, sometimes white. Form, mole-like, with a blunt head. Pockets open externally on the side of the lower jaw. Length, nose to base of tail, five to eight inches; tail, two to three inches. Upper incisors without a median groove, which distinguishes it from the members of the family in the Eastern States, all of which have a groove down the middle of the upper front teeth. Found from the Rocky mountains to the Pacific. Typical from northern variety *bulbivorus*, in the Pacific Coast region; variety *umbrinus* in Lower California and Arizona; variety *perpallidus* in the Colorado and Mojave deserts. The last variety is very pale, nearly white sometimes.

The above description is sufficient to enable any one to recognize the animal I am writing of, and most farmers know it too well already. The name "gopher" is applied to very different animals in different parts of the United States. In the Mississippi valley it is often given to several species of ground-squirrels which burrow in the ground, but spend part of their time on the surface, while the true gopher lives altogether underground. In some of the Southern States the name is applied to numbers of the tortoise or land turtle family.

The pocket gopher probably breeds two or three times a year, and judging from the numerous mammæ (10 to 12) the litters will average about half a dozen, so that it is little wonder that they increase fast. Very little is known about the breeding habits of the pocket gopher, and the breeding nest is undoubtedly placed deep in the ground, and therefore not likely to be found often. I have taken females, evidently suckling young, at all times of the year.

The runs or prolonged burrows are very extensive; practically endless, as they often run into one another. The runs are usually but a few inches beneath the surface. The object in making the runs is to procure food, which is principally the roots of plants, and are, of course, the most abundant near the surface. A considerable part of the food, however, is the plant itself, which is sometimes carried a short distance to the entrance of a hole, or, as is more often the case, a tunnel is run under the plant and it is pulled in from below. A small portion of their food is such earthworms, beetles and similar animal food as may drop into their runs, which they seem to travel over daily for the apparent purpose of picking up such bits. The pocket gopher does not feel at all safe on the surface of the ground and will not venture many feet in the open air, but, if it sees a desirable plant at a distance, will run a tunnel to it rather than to carry it any distance on the surface. They are good, practical engineers, and will run a tunnel several feet and come up beneath a melon without showing any sign on the surface until the hollowed-out melon is rolled over.

It is supposed by many that the pockets are used to carry out the dirt seen in the mounds marking the course of the runs, but such is not the case. I have trapped hundreds of pocket gophers, principally for the purpose of ridding the ranch of them, but sometimes for scientific specimens, and have shot some in the act of building the mounds as they come to the surface with fresh dirt, and have yet to see the first dirt in the pockets of such animals, but I have seen bits of roots, bits of plant stems and leaves in their pockets very often. Careful watching by others, whose conclusions I indorse, shows that the animal loosens the dirt with its powerful fore feet and works it behind itself with fore and hind feet, in a manner similar to that of a dog in like work, until it gets a sufficient quantity, when it turns around, and lying flat on the bottom of the run with the wrists of the fore feet close together under its nose and the claws spread wide apart, it pushes the pile of dirt before it, using the hind feet only for propulsion. A little examination of the fore feet will show any one that in this manner the animal can push a much larger quantity of dirt ahead of it than it could carry in its pockets, and the quick flip that is given to throw the dirt away from the mouth of the hole when coming out, explains why many persons think they throw the dirt out of their pockets with their fore feet. The work is done so quickly that it needs much close watching to see how it is done. When the ground is soft, some of the earth is pressed aside, so that less needs to be carried to the surface, and in very dry weather, when the ground is quite hard, but little work is done, the animal subsisting on such food as it can obtain in the old runs. At such times one may as well lay away the traps until the next rainy season begins.

The pocket gopher is a serious pest in orchards, gardens, alfalfa-fields and similar places, and it is desirable to know how to rid the premises of them. It can be done, but only by perseverance, and when done one must keep at work around the edges of the place to catch those that come in from adjoining places. When several join, it becomes easier for each.

After numerous experiments, I have settled on the use of traps as the most preferable method, and I want two kinds of traps. I use the No. 0 Newhouse (the smallest size, worth about $3 per dozen) and a wire trap that I think is called the C. V. or something similar. In it the gopher enters a wire loop, when a bent point catches him from below. One needs a dozen of each to do much trapping, as it is too slow with a less number. If there are cats around, fasten a light wire two or three feet long to the C. V., so that you can stake it, or the cats will carry off both gopher and trap. You want some bits of board six or eight inches square, stakes to stake the traps with, and these should be long enough that you can see them at a distance or you may find it difficult to find your traps, especially in weedy places. You also want a bit of stiff hoop iron bent into a fish-hook shape to widen the entrance to the runs, and a shovel, and you are ready to begin. Make your rounds in the morning and at night, as then the gophers are most active. If you find a fresh hole yet open, enlarge it sufficiently to run in a C. V. six or eight inches; leave the entrance open in this case. Look out that no lumps of dirt lie in the hole beyond the trap to give the animal warning. If you find a fresh mound with the entrance closed, dig with the shovel until you find the side branch connecting the mound with the main run, feel along this side branch until you find the main run, and open it until you can set a Newhouse trap in the main run itself, with the pan of the trap in the middle of the run and level with its bottom. Disturb the run as little as possible. Use no bait. The object is to catch the animal as it passes in its usual rounds. Close the mouth of the hole you have made with a bit of board covered with dirt, so as to stop out all light. Sometimes you will find that the animal has detected the trap and filled it with dirt. In this case, it will have made a new run a few inches beyond the trap, where you can try it again. Sometimes in digging below the mound you will open the main run itself. In this case, set a C. V. in each side and close the hole with a board as before. You are not likely to get more than one animal in a place. Sometimes they get very cunning and hard to catch; then, after a few trials, change to the other style of trap. By far the most effective time to trap is after rains, when they are very busy and careless of traps.

Poison can be used to a small extent by putting a few grains of poisoned wheat or a raisin with a little powdered strychnine in it in the run, but the entrance should be closed. A good cat is very effective in catching gophers, and the barn owl is one of the farmers' best friends, as they live principally on pocket gophers and feed their young on them.

THE VINEYARD

Report of Commissioner Bundschu.

Charles Bundschu, Viticultural Commissioner for the San Francisco District, has filed the following annual report with the Board of State Viticultural Commissioners: I am gratified in reporting to you that the state of viticultural matters pertaining to the Third or San Francisco District may be considered in a fair condition of prosperity.

The depressing and unfavorable circumstances that impaired the healthy advancement of the industry for some time past, appear to be supplanted with a feeling of renewed confidence and hopeful expectation.

I find that in all the different sections comprising this extensive district the stock of old wines held in first hands is limited and the new vintage could be taken care of without difficulty. Although special inducements have been offered this year for the preparation of dried grapes on a larger scale, sufficient wine grapes have been reserved for wine-making purposes to make our vintage a very abundant one and sufficiently large to replenish the stock for the regular trade requirements.

Santa Clara county has developed into one of the great centers for the production of red wine varieties, and the general characteristics of the wines—good color and body—make them a desirable product for the great bulk of our export clarets. The Charbona variety, extensively cultivated in the past, has been largely eliminated and replaced by grafts of the Burgundy and Bordeaux types, greatly increasing thereby the value of the product. Some of the finest claret types are grown in this wonderful section, especially in the mountain regions, and after undergoing proper treatment and cellar handling their merits must and will command general approbation and appreciation; they have compelled recognition heretofore and will continue to grow in public estimation hereafter.

San Mateo county is also making strenuous efforts to increase its acreage of vineyards; its vineyardists are planting out the choicest varieties in the mountain regions, evidently well adapted for the cultivation of the vine. These new vineyards will soon come into full bearing and will undoubtedly produce satisfactory results.

The Santa Cruz mountain district has had good opportunity to show its superiority in many respects. The wines are not very heavy in alcohol, but develop a most delicate flavor and highly distinctive aroma, which may be attributable to the proximity of the ocean. The yield of the vines is generally light, cultivation more difficult and expensive than that of the valley lands, but the result shows immense possibilities limited only by the degree of skill and knowledge of the vineyardist to assist nature's efforts and to overcome difficulties of fermentation and development.

Alameda county and especially Livermore valley appear to have made the most formidable progress in the general rivalry for the production of higher types of the table wines. The distinction of the highest awards of merit that were accorded to the products of this now famous district by the Paris Exposition of 1889 must be considered evidence of superiority of climatic conditions and adaptability of soils, especially to Sauterne and Bordeaux varieties, as well as the wine-maker's skill and careful methods of making, treating and ripening their products.

So far as general statements may be relied upon, the Third District is free from the attacks of the phylloxera, and although no serious apprehensions are felt on the part of the vine-growers, abundant provision is made for the introduction and propagation of resistant vines. In fact some newer vineyards of the district have been entirely planted in resistant stock and grafted with the most approved varieties.

The conditions of trade have not been very favorable for our California growers for some time past, although the shipments from this port and interior points show a healthy increase in volume; prices have declined to a remarkably low and unprofitable standard. One of the principal reasons for this unfavorable condition of affairs in the past is undoubtedly an overproduction of inferior wines, which under the ordinary pressure of commercial competition have found their way into the channels of trade and under competitive prices have degraded the prestige and dragged down the prices of our superior products. The general opinion that all our wines should have a certain age before they could advantageously be placed on the market has induced many to hold their products for future prospects. It should be remembered by all parties interested:

First. That only a limited portion of our wines can be safely placed aside for storing and ageing, and that quality alone can form the criterion for judicious selection.

Second. That the conditions essential for the preservation, for the improvement and for the maturing of wines into a really fine product must be thoroughly understood.

Third. That when the fundamental conditions of original soundness, excellence of quality and means of preservation coupled with the knowledge of methods are wanting, all attempts at ageing wines will most assuredly result in failure, sacrifice and disappointment.

When only eight or ten years ago it was firmly asserted by representative authority and published all over the State, that California could never produce too much wine and that the then prospective vintages (variously estimated at forty to fifty million gallons) would be readily disposed of—when it was stated that the happy owner of a hundred acres of bearing vineyard would be the enviable possessor of an estate equal to an independent fortune—then nobody anticipated that even the largely reduced yearly quantity of about eighteen million gallons could bring about a disastrous flooding of the wine market. That the prophetic glorification of the future of our industry was not to be realized up to the present time, is due in a great measure to the fact that our American population are very slow in adopting the habit of drinking in moderation—a habit almost as old as the world and to-day indulged in by the most enlightened and cultured nations of Europe.

The planting and growing of a vineyard is only the beginning of the problem of "making wine," the solution whereof is its profitable marketing. The production of ordinary wines may be comparatively an easy task, but the selection, nursing and ageing of wines of superior quality is an accomplishment acquired only after untiring application and experiments coupled with natural ability and skill.

I am most happy to note quite an advance among the growers of this district in all the qualifications of successful wine men, and in proof of my assertion I point to the improvement especially in the quality of wines made these last two years. I doubt not but that the future will show still better results and bear witness to the correctness of my judgment.

I look upon our past and present struggles as an unavoidable reaction from over-sanguine expectations, which must naturally adjust itself and then the wine industry will once more be established on a basis remunerative to all.

S. F., Oct. 25. CHARLES BUNDSCHU.

The Situation in Grape-Growing.

EDITORS PRESS:—I am a new subscriber to the PACIFIC RURAL PRESS and read with interest the articles on farming and tree culture. In your issue of November 15th is an article "The Future of the Wine Interest." While it is true the wine grape has not paid very well for the last few years, when we take into consideration the destruction of the vine by the phylloxera and other diseases, the outlook is not very bright for the wine grape. One other thing I would call attention to is the sentiment growing over the United States against wines and all intoxicating drinks. Some say that it will not hurt the wine interest in California. Look at the number of States east of the Rockies under prohibition, and it has been lately stated that the Southern States have nearly as much territory under local option as the North has under prohibition. California has been nearly doubling the prohibition vote every two years of late, and if the tide does not turn soon, the time is not far distant when those having grapes only good for wine might not find a market for them. It seems to me the wisest thing for vineyardists to do is to plant a grape that can be dried, canned or put to some other profitable use. Then they would be on the safe side of the question.

Mr. Wehner advises buyers to buy lands already planted to vines and bearing. So far as my experience goes, it is nearly always cheaper to buy improved land rather than unimproved land. NELSON WARD.

Compton

THE APIARY.

Bee Culture in the Sacramento Valley.

EDITORS PRESS:—On a recent trip to Sacramento and Yolo county, I visited Mr. Adam Warner of Clarksburg, Yolo county, an extensive apiarist who keeps bees in both counties. I found Mr. Warner at home. He had just finished taking off about a ton of honey, mostly in one-pound sections. The honey was as fine both in color and flavor as any I have seen this season.

"What kind of a crop did you have this year, Mr. Warner?" I asked.

"Not very large," he answered; "a little over a ton. You see the high water kept things back so this last spring that the bees did not have a chance to do much."

"That is very fine honey," I remarked. "By the look of it I should think that it was gathered from alfalfa."

"No doubt part of it was; but the honey this year I don't think is as good as that I had last year. I have noticed, though, that the honey raised the last few years is a great deal better than that obtained when Harbison kept bees here."

"That is no doubt owing to the wild growth being cleared out and replaced with alfalfa, fruit bloom, etc.," I answered. "About how many colonies have you, Mr. Warner?"

"I generally keep between 250 and 300 stands in six different apiaries. I give the ranchers $20 a year for the privilege of keeping bees on their places. How many colonies do you think can be safely kept in one apiary, taking it season for season?"

"Well, that is hard to tell," I answered. "I have heard of keeping between five and six hundred in one apiary, but that is in the lower counties where there is excellent bee pasturage, and where bees gather from three to five hundred pounds to the colony. In your location I think you could safely keep 100 colonies without overstocking. A great deal depends on the season. Some seasons there is abundant pasturage for 1000 colonies in one location, and again 25 will overstock it in unfavorable seasons. I once kept 130 colonies in one apiary in El Dorado county, and they did first rate."

"Yes, I am sure I could profitably keep 100 stands in one location without overstocking, in fact, I am going to try it anyway next season. In the future I intend to devote all my time to bee-keeping. I have sold all my stock and intend renting my ranch, so that I can spend all my time with the bees."

"Have you ever tried the Carniolan bees?" I asked.

"No; these I have are hybrids and Italians, and they are splendid bees for honey gathering. I have heard about the Carniolans being a very gentle bee. A bee-keeper down below told me that they did not sting at all."

"Oh, yes, they will sting as well as any other kind of bees," I answered; "but with proper handling you can look through a good-sized apiary without getting stung. Carniolan bees cap their honey very white and use little or no propolis, so that it is a pleasure to handle frames and sections; they gather as much honey as any race of bees, and are excellent defenders of their hives against robber bees. Do you have any trouble by bees robbing here in your apiaries?"

"No, bees don't rob here; at least none of mine ever have. I have heard that some bee-keepers have great trouble by robbing."

"It is only in certain locations that bees rob each other very bad," I observed; "as long as there is sufficient pasturage for them to work on, there will be no trouble. In Placerville we sometimes have considerable trouble with robber bees, but higher in the mountains bees rarely if ever rob. I see your hives are the Harbison style. Do you practice artificial swarming, or do you allow your bees to swarm naturally?"

"No; I divide all my bees. I divide them once and then try to keep down all natural swarming afterward. I tell you there is considerable in knowing the right time to divide your bees. I wait until the hive is overflowing with brood and bees and then divide. Some bee-keepers divide too early in the spring, which I think puts them back too much and takes them too long to get started again. I want all my colonies strong, every one of them."

"But don't your bees still persist in swarming after being divided?" I asked.

"No; after being divided once, I give them plenty of room, and they generally settle down to business, and very few of them ever swarm.

Runaway swarms have a hard time in seeking a suitable habitation in a country like this, where there are so few hollow trees; they will go in old buildings, barns, chimneys, almost in any place where there is not much noise; sometimes they build out in the tules, but are generally swept away by the high water in the winter-time."

"I see you have quite a lot of Harbison section boxes on hand. Do you like that style?"

"No; after they are all used up, I am never going to use that style again. The one-pound section sells the best and is the best, all things considered."

"You do not use a regular section case, do you?"

"No; you see my sections are clamped together in this style;" and he showed me seven one-pound sections clamped together by four very thin strips; one at each corner. "You see," he continued, "I can put 21 one-pound sections on a Harbison hive, and by having sections clamped this way, it facilitates handling when taking the bees out of the sections, and when packing honey for shipment; the box I use for shipping honey holds 63 one-pound sections. Do you ever have much trouble in taking the bees out of the sections?"

"No; the style of hive I use, I can take off a great many sections and bring but very few bees in the house."

"You do not use the Harbison hive?"

"No, I use the regular movable frame hive, while yours is somewhat of a fixed frame. I should think the Harbison hive would be a splendid hive to move bees in."

"Yes, it is; you see the frames are all set at fixed distances, and it is simply no trouble at all to move bees in that style hive."

"Yes, I must say that it is one of the best hives for moving bees that I have ever seen; but that style of entrance is not Harbison's invention, is it?"

"No, that is my own; it is no trick at all to close up a hive this way; Harbison's style of entrance was too unhandy."

Mr. Warner's invention consisted in having an entrance cut in the bottom board, to within an inch of the end of the hive; he did not have that triangular-shaped opening by the entrance of the hive which is characteristic of the ordinary Harbison hive; but instead, the front part of the hive was a straight piece of board clear to the entrance; he had a strip of board cut, so that it would just fit and close the entrance perfectly tight; this board rested at one end of the entrance, and was held in place by a screw driven in full length, which allowed the strip to be moved up or down at pleasure; another screw was put in the other end, but only driven in part way, so that after the hive was closed the strip could be securely fastened.

The Harbison hive allows considerable ventilation, and I should think large colonies could be moved quite a distance in ordinary weather.

I shall have more to say of this interesting visit in my next letter. S. L. WATKINS.

Grizzly Flats, Cal

FORESTRY.

Reports on the Sequoias.

WASHINGTON, Nov. 19.—Andrew Caldwell, the Special Land Office Agent, who was sent from the Visalia Land Office, has filed his report with the Land Office on the mammoth trees of California. He finds that the Land Office plats on the subject of mammoth trees are not always correct in locating the sequoias, but by interviewing old settlers, miners, mountaineers and local surveyors, he secured information which greatly aided him in his work. The greatest body of sequoias, he says, are to be found in Townships 15 and 16, Range 29 east, and Townships 15 and 16, Range 30 east, Mount Diablo meridian.

He says: "The Kaweah Co-operative Colony Company are making squatter claims on much of this section, and unless it is stopped there is danger of their making entries of all the desirable lands upon which the great trees are standing. It would be an irreparable loss if this one large and perfect body of sequoia giganteas should fall into private hands and be cut down or otherwise destroyed simply to gratify and possibly enrich the leaders of this body of misguided enthusiasts." A sawmill in the vicinity, he says, is creating much havoc with the forests thereabout.

A newspaper giving a short paragraph about the discovery of a group of trees, some of which were over 600 feet high, said to have been discovered in Pierce county, Wash., caused Commissioner Graff to detail Special Agent Mosier to investigate the story. He went to the locality named and found the author of the newspaper story, who said that the trees were in a remote canyon in the southeast corner of Pierce county. Some of the trees, he said, were 400 feet high and many of them were 13 feet in diameter. Deep snow prevented Agent Mosier from penetrating this mountain region, which has never been explored by white men.

It is hoped by the Department that some means may be devised by which samples of these trees may be shipped to the World's Fair at Chicago. Of course their transportation by rail would be out of the question, and the only other way would be to take them by ocean around the Horn and up through St. Lawrence river and the Great Lakes or else up the Mississippi river to Rockford, Ill., and thence to Chicago over the prairie country.

THE FIELD.

California Weeds.

Mr. Thomas Magee, a city man with rural interests and proclivities, recently wrote for the *Evening Bulletin* in an interesting way upon the weeds most common in this State according to his observation, and we quote as follows:

Only the most notorious weed freebooters will be mentioned, which, like the poor, we have always with us in nearly all the lower valleys of the State, but especially in our bay counties. They are on all rail, county and private roads. They have squatted on and preempted a large share of every hill, valley, bank and ditch. Rich or poor land seems, in one sense, alike to them. They pay no rent, yield not a cent from their crops, and the more luxuriant their yield the poorer they make the man who owns or leases and farms the land which is cursed by their unsightly presence, and in some cases made offensive by their disagreeable odor. These best-known weeds are mustard, dog fennel, dock and sorrel, tar-weed, skunk-weed, pig-weed, four thistles (California, Spanish, Scotch and milk thistle), knot grass and morning-glory. Of these, one of the most land-usurping and plentiful is the dog fennel or fetid camomile. The rays of its flowers are white and the disks yellow. Although the flowers are, of course, borne on the main stems, they do not all appear there, and, therefore, cannot be completely extirpated but by the hoe, plowing or hand-pulling. Cutting by the scythe or mower fails to reach the lateral spread of the stalks, or to get at the flowers close to the ground. This weed is everywhere and attains its most luxuriant growth close to the fences where the hoe or hand-pulling only can reach it. In Moraga valley and other portions of Contra Costa county, and in the Alameda hills, it grows so rank in hay and grain fields and emits such an acrid dust when thrashed in the latter that men have to use a large wet sponge over their nostrils, which is tied around the head to keep the dust out. This dust burns the eyes like pepper, produces choking sensations in the throat and is most irritating to the nostrils.

A Costly Importation.

There is more or less fennel and other weeds and their seed in all bay county hay and grain. Professor Hilgard tells me that dog fennel first appeared in California about eight years ago. It came in a hay-packed crate of crockery. Whether this hay came from the East or Europe Prof. Hilgard could not say. It was dropped somewhere on Oakland point. The dog fennel, thus introduced in this State, spread slowly on level ground, but when it reached the Alameda hills the plant spread, the professor says, like wildfire. That importation, it may be safely said, was the most expensive for farmers that ever reached the State. Any one who carelessly or ignorantly throws hay on the ground to cattle is sure the following spring to find a luxuriant crop of dog fennel or mustard there, if plowing meanwhile and the sowing of a good crop do not at least partially check the growth of the weeds. We say partially, for about two weeks after the good crop is cut, fennel, or a fragrant species of tar-weed, called by some pepper weed, will be found appearing as a second crop. This species of tar-weed, if in grain or hay fields, does little harm, as it never appears until the good crop is cut, and when plowing-time comes it is plowed under. It should be weeded out of pastures that are not plowed.

Tar and Milkheads.

Bad as dog fennel is, it is grateful to the eye and nose compared to tarweed. Except as to odor, the word "nasty" cannot be applied to dog fennel, but no other word can describe tarweed justly. As an unclean agricultural pest it takes high rank. It blackens and leaves ineradicable greasy stains on the hands and clothing that touch it. It greases and blackens the muzzles and limbs of animals that are compelled to graze where this weed is growing. Tarweed is so dirty and sticky to the touch, so shabby in its colors to the eye, and in every way so offensive, that a redeeming feature, in the farmers' eyes at least, cannot be claimed for it; yet all of the tarweeds are charming plants, and their flowers are very beautiful. There are some 12 species of tarweed; the worst, because the largest and most greasy, is the *Madia Sativa*. It is cultivated in France as an oil-yielding plant.

Milkweed, more properly milk thistle (*sonchus oleraceus*), is too well known to need description. Cows and turkeys are fond of it. It is particularly plentiful on moist ground. Because of the excessive rains of last winter milk thistle attained a more luxuriant and extensive growth last spring than in any year of the past ten. Its leaves are of a white and shabby green, veined with dull maroon colors. When this plant withers its seed, leaves and stalks suggest nothing but plant rags and shabbiness.

The Thistle.

Animals will eat California thistles when they are green. The real name is Napa thistle or *Tocalote*. This thistle grows from a tough, thick and sticky stalk to a hight of one to two feet. Its stems put forth many branches, of a shabby green color, which are harsh and sticky. When growing it is tolerable to the eye, but in the fall when withered and in entire possession of a field, it is suggestive of utter land neglect, plant-rustiness and farm ruin. There are other weeds far more offensive than this thistle, but there are none that attain to greater ultimate and utter plant-poverty and meanness to the eye.

Besides the California thistle, the Scotch thistle lifts on high its tall stalks, crowned with flowers of purple. With its large pale-green leaves, veined and streaked with clean white, it is not an unsightly looking plant, even if it warns off touch and intrusion by its rigid and prickly armament. The Scotch thistle is making rapid headway toward monopoly of the land in many places, especially in Marin county. Marin is now largely a county of Scotch thistle crops, and is likely to become almost wholly so, at least in its pastures, if severe measures for its extinction are not soon resorted to. This thistle has one saving feature—cattle will eat it when other feed is short. This thistle is not so offensive to the eye as the other weeds enumerated, although when shriveled into leaf rags and utterly dried out of verdure and moisture, it is anything but an attractive feature, or one telling of pasture vigilance or land cleanliness.

There is no Canada thistle in California. It appeared once in Butte county, near Chico, some ten years ago. Owing to Gen. Bidwell's determined efforts it was stamped out. The State is under heavy obligations to the general for the eradication of this plague.

Knot Grass an Outlaw.

Knot grass (*polygonum aviculare*) now covers the side paths of all roadways and the roads themselves out to where hoofs of horses and wheels of vehicles keep down all vegetation. It does not grow upright, but laterally from a wiry, deeply rooted central stem; its decumbent stems spread out in all directions. It belongs to the buckwheat family and is not a bad weed. Cattle, in lieu of anything better, will eat it. It clings close to the ground and forms a rough carpet of dirty green. It is improperly called pigweed, because hogs are fond of it.

Bad as all of our other weeds are, the worst of them are beautiful in color and grateful in odor compared to skunkweed (*gilia squarrosa*). It grows to a hight of four to nine inches. It is composed nearly wholly of spines or burrs. It is wholly given over to disgrace in color and general appearance, and, to add the last element of degradation, its odor suggests the presence of a whole colony of the unclean animals after which it is so appropriately named. Where it is growing, no animal will feed, even when good pasture is found near it. The most enthusiastic botanist would find it difficult to say a good word for skunkweed or to frame an apology for Nature in making it. The best that can be said for skunkweed is that it is scarce. Strange to say, this outlaw in odor, and worse than tramp in stubby spines and raggedness of appearance, is related to some of our most beautiful spring flowers. Sheep will eat almost all other weeds, but even sheep draw the line at skunkweed.

The Spanish Thistle.

The Spanish thistle, the spiny cockle-burr (*xanthrum spinosum*), is armed with slender, very sharp and needle-like spines of great length. The long rowels of a Spanish spur must have borrowed their length at least from the Spanish thistle. In heavy soil it clings to the ground, though occasionally found in clumps three feet in hight. The long, sharp needles form perfect *chevaux-de-frise* against all intrusion of touch or passage. This weed is a great pest to both cattle and horses. The thistle needles—and they are needles in both length and sharpness—enter their muzzles and legs and are greatly dreaded for that reason. This thistle takes the first premium as a weed nuisance, with no redeeming feature, either of shape or color. Every biped curses it, and if cattle were gifted with speech, doubtless their first profit in utterance, like Caliban's, would be to curse, and curse the Spanish thistle. It came from Spain, and immigrated to California with the Mission fathers.

The *large* milk thistle, with its acanthus-like succulent leaves, is easily kept under, and is eaten by cattle. It is not, therefore, a very troublesome, though a very thickly growing weed nuisance where it has a foothold.

Mustard Weeds.

The tall and very graceful mustard plant, with waving clusters of sulphur-yellow flowers, was remarkably abundant this year in the early spring, especially on the Oakland side of the bay, between Fruitvale and San Jose. This plant in that region last spring usurped one-eighth of many grain-fields. It was so generally and thickly spread in Alameda county that few attempts were made to pull it. This can only be done by hand, and farmers, especially lessee farmers, too often do not attempt the tedious task. This variety of mustard adds grace of form and wealth of yellow color to the landscape. There are three species of mustard. One of them, the rape-seed plant (*brassica rapa*), is believed by botanists to be the progenitor of the cabbage and cauliflower, which are of one family. One species of mustard is as shabby in color, shape and general appearance as the first described is graceful and beautiful. Like the large dock, it shows a wiry candelabra-like spread of faded green color. The stalks are quite as hard to the hand as wire, too. And this, by the way, is a striking characteristic of weeds. They nearly all have extremely hard stalks, are harsh and rough to the touch and unpleasant to the eye. Indeed, the weeds which have most afflicted the farmer proclaim themselves to be such at once to the sense of touch and sight, while the odor of some of them is offensive likewise.

The Morning-Glory.

Where the seeds of weeds come from, or how long they may remain in the ground before germinating, is sometimes a mystery. In San Joaquin county, not long since, a bank, or levee, ten feet in hight was thrown up by the excavation of a ditch of equal depth, adjoining it. The following spring the top of the bank, which, of course, came from the bottom of the adjoining ditch, was covered by a rich growth of mustard. In some portions of our bay counties, but especially in Alameda, weeds, like mustard, dog fennel, California thistle, and, above all, morning-glory, threaten to take entire possession of the land. No one looking at morning-glory, and ignorant of its nature and ravages, would dream of its being anything but a beautiful and desirable floral addition to our fields. The fact, however, is that its presence is a dire affliction, and its eradication in some districts, where it has been allowed to obtain a strong foothold, is thought by many to be almost impossible. It belongs to the convolvulus family. Innocent and beautiful in appearance, and slender, almost thread-like, in its stem, the morning-glory is, nevertheless, a strangler, and a most powerful one, of other plant life. It can destroy them all and take entire possession of the land. Morning-glory in grain-fields climbs and entwines the stalks, and practically kills the plant by preventing the heads from filling out. From each joint of its long, creeping root-stocks a new plant may be developed. It is a remarkably rapid grower. Sowing of salt on some land in the vicinity of San Leandro was lately resorted to as a *dernier resort* to extirpate morning-glory, which had there displayed a vitality and power to conquer all other plant life that was as marvelous as it was disastrous. Sowing with salt means the disuse of the land for two or more years. Professor Hilgard informs me that morning-glory can be extirpated by steadily cutting off the tops as they appear for one full season. In addition to these, the most abundant and best-known weed plagues, there are the true pig-weed (*amarantus retroflexus*), the white pig-weed (*amarantus euxolus*), lamb's quarter (*wenopodium album*), tall knot-weed (*polygonum Pennsylvanium*), several docks (*rumex*), good Henry (*Chenopodium bonus Henricus*), but they cannot here be described, for the writer knows nothing of their habits, except pig-weed, which has the largest spread of all our weeds.

Weed-growing, shallow plowing, dirty and poor seed sowing and no crop rotation or land fertilizing will keep a farmer poor anywhere. The difference in cost between the poorest and the fullest and the plumpest seed is very little, but if the former could be purchased at half the cost of the latter, it still should be rejected. Sow only the very best seed if you would have a full and therefore heavy crop. In farming, as in morals, the gospel is: "Whatsoever a man soweth, *that* shall he also reap."

Sowing Foul Seed.

Foul-seed sowing exceeds all other causes of the widespread existence of weeds. No one should ever sow seed nowadays of either wheat, oats or barley without having it cleaned. It costs $1.50 to $2.50 a ton to do this, or the farmer can do it himself with a hand-cleaner. But if the cleansing of the seed cost $10 a ton, it should be done. One of the lessees of a large island on the Sacramento river, himself a dealer in seeds and produce, says no seed should ever be sown without cleaning. He says to neglect this is to lose $10 to save say 15 cents. The ounce of prevention here is worth not a pound, but almost a ton of cure. With weeds, too, possession is not nine but ninety and nine points of the law. The greater richness of our land here, and our climatic wealth in superabundant sunshine (and this is a subject I have never seen treated), cannot keep poverty from the door of those who neglect nearly every maxim of sound agriculture. Hand-pulling of weeds is the best mode of disposing of them. That system of weeding brings up root and stem; the hoe is the next best, and where neither can be resorted to, the mowing machine, about the middle of July, will get away with most of the dog fennel in pastures; but the mower will by no means make thorough work of it. Horses or cattle will not touch either dog fennel or tar-weed unless they are starving, but sheep will eat both. The sheep, of course, do not prefer either to good pasturage, for they will let both alone in a field where even knot-grass is to be had.

If it were possible to turn sheep all over the counties of Alameda and Contra Costa after the grain and hay crops are gathered, they would do much toward exterminating many weeds. Sheep can clear land of all weeds except morning-glory, dock and sorrel. These two last must be rooted out. Whether hand-pulled, hoed out or cut by a mower, when dried, all of these weeds should be most carefully burned. Most of the weeds named are composite plants—that is, plants with compound flowers—perfect plant seed-mills, in short. These weeds, therefore, are in every way fitted to maintain a roothold in all land and to increase and multiply at a fearfully rapid rate. Incessant vigilance and warfare are alone the price of liberty from their ravages. This warfare is now but feebly maintained. Its vigor must be increased, for the land must be saved for a cleaner and much more profitable agriculture.

Patrons of Husbandry.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

The Master's Desk.

E. W. DAVIS, W. M. S. G. OF CALIFORNIA.

National Grange Notes.

Dear Brother:—The 24th annual session of the National Grange closed at 10:30 P. M., Wednesday, Nov. 19, 1890. The session lasted eight days. It is claimed by those who have attended many sessions that more good work was done at Atlanta than has been done for many years at any one session. Certain it is that the body was at work nearly all of the time. We had three sessions per day, and then the committee work was an extra. Some of the discussions were hot and heavy, yet during the whole session there was not one personality, not one accusation of unfairness, and no acrimony or ill-feeling. The debates would be a credit to any parliamentary body. Though there were disagreements as to methods there was no disagreement as to the main issue, viz.: the protection and elevation of the Farmers of America, and all agree that the Grange is the organization through which this relief must eventually come. Other organizations, more or less of a political nature, and which have a membership of a very peculiar combination, may, for a time, ride into power. And yet it is charged that politicians now have a finger on some if not all of these organizations. During the U. S. Senatorial contest in Georgia, there was a most bitter and determined fight between a farmers' organization and the combined opposition. The opposition had in its ranks some of the best farmers of Georgia, who said they could not affiliate with a secret political organization.

That the Grange is growing in strength and influence is very patent from the reports of State Master. Nearly every State Master predicts a bigger gain in 1891 than for any year in the past decade.

The ritual for juvenile Granges was adopted, and the manuscript is now in the hands of the printer. By its provisions for the organization of juvenile Granges, the National Grange provides that the juveniles must be under the protection of a subordinate Grange. Children of the farm, *over* 8 and *under* 14 years of age are eligible.

Pomona Granges asked for a separate annual word, but, as at the last session, the request was not granted.

The report of the Committee on Agriculture, written and submitted by Bro. Page of Missouri, was an able paper. The same can be said of the report of the Committee on Education, Bro. Bowen of Connecticut, Chairman.

Bro. Hale, who is now in California, sent a very pleasing letter from the "Sunset Land," which was enjoyed by all the members of the National Grange.

The constitutional amendment, as submitted by the State Grange of California and urged by "yours sincerely," was adopted and will now be at once submitted to the various State Granges for adoption or rejection.

The A. W. will soon be in California. You and your readers may begin to guess what it is. In the meantime I trust Secretaries will be very prompt in sending their December report and the quarterly dues to you, so that they may become early in the new year possessed of the new annual word.

Am sight-seeing for a few days on my return trip, but expect to be "home" by the 10th of December.

Have seen the great iron works at Birmingham and at Bessemer, Alabama; also visited Fort Walker, where Gen. Sherman and his forces had such a "warm reception" when attacking Atlanta. Saw the Government monument erected on the exact spot where Gen. McPherson was shot.

Am getting a few points at Memphis, the "great cotton center" of this portion of the Union. From here I go to Jackson, Miss., and then to the famous Vicksburg, where I expect to get some valuable information.

Before closing, I must not forget to say that Bro. and Sister Kimbrough of the Georgia State Grange did all in their power to make our stay in Atlanta pleasant, and they succeeded to the fullest extent. The sunset admonishes 'tis time to quit. More anon. E W. D.

Memphis, Tenn., Nov. 24, 1890.

Pescadero and Grange.

Editors Press:—At a special meeting of Pescadero Grange held on Nov. 29, the first and second degrees were conferred, and it was decided to meet at 11 A. M. on the first Saturday in December, and confer the third and fourth degrees on a class of five and have a Harvest Feast, and elect officers for the ensuing year, in the afternoon.

The weather is fine; if it continues so one more week, Pescadero Grange will be in fine condition for the new year.

Some of the farmers in this section are getting anxious for rain, as feed for stock is getting scarce with them. The hay crop was not as abundant as usual, and those who do not have a surplus in good years are sure to be short in poor years. In this favored country men are liable to depend upon the climate and fail in their calculations. The light rain that came so gently laid the dust, brightened the foliage of evergreens and made the air delicious.

Dec. 1, 1890. I. C. Steele

Connecticut's Past Master's Talk to All Farmers.

Tulare Grange Meeting—What Past Master Hale Had to Say.

On Thursday, Nov. 20th, Bro. J. H. Hale of Conn., in company with C. H. Shinn of the *Overland Monthly*, and inspector of experimental stations in California, met with Tulare Grange in open meeting in Goldman's hall, at 10:30 A. M. After music by the choir, the chairman, Bro. A. P. Merritt, introduced Bro. J. H. Hale to the meeting.

The Tulare *Register* reports: Bro. Hale is a very good sample of a shrewd Yankee farmer of the better sort who says many homely things in a very straightforward manner. He said if anything is to benefit the farmer it must come by his own exertions and cease looking for outside assistance. He would not say that farmers were ignorant; they were as brainy as any other class, nevertheless, farmers did not know their business as they ought to, did not know it as well as the merchant and manufactnrer knew theirs and of whom they were envious. In every other business but farming it was deemed necessary to know expenses and gains in detail and govern accordingly in order to be successful. That farmers could live at all under their present slipshod, haphazard style of business proved farming to be a profitable occupation if it were reduced to a system. Farmers had lately been talked to in a very misleading manner, to rise in their power and glory and take possession of the ballot-box. This was wrong. Class legislation and class representation was as wrong when that class was a farmer as when it was a lawyer. It would be better for the farmer to better understand how to run his own business before venturing to run the business of the State. He should learn the value of details of everything on his farm, give systematic attention to everything done, and cited as an illustration the Standard Oil Co. of Cleveland, Ohio—not that he loved trusts, but that he loved their systematic prevention of leakages. By allowing nothing to go to waste and economizing in every thing they could sell oil cheaper than any small institution could. He advocated judicious laziness. Farmers work too much. Not that he would have them quit work and spend their time on the streets, but they

Should Think More.

Mind is more than muscle. A mule has four times the muscle of a man; use the muscle of the mule. Was in St. Joseph, Michigan, and saw asparagus for sale. One lot was roughly put up in boxes to be returned. Another in neat white boxes which did not cost half of the other, was put up neatly in bunches, tied by red tape in neat bows, tied no doubt by a woman, and brought 40 per cent more, cost less than the other. Curiosity led him to the home of the man and found him doing less hard work and showing more general prosperity than his average neighbors. Knew a milk dealer who kept an account with his cows, each having a separate account, and the cow that did not show a profit was sold to the farmer who did not keep books. He asked all the farmers present who kept farm accounts or even a cash account to raise their hands. Not a hand was raised.

Experiment Stations

Will be of great value to the systematic, scientific farmer. The Wisconsin experimental stations are doing more for the farmer than those of any other State, though they are perhaps not so scientific as some. Every kind of business to be successful must have associations, a Grange idea pervade the whole; in meeting together we learn and often, too, from the otherwise most foolish.

Oppression coming from taxes is but a trifle compared to the oppressions brought on the farmer by himself. For instance, the farmer should make a more comfortable home than anybody else, but does not have as comfortable a home as his city cousin. He suggested an idea to Tulare Grange which is in use in Connecticut Granges. Committees are appointed to visit the farms of the Patrons and report how they found them. This caused an emulation and stimulated the less energetic to further energy.

Farming Institutes.

Farmers in the East realizing that they could not do everything as well as deserved to be done, got their several States to appropriate certain moneys annually for this purpose. Wisconsin gives $12,000; New York, $16,000; Ohio, $5000; Pennsylvania, $10,000; and each of the New England States, $3000.

The method pursued is to get the successful in any branch of farming to prepare essays on their specialty. In Wisconsin, 160 meetings of two days' session are held annually. The experiment station is always represented at those meetings. Every dollar spent that way represents a return of $1000

Farmers must use their influence in the Legislature by letting it know what farmers want. The majority in legislative halls are honest, but they do not know the wants of the farmers and cannot know if farmers persist in staying at home and growling instead of informing their representatives. Tariff has in the past been largely against the farmer, but the present McKinley tariff is more fair to the farmer because he asked for it. In the East, sometimes the different Granges united and sent delegations to Washington with petitions numbering 300 or 400 brothers and sisters.

Chas. H. Shinn's Remarks.

Mr. Shinn took hold of the subject with a good deal of enthusiasm; had only lately taken hold of experimental station work, though he had long been an agricultural writer. Said that we had a State that would yet contain a population of 30,000,000. The day was coming when every home in the State would have its ornamental orange trees, date and palm trees. But to get them, many experiments would be required, and this the stations are doing, and it is their endeavor to get the press interested in what they are doing, and items of interest to farmers will be presented in their newspapers; and thus the endeavor would be to replace the Old World fruits with a better article grown at home, with better dates than grown in Asia Minor, better prunes than in France, and better raisins than in Spain, a higher grade of people, for the higher the grade of people the greater inclination existed for eating fruit instead of meat. The coming centuries would look back upon the present settlers as giants who brought order and culture out of chaos and desert plains. He traced the course of culture through the gold, cattle, wheat and fruit periods, and gave an enchanting picture of the future destiny of California.

He differed from Bro. Hale in thinking that we had not the same right to go into politics as other classes. Farmers were not making themselves felt as they ought to in public institutions. He cited the college institute, where were 700 young men and women, 60 of them women, and there were only 14 of the whole studying agriculture.

Tulare alone should send 100 young men to study agriculture where the course of study was free, with an endowment of $7,000,000. He advocated the scratching of tickets and

Voting Only for the Best Men,

And so mystify the politicians that they could never even guess the votes they were certain of. He recommended a simpler book-keeping to the various States, especially in this State. California has in her books 78 funds, Massachusetts only 4.

Future population will settle the problem of markets, and everything grown in the United States will be consumed there. Free trade must some time be the policy of the world, but our present policy is tariff for revenue only. The best kind of taxation is that which gets the most money from the people without their feeling it. The land question, too, will come to the surface and have to be settled. Land and interest are now what makes millionaires. Farmers will be compelled to study financial questions in banking and taxation. The hope of the United States to-day is in the farmer as a strong wall on which the tide of ignorant foreigners and other evils will strike and be held back.

Our lands will become more productive as we learn more. The time is coming when one acre will feed more than 160 acres do now. An instance was cited of land on Alameda creek, which was valued at $10 an acre 20 years ago, when an Italian rented it for vegetable purposes, for which he now pays $40 per acre annual rent and supports a good-sized family. If nut-bearing trees were planted on the highways of the United States, in a few years the yield would be enough to pay the national debt.

In the Afternoon,

Bro. Hale stated his mission here as the special agent of the eleventh census to gather statistics of tropic and semi tropic fruits and nuts, and then gave as an offset to California brag that in his little peach orchard in Connecticut of 35 acres he had sold $28,000 worth last year.

The meeting was rendered exceedingly interesting by questions and answers, in which Bros. Hale and Motheral took the principal part, and in which the shipping qualities of the various kinds of prunes, peaches and grapes were discussed. Bro. Motheral moved that a committee be appointed of three to inaugurate an Institute of the Farmers within a month and state the subject of discussion and place of meeting. The committee appointed were: N. W. Motheral, John Tuohy and J. W. Mackie. The committee met and decided the second Wednesday of December, in Goldman's hall, if attainable, at 10 A. M. Subject, "What, when and where should we plant for future profit?"

The National Grange.

The National Grange closed its session at Atlanta, Ga., on last Wednesday, the 26th ult. Resolutions were passed during the session favoring the Conger Lard bill, the Paddock Pure-Food bill, the Meat Inspection bill, favoring the opening of the markets of the world to American agriculture, deprecating socialism and Anarchism, favoring the Australian Ballot system, urging the necessity of closely watching the Interstate Commerce bill to prevent its repeal, urging the Government to foreclose its mortgage on the Pacific railroads, favoring the Government loaning money to people upon land and other good securities.

The session just closed was one of the most successful in the history of the Grange, in point of number of delegates present and the interest taken by them in the proceedings. The Government was represented for the first time officially in the person of Wm. Saunders, who was one of the founders of the National Grange and the first Master of the Order.

North Butte Grange.

Editors Press:—On November 29th, myself, wife and Sister Elliott of Merced Grange went up to Live Oak to participate in the work of the Grange. Arriving at the Grange hall at 10 o'clock, we found a number of Grangers had already assembled, among whom we found Bro. Coulter, with his ever-smiling face, extending the right hand of fellowship with the grip of a true Patron.

Shortly after we arrived, the Grange was called to order by Worthy Master Hedger. After they had gone through with the regular order of business until they came to conferring degrees, when the Worthy Master requested B. F. Frisbie to do the degree work, and Bro. Coulter to render the secret work of the Order. At the proper time, the Grange was closed in the fourth degree and opened in the third. When the L. A. S. and A. S. presented a class of 17 for the third degree, which your humble servant had the honor to confer, after being duly instructed in the secret work by Bro. Coulter. I also conferred the fourth degree, after which Bro. Coulter explained to the class, in his usual impressive manner, the unwritten work of the fourth degree. We were invited to take seats at the table for a Harvest Feast. Three long tables were loaded with all the good things that the Matrons of the Grange know just how to prepare. I will not try to describe it, for I could not if I wished. There were 125 Patrons seated at these tables. After the inner man had been satisfied, we returned to the Grange hall, where we were called to order by Worthy Master Hedger. After a song by the Grange, the Worthy Master introduced Bro. Coulter, P. M. S. G., who gave us one of his best speeches, to which the Grangers listened with a great deal of attention. It was one of his best efforts, and he did the Grangers a lot of good. After Bro. Coulter, came Bro. B. F. Walton of Yuba City Grange, who gave the Grange some good advice; then we listened to Bro. Ohleyer, Sr., who gave the Grange some good thoughts to think about. Bro. Ostrom followed, telling us what the Grangers ought to do during the coming winter in the halls of legislation at Sacramento. He suggested a great many good ideas, which, if the Grange would carry out, I think would be of benefit to the farmer.

Sister Elliott of Merced Grange spoke a few encouraging words for the Grange. Bro. Frisbie talked to the new class of Patrons, giving them good advice for their future use as Grangers, and how to make the Grange a success and how they can become good working members of the Grange.

The Grange was then closed in due form, and all returned to their several homes, feeling that the day had been well spent, and wishing North Butte Grange a grand success in their new hall.

The visiting brothers and sisters were as follows: Thirty from Yuba City Grange, ten from March Grange, eight from Gridley Grange and one from Merced Grange, all of whom felt as if they had received some good from their visit to North Butte Grange, and I think that North Butte Grange felt as if it had received a benefit from the visits from those other Grangers, and I think that such visits do a Grange a good deal of good. Fraternally yours,

B. F. Frisbie State Deputy.

To All Farmers.

To those farmers not already members of the Grange, we would say the present is an excellent time to turn a new leaf and join the Grange. Do not wait to be asked.

If you are willing to join the organization and work for the progress and welfare of farmers in obtaining rights and privileges that for one reason and another have not been secured to your class, make your willingness known to some member of the Grange by word or letter. If eligible, you are wanted inside the gates.

There are few farmers, their wives, or children 14 years of age or more, living on farms, but would be personally benefited and pleased with their enterprise in joining the Grange, even should they not find it convenient to always remain members.

Ninety-nine out of every 100 practical farmers who have joined the Grange will bear testimony in favor of the organization, whether they continue their membership or not.

Not less than 99 in 100, to say the least, who join are benefited thereby, for, if not satisfied with their material gains, they are certainly well rewarded by benefits worth more to their lives than silver or gold.

We have been led to write of this matter at this time by the near approach of the New Year and holiday season. We hope it may be the means of many a good farmer making himself, as well as his family, the best New Year's present of any season yet, namely, a membership in the noblest of farmers' organizations ever devised.

Tulare Farmers' Institute.

Wednesday, Dec. 10th, is set as the day for the farmers of Tulare and adjoining counties to meet for conference and co-operation in organizing a Farmers' Institute. Important questions will be discussed by local as well as able speakers from abroad.

Farmers, talk this matter over, notify your neighbors, and bring your families, enjoy the occasion, and build better for the future than you may have yet dreamed of.

J. B. RIGDON for Alameda and San Benito counties.
KATE L. SQUIRE for Santa Cruz and Santa Clara counties.
F. P COOK for Merced and Stanislaus counties.
H. W. RHYNE for San Luis Obispo county.

National Farmers' Alliance.

First Meeting of the New Industrial Union in Florida.

OCALA (Fla.), Dec. 2.—The National Farmers' Alliance and Industrial Union met at noon to-day. President Polk delivered the annual address, which congratulated the Alliance on its achievements since the last meeting.

"Retrogression in American agriculture," he said, "means national decay, and powerful and promising as is this young giant republic, yet its power and glory touch not the degradation of the American farmer."

Both Parties Condemned.

The harm incident to the centralization of the money power and the upbuilding of monopolies was then pointed out, and both political parties were condemned for forcing and encouraging this condition. The President urged that additional organizers be sent at once into Oregon, Washington, Ohio, New York, New Jersey and other States.

Among the recommendations was one that an organization be formed, to be known as the National Legislature, composed of the National President and the Presidents of the State Alliances, to look closely after the legislative reforms demanded by the Alliance, both in the State Legislatures and in Congress.

In his remarks upon the proposed National Legislative Council, President Polk said an organization of this kind would wield a power which would enforce the respect of any legislative body to which it might appeal. Touching upon the political action of the Alliance, President Polk said:

Political But Not Partisan.

"While our organization is political, it cannot be partisan or sectional in its action. In support of this declaration we proudly point to our whole past record and to the recent popular elections."

Outlining the future financial policy of the Alliance, Polk said it would demand the restoration of silver to the rights and equalities of legal tender which gold possesses, the issue of Government currency direct to the people, equalization of taxes, prohibition of alien ownership of land, ownership and control of transportation lines by the Government, limit of the public revenues to the economic administration of the Government, graduated taxation of incomes, and the election of United States Senators by the direct vote of the people.

Cheering Old Enemies.

President Foulks of the South Dakota Alliance made a short address, speaking forcibly upon the breaking down of sectional lines. An old Union soldier from Indiana moved that all ex-soldiers in the hall who indorsed those sentiments rise. Forty or fifty stood up amid the wildest enthusiasm; then an ex-soldier from Wisconsin called upon all Union men to give three cheers for the old Confederates in the Alliance. They were given with a will, after which the Confederates returned the compliment in a manner that left no doubt as to the genuineness of their feeling.

The rest of the session will be secret.

The annual meeting of the National Colored Farmers' Alliance will be held to-morrow. The organization embraces 22 States and has a membership of over 1,000,000.

OLD SUBSCRIBERS.—We recognize the names of many of our old subscribers to the RURAL among the names of the officers and members of the Alliance, who no doubt will be pleased to have this Alliance department in their own farming paper.

Hanford (Tulare Co.) Alliance meets every Thursday night at their hall, W. Ogden Pres., H. Crane Secretary.

President Cannon Talks.

Marion Cannon, the newly elected President of the California State Alliance, in an interview says:

"The Alliance proposes to go into politics in California and the country at large, but in a certain sense only. Understand me, we have not formed and are not forming any new political party. We desire to, and shall, if possible, work through the medium of the party organizations already in existence. We will not put tickets of our own in the field excepting when such course is absolutely necessary. We mean to and will control legislation. We propose to do this by indorsing our friends for office and by allowing those who are not our friends to stay at home; that is what the Alliance did in Kansas and other Eastern States.

"When men are nominated for Congress by the several parties, we shall make it our business to find out exactly how those nominees stand upon matters of legislation in which we are interested. If neither nominee can or will give us satisfaction in this regard, our district conventions will then put our own nominees in the field. We do not, however, desire to do this if it can be avoided. We will hold district conventions in the several districts. We are organized to secure certain legislation, and we will not give up until we shall have secured control of Congress."

In the Presidential Campaign.

"And will you take part in the Presidential election?"

"Most emphatically, yes. We have no candidate, but we will play a part, and a most important one. Whoever is not our friend can remain at home. But, after all, Congress is the most important thing. All the abuses to which we have been subjected—and I believe that you will admit that we have been an abused class, without going into our declaration of principles already printed in the *Examiner*—have originated in Congress, and we must begin there to rectify them."

"You will not attempt to take part in local political affairs?"

"No. State and local officers are executive. They must enforce the laws as they find them, from the Governor down."

"The Alliance is an exclusively national organization, then?"

"More national than anything else. It will make itself felt in the election of a Legislature to choose the next United States Senator from California in 1893. You can depend upon it making itself felt there—not only in California but all over the United States. Every man who goes to the United States Senate from the West in 1893 must go pledged to support our measures, as the legislative candidates will be pledged or they will stay at home. We will control the United States Senate and Congress in four years from now, I firmly believe, despite everything that the Republicans can do or say.

"At least ten of the new Senators from the West will be our friends, and that will give us the balance of power there. We should have held the balance in the lower house this time had not the Democratic victory been so sweeping. We may even yet hold it. A large number of the new members are Alliance men—I have not received all their names yet—and these will not go into any party caucus. That is true now and will always be true."

Measures, Not Men.

"And you have no candidate for the Presidency?"

"We have nothing to do with men. We are seeking measures, and as the first of these in four years the Government will own the Central and Union Pacific roads. We will take them for their debts."

"Do you believe, Mr. Cannon, that the farmers of the country can be held together with sufficient firmness long enough to accomplish the objects that they have set out to attain?"

"I do, most firmly. My experience at the State meeting convinced me that we are all right, so far as California is concerned, and we all know how matters have gone in the East."

"You say you have no choice for the Presidency?"

"I say it again and again. We will have at least two more State meetings before the next Presidential election, and there will be plenty of time to discuss that. But we shall look to the platforms, not the candidates, of the parties in that fight."

Railroads and Telegraphs.

"The Pacific railroads will be the first point of attack?"

"I do not say that. We want those roads and we also want the Government to control the telegraph lines. We wish these systems put under Boards of Control, who will be empowered to employ and discharge men, in fact, who will conduct their affairs in all things as the present Boards of Directors do."

"You are not afraid of the employments under these Boards of Control being made places for political hangers-on?"

"No; I do not think there is any great danger of that sort to be apprehended. Now, do not write too much of what I have told you. I do not wish to make any statement for publication further than has been made already in our platform."

State Alliance.

The following is in addition to the report of the session of the State Grange, held at San Jose, which was published in our last number:

On motion of Nixon of Yolo, it was decided to take an informal ballot instead of making the usual nominations.

The chair appointed Bros. Wood of Los Angeles and Witherell of Stanislaus as tellers, and the informal ballot was had, resulting as follows:

E. C. Tully of San Benito, 4; John Roth of Tulare, 2; Marion Cannon of Ventura, 17; D. C Vestal of Santa Clara, 2; J. L. Gilbert of Fresno, 4; Peter Roth of Yolo, 7; J. W. Hines of Santa Clara, 1; John S. Dore of Fresno, 2.

Marion Cannon, temporary chairman, declined, but the convention refused to accept, and on a ballot being had, Cannon received 37 votes; Peter Roth, 1; blank, 1; total, 39; and Marion Cannon was declared by Vice-Chairman Schilling duly elected as President of the State Farmers' Alliance and Industrial Union. Bro. Cannon returned thanks in a very impressive manner, showing a due appreciation of the honor conferred and of the duties and responsibilities of the office.

It is a matter of regret that his exact words cannot be given as a part of this record. The remainder of the officers were elected without peculiar incident, and when the list was completed it stood as follows:

[See Directory at the head of this department for list.]

Brief speeches were made accepting the various offices and expressing thanks for the honor conferred.

On motion, the order of business was suspended and the State Organizer, J. S. Barbee, proceeded to install the officers-elect, the remaining officer requiring no installation.

He called to his assistance James Morgan of Santa Barbara. The ceremony was performed in a very creditable manner and the officers-elect took their seats.

A rising vote of thanks was unanimously tendered Bro. Barbee for his untiring energy in pushing the work of organizing to completion.

Third Day—Satuday, Nov. 22.

The Alliance convened for its third day's work as per adjournment, and was opened in ritual form. Consideration of the report of the Committee on Constitution and By-laws resumed. Art. X of the by-laws was thoroughly discussed, amended in several particulars and adopted. Art. XI, Secs. 1 and 2 were adopted.

At this point the order of business was suspended and a unanimous vote of thanks was tendered the San Jose Grange for courtesies extended in vacating their hall for the benefit of the Alliance.

The order of business was again resumed and further by-laws adopted; but owing to want of time the matter was not classified by the committee into articles and sections. After due consideration and discussion it was decided to raise the initiation fee to $1 and the quarterly dues to 50 cents. The county dues to the State Alliance were fixed at $1.30. All dues payable quarterly in advance. That portion of the by-laws reported by the committee prohibiting the organization of Sub-Alliances within the corporate limits of any town or city, was, on a motion to strike out, thoroughly discussed and the whole matter laid on the table indefinitely. Los Angeles County Alliance paid in $1.65 dues to the National Alliance, Bear Valley Sub-Alliance of San Benito county, 55 cents, Monterey County Alliance, through David Reed, $3.70.

On motion, the Executive Committee were instructed to ascertain the amount of money necessary to defray the expenses of this convention, and report after recess. On motion, the Alliance adjourned until 1:30 P. M.

At 1:30 P. M. the Alliance resumed business, and the President announced the appointment of committees as follows:

On motion, all matters relating to the establishing of a State organ were referred to the Executive Committee.

A unanimous vote of thanks was tendered Bro. F. P. Cook, clerk of the Committee on Constitution and By-laws, for his efficient services on that committee.

We shall give a perfected copy of the Constitution and By-laws as soon as received.

State Agent.

J. M. Moore of Tulare expects to arrive in San Francisco by the last of this week. He expects to remain here, as this will be the headquarters of the State Agent.

Ballot Reform.

Last Sunday's *Examiner* concluded an editorial on the Farmers' Alliance and its work, with the following:

"The farmers do not wish to see their well-weighed votes swamped by the purchased ballots of the stuffers in the cities. The way to prevent such a misfortune is to secure the passage of a ballot reform law. Would it not be a good plan for the Alliance to make its influence felt this winter by notifying every member of the Legislature that a vote against the Australian system will be considered a disqualification for re-election in 1892?"

We wish to say for the benefit of the *Examiner* and other doubting Thomases that the Alliance has already taken hold of this matter by passing resolutions touching this very point, and it would be extremely proper for each Alliance, if possible, to personally interview their member of the Legislature and inform him of the fact that this great reform is demanded by the great mass of organized farmers and toilers of the State. If it is not possible to see your member personally, he should be written to, so that he will have the fact brought directly to his attention and that no dodging of the issue presented will be tolerated in any form.

Which is the Whichest?

EDITORS PRESS:—At the Fruit-growers' Convention at Santa Cruz, Senator L. W. Buck gave us to understand that the future of fruit-growing depended on increased railroad facilities.

I then rose and asked the Senator whether in view of this fact he did not consider it would be well to spend our national resources on these increased railroad facilities rather than on the needless war-vessels upon which the Secretary of the Navy proposes to disburse $1,500,000,000 during the next 13 years. The Senator gave a guarded reply, but the convention applauded the question.

Subsequently Mr. I. M. Benson of Clements asked to bring in a resolution something as follows:

That this convention is impressed with the fact that the success of the California fruit-growing industry depends largely on increased railroad facilities.

That, in view of this fact, this convention deems it would be wiser to expend our national resources on such reproductive public works as transcontinental railroads, rather than on such unproductive superfluities as ironclad vessels of war. The same skill, the same labor, the same material can be expended in either manner, usefully or uselessly.

Chairman Cooper would not permit Mr. Benson to put the resolution to the meeting, whereupon Mr. Benson uttered a stage whisper, "Well, we must wait till the Farmers' Alliance comes along!"

I would like, Messrs. Editors, to offer to the people of this continent the resolution of Mr. Benson, and through the medium of the RURAL put to them this question: Of these two methods of spending our national resources, "which is the whichest?"

The tax amounts to $120 for every family in the United States, and it is to my mind for a purpose utterly repugnant to American institutions and opposed to the dictates of common horse sense.

What thinks the Farmers' Alliance?

EDWARD BERWICK.

Carmel, Nov. 30, 1890.

[Will some Alliance discuss this question and report for the RURAL?—ED.]

Work in the Field.

EDITORS PRESS:—Wednesday and Thursday evenings of this week I gave lectures, by invitation, at Alliances in this county, and to-night and to-morrow night will give two more.

Wednesday night I found the schoolhouse in Pioneer district filled to overflowing, and my lecture to the Pioneer Alliance, No. 5, was heartily indorsed by a liberal contribution and applause, as well as the addition of ten new names to the roll, making their list of members one of the largest in the vicinity of San Jose. The intelligent criticism by various members upon the important questions of the hour give great hope of future progress.

Thursday being Thanksgiving, Mr. Rigdon, another National organizer, was invited to join me in addressing the Alliance at Meridian, where we found another flourishing Alliance of intelligent, earnest workers in the cause of human progress. Most of the large audience were already members of the Alliance, and at the close of the evening's entertainment, which was assisted very much by the Lecturer, Mr. Lovell, giving a fine reading of the poem "Bernardio del Carpio," and singing by the young people, we added to the list the name of every eligible person in the audience, not already a member of the Alliance, so you can see how encouraging the work has become.

MRS. KATE L. SQUIRE,
F. A. Lecturer and Organizer.

San Jose, Cal., Nov. 29, 1890.

Back Where They Used to Be.

Pap's got his patent right, and rich as all creation,
But where's the peace and comfort that we all had before?
Let's go a visitin' back to Griggsby Station—
Back where we used to be so happy and so pore!

The likes of us living here! It's just a mortal pity,
To see us in this great big house, with cyarpets on the stairs,
And the pump right in the kitchen, and the city! city! city—
And nothing but the city all around us everywheres!

Climb clean above the roof and look from the steeple,
And never see a robin, nor a beech or ellum tree!
And right here in ear-shot of at least a thousand people,
And none that neighbor with us or we want to go and see!

Let's go a visitin' back to Griggsby Station—
Back where the latch string's a hanging from the door,
And every neighbor 'round the place is dear as a relation—
Back where we used to be so happy and so pore!

I want to see the Wiggenses—the whole kit and bilin
A drivin' by from Shallow Ford, to stay the Sunday through,
I want to see 'em hitchin' at their son-in-law's and pilin'
Out there at Lizzy Ellen's like they used to do.

I want to see the piece quilts that Jones' girl is makin'
And I want to pester Laury about their freckled hired hand,
And joke about the widower she come purt' nigh a takin',
Till her pap got his pension 'lowed in time to save his land.

Let's go a visitin' back to Griggsby station—
Back where's nothin' aggervatin' any more,
She's away safe in the wood around the old location—
Back where we used to be so happy and so pore!

I want to see Merindy and help her with her sewin',
And hear her talk so lovin' of her man that's dead and gone,
And stand up with Emanuel to show me how he's growin',
And smile as I have saw her 'fore she put her mournin' on.

And I want to see the Samples on the old lower eighty,
Where John, our eldest boy, he was took and buried—for
His own sake and Katy's—and I want to cry with Katy,
As she reads all his letters over, writ from the war.

What's in all this grand life and high situation,
And nary pink nor hollyhock bloomin' at the door?
Let's go a visitin' back to Griggsby Station—
Back where we used to be so happy and so pore!

—*James Whitcomb Riley.*

One October Morning.

Flowers stood on the window-sills; all sorts of pretty knick-knacks and feminine appointments brightened up young Mrs. Clifton's morning-room, while over everything the soft autumn sunshine fell with enhancing touch.

The golden rays lingered longest in the chestnut braids which crowned the bride's shapely head, but they found no reflection in the face beneath; its beauty was clouded by a look of sorrowful perplexity. Elizabeth Clifton had been married just a month, and the first shadow had come over her happiness.

"I suppose it was some tiresome business that upset Henry so," she sighed, "for it was just after he had read his letters; it must have been the one he thrust into his pocket that had the bad news. But how completely his manner to me changed! I don't understand it. When I asked him if anything was the matter, he actually mumbled something I couldn't make out, and then the clock struck, and we heard the whistle of the train, that provoking train! it always comes at the wrong time. But the worst of all was his not kissing me good-by! To be sure, he had done so once when he first got up from the breakfast-table, thinking he wouldn't wait for the mail, and I know he was in a hurry when that whistle sounded, for it just gives him time to reach the station; but it wouldn't have taken a minute to say good-by again, and instead he rushed off without a word!"

By this time, the young wife, in spite of herself, was crying quietly. But she was a brave girl, and did not give way any more than she could help. After a little she decided to go out and take a walk. She would probably have time before her mother-in-law had risen, and the fresh air might do her good. No, she would not sit and mope any longer, so jumping up suddenly, Elizabeth carefully removed all traces of weeping and put on her garden hat. She was about to step toward the door when a knock sounded thereat.

Looking hastily in the mirror to see whether any tear stains were visible on her face, she opened the door as little as possible, that she might not be seen. Her mother-in-law's maid stood in the hall.

"Mrs. Clifton is ready to see you, ma'am, whenever you wish to come," the girl said respectfully.

"Very well, Jane; I will be there in a few moments," and giving another peep into the glass to be sure that her eyes were not red, Elizabeth went to make her regular morning visit to the invalid.

The young couple had spent the first week of their honeymoon in a pleasant trip to Niagara, returning thence to pay a visit to the elder Mrs. Clifton in her pretty country home in one of the picturesque valleys of Pennsylvania.

The bride had never seen her husband's mother, and had rather dreaded the ordeal of making her acquaintance. She found her very charming, but was haunted by a secret fear that her admiration was not returned; she fancied that she was undergoing a critical scrutiny from the fond parent whose only child she had married. This morning Elizabeth particularly shrank from the interview, for she feared that her face was a telltale one. However, the visit must be gone through with; so, summoning all her courage, she boldly knocked at the door of her mother-in-law's sitting-room and was at once admitted.

"Good morning, my dear," said the elder Mrs. Clifton, in a low, sweet voice, and the young lady knelt to receive her usual kiss.

The invalid pressed her pale thin lips against Elizabeth's soft rosy ones, and then, laying her hand gently on her daughter-in-law's shoulder, looked mildly but searchingly into the upturned face.

"How do you feel this morning, mother?" asked Elizabeth, gently.

"Very well, thank you, for me; but how are you, my child? Didn't you sleep well last night? Your eyes look dull and heavy."

"I have a slight headache," answered the young wife, hoping thus to account for her clouded face. "How did you think Henry seemed when he stopped in to say good morning and good-by to you before he came in to breakfast?" she continued, trying to speak carelessly.

"He looked very well—splendid," was the reply. "Didn't you think so too?"

"Oh, yes, certainly," said Elizabeth hastily. "It is too bad for you that he had to rush off to attend to that bothersome business of mine, leaving you alone with nobody but a stupid old woman to keep you company; but never mind, it won't take him more than a day or two, and the matter was very important—it involved considerable money. Besides," with a little laugh, "the honeymoon ended yesterday; you must come down out of paradise."

"Don't trouble about that, I am not in the least lonely," answered Elizabeth; "and, as you say, the honeymoon is over."

But her heart sank within her at the ominous words. Was this what Henry's manner that morning meant?

"My dear," said the elder lady, closing the book which had been lying open on her lap and putting it on a wicker chair that stood close by, "I was only joking. I hope and pray that Henry's and your honeymoon will never be over. As long as you love each other, you have a glimpse of paradise."

There was silence for a few moments. Elizabeth seated herself in a rocking-chair, took off her hat, which she had forgotten in her pre-occupation, and began talking about indifferent matters.

At last, in obedience to her mother-in-law's suggestion, and thankful to be released, young Mrs. Clifton started out for a walk. It would be better than staying in the house, trying to sew or read, and there was a shady wood near by, where she could be undisturbed. It opened on the high road, but a fence kept out all intruders. As Elizabeth neared her destination, she noticed that a tall tree outside the wood was bent and nearly uprooted, while the branches were almost denuded of the leaves which only two days before had glowed in all the red and gold glory of autumn. Then she remembered that it had stormed the previous day—one of those violent storms which sometimes come early and rob the forests of their foliage. With a shiver, Elizabeth wondered if a chill had come over everything—was the winter indeed come?

Left alone in her quiet room, the elder Mrs. Clifton leaned back in her armchair looking grave.

"Poor child! I wonder if they have had their first quarrel? Well, I suppose it must come some time. They will be all right by evening. I am sorry Henry was obliged to be gone all day; I wish I could help them," and she ended her soliloquy with a sorrowful shake of the head.

In the meanwhile, Elizabeth did not get a chance to enter the wood, for, as she stopped by the bent tree, she glanced up the road and saw in the distance a party of ladies and gentlemen whom she fancied she recognized. They evidently knew her, for they waved their handkerchiefs, shouting and gesticulating frantically. As they came nearer, she saw that they were the young people belonging to several families in the neighborhood, all of whom had called on her and at whose houses she had visited.

Elizabeth stood her ground.

"There is no use in retreating into the wood," she told herself; "they would only follow and hunt me up. I must submit."

She did so very unwillingly, however, for she did not feel in the least like seeing strangers. She consoled herself by thinking that they probably had some object in view and would soon go on their way. She was disappointed in this, for no sooner had greetings been exchanged than the foremost of the party—Miss Earle, a young lady to whom Elizabeth had taken quite a fancy and who was a favorite of Mrs. Clifton's—cried out:

"How lucky! We were just coming to the house after you. We had planned a picnic for to-day, but yesterday's storm has made the woods too damp, so we have decided to take a straw-ride instead. You must come—it is great fun—and your husband too; isn't he at home?"

"Mr. Clifton was called away to-day on business," answered Elizabeth, "and I'm afraid I can't leave mother for any length of time."

But the party would not accept this excuse. Mrs. Clifton the elder was used to being alone—they knew that—and she (young Mrs. Clifton) must be lonely with her husband away.

Protestations were useless; so, finally, seeing there was no way of escape, Elizabeth yielded gracefully, only stipulating that she must tell her mother-in-law where she was going. Two or three of the party wanted to go in her stead, but this she positively refused to allow. There was a farm a short distance up the road, where their conveyance awaited them, and Mrs. Clifton agreed to meet them there. Some of the people would have insisted on accompanying her; but, being possessed of quick intuition, and divining that the young bride was in no mood for company, Miss Earle dragged the whole party toward the meeting-place, leaving Elizabeth to hurry home alone.

"If they have had a tiff, she had better forget her misery in company, after she has had time to recover herself," was Miss Earle's wise reflection.

Young Mrs. Clifton informed her mother-in-law of the invitation, which she was of course urged to accept, said good-by, and went to her own room to make some changes in her toilet. She lingered over the process as long as possible, putting off the moment of joining the merry-makers until she felt she must go. Then she started out at a very laggard pace.

Hardly had Elizabeth entered her room, when her husband knocked at his mother's door.

"Why, Henry! you have got back very early," cried the invalid in surprise, when her son appeared in answer to her "Come in."

"Yes; Ormsby was away. I couldn't do anything. I shall have to go to-morrow," Mr. Clifton answered, as he stooped to kiss the face upturned to his. "If I hadn't known you expected me home this evening, I would have remained all night."

This total ignoring of his wife startled Mrs. Clifton, and one look into her son's stern face strengthened her fears.

"Poor babies! they must not really quarrel," she thought, and then she spoke.

"Henry, my dear boy," she said gently, "if you and Elizabeth have had a disagreement, find her at once and make it up. Don't let it go on, I beseech you."

"Mother, it is much worse than a disagreement. Has she said anything to you?" was the reply.

"Nothing, my son, and I do not wish to know; it is entirely between you two. I only beg you to do as I say."

There was silence for a moment or two, and then Henry asked gloomily:

"Where is Elizabeth?"

Mrs. Clifton explained her daughter-in-law's whereabouts, adding:

"If you go at once, Henry, you may be able to overtake her before she reaches the rest of the party." And she accompanied the words with a beseeching look.

An instant's hesitation, and with an abrupt good-by, the young man left the room, while his mother leaned back with an air of relief.

"It will surely all come right now," she told herself.

Young Mrs. Clifton was just leaving the wood to set out on the high road toward the farm, when she heard her name called in a voice that she recognized at once as her husband's, though the tone was new to her ears. She waited until he came up to where she stood. Then, in a very ceremonious manner, he accounted for his unexpected appearance. In a tone equally cold, Elizabeth informed him where she was going, pointing toward the farmhouse as she spoke.

Young Mr. Clifton had removed his hat and held it in his hand when addressing his wife; but a sudden cold gust of wind made him put it on again. After she had finished speaking, he said gravely:

"Elizabeth, I have something to say to you; will you give up this pleasure party if I make your excuses to them, and listen to me for a few minutes?"

The idea of giving up the pleasure party struck young Mrs. Clifton with a sense of bitter absurdity. For a moment a spirit of defiance possessed her, and the answer "No" trembled on her lip. In that short space of time, her life's happiness perhaps hung in the balance.

"I will wait here," Elizabeth said at last, and, lifting his hat very ceremoniously, her husband, with a formal "Thank you," walked rapidly up the road.

The minutes seemed like hours until he returned. Elizabeth stood motionless just where he had left her. He came quite close and looked keenly into her face.

"I have a letter here I would like you to read," he said, in horribly judicial tones, "but first let me explain how it came into my possession. If you will look at the address, you will notice that the word 'Mrs.' is written very much like 'Mr.'—the 's' is hardly noticeable. Jane gave it to me this morning with my mail. I hastily broke it open without even glancing at the outside, not being a woman, and—perhaps you can explain the rest."

Elizabeth received the extended envelope mechanically, looked at the direction, and then took out the inclosure—two sheets of closely written note-paper—looked at that and then up at her husband.

"I have not read it all," he said, in a very quiet tone.

"Perhaps if you had you would have seen it was not for me," his wife answered, just as quietly.

Elizabeth felt only a terrible anger—all other feelings seemed in abeyance. She looked at the letter again, while her husband watched her in dull amazement. What did this mean? Was it guilt or innocence?

Suddenly it flashed over her what her husband must have felt when he saw the words of endearment on the page—"My own darling"—must have stared at him the instant he unfolded the sheet.

"Henry," she began, lifting her clear eyes to his, "if you had shown me this before you went away—"

"I had not time," he hastily interrupted.

But she went on without heeding him: "It would have saved us both a very unhappy morning. I have been foolish, I knew that, and so I did not dare to tell you. Henry, that letter was intended for Cousin Kate Ashton. See, the signature is 'Edward St. Clair.' Don't you remember he was in love with her, but the family forbade an engagement—would not even permit a correspondence? In a moment of weakness, I said he might address his letters to me, and then I would re-inclose them to Kate. I have been sufficiently punished for my folly."

"Elizabeth, forgive me!" was all her husband could say, and for answer she smiled up at him through her tears.

Presently Henry told her how near he came to not showing her the letter.

"It was my dear mother who induced me to do it," he said, tenderly, and Elizabeth whispered:

"Let us go thank her; she need not know how foolish I have been."

"Dear, we will look the secret of our folly in our own bosoms," Henry answered, "and perhaps we have learned a lesson we shall never forget, this one October morning."—*Peterson's Magazine.*

Pertinent and Puzzling.

What parent or teacher has not been puzzled by the flow of questions from a boy, whose eagerness for knowledge keeps his tongue running when the weary one longs for its cessation? A writer in *Life* says:

I took my boy off for a sail on a Sound steamer a short time ago. Here is what he asked me in the course of the day:

"Do they call this a sound steamer because it makes a noise?"

"Is that water down there any wetter than the water in the Atlantic ocean?"

"What makes the water wet, anyhow?"

"How many men could be drowned in water as deep as that?"

"If a mamma fish couldn't get any worms in the water for the little fish, would she go ashore and dig for them?"

"Suppose a whale came along and sat for three days on an oyster, so that he couldn't open his shell, would it suffocate the oyster?"

"Doesn't the dampness ever give clams malaria?"

"Does it hurt to get drowned?"

"Is that big man with the gold buttons on his coat the papa of all those men who do whatever he tells them to?"

Chaff.

UNLIKE a horse, a man may be driven to drink, but not to water.

"MORE in sorrow than in anger"—the letter O.—*Binghamton Republican.*

FLATTERY pats a stupid young man on the head and he wags himself.—*N. O. Picayune.*

THERE is something fundamentally wrong about the man who never gets mad.—*Somerville Journal.*

SHE: It's such years since we met that perhaps you never heard of my marriage. He: No, indeed. Is it—er—recent enough for congratulations?—*Harper's Magazine for December.*

GIRLS ARE ALIKE EVERYWHERE.—Myrtle: Florence, is that Fred Dumley's handwriting? Florence: Yes, dear! I'm engaged to him, you know. Myrtle: Yes, I know it. I was engaged to him last summer. Florence: The dear boy! I wonder who will marry him eventually?—*London Punch.*

YOUNG FOLKS' COLUMN.

Barjonah's Bear Hunt.

[Written for the RURAL PRESS by MRS. M. E. B.]

Many years ago there lived in the little village of Hillsboro a youth who rejoiced under the rather egregious name of Barjonah Ichabod Whitefield, but was better known among his friends as Jonah, until one eventful day when his name became distorted into the quite appropriate one of Bear Jonah.

He was a tall, awkward boy of about 16, with fiery red hair, pale blue eyes, and was abundantly supplied with freckles and what his brother termed insupportable conceit. In fact, his marvelously high estimate of his own capabilities, and unerring judgment in all things, became so conspicuous a trait of his character as to overshadow many good qualities he possessed. Barjonah was very fond of hunting, and his highest ambition was to excel all his companions as a superior marksman.

About 30 miles from the village in which Barjonah resided was a mountainous region where his uncle, Dave Whitefield, owned a large cattle ranch, and as Barjonah was frequently invited to spend his vacation there with his cousin Fred, who was about a year his senior, he had many opportunities for indulging in his favorite pastime. He had already saved a number of deer, panther and fox hides, and triumphantly exhibited them to his young friends as proof of his prowess, while he would relate wonderful stories of his adventures, the all-important pronoun "I" taking so prominent a part in all his narratives as to cause the exchange of many knowing winks and sarcastic nods of the head among his listeners, unknown to himself.

One evening in June, Barjonah received a letter from his cousin Fred which threw him into the greatest excitement. In his letter, Fred had stated that two fine calves were missing from the pasture back of the barn, and that large bear tracks were found around a pond in the same inclosure where his father's cattle were pastured. The letter ended with an invitation to Barjonah and his particular friend, Joe Brady, to take a trip up in the mountains and lend their aid in hope of exterminating the bold thief and thereby prevent further depredation.

Both boys obtained the consent of their parents, and Barjonah soon made the fact known in the neighborhood. He had stored his mind with what information he could glean from the sportsmen of his acquaintance, had read several competent works on the subject of hunting and trapping, and felt himself equal to almost any emergency.

"There is a science about hunting," said he to the little gathering of friends who dropped in for an evening call the night before his departure, "which most of these hunters do not understand. Now I am going to show Uncle Dave and Fred how to get a bear without running one's self half to death climbing canyons and hazarding one's life to accomplish it. I say," he continued, growing eloquent over his pet hobby, "let careful planning or headwork, so to speak, take the place of so much unnecessary physical toil—in short, work on strictly scientific principles."

"Ahem-m," began Joe, clearing his throat with unnecessary emphasis; "how many bear have you killed in that way, anyhow?"

"I congratulate your uncle upon the efficient help he will have," said another.

"Or rather for having the disagreeable job taken off his hands," remarked a third innocently.

But Barjonah would not deign to notice the sly thrusts put to him by his companions.

It was late the next evening when the two boys arrived at Dave Whitefield's residence, and very tired and hungry they were after their long ride on horseback. Supper over, planning began for the next day's hunt.

Barjonah lost no time in airing his pet theories, and sought earnestly to bring his uncle to accept his way of thinking and approve of his plans; but an hour spent in oratorical display intermingled with choice quotations from authorities on the subject of hunting which he had stored up in his mind for this particular occasion had no effect on Uncle Dave. He had had too much experience in such matters to consent to be led by a mere boy, and the only consolation Barjonah received when his lengthy discourse was ended was the remark, "Young man, ain't you a leetle cranky?"

The next morning all hands were up promptly at four. The horses were saddled, the hastily prepared meal finished, and all were ready.

Uncle Dave coupled the younger of the hounds by means of a short iron rod attached to the collar at the neck. There were six in number, leaving old Bugle, the magnificent start-dog, free to run at will.

They took the direction of the cattle pasture, then rode over the hill toward the lakes. They had proceeded quietly on their way for about three-quarters of a mile when suddenly Bugle tossed up his nose with a sniff, gave a short bark, then ran to and fro with his nose to the ground. The other hounds also became impatient and eager for a chase. Bugle gave a series of low, whining barks, and seemed bothered about following the track; but soon his barking assumed a more triumphant tone, and he started over the hill in hot pursuit. This was the signal for uncoupling the other hounds, which Uncle Dave accordingly did, and away they went bawling and barking, making the forests ring with canine music in a way which would have struck terror to the heart of old Bruin if he were within hearing.

This being Barjonah's first real bear hunt he was greatly excited; so much so that he quite forgot his labor-saving plans, and would have rushed after the dogs, regardless of the "unnecessary outlay of strength" to which he referred the evening before, had not his uncle restrained him.

"Take time, sonny; there is no hurry. We can't do much until the animal is treed," said Uncle Dave. "We must use 'head work' for our horses, and not 'expose them to unnecessary fatigue,'" he added slyly.

"While we are waiting, give us poor ignorant fellows another lecture on scientif—" began Fred, but a warning look from his father caused him to leave the sentence unfinished. The men followed on slowly after the dogs, and on reaching the top of the mountain could distinctly hear them in a canyon some distance below. Here they left their horses and descended the gorge on foot. They found the dogs circled around a large tree, and high upon one of the branches, hugging the trunk of the tree, sat an immense brown bear growling savagely and looking formidable enough.

Bang went three rifles simultaneously, and each boy declared that his shot had hit the mark. The bear was certainly wounded and evidently thought it best to change his quarters, which he did with surprising agility for so clumsy a creature. As he neared the ground the dogs sprang back to avoid too close contact with the brute, then started again in pursuit. The men followed, but a small pebble having worked its way into one of Barjonah's shoes, he stopped a few moments to remove it, saying he would catch up with the rest soon. Now the cattle had made numerous trails through the thick underbrush, and Barjonah, who had now lost several minutes, hurried on, selecting what he thought to be the path over which the others had passed, but after a walk of about half a mile the path ended by the side of a brook. He now started back on a run, but on arriving at the place he started from was unable to tell which path to take, the trails being so hard and rocky that no foot tracks could be detected. It would have been useless to halloo in hope of being heard, as the men were now far in advance, and the distant bawling of the hounds upon the track would prevent his being heard; so he sat down where he was and waited. Meanwhile, the men who were about a mile beyond had stopped to listen and ascertain whether the bear had again been treed; but the bear, with the well-known sagacity of its species, by crossing and recrossing the creek, had thrown the dogs off the track, and having thus gained on them ran around in a circle, after the manner of bear when close pressed, then after crossing the creek had traveled on. The men following slowly came upon the dogs where the bear had given them the dodge, some following the circle round and round, and others running back and forth by the bank of the creek, so there was nothing to do but to patiently await developments.

Meanwhile Barjonah was growing impatient. He had counted on winning fame for himself on this day, and proving to his uncle and all else concerned, by his superior skill and the ease with which he would bring down that bear, that he was by no means the crank they thought him to be, and now to get left in this manner, the others would undoubtedly carry off the palm of victory and have the laugh on him. It was unbearable. His meditations were getting very uncomfortable, when a slight crackling of the brush some distance away attracted his attention. Then came the sound of something moving among the fallen leaves; nearer and nearer it came, and then Barjonah, who was partly concealed beneath a growth of underbrush, saw a little animal making its way clumsily across the opening to the right. It proved to be a baby bear, and not seeing Barjonah it passed within a few feet of him. The little creature had evidently been frightened over something and was endeavoring to reach some place of safety. Barjonah raised his gun to fire, when the thought flashed across his mind to capture the little fellow alive and take him home for a pet. He started in quick pursuit, and as the little animal's strength was well-nigh exhausted, the capture was an easy one. Each man before starting out had been provided with a sack of convenient size for carrying home the hide, tallow and a portion of the meat for feeding the dogs, provided their day's hunt should prove successful. Barjonah fearing the cub's maternal parent might be prowling around the near neighborhood, hastily dropped it into the sack and fastened his burden securely to his back by means of a stout rope, the cub resisting stoutly meanwhile. Barjonah's fears of motherly interference were only too well founded, for just at this juncture a low growl and heavy pattering of feet denoted that reinforcements were advancing. The bear limped painfully and was panting loudly, and Barjonah in one frightened glance recognized the ferocious beast as the same one they had encountered that morning. Having gained on the dogs, she had gone to her young and was endeavoring to make way with it to some place of safety, but being crippled and weak from loss of blood, had fallen somewhat behind her cub, and now the infuriated beast, mad with the pain of her wounds and roused to frenzy by the very audible snarling and growling of her cub on Barjonah's back, was making straight for him as rapidly as circumstances would permit, with mouth open and tongue protruding, every deep savage growl sounding like a death-knell to the poor lad. In his haste to capture his prize he had left his gun on the ground where he had been sitting when the cub first made its appearance. To return for it was out of the question. He grabbed and tugged frantically at the sack in hope of detaching it from his back, but it was no use; his precious burden clung to him with a tenacity "stronger than a brother's." Indeed, Barjonah feared their close union would exist "until death did them part." Then remembering that a large bear cannot climb a tree of small circumference, he started on the run toward the nearest group of saplings, and selecting one he thought strong enough to hold his weight, began, without waiting for ceremony, to climb the tree, and despite the added weight of bear flesh, accomplished the feat with an agility which would have done credit to an expert tight-rope performer. He was none too quick, however, for Mrs. Bruin noticing the very energetic manner in which her victim was proceeding to put space between them, redoubled her own efforts, and now stood with little glittering eyes and lolling tongue directly beneath Barjonah's more lofty place of retreat. The cub did not appreciate the high position in the world in which he found himself placed, and growling and struggling, he soon with his sharp little claws made a rent in the sack of sufficient size to permit of his head protruding therefrom.

Far in the distance came faint sounds by which Barjonah knew the hounds were still working on the track. As the barking became more and more distinct, the bear, seemingly realizing that there was little time to be lost in speculation, proceeded to enliven matters by grasping the little tree in both great paws and working it to and fro. The slender sapling bent and swayed with the boy's weight together with the bear's efficient aid, and things were assuming a serious aspect. Here was a dilemma for which he, with all his vaunted superior knowledge, was unprepared. He could remember no rule or hint from his numerous guides and helps for hunters which could apply to such a case as this, or aid to extricate him from his perilous position. His learned discourse to his uncle the evening before came with peculiar force upon his mind. Then he thought of his mother; of her grief over his early demise under such touching circumstances. Then a tiny drop, glimmering in the sunshine, took a fall of about twelve feet and lay sparkling in the grass below; this was followed by many others, accompanied by the unmistakable sound of sobbing. Yes, the mighty hunter was in tears. Every minute seemed an hour to the frightened and now thoroughly humiliated boy, and although he had probably not been treed over half an hour at the most, it seemed an age to him. The little tree was beginning to succumb to his weight, bending so low that each swaying motion brought him within three or four feet of the bear's reach.

Uncle Dave and the boys, tired of waiting the slow tracking of the dogs, started back to look for Barjonah. The hounds, having taken the bear's return track, were not far behind them when the men came to the little opening where they had left Barjonah. What a spectacle greeted their astonished gaze. There, not more than forty yards from where they stood, clinging desperately to the low-bending tree, which was creaking beneath his weight, was Barjonah's trembling form, hatless, his hair on end, every big brown freckle emphasized by contrast to the ghastly pallor of his face, and around the pale blue of his dilated orbs a clearly defined circle of white was distinguishable; while the cub, whose persistent efforts to extricate itself from its difficulty had been partially successful, now hung with about a third of his body protruding from the enlarged rent in the sack, and the distressed mother stood just below, looking anxiously up at her offspring, a low growl escaping her now and then, and unheeding the advance of the foe, evidently determined to stand her ground rather than desert her little one.

Crack! went a rifle report, followed by two others in quick succession. The bear fell heavily, and before it could regain its feet, out from the brush darted Old Bugle, followed by the other dogs, and a warm meeting took place. The older dogs, whom many previous encounters of a like nature had rendered cautious, darted here and there, giving the disabled bear the benefit of their molars whenever possible without coming in too close contact with Mrs. Bruin's huge paws.

One of the younger and less discreet of the hounds, however, ventured too near and received a forcible reminder of his familiarity from the bear's animated appendage, which filled the air with howling and sent the dog on an ignominious retreat into the brush. Barjonah, from his perch on the tree, silently sympathized with the dog in its humiliation, probably from a sort of fellow feeling, bringing to his mind his own high aims of that morning and his subsequent inglorious defeat.

A well-aimed shot from one of the rifles, which took effect in the heart, now laid the bear low, and the dogs soon put an end to its existence. Barjonah now started to descend from his place of refuge, when a twig caught in one end of the rent in his sack at the same moment that his hold was loosened preparatory to slipping down. This tore the sack open, and the cub, in obedience to the laws which govern the universe, fell, like Newton's renowned apple, to the ground with a heavy thud. Stunned by the fall, the dogs made short work of it.

"Well, Barjonah," said Uncle Dave, when that young man reached terra firma once more, "you have showed us how to conduct a bear hunt on your 'strictly scientific principles.'"

"Yes," broke in Fred, "you treed your bear, but if I had to climb the tree with it tied on my back in order to accomplish it, I fear I shouldn't feel that 'headwork' had superseded 'physical labor' to a very striking extent."

Then followed more good natured bantering with select quotations and extracts taken from the learned discourse they had been treated to the evening before. Then Fred wound up with "Three cheers for Bear Jonah, the champion hunter of Hillsboro!"

They were given with a will by the boys, while Uncle Dave tooted his hunting-horn as an accompaniment.

Uncle Dave really felt sorry for the boy, but thought the lesson would prove a healthful one to his overwise nephew.

Barjonah's return to the village the next day, which was several days in advance of his chum, occasioned some surprise among his friends, but his meek and quiet behavior surprised them still more, so different from his usual loquacious and conceited manner, but with the return of his friend, the problem was speedily solved.

Poor Bear Jonah, for this name clung to him ever thereafter, had won fame for himself, certainly, but it was fame of a very different character than that for which he had hoped. But the trial proved a blessing in the end, as it became the means of uprooting one of the most disagreeable and unlovely traits of character possible for a young person to acquire.

DOMESTIC ECONOMY

Hash.

EDITORS PRESS:—No, not the genuine article, but a few remarks on several subjects. In making

Bread

At night it is far better not to knead or mix it up stiff but leave it limber, so that it can the more easily be worked over in the morning, and if you wish it limber do not mix all the flour with all the water or milk at once. Put the flour in gradually after having mixed all the water with about half the flour, and this gradual process of putting in the flour will easily enable you to leave the dough in a more workable state for morning. Another thing: I have found that the majority of women bake their bread too much, get too hard a crust on top. Now *I* am a man, but all the same I dare to advise you, as I have done considerable baking myself, and that under the tuition of the best cook I ever saw.

Beans.

Did you ever buy any beans and have to throw them away? The matter with them probably was that they were not baked enough, as they ought to be baked not less than 12 hours, not a minute less. I find most women know this nowadays, but not the city bakers, and because, baked three or four hours, they are not fit to eat, are very indigestible, and the cause of many persons saying they cannot eat them.

Dried Fruit

Should always be soaked over night in cold water, as it is thus made tenderer and more easy to cook in the morning. This is especially true of prunes, which require a good deal of cooking in order to make the skins acceptable to the mouth, while the stomach should not be even consulted in the matter—*never swallow them.*

C. P. N.

Aunt Mary's Biscuit.

There are only a few things requisite for the making of good soda biscuits, but those few are of the utmost importance. A dear old lady in New England, called "Aunt Mary" by all who knew her, was justly celebrated for her unrivaled success in that line. I have many times watched the process from the flour-barrel to the breakfast table, but my best efforts have never produced anything approximating her biscuits, writes a contributor to *National Stockman.* Her first thought was of the oven, the heating of which was by the use of wood. She followed the same rule observed the world over, of two teaspoonfuls of cream of tartar and a pinch of salt mixed with a quart of flour, but one of the main points in which she was very particular was that the liquid should all go in at once, and she for many years invariably used the same bowl filled (up to a certain blue stripe around the border) with equal proportions of milk and water—about a cupful of each—in which she dissolved a teaspoonful of soda. She was very quick in her movements, and it was an incredibly short time until she had sprinkled a little flour on the board where she placed the dough, which was quite soft, and dipping her hands in the flour (she never used the rolling-pin), she gave the mass an encouraging little pat—in which I think there must have been some peculiar charm—and in a moment they were cut out and ready for the oven, which by this time was in condition to impart, by the first whiff of its atmosphere, a rising ambition to the biscuits, without which heat they certainly would have been a flat failure.

The Week.

Although the rain comes late and not until many had begun to seriously deplore its delay, the storm, which is active as we write on Wednesday evening, is heavy and far-reaching, and is not likely to cease until the whole State is drenched.

According to experience it comes soon enough and a fair measure at proper intervals will ensure full production of all crops. Such a season will be immeasurably better than the last one and better, too, than one with very early rains and a long, dry spell following.

We look now for an exceedingly active December in all agricultural affairs and a confident disposition all around which will make Christmas the merriest within memory. The air is full of developments of all kinds, and to close up the year as present conditions promise will be to begin the new year with a rush forward in the lines which during the last year have been most profitable, and this activity will communicate life and energy to all honorable lines of effort. Evidently the outlook is for a good year.

Rains and Rain Lore.

Now that the rains have come with a vim and vehemence which promise plenty of water, Rural readers will be interested to study over the weather wisdom from the Chief Signal Service Officer, which we print on another page of this issue. It cannot be doubted that the careful and systematic study of our local meteorology is yielding very satisfactory results, and one is a better popular understanding of the conditions to which our climatic peculiarities are due and the agencies immediately concerned therein. This is a justification of the constant efforts made by our farming population years ago to secure a local weather bureau, and which were finally successful in securing such an establishment. This branch bureau has been in charge of several able gentlemen during the few years of its existence, and each has done something to advance the work and more widely popularize it. Lieut. Finley, the present incumbent, already shows his mastery of the situation, and his work promises to be of great value to all our industrial interests. Now that this branch of the signal corps of the army is to be transferred next July to the Department of Agriculture, we hope that provision will be made for the extension of the work on this coast. By perusing the paper by Lieut. Finley, which we print on another page, it will be seen how weather conditions are dependent upon manifestations on the northwest coast and the ocean adjacent thereto. Lieut. Finley holds that if weather stations were located along the Alaska and British Columbia coasts, and connected by telegraph with the main Signal Service offices, the coming of cyclonic areas to the coast could be foretold days ahead, and much damage averted by the timely warning.

In view of this need of our coast, it is interesting to read what Secretary Rusk says on the general subject in his report to the President last month. We quote as follows:

Under an Act approved October 1, 1890, Congress directed "that the civilian duties now performed by the Signal Corps of the army shall hereafter devolve upon a bureau to be known as the Weather Bureau, which, on and after July 1, 1891, shall be established in and attached to the Department of Agriculture."

In accordance with this Act, I have included estimates for the ensuing fiscal year for carrying on the work of the Bureau thus created in this department. I deem it evident from the discussion which attended the passage of this Act, and from the wording of the Act itself, that in making this transfer of the Weather Bureau to this Department, it was the intention of Congress that the work of the Bureau should be extended, in so far as might be necessary to a full co-operation of this branch of the service with the work of the several divisions already established in this Department for the benefit of agriculture, without in any way restricting its general scope. In this spirit I have submitted estimates for the coming year on the basis of the wider range of work thus contemplated, and I take the opportunity of expressing here my own conviction that in many ways the work of meteorological observation which this Department will be thus enabled to carry on in conjunction with its other work, will be found of great value to the farming interests of the country. It is indeed self-evident that to complete the study of soil conditions, of animal and plant life, a study of the climatic conditions of our country is indispensable.

We hope this policy will be carried out, and in it the secretary will certainly have the interest and support of our people.

There is one thing in Lieut. Finley's reports which may alarm those who only read casually, and that is his frequent use of the words "cyclone" and "cyclonic." The careless reader in the "Great West" may conclude that the Pacific Coast is even a more cyclone-beridden country than the Mississippi valley. As we understand it, what is called a cyclone and for which people in the Mississippi valley retire to their dug-outs, is really a tornado, and that cyclone, meteorologically speaking, is nothing of that kind and is not necessarily a dangerous disturbance at all. Therefore do not misapprehend Lieut. Finley's meaning when he speaks of "cyclones" and do not conclude that this is a country in which the tornado flourishes, for it is not.

"Going West"—What the Term Has at Different Periods Implied.

It is not more than 80 or 90 years since the term "going West" meant, with the people of Virginia, moving over the Blue Ridge; with the people of Pennsylvania, emigrating beyond the Alleghany mountains; while in New York a removal to Genesee valley, about the center of the State, was looked upon as "going West." Later on, emigrating to Ohio, Illinois, Michigan and Indiana, each in its turn was considered "going West," up till about 1840 everything beyond the Mississippi being regarded as "the Far West!"

Since California became the *ultima thule* of westward immigration, it is no longer easy to say just where the "West" is. Practically, the dwellers on this coast have no occident. Where the inhabitants of our Oriental States now locate the "West" we are not advised. We suppose they continue, as of old, to speak of the central group of States as the West, though with us they lie so far to the east. Our geographical nomenclature in this, as in some other respects, calls for amendment. We require at least a new classification of the States. The Republic should be divided into the Northern, Southern, the Middle or Central and the Western States, the latter taking in all west of the Rocky mountains, while the Middle or Central group takes in all between the Rockies and the Mississippi river, except such portion of Louisiana as lies west of that river. The Northern tier of States might properly be made to comprise all the territory north of Virginia and Tennessee.

Grouping the States in the manner here proposed and naming the several groups according to their geographical positions would enable us to fix the "West" somewhat definitely and give to these other subdivisions of the Republic more precision than has been the custom.

The President's Message.

Congress convened on Monday, when the President's message was read and heralded through the press to all parts of the United States. For a short session the message is much longer than the average, but this can be overlooked when it is considered that he must devote considerable space to the important subjects under debate at the last Congressional election.

Taken as a whole, the message contains much to commend; but like all annual messages to Congress it contains weak points open to attacks from the opposition, but it is this divergence of opinion that makes a politician's life endurable, and which is also calculated to keep each party on the alert for the best interest of the country.

The most interesting features in the message can be briefly stated as follows: Approving reference is made to the Pan-American conference; which marks an epoch in the history of the Western Hemisphere. The President surprised (probably agreeably so, too,) the country by disavowing the action of Mizner, Minister to Guatemala, in the Barrundia case, and the Minister has been recalled. In briefly referring to China, he states that he has made a proposition to the Governments of Mexico and Great Britain to consider a conventional regulation of the passage of Chinese laborers across our southern and northern boundaries. On the silver question he fails to recommend free coinage, but says that "it having been thought best to renew formally the suggestion of an international conference looking to an agreement touching the full use of silver for coinage at a uniform ratio, care has been taken to observe closely any change in the situation abroad, and no favorable opportunity will be lost to promote a result which it is confidently believed would confer very large benefits upon the commerce of the world. The recent monetary disturbances in England are not unlikely to suggest a re-examination of opinions upon this subject."

The receipts of the Government for the fiscal year are given at $463,963,080.85, and the expenditures at $358,618,584.52. The recommendation of the Attorney-General that greater care be taken in the examination of applicants for citizenship is indorsed, as is the recommendation that pool-selling in the District of Columbia be prohibited. The Behring-sea difficulties have not been adjusted. The Pension Disability Act has not entailed a greater outlay than was expected. The beet-sugar industry is declared to have passed the stages of experiment and may be regarded as a complete success.

The President predicts that recent legislation will quicken and enlarge the manufacturing interests, increase markets for farm products and cause general prosperity, and he shows that there has been a general improvement in trade and industry during the year; that the number and extent of business failures have decreased; that business, as shown by Clearing-house returns, has increased; that prices of agricultural products have advanced to a marked extent, and that labor troubles have diminished.

The President discusses at some length the McKinley tariff, and deprecates the idea of subjecting the Act to important changes until it has been fairly tried. Reciprocity receives a large share of favorable attention.

The President's reference to the water question possesses peculiar interest to this coast. He says that "the owner of the water is the owner of the lands, however the titles may run. All unappropriated water sources and all necessary reservoirs should be held by the Government for equal use at fair rates." He suggests that the Government should take charge of the watersheds.

The message ends with recommendations to Congress for the passage of apportionment and appropriation bills. For the encouragement of American steamship lines connecting domestic and foreign ports, an especial plea is made for the Oceanic Steamship Company of San Francisco, whose steamers ply between San Francisco and Australia, and which may be driven out of the business unless the United States comes to the rescue. The President calls attention to the danger of a rival subsidized line from British Columbia.

For the incorporation of an international American bank to facilitate business with the other American nations.

For an increase in the salaries of United States Judges to $5000 a year.

For the settlement of Mexican and Spanish land grants.

For the passage of a national bankrupt law.

For an international copyright law.

For the passage of a law compelling railroads to use couplers and brakes on freight trains.

For the passage of laws reserving all water rights and reservoir sites in the arid regions for public use.

For the passage of laws to enable the Post-office department to contract with the telegraph companies to establish a postal telegraph system.

For the passage of laws for preserving the purity of the election, and a special recommendation for the passage of a bill similar to that known as the "Force" bill during the last session of Congress.

In Nicaragua.

The course of events apparently justifies anticipations of the realization of the interoceanic canal enterprise via Lake Nicaragua. In his message to Congress this week, the President says: "The Nicaragua canal project, under the control of our citizens, is making most encouraging progress, all the preliminary conditions and initial operations having been completed within the specified time."

The progress of the enterprise adds new interest to scenes representing the locality through which the canal will pass and the life of the citizens of the country which will thus become commercially one of our nearest neighbors. On our first page this week, two such scenes are presented, one representing the river along which ships will ere long be speeding from ocean to ocean, and the other giving a glimpse of an interior of one of the mansions of the country.

The landscape shown lies in the valley of the river San Juan, from Fort San Carlos, Nicaragua. The town of San Carlos, at the junction of the Rio San Juan with Lake Nicaragua, is rapidly assuming the proportions of a city in view of its future importance when the canal is built. The proposed route of the canal, laid out by the engineers, is from the harbor of Greytown on the Caribbean sea to Brito on the Pacific. Its total length is 169 miles, of which 38 miles will be excavated canal, 130 miles navigation by Lake Nicaragua, the river San Juan, the outlet of the lake, the basin of the river San Francisco and through seven locks. A canal without locks is impracticable across Nicaragua.

The lake is an inland sea 90 miles long and 35 to 45 miles wide. The lake will be connected with the Pacific by a canal and with the Atlantic by slackwater navigation in the river San Juan by a short section of canal from the river San Juan to the basin of the river San Francisco, and by a canal from the eastern end of that basin to the Caribbean sea.

The interior view on our first page shows an apartment in a mansion of the better class. It is certainly an apartment designed and fitted up for the comfort of its occupants, manifesting a good degree of taste and showing some of the characteristic architectural and furnishing features of the country.

HORTICULTURE.

The Fruit-Growers' Convention.

Opening Address by President Cooper.

We continue our reports of the recent convention of fruit-growers at Santa Cruz with the full reproduction of the opening address delivered by President Ellwood Cooper of the State Board of Horticulture as follows:

This will be the Fourteenth Fruit-Growers' Convention and the tenth held under the auspices of the State Board of Horticulture. In addressing you on this occasion, it would be appropriate to review what has been accomplished, both at these ten conventions and by the State Board, this year completing the first decade of its existence. I refer you to the Biennial Reports of 1885 and 1886, 1887 and 1888, the Annual Report of 1889 and the Annual Report of 1890, which is now ready for distribution, and includes the transactions of the last convention held in Los Angeles in the spring of this year. I cannot pass over this opportunity of complimenting our Secretary for his indefatigable efforts in having this work ready for distribution at this convention.

All those familiar with the workings of State institutions, and the necessity of constant watchfulness and preparation in time, will comprehend the energy that must be given to secure the early presentation of such a report. I desire on the part of the members of the board to express our sincere thanks for his promptness in this regard. The Fruit-Growers and people of the State engaged in kindred pursuits who can profit by these reports, and those especially who have contributed nothing toward the knowledge therein contained or the labor of compilation, should feel grateful for the privilege they enjoy in their perusal, and in obtaining such valuable information. We, the guardians of the State appropriations, receive no compensation for our labor and time given to the management and production of this work.

The reports contain essays by the most intelligent and largest fruit-growers of the State, comprising the matured experience of years, failures as well as successes, and discussion by equal authority and entitled to equal attention. They treat of every branch of the fruit industry as now carried on in the State, and every part of each branch from selection of varieties to the planting and to the manipulation in every particular until the perfect fruit is presented for sale in the different markets throughout the country. In many cases the localities adapted to the successful culture of certain fruits are well defined, so that the fruit-growers have at their command all the knowledge that has been obtained by the best experience. I call the attention of beginners to the reports, and repeat what I said in my first opening address, delivered in Los Angeles in November, 1885: "If we expect to succeed in our fruit enterprises, we must read."

The first law in the interest of horticulture was passed on the 4th of March, 1881. A Horticultural Board soon after was organized. Prior to this organization very little united action had taken place in our State. It is true there were a few men who, as pioneers, were struggling to establish the importance of our horticultural interests, and by their publications had created that interest which secured the legislative Act with the necessary appropriation.

I referred to this subject in my opening address before the Santa Barbara convention, held April 9, 1888, to be found in the Report, pages 163 and 164, to which I call your attention.

At the first inception of the law, fruit-growers were groping in the dark; their operations were mere experiments, the results uncertain. To-day there is no uncertainty among the intelligent fruit-growers; many branches of the industry are now a science well mastered. I venture the assertion that nowhere in the world is the business so generally and so well understood as in California. The dissemination of important knowledge, the progress made, has reached the most isolated fruit-gardens, as well as the most princely orchards. Fruit-growers vie with each other to discover new facts and to disseminate them. We are united, our mutual efforts have secured for us this year a success beyond our most sanguine expectations. It is the result of our united efforts.

I think you will bear me out in the assertion that this decade marks a greater advance in horticulture than any century heretofore in the world's history. I do not wish to be understood in this statement to claim for our generation a superiority of intellect. Other circumstances have contributed to our progress—the nation, our republican form of government, the freedom and liberty of our people, our public schools. In my early schoolboy days, at the beginning of the public-school system in the rural districts of Pennsylvania, it was quite common to have young men from 20 to 30 years old in these schools taking their first A-B-C lessons. At that time it would have been impossible to disseminate scientific knowledge of agriculture or horticulture. How different it is to-day! In our State, the most humble citizen, in his pre-empted rural home, has access to literature and understands and practices the most improved methods that lead to success in his business. We ought to be thankful that we have such a country, such a Government, and feel a deep sense of gratitude for all the blessings that we enjoy.

As successful horticulturists, we meet here on common grounds. There is no party politics in the production of fruits. We have to deal with the inevitable laws of Nature and comply with all that she demands. We of course do not wish to undervalue or discourage the zeal of our people in the political controversies that take place periodically by the partisans representing the different policies of the most advanced system, because it is the safety of the Government; and without good government there can be no continued material prosperity. We, as Americans, can never be too deeply impressed with the fact that whatever evils or defects are observable in our institutions, it is within our power to remedy or remove them. We could easily draw from retirement our best men and invest them with the offices and responsibilities of administration. Judge Story has said:

> Republics are created by the virtue, public spirit, and intelligence of the citizens. They fall when the wise are banished from the public councils, because they dare to be honest, and the profligate are rewarded because they flatter the people in order to betray them.

I hope and trust that I may live to be with you at the end of the next decade and that we shall have the same prosperous condition, witness comparative like progress in the advancement of all our interests, enjoy an equally advanced Government, and that intellectually, morally and spiritually, we shall more nearly approach the divine.

At the last convention, held in Los Angeles, citrus culture elicited a very warm and general discussion. The different theories concerning the best manner of propagation would tend to create a doubt in the minds of those about to plant orchards of oranges or lemons as to the proper root upon which either should be grown.

To me there appeared to be but little positive knowledge on this point. The range of opinion among the most intelligent growers is too wide to warrant successful results in the enterprise. More care and serious thought must be given to this subject.

Citrus Fruits.

People are rushing into the citrus production more rapidly than the home nurseries can produce the trees. It will be found that stock imported from China, Japan or Florida is unsafe. In each case the nurserymen have no interests in the results. They desire simply to sell their stock, knowing that they would not be held responsible in the event of the early death of the trees or the spread of dangerous insect pests. Every planter should have the trees grown in his own neighborhood or near enough that he could ascertain by trustworthy information from what seed they were produced, the manner of propagating, of budding, and the care given to them while in the nursery.

The preponderance of opinion seemed to favor the sour-orange root for both lemon and orange, but this was questioned on the ground that the best citrus results could not be obtained by the passage of the sap through the orange root, and that on the other hand sweet oranges of superior quality could not be produced by the sap passing through the sour-orange root. In regard to the function of the roots as a means of transmitting the sap, or the chemical action that must take place before the perfect fruit is formed and matured, I will not enter into discussion at this time, but a very important question arises as to the seeds, even if we admit that the sour-orange is equally adapted for both fruits. From which sour orange shall we get our seeds? There are in Florida sour-orange trees adapted to the low wet lands. In the West Indies we have the native sour orange in the high valleys and on the mountain slopes, where the land is well drained, growing into immense trees without irrigation and adapted to a climate having two dry and two wet seasons each year. It would seem that seeds from the fruit of such trees would be more desirable. Baron Ferd. von Mueller, the great botanist of Australia, has said that an orange tree well planted and well cared for will give fruit for a period of 2000 years. A gentleman friend of mine told me once that he saw an orange tree in Mexico that bore 20,000 oranges in one season. In the employment of our time and in the expenditure of our money we should give our best thoughts so as to procure the greatest and most lasting results.

In our last report, pages 97–104, will be found a most interesting essay on olive culture by C. F. Loop of Pomona. In referring to this essay, I simply wish to call your attention to the various names of selected varieties that he recommends, and state that there are such a multiplicity of names by the different writers in the different countries that too much reliance must not be placed in their names. It is only by our own experience that we shall gain the knowledge so much desired, viz.: What variety produces the best fruit for making oil and pickles.

Many have been led to believe that our Mission olive is a seedling and that there are many better varieties. The early priests or founders of our Missions were too intelligent, and knew too well the value of the olive, to risk the seeds; and if we were to draw any inferences from their work, we would naturally conclude that they probably brought the very best variety that could be obtained. I certainly would incline to this opinion. The Mission olive is a most excellent fruit both for oil and pickles, and we should proceed cautiously until we discover a better.

Insect Pests

Menace our business. Their ravages are the greatest drawback to our success, and notwithstanding our experience, we advance very slowly in counteracting them. We have had just one lesson. That lesson should impress us more seriously. It is nature's remedy, and on which we will be compelled to rely sooner or later to save our fruits. I have reference to the Australian beetle, *Vedalia Cardinalis*, the importation of which achieved the almost complete annihilation in one season of the *Icerya purchasi*, the worst and most formidable insect pest ever known to civilization. Our largest citrus-growers, who one year ago contemplated bankruptcy and the complete destruction of their orchards, now rest without anxiety in the full confidence that their orchards are saved, and that they will be protected from the ravages of the *Icerya purchasi* in the future by this ladybug.

I call your attention to my opening address at our last convention, held in Los Angeles, to be found in the last report, pages 39 to 41. I most urgently recommend that we pass a resolution as the sense of this convention to ask an appropriation of $10,000 from our next Legislature to defray the expenses of an entomologist to Australia and adjacent islands to procure the parasitic insects as mentioned in the address referred to above, and that a committee be appointed to have the matter in charge. We have repeatedly memorialized Congress asking for an appropriation for this object, commencing with the Riverside Convention held in April, 1887, and at each subsequent convention. We have not been successful, and it will be wiser to rely upon ourselves. The Hon. Secretary of Agriculture will, without question, give us every aid within his power and furnish us an entomologist with sufficient experience to assist us in the work. Let us not delay further in this matter. I hope to be able to report at the next fall convention a *second lesson.*

Oxide of Zinc in Dried Apples.

In Consular Report of March, 1890, No. 114, our consul, Chas. F. Johnson, at Hamburg, pages 480 and 481, says that the chemical board of examiners declared that large quantities of American sliced (dried) apples contained oxide of zinc, free from water, in such proportions as to be pernicious to health. The Police Department stopped the sale of such apples, and the dealers still had them on hand Dec. 24, 1889. This, if true, should claim our most serious attention. Our interests are too great to be jeopardized by any such drying processes, and our condemnation cannot be too severe of the parties concerned. This recalls me to a suggestion made at the convention held in National City April, 1889. I refer you to the annual report of that year, page 329.

I recommended that one of the important measures to be adopted by the fruit-growers was fruit inspection. Perfect fruit is always salable in every market. The success of the vast majority of fruit-growers depends upon a combination that will secure to the consumer a good, wholesome article. There must be no doubt on this point. To surround our business with the necessary safeguards that will protect the industry, we must have fruit inspectors invested with the power to confiscate all poisonous or seriously damaged fruits, green or dried. It will take many years to arrive at proper rules or laws of inspection, hence the necessity of early commencement.

I submit these suggestions for your consideration.

HIEROGLYPHICS ON A PORPHYRITIC BUTTE IN THE MOJAVE DESERT.

Pictured Rocks in the Mojave Desert.

[Written for the PRESS by JAMES H. CROSSMAN.]

The work of the Silver Valley Land & Water Company has shown that a large portion of the Mojave desert can be rendered productive and habitable. There also seems to be sufficient evidence to prove that at a comparatively recent period, geologically speaking, this region of country contained a considerable population, and to support a population, there must necessarily have been vegetation. To say the least, we find here evidences of man's handiwork in the sculptured characters to be seen on the faces of a small porphyritic butte standing out on this desert and known as

Rattlesnake Rock.

This name having been given it by reason of the immense number of these reptiles that find shelter in this mass of rocks. This butte is situated about two miles north of Daggett and 1½ miles east of the Waterloo mill, standing solitary and alone on the barren plains. It is seldom visited and but little known, not being on the line of travel. It was called to the attention of the writer by Mr. J. Alderley of the Waterloo mine. Visiting the spot, a sketch of the rock and the hieroglyphics engraved thereon

was made—the same being represented in the cut herewith given.

The implement used in making these characters was evidently a dull-pointed stone, as the lines are not sharp and the sides of the indentation show marks of striation. That these characters are no erratic figures emanating from the brain of the stupid and ignorant aborigine of the present day, is very evident. They were formed by the hands of a superior race who had acquired the art of recording their ideas and history in symbols and characters, and who possibly may have been allied to the mound-builders that at a remote period populated the American continent from Lake Superior on the north to Bolivia on the south, Yucatan and Central America being the central point of this civilization, which must have been somewhat advanced, judging from the works of art, ruined cities and other monuments of progress to be seen in these countries. Many of their sculptured characters bear a strong resemblance to those of the Egyptians and Chaldeans. The characters on the rock here spoken of are similar in many respects to those of Yucatan. Doctor Le Plougeon, writing on the subject, states that the Mayas in Yucatan used many words and names common to all or nearly all the ancient languages of which we have any knowledge; that they used letters and characters belonging to the most ancient Chaldaic alphabet; and that their mode of writing was similar to that of the Babylonians. He even claims that the continent we live on was the cradle of the world's civilization. Other works of art also exist in this region which are equally as interesting as this sculptured rock.

About six miles from this spot, in a northerly direction, in the Calico range of mountains and two miles east of the town of Calico, an ancient tunnel has been driven into the hill through a granitic rock of a slaty structure for a distance of 180 feet. Some stoping has been done here and a shaft has been sunk at the mouth of the tunnel 30 feet in depth, the tunnel being 4½ feet high and 3 wide. The implements used in this work, judging from marks and abrasions on the rocky wall and roof, were stone hammers and gads of the same material. The mineral sought for was a peroxide of iron of a brilliant red color, which the people who performed this work undoubtedly used as a paint in decorating their persons and wares. Numerous well-formed stone mortars and pestles were found at the mouth of this tunnel, which was undoubtedly driven by the same race that recorded their history on this sculptured butte, but at a period anterior to the cataclysmic volcanic disturbance that destroyed both the flora and the fauna of this once fertile and populous land.

As a point of considerable interest, and one well worth noticing, it may be stated that Donnelly, in his "Atalantis, or the Sunken Continent," has for his frontispiece a character similar to that found on the Rattlesnake rock—a mythological symbol of something, but that is left for the archæologist to determine. The figure alluded to represents apparently the globe with a serpent or other huge reptile attached to or attacking it.

PUBLIC AFFAIRS.

The Silver Dollar and the Farmer.

EDITORS PRESS: — Some months ago you kindly published a letter entitled "The Silver Dollar, *not* the Poor Man's Dollar." I therein endeavored to point out that it was as much the duty of government to "bull" the barley market as to "bull" the silver market.

I also tried to show that the proposed action of our Government in entering the silver market and buying up silver to add to the already fabulous stock in the Treasury vaults, could in no way inure to the poor man's benefit. But each great political party vied in outbidding the other in their professed desire to serve the "poor man's interest" by coining Mints full of silver dollars. Really, to conciliate the clamorous "silver ring," who raised the "poor man" shout.

For a time the silver market boomed! The produce market, thank Heaven, also boomed! This resulted: Politicians eagerly claimed that the boom in the produce market was in consequence of the increased buoyancy in the silver market.

This was simply the old *non-sequitur* (does not follow) of *post hoc ergo propter hoc* (*after* this therefore *because of* this).

Now the utter inconsequence of the two things is proved by the entire collapse of the silver market, while the produce market (unstimulated by any fictitious demand) booms as gloriously as ever.

I trust this may open the eyes of the Farmers' Alliance before they commit themselves to the folly of unlimited silver coinage. It merely means that our farmers will *ultimately* be called on to take pay for their produce in what will be virtually a debased coinage. Silver has and will come from all parts in response to our demand at fictitious prices, and our country will be denuded of gold.

If there were any real need of silver coin for bona fide circulation, the glittering millions would not be cumbering the Washington vaults.

Farmers of California, do not be deceived by the cuckoo cry of "poor man's dollar." It is the silver man's trick of scrouging you out of your nests. EDWARD BERWICK.

Carmel, Nov. 22, '90.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

EARLY PEAS.—Haywards *Journal*, Nov. 22: For the past three weeks Henry Frederickson of Castro valley has been shipping early peas to the city and supplying customers in this place. He has charge of the Frenchman's place, adjoining Whitehill's property, and by means of a little irrigation has raised a fine crop of peas a month or two earlier than has ever been recorded.

FALL SEEDING OF WHEAT.—Haywards *Journal*, Nov. 29: O. C. Luelling, who farms the extensive Norris ranch in San Ramon, was in town Wednesday. This weather just suits him, for he has been able to dry plow a large amount of adobe, and by the end of the week he will have cut up over 300 acres. It is being planted to wheat.

Butte.

RAILROAD FACILITIES WANTED. — Oroville *Register*, Nov. 21: The enormous planting of fruit along both sides of Feather river will demand a railroad within the next two years to move the crop. There will be the fruit from at least 4000 acres to move in two years, on the banks of the river, and by the end of another year that acreage will be largely increased. If to this we add the enormous quantity of fruit that must be moved from Thermalito, it will be seen that a railroad will be needed to handle the output.

RANCHO CHICO RAISIN PACK.—Chico *Enterprise*, Nov. 28: The last car of raisins from the Rancho Chico was loaded up to day. Mr. Brown, the raisin expert, who has been superintending the curing and packing of the raisin crop, says that this last car makes a total of 13 carloads of raisins shipped to Chicago. Each car contains 1000 boxes, so that the total output is 13,000 boxes.

BUYING ORANGE TREES.—Oroville *Register*, Nov. 27: The fact that B M. Lelong, secretary of the State Board of Horticulture, has recently purchased 15,000 young orange trees here, shows that this section is rapidly becoming known to orange-planters.

Colusa.

WAITING FOR RAIN.—Maxwell *Mercury*, Nov. 29: Our farmers are getting anxious for rain. Seeding is over with and everything depends upon the season as to the amount of grain we have for export. From our observation this vicinity has never been better prepared for a larger grain yield than at present. The acreage of summer-fallow sown to wheat is much larger than usual, and the holding off of the rains has forced our people to do first-class work, by way of preparing the soil for seed.....Williams *Farmer*, Nov. 29: The farmers in the immediate vicinity of Williams are nearly or quite through seeding their summer-fallow, and are now awaiting the rains with that smile of satisfaction a man has when he feels that his work is well done. The ground this season, despite the wet winter, is nearly all in good shape for a crop next summer. The ground being so thoroughly soaked by last winter's rains will not require near so much water this winter to insure a fair average yield of grain.

Fresno.

THE KIND OF HELP.—Fresno *Republican*, Nov. 28: The question of labor has long been a serious one in the San Joaquin valley, and many people have been compelled to employ Chinese, much to their reluctance. The idea had gained ground that it is impossible to get along without Chinese labor in this county, but this erroneous idea is happily dying out. A. D. Barling says: "I have employed a great deal of white labor, picking in the field, and am so well pleased that I shall never employ a Chinaman on my ranch again, if I can help it. The Chinaman is a nuisance on a ranch, any way. He is not desirable help and not cheap. My experience has shown this. A white man will pick 75 trays a day, while a Chinaman will not pick over 35 to 40. The Chinaman is slow and plodding. I have experimented with white labor and Indian, too, and the white man is the laborer for me. It is better to pay the white man double wages. I have paid $1.25 a day and board and $1.75 a day without board for pickers, this year. About the packing-house I employ white men only; never had a Chinese there. I have no difficulty in getting good white labor and experienced none in keeping it. Of course I provided a comfortable place for them to live and sleep in, and gave them good food and plenty of it. I gave my people the same food that I sit down to myself—just as good as any hotel in town serves. I gave them the best cuts of meat and plenty of it, with vegetables, bread, etc. I treat the women with especial consideration, and they have steadily remained with me. In short, I have treated my help as white people and have had no trouble. I hope to have all white labor next season."

OLEANDER RAISIN PACK.—Fresno *Expositor*, Nov. 26: The season's shipments of the Fresno Raisin Company at Oleander will amount to between 60 and 65 carloads. They have already shipped 42 cars and are hard at work on the rest of the pack. The total output this year will amount to fully 150 carloads.

Humboldt.

A QUESTION OF BEEF.—Arcata *Union*, Nov. 22: Farmers and stockmen are growing tired waiting for rain. The ground is too dry to plow, the old grass in the hills is about gone, there is no immediate prospect for new grass, and the outlook is growing dubious. Since the first of last month, up to yesterday, we have had but little more than half an inch of rain, while during the same time last year we had more than ten inches. The question is, where will we get our spring beef? It looks as if grass cannot be depended upon, and hay and grain are too high priced to feed.

Kern.

TRANSFORMING A DESERT.—Independence *Independent*, Nov. 21: Antelope Valley, south of Mohave, in Kern county, is as barren looking a region as can be found on the Pacific Coast. Cactus and sagebrush are all that is seen there in the way of vegetation, and so far as we know, there is not a running stream of water in the whole region, and yet settlers are fast gathering there, locating land and making homes. Water is found near the surface and with good cultivation the land needs but little water to make it fertile and produce good crops.

Los Angeles.

A BIG ONE.—Downey *Champion*, Nov. 29: One of the handsomest and most perfect sweet potatoes that we have seen was raised by John M. Rogers on his place near town. It weighs 15 pounds and will be forwarded to the Chicago Exhibition.

A BIG ACREAGE IN ANTELOPE VALLEY SEEDED TO GRAIN.—Los Angeles *Herald*, Nov. 29: Mr. White, one of the most extensive farmers of Antelope valley, says that the grain crop in the valley this season would consist of 100,000 acres. The delay in the rains was all right; farmers there did not need any rain until the middle of December, which would insure a large yield. The grain land is summer-fallowed, which Mr. White thinks is much the best plan. One farmer tried both summer-fallowing and winter plowing; on the land treated in the former way he got a crop of 12 sacks to the acre, and on the latter only eight sacks. Mr. White thinks that summer-fallowing is best adapted for all grain regions in Southern California.

WATERMELON PREMIUM.—Los Angeles, Nov. 29: Mr. John McGirk of El Monte has received the following letter from a seed merchant at Philadelphia in reference to a watermelon grown on his place and sent East to compete for a prize:

PHILADELPHIA, Oct. 30, 1890.

Mr. John A. McGirk, El Monte, Cal.—DEAR SIR: It gives me pleasure to inform you that, after due investigation, I have decided that you are entitled to the premium offered for the largest prize jumbo watermelon raised from seeds purchased of me the past season, owing to your having raised a jumbo weighing 131¼ pounds; consequently you will find inclosed herewith a draft on the Third National bank of this city for $100, being amount of prize offered, etc. Yours truly,

WM. HENRY MAULE.

Marin.

WHO GETS THE BUTTER PROFIT?—San Rafael *Tocsin*, Nov. 29: Butter is booming away up into fabulous figures. Had the ranchers only kept their pickled stock until this fall, they would have occasion to remember this year with pleasurable emotions. The difference in price between what the majority sold for and what could be realized now for pickled roll would just about pay the usual rent of a dairy ranch. As it is, the commission men will make this enormous profit.

DRAINING A MARSH LAND.—San Rafael, Nov. 29: Messrs. Mackay and Flood have about completed a system of canals to drain thoroughly the stretch of marsh land between the old toll-road and the San Quentin hills, extending from the town to Sims Island. This piece of fertile land is to be turned to agricultural account.

Orange.

PEANUTS.— Orange *Post*, Nov. 29: The peanut is cultivated much the same as a potato. It requires a very light, sandy soil, and will do well without irrigation except upon the driest lands. When ready for the harvest, the nuts, attached to the subterranean stems, are plowed out and left to partially dry upon the surface of the ground, after which they are picked, cleaned and sacked, and are then ready for market. Two kinds are cultivated, the California and the Tennessee. The former is the favorite here, though it is claimed that the latter is more prolific. In the latter variety the nuts are crowded closely together, while in the former they are more widely scattered on the stems. Statistics have been obtained from five tracts of land upon which peanuts have been raised. These tracts have been taken here and there at random and will perhaps give a fair average of yield and profits. First tract, 20 acres; yield, 400 sacks or 16,000 pounds; value, at 6 cents per pound, $960, or $48 per acre. Second tract, 9 acres; yield, 191 sacks; value, $458.40, or $51 per acre. Third tract, 8 acres; yield, 200 sacks; value, $480, or $60 per acre. Fourth tract, 10 acres; yield, 400 sacks; value, $960, or $96 per acre. Fifth tract, 3 acres; yield, 200 sacks; value, $480, or $160 per acre.

Santa Barbara.

PERFUME FARM PROJECT. — Santa Maria *Times*: L. E. Blochman has quite a perfume farm in Cat Canyon, having over 3000 lavender plants on his place. Mr. Froude, who has charge of the place, has extracted some of the oil and finds it to be first-class in every respect. The plants grow thriftily and are doing well, and as the oil is rather an expensive kind, it no doubt, with the proper facilities for extracting, could be made quite a paying business. As far as experimented with, it has proven a success.

San Benito.

AN ALMOND CROP.—Hollister *Free Lance*, Nov. 28: G. A. Moore has finished gathering his almond crop from his 20-acre orchard. The variety is known as the Languedoc. Over 9000 pounds have been gathered, which will bring from 14 to 16 cents per pound, and perhaps higher, as the almond crop this year has been very light all over the State.

San Diego.

LARGE VEGETABLE AND FRUIT FARM.—Otay *Press*, Nov. 27: Dr. H. P. Woodward is employing help on his fine, fertile ranch up the valley, cultivating and getting ground ready for four acres of potatoes and other vegetables. He has just set out 1300 orange trees and will enlarge his strawberry grounds, adding another acre for the cultivation of this profitable crop.

ALFALFA AND GYPSUM.—Otay *Press*, Nov. 20: Montgomery Bros. are now busy clearing and plowing their bottom land for planting alfalfa. They will use gypsum as a fertilizer.

Stanislaus.

THE TURLOCK CANAL.—Modesto *News*, Nov. 28: The main canal of the Turlock Irrigation District is rapidly approaching completion. The work is one of which the directors and engineer may well be proud. In a short time, the portion of the canal now under construction will be finished, and persons who desire to fully appreciate the work should make an inspection of it at once. The unfinished work must be seen to fully understand its magnitude and extent. When smooth and rounded up in its finished state, no one can imagine the labor used to bring it to such perfection. Miles on miles of canal, ranging from 30 to 70 feet in width and from 7 to 70 feet in depth, have been cut through material varying from soft sand to hardest granite, and in situations from the level surface to the heart of solid hills, which required deep tunnels.

Sutter.

RAIN WANTED.—Marysville *Appeal*, Nov. 28: A farmer from Sutter county says that considerable of the summer-fallow in that county had already been sown to wheat, and that unless a rain should come shortly it would not do well. What is needed by the farmers, he stated, was a two-inch rainfall, and then they would be happy. It would start the grain that has already been planted, would put what summer-fallow has not been sown in shape for grain, and would make it possible to do some fall plowing.

Tulare.

VOLUNTEER PUMPKINS.—Hanford *Sentinel*, Nov. 27: A. Onesti reports one volunteer vine on his place as yielding 42 monstrous pumpkins, and another vine raised 30. Some of these were large enough to make the yield of one vine a good wagon-load.

TURKEY RAISING.—Visalia *Times*, Nov. 27: A San Francisco commission merchant traveling in this county last week purchased 3200 turkeys in one day. The prices paid averaged about $1.50 each, the deal thus amounting to $4800. Not less than $20,000 worth of turkeys will have been shipped from this county to San Francisco this week, and there will still be on hand a reserve for Christmas and New Year's. The raising of turkeys is no small part of the business of many of the ranchers on the dry plains, and goes a long way in tiding them over a dry season.

Ventura.

A BIG CARLOAD OF BEANS.—Ventura *Free Press*, Nov. 28: Mr. Lombard shipped the biggest carload of beans which ever went out of the county. In a shipment, a day or two ago, of five cars of beans, there was one car of 721 sacks, aggregating 46,662 pounds.

Yolo.

TREE THINNING.—Pleasant Valley, Nov. 29: E. R. Thurber, who is a practical orchardist, is taking out every other row in his fine-bearing apricot orchard, because the trees have grown too close together. He is cutting out, also, every other row in an orchard near his house. There has been a tendency to put trees and vines too close together, but they are more profitable bearers with a good space between.

HOG RAISING. — Winters *Express*, Nov. 29: While Joseph Melvin farms extensively, he has made provision for keeping hogs by fencing his place into different fields. Some ten years ago he imported some fine thoroughbred stock, and has been increasing the herd until now he has almost a hundred head, besides about a hundred young pigs. Mr. Melvin finds that hogs are the best stock he can keep on his ranch. They are kept at less cost and yield more profit than any other.

Yuba.

LEVEE WORK.—Marysville *Democrat*, Nov. 28: William Elliott, Sr., of Gridley was interviewed with regard to some levee contracts. He said that the breaks at Nelson Point, which he had been at work to close under a contract, were all completed on Saturday evening last. The breaks were three in number, and it took about 14,000 yards of earth to fill them. He had been working a large force of men for 21 days at that point. The Rideout levee will be finished next Tuesday evening. The work extends for 6600 feet from the White House, Sutter county, and will be raised to about 11 feet in hight, being six feet wide on top. The contract for raising the Brown's valley grade from 18 inches to 4 feet, a distance of 7900 feet in length, will be completed this evening. It will have a crown eight feet wide. Jake Schimpf's

contract for putting up a bench for road purposes on the Brown's valley grade, from the Citizens' levee to the old Teegarden ranch will not be completed for about ten days. The Marcuse levee on the west and south of his ranch in Sutter county is being raised. Mr. Elliott is putting up a bench on the inside of that portion of the Knight's Landing extension railroad below Marcuse, which was washed out last winter. This will be a preventive against wash from high water this winter.

FRUIT NOTES.—Marysville *Appeal*, Nov. 28: Little is being done in and around Smartsville in the way of horticulture at present. The orange crop promises to be larger than in any previous year, many new trees coming into bearing this year. Jas. Campbell and John Peardon may have oranges to sell this year, they being among the new producers. Timbuctoo will come in for an increase of last year's yield also. F. D. Congdon has already disposed of some of his new crop, which is fast maturing. Raisin and table grapes are receiving considerable attention also. John T. Vineyard has an increased acreage of all kinds of fruits and especially of the table grape. Almond trees are next in prominence in his orchard to peach trees. Extensive orchards and vineyards will soon surround every country home, and especially those along the line of irrigating ditches. Next will come rapid transit for a ready market—then the wilderness will have bloomed.

DITCH-BUILDING. — Smartsville, Nov. 26: Ditch-building is a prominent feature in the field of labor hereabout. The opposition canal to the Brown's Valley Irrigation District canal is progressing as rapidly as the adamantine ledges through which they are working will allow them to move. Albert Hedges is division boss on the upper end of the ditch. The O'Brien ditch, running near the Park's Bar bridge, is to be pushed to completion at no distant date.

NEVADA.

STOCK CATTLE ARRIVING. — Winnemucca *Silver State*, Nov. 29: Eleven carloads of stock cattle and two carloads of sheep have arrived for Charles McConnell. The cattle are mostly yearlings and two-year-old heifers, and will be turned on Mr. McConnell's range near Willow Creek. At the rate stock cattle are coming into the country, it looks as if times in this county will be much brighter in the future than they have been in the last few years.

PINE NUTS.—Carson *Appeal*: Of late years, pine nuts have grown to be quite an article of commerce on this coast. This season over 11 tons were shipped from this State to San Francisco, where they threaten in some degree to supplant the peanut on the horse-cars. The Indians go out in the pine forests every fall and gather the crop. The red men have attempted to gauge the weather by the quantity of pine nuts gathered, but as a rule the weather has gone along without any visible connection with pine nuts. The nuts, which are less than half the size of the peanut, come from the pine cones; under each leaf is a nut. The cones are gathered and roasted, and the cones spreading apart with the heat, drop the nuts. This accounts for the black soot one occasionally finds on the nuts, which comes off on the forefinger of the right hand. Another way of getting them out is to store the cones away in a safe place and allow them to dry gradually, letting the nut fall out thoroughly seasoned. Nuts gathered in this way are higher priced than the ones which have been "fired." These, however, have to be roasted like raw peanuts.

"I use Ayer's Cherry Pectoral freely in my practice, and recommend it in cases of Whooping Cough among children, having found it more certain to cure that troublesome disease than any other medicine I know of."—So says Dr Bartlett, of Concord, Mass.

BULBS AND SEEDS.—Trumbull & Beebee, the well-known seedsmen of 419 Sansome St., have issued an interesting fall catalogue of bulbs and seeds, showing a fine collection of varieties for the bulb-bed, and of vegetables for autumn sowing, also flower-seeds of recent introduction. The publication should be widely distributed.

PEACH PITS.—Any one desirous of obtaining a supply of peach pits will do well to read the advertisement of C. J. Berry in another column of this paper.

POULTRY YARD.

Poultry and the Tariff.

Chas. R. Harker of Santa Clara, in the first issue of his excellent *Fanciers' Journal*, writes as follows:

A good deal is now being said for and against the McKinley bill. Its effect upon one industry, however, has not been much noticed. Perhaps many of our readers may be free traders enough to denounce even the clause in the bill which protects the American hen.

But we incline strongly to the side of our native hens, every time; or perhaps it is the owner of the hen that we favor, and into whose pocket the McKinley bill indirectly puts a good many bright dollars. How and why? Well, it is the old story of cheap European competition injuring our home markets. In Continental Europe eggs are exceedingly cheap. They can be bought in great quantities there for about five cents a dozen. Even at that price the country people cannot afford to eat them. Ten years ago, some speculative merchants, seeing that eggs sold in New York for 20 and 25 cents per dozen when they might be bought for five cents in Germany, thought it would be a bright idea to import a few. They began in a small way to introduce foreign-laid eggs into the American markets. At first the effect was not noticeable, but it was a paying business and grew to be a big one very quickly. The imported eggs were not as good as the home-laid ones, but they did not cost so much. Cheap restaurants and boarding-houses began to buy them. Even the cheap eggs from the West could not compete with the product of the German hen. The trade grew to enormous size—16,000,000 dozen being imported in one season. Western eggs sought other markets, and some of them—millions of them in fact—were sent to California, depressing prices here. This was all right for those who were not trying to make a little money at poultry keeping, but to poultry breeders it was anything but satisfactory, though many of them did not understand the cause of the low prices and markets glutted with stale but still salable cheap eggs. Instead of diminishing, the imports kept on increasing. European peasants seemed determined to supply us all with eggs and make poultry keeping here an unprofitable business.

Now in steps the McKinley bill and imposes a duty of five cents a dozen on eggs, three cents per pound on live fowls, and five cents a pound on dressed poultry. That will put an effectual quietus on the importing of eggs and poultry from Europe. It was, all quibbling aside, rapidly becoming a simple question of whether European or American poultry keepers should supply our markets with eggs and poultry. The new tariff declares emphatically in favor of American breeders, and American breeders, we suppose, know upon which side their bread is buttered.

We are sorry for our Canadian brethren, who have been sending us 3,000,000 dozen eggs yearly; but by poultry keepers in the United States the McKinley bill should be and will be hailed as the most encouraging piece of legislation that has ever been offered the American hen and her owner since the foundation of our Government.

A Hopeful Subscriber.

Enclosed, Mr. Dewey, you'll see,
Is $3—please put to the credit of me.
I'm a Granger by nature though not in name,
A lawyer in practice—I am that same.
Big cattle and hogs look well on paper;
To breed them, not yet have I got the true caper.
I breed good horses at a very high cost;
I sell them low down and pocket the loss.
I grow hogs—no better can be found;
But pork costs me close to $1 a pound.
Hens are my specialty, but don't you know
For one dozen of eggs it costs $2 to grow?
My delight is the thoroughbred Jersey cow;
But her butter, if you'll hear me just now,
Comes pretty high; but send me the PRESS;
It may teach me better—I'll stand it, I guess.

Oakland, Cal. STEPHEN G. NYE.

"Battle of Gettysburg."

The celebrated Panorama of the Battle of Gettysburg and Museum, corner Market and Tenth Streets, San Francisco, is a wonderful production. It has captured the entire State, doing a great deal of good. There is no better way of passing an hour or so, and in studying American history, than by visiting this Grand War Panorama. If any of our readers have not seen it, it will pay them well to do so.

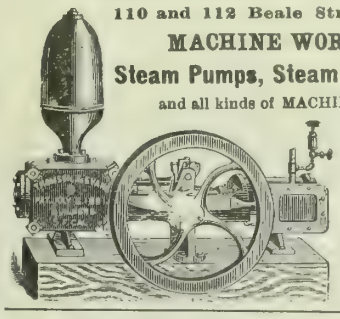
CHILDREN

Are always liable to sudden and severe colds, to croup, sore throat, lung fever, etc. Remedies, to be effective, must be administered without delay. Nothing is better adapted for such emergencies than **Ayer's Cherry Pectoral.** It soothes the inflamed membrane, promotes expectoration, relieves coughing, and induces sleep. The prompt use of this medicine has saved innumerable lives, both of young and old.

"One of my children had croup. The case was attended by our physician, and was supposed to be well under control. One night I was startled by the child's hard breathing, and on going to it found it

Strangling.



It had nearly ceased to breathe. Realizing that the child's alarming condition had become possible in spite of the medicine it had taken, I reasoned that such remedies would be of no avail. Having a part of a bottle of Ayer's Cherry Pectoral in the house, I gave the child three doses, at short intervals, and anxiously waited results. From the moment the Pectoral was given, the child's breathing grew easier, and in a short time it was sleeping quietly and breathing naturally. The child is alive and well to-day, and I do not hesitate to say that Ayer's Cherry Pectoral saved its life."—C. J. Wooldridge, Wortham, Texas.

☞ For colds, coughs, bronchitis, asthma, and the early stages of consumption, take

Ayer's Cherry Pectoral,

Beet Sugar Facture

E. H. DYER & CO., SUGAR CHEMISTS, ENGINEERS and Draughtsmen, and Practical Manufacturers of Beet Sugar, Alvarado, Cal. The members of this firm have spent many months in the largest beet sugar factories of Europe, studying the details of German and French methods of manufacturing sugar from beets, and also at works of the leading manufactories of beet sugar machinery. Having had many years' experience in manufacturing sugar from beets in California, and having fully demonstrated the feasibility of producing sugar from beets in this country in almost unlimited quantities, and in successful competition with cane sugar imported from foreign countries, we are prepared to furnish designs for factories, plans and drawings of the latest improved machinery now in use in Europe and this country. Can also furnish skilled engineers to superintend the construction of factories, and the necessary technical skill to operate the works successfully when completed. Will make personal examination of localities with regard to their fitness for the production of beet sugar, free of expense, except traveling expenses. Successful results guaranteed when the conditions are considered favorable.

SAVE WOOD AND AVOID FIRE.

FARNHAM'S
PATENT
Stovepipe Drums.

It is a perfect SPARK ARRESTER as well as a FUEL-SAVER. Not a spark can escape through the pipe when the damper is properly turned, and for this reason alone, should be on every stove.

It is especially adapted to cooking stoves. If the oven is slow to heat, the drum will correct this fault, throwing more heat around the oven. It will last from 10 to 15 years. Parties desiring can give it a fair trial on their stoves before purchasing.

This drum is sold at the modest sum of $5 and is warranted to give ENTIRE SATISFACTION. For further particulars apply to

M. P. FARNHAM,

'Planet Jr.'
Improved Farm and Garden Tools for 1891.
BETTER, Both Horse & Hand, THAN EVER; better and more money saving. We cannot describe them here, but our new and handsome catalogue is free and interesting. A goodly number of new tools will meet your eye there. Among these, Gardener's Harrow, Cultivator & Pulverizer, combined, adjustable teeth; Market Gardener's & Beet Grower's Special Horse Hoe with Pulverizer; Special Furrower, Marker and Ridger, adjustable [illegible] Sweet Potato Horse Hoe, four tooth with vine turner; Heavy Grass Edger and Path Cleaner; Nine Tooth Cultivator and Horse Hoe combined; Special Steel Leveler and Pulverizer combined, also [illegible] we have ever made so practical or perfect. Some improved things too are grafted upon our old favorites. A repaired LEVER WHEEL, instantly adjustable for depth, is a great feature; put on all of goods we have produced of late years. Nor have our Hand Seed Drills been forgotten in the march of improvement, nor our Double and Single Wheel Hoes, Garden Plows, Grass Edgers, Etc. Some of them are greatly altered for the better; yet do not forget that no novelties are adopted by us without actual and exhaustive tests in the field. We therefore guarantee everything exactly as represented. Send for Catalogues now. S. L. ALLEN & CO., 1107 Market St., Philadelphia, Pa.

"Neponset" Waterproof Paper.

NEPONSET MILLS.

THESE PAPERS are all guaranteed to be absolutely water proof, air-tight and odorless.

For sheathing and lining of buildings; for roofing of factories, storehouses and farm buildings.

They are entirely unaffected by heat, cold, snow or rain.

"NEPONSET" SHEATHING (color black).
NO. 1 "NEPONSET" ROPE ROOFING (color terra cotta).
NO. 2 "NEPONSET" ROPE ROOFING (color terra cotta).

These papers are in rolls 36 inches wide, and they contain either 250 or 500 square feet per roll, and weigh about 20 or 40 pounds per roll, respectively.

THE ONLY TRUE FERTILIZER

Is the GENUINE Compound of the MEXICAN PHOSPHATE & SULPHUR COMPANY prepared from GUANO and rendered soluble by the application of acids.

This manure is an ENRICHER of the soil and not, like others, a STIMULANT only; it will do for the land what no other can in rendering it PRODUCTIVE without IMPOVERISHMENT.

Its analysis is reliable; its work is immediate and effective, and for results we point with confidence to the ORCHARDS of RIVERSIDE, where it has been liberally used for the past three years.

It can be prepared to suit any land, with or without potash, as occasion may require. It is rich in PHOSPHORIC ACID, and can be made as rich in NITROGEN as the most deficient soil may exact.

WE GUARANTEE ALL WE CLAIM FOR IT,

Viz.: TO BE THE MOST COMPLETE FERTILIZER ON THIS COAST.

For Sale in Lots to Suit by

Meteorological.

Why the Rains Were Late.

The Signal Service weather report for November has just been issued. In it Lieutenant Finley of the Signal Corps, in charge of the Division of the Pacific, says:

"The most remarkable feature of the weather for the month is the extraordinary deficiency of rainfall. It is a deficiency which affects the entire Pacific Coast from Mexico to British Columbia. The proximate cause for this deficiency is found in the high latitude of the easterly movement of cyclonic areas from the Pacific ocean. In spite of the fact that there were a large number of these areas, only one of them passed south of the northern boundary of the United States. This area gave rise to a peculiar secondary cyclonic effect which passed southward into Nevada and gave rise to the sudden and rather heavy rains in Western Arizona and Southern California. This secondary area was forced southward by the rapid formation of a high barometer in Washington and Oregon. A weather record for San Francisco, embracing a period of 42 years, shows that never before within that time has the month of November been so deficient in rainfall. The smallest amounts previously recorded are 0.15 of an inch in 1862; 0.25 in 1876, and 0.26 in 1884.

"A chart with the storm track for November, 1884, shows but three cyclonic areas, two of which passed eastward north of Washington and the third through the northern portion of that State. This slight deflection to the southward of one of those areas was sufficient to give California a few light showers. The cyclonic areas for November, 1890, have been peculiar not only for their high latitude but also for their rapidity of movement, which has tended to increase their number, which is unusually large for the month. This rapidity of movement also explains the large number of days on which light showers fell in Washington and Oregon (nearly two-thirds of the month) and the small total of precipitation. The conditions for rainfall were no sooner formed than a change in the cyclonic circulation drove them away. It is not within the province of this review to discuss the question as to the cause of the extreme northerly movement of the cyclonic areas for this month.

"Rainfall—It is everywhere deficient, and the amount of such deficiency varies from .06 of an inch at Keeler to 6.15 inches at Olympia. The deficiency increases in amount from south to north, and is especially remarkable north of the 38th parallel. Rain fell on the following dates: Washington—5th to 11th, 13th, 14th, 17th, 18th, 22d to 24th, 26th to 28th. Oregon—5th to 8th, 11th, 22d to 27th. California—5th to 7th, 22d to 25th. Nevada—6th, 9th. Arizona—6th to 8th. The heaviest rainfalls in 24 hours were .66 of an inch at Fort Canby on the 8th and .56 of an inch at San Diego on the 7th. A fall of 2.65 inches was reported from Globe, A. T., on the 8th. The heaviest monthly rainfalls were .70 of an inch at San Diego and Olympia. The following stations report no rainfall: Walla Walla, Winnemucca, Red Bluff, Sacramento and San Francisco. Snow is reported as follows: Washington (6th), Whitman county. Oregon (6th), Harney county. California (5th), Plumas, Yuba and Sierra counties, 2 to 24 inches; (6th), Ventura county. Nevada (6th, 9th). Arizona (8th), on Pinal mountains.

"Local storms—Hailstorm at Belotta, Cal., 8th; thunder-storm at Quincy, Cal., 5th. High 'northers' occurred in California on the 11th and 12th during the prevalence of an area of extremely high barometer in Northern Nevada, Idaho and Oregon. The barometer during this time was from .40 to .60 of an inch above the normal. In some places the wind was reported as reaching a velocity of over 60 miles per hour, causing damage to fences, trees and roofs of buildings. Floods were reported from Western Arizona on the 8th, causing high water in the Gila and Colorado rivers.

"Temperature—It has been above the normal in all districts. The excess ranges from 3 degrees at Olympia to 12 degrees at Los Angeles. The highest temperature, 96 degrees, occurred at Los Angeles on the 3d; the lowest, 10 degrees, occurred at Winnemucca on the 13th."

An Address on the Weather.

Lieutenant John P. Finley gave a detailed explanation of "Cyclonic Development and Precipitation upon the Pacific Coast" before the Academy of Sciences Monday evening.

"In a mountainous country," said he, "weather conditions are localized. North of the 30th parallel we look to the west for the coming of storms. All storms which enter this country come from the Aleutian islands, or the region adjacent to Japan, the great breeding-ground of storms.

"The precipitation depends upon the parallel along which the storm moves. The rainfall during October, 1889, was the greatest for that month in this city during a period of 42 years, and the reason for it was the lower easterly movement of the storm. As a rule, storms strike Alaska on the Washington coast first, but in this instance they struck the northern part of California directly. This may have been due to an area of high barometer to the north, which caused the storm to deflect more to the south than usual.

"This year for the first time in 42 years no precipitation has been recorded in San Francisco during November, but the signal charts show that there has been no lack of cyclonic movement, as 10 storms were recorded during the month. They, however, all passed along unnaturally high latitudes. They moved very rapidly, and there was no time for a storm to grow to the south.

"The summer storms in Southern Nevada, Western Arizona and Southwestern California were due to the melting of the huge masses of snow in the mountains, which surcharged the air with moisture at the same time that a cold wave passed along the eastern slope of the Sierra and condensed the clouds into rain.

"All cyclonic movements are divided into quadrants. The southeast quadrant is nearest the food supply, that is, the moisture, and hence it is from this section that rain comes. The northeast quadrant develops the greatest cloudiness, with some rainfall. The northwest quadrant is the coldest and driest, while the southwest quadrant, on its western side, partakes of the nature of the northwest quadrant and on its southern side of the southeastern one.

"With signal stations on the Alaskan coast and the Aleutian islands and telegraphic communication, we should be enabled to forewarn every storm and approximate its course.

"It is not alone the Pacific Coast that is influenced by the cyclonic movement from the west. The storm, shorn of its moisture, it may be, keeps on eastward, when it again becomes surcharged with moisture, which is precipitated in the great interior valley and on the Atlantic seaboard. Its breeding-ground then becomes the Gulf of Mexico, and the air currents generated by it produce the hurricanes and destructive tornadoes in the region east of the Rocky mountains.

"The theory of cycles seems more a theory than a fact. I have experimented with the statistics for many years, and I find that you can place no dependence in a recurrence of wet and dry seasons at regular intervals."

The Population of the United States.

Robert P. Porter, Superintendent of the Census of 1890, has issued a preliminary bulletin of census results from which we take the following table showing the population of the United States in 1890, as compared with 1880 and 1870, by States and Territories. The figures for 1890 in this table are not final, but are subject to revision:

STATES AND TERRITORIES	POPULATION 1890.	1880.	1870.
The United States	62,480,540	50,155,783	38,558,371
North Atlantic Division	17,364,429	14,507,407	12,298,730
Maine	660,261	648,936	626,915
New Hampshire	375,327	346,991	318,300
Vermont	332,215	332,286	330,551
Massachusetts	2,233,407	1,783,085	1,457,351
Rhode Island	345,343	276,531	217,353
Connecticut	745,861	622,700	537,454
New York	5,981,934	5,082,871	4,382,759
New Jersey	1,441,017	1,131,116	906,096
Pennsylvania	5,248,574	4,282,891	3,521,951

441,584.—PROTECTING PILES—F. Rives, Seattle, Wash.

441,334.—SPEED INDICATOR — F. N. Scofield, Phœnix, A. T.

441,382.—CULTIVATOR — Robert Simpson, Hanford, Cal.

441,598.—SUSPENSION BRIDGE—G. W. & F. P. Stedman, S. F.

441,449. — WAVE-POWER MOTOR—E. D. Stodder, S. F.

20,350.—DESIGN—E. Shepperd, S. F.

The following brief list by telegraph, for Dec. 2, will appear more complete on receipt of mail advices:

California — Albert J. Armstrong, Coronado, boot calk; Hans C. Behr, San Francisco, crushing roll; George H. Clark, Sacramento, burial apparatus; Greenwood Fry, Cottageville, Ky., assignor of one-half to H. M. Crawford, Los Angeles, corn-planter; Lamartine R. Fulda, assignor of one-half to E. Fulda, San Francisco, hoop coupling; Wendell P. Hammon, Oakland, and C. J. Sechrist, San Francisco, fruit-drying tray; Herbert S. Herrick, San Francisco, dose-measuring bottle; Andrew McClain, San Diego, fumigator; Samuel A. Owen, West Berkeley, propulsion of vessels; James Patterson, Stockton, and W. Patterson, Benicia, steam boiler; Florian Stanke, San Francisco, fruit-gatherer; William S. Van Sant and E. E. Eames, Dixon, coin actuated liquid-vending machine.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

Fresno County Mentions.

We are in receipt of a letter from our old friend D. T. Fowler, who is one of the directors of the Del Rio Rey Raisin and Fig Company. Mr. Fowler is at present at the company's ranch in Fresno county, and writes as follows:

Work on the Del Rio Rey is prospering. I am pushing preparations for the spring planting of vines and trees all that is possible. We will have the 480 acres all improved this spring. The vines and trees planted last spring have made fine growths.

This section of country is being rapidly improved. We have passed the stage of talk and reached that of action. It is no longer a question of experiment to ascertain what the soil will produce for profit, but one of desire and ability to plant and improve.

Many small holdings will be planted in vines and trees this spring, for illustrations of profit in raisin grapes and various fruits are so numerous that the dullest can comprehend.

Can we predict the future of Fresno county in vineyard and orchard and material wealth 20 years hence? D. T. FOWLER.

THE Government of Guatemala has imposed an export tax of $1.84 a pound on silver because of the increased price of silver in the United States.

"At last I can eat a good square meal without its distressing me!" was the grateful exclamation of one whose appetite had been restored by the use of Ayer's Sarsaparilla, after years of dyspeptic misery. A teaspoonful of this extract before each meal sharpens the appetite.

GOOD LAND TO RE[NT]

Terms Unequaled.

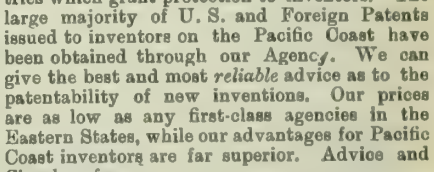
SEVEN ACRES OF BEARING ORCHARD, FOR CASH OR ON SHARES, SEVEN MILES FROM TULARE.

IMPROVED LAND.—160 acres within half a mile of Tulare City; 160 acres seven miles from Tulare; 320 acres adjoining the last named.

FOR LOW CASH RENT, or Reasonable Share, the above will be let.

UNPLOWED LAND.—Very level and easily tilled. 160 acres 1½ miles from the last named; good soil; water at small cost if desired. Rent free first year and preference given for second. Also, one section (640 acres) of similar land three miles S. W. of Pixley on the same terms as last named, but without irrigation. Will rent in subdivisions if necessary.

Inquire of E. M. DEWEY, Porterville, Tulare Co., or at the office of this paper.



Dewey & Co.'s Scientific Press Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most *reliable* advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

—IMPORTERS AND BREEDERS OF—

Red Polled Cattle.

We have 19 head of Imported Stock.

Young Bulls and Crossbreds on Devons for sale.

H. MECHAM,

Importer and Breeder of Shropshire Sheep

They were all imported from England in '88, or bred direct from Imported Stock, and all registered.

H. MECHAM,

—BREEDER OF—

American Merino Sheep Without Horns.

The only flock in the United States. When we bought our sheep East 20 years ago, among them was a ram without horns. He grew to be a large fine sheep, shearing at 2 years old, a 12 months' fleece, 35 lbs. of long white wool.

I have bred from him and his get ever since and have never made an out-cross and never used the same ram but one year on the same flock. My rams at 2 years old will weigh from 160 to 180 lbs.; have a strong constitution, without wrinkles, and will shear on an average about 25 lbs., a 12 months' fleece, of long white wool. Rams and Ewes for sale. P. O. Address:

Stony Point, Sonoma Co., Cal.

R. R. Station, Petaluma.

S. F. Market Report

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Dec. 3, 1890.

General trade in farm products has been quite fair. Rains last night and to-day are contributing a more cheerful feeling with the trade, although prices in some commodities are more or less unsettled. Trading in barley has been fairly free at shading prices; even wheat has exhibited more life. The Eastern and European wheat markets have ruled fairly firm. The following is to-day's cablegram:

LIVERPOOL, Dec. 3.—Wheat—Quiet but steady. California spot lots, 7s 4d@7s 6d; cargoes off coast, 37s 6d; just shipped, 37s; nearly due, 37s; cargoes off coast, quiet; on passage, Red very dull and White firmly held; Mark Lane wheat, steady; English country markets, steady; French, firm; wheat and flour in Paris, quiet; weather in England, wet.

Foreign Grain Review.

LONDON, Dec. 1.—The *Mark Lane Express*, in its review of the British grain trade, says: English wheat was firm. Foreign wheat was weak on large arrivals of Russian and Indian. Oats were firm. Fine American corn is in good inquiry at 28s; round corn, 24s 3d. At to-day's market a small business was done and prices were steady.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per ctl. for the past week:

	Dec.	Jan.	Feb.	Mar.	April.	May.
Thursday	....	....	....	....	....	....
Friday	7s6¾d	7s6½	7s6½d	7s6½d	7s6d	7s6d
Saturday	7s6¾d	7s6½	7s6½d	7s6½d	7s6½d	7s6d
Monday	7s6¾d	7s6d	7s6½d	7s6½d	7s6½d	7s6d
Tuesday	7s6d	7s6½d	7s6½d	7s6½d	7s6d	7s6d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday	....	....	....	.....
Friday	37s6d	37s0d	37s0d	Firm.
Saturday	37s6d	37s0d	37s0d	Quiet.
Monday	37s6d	37s0d	37s0d	Quiet.
Tuesday	37s6d	37s0d	37s0d	.....

Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

Day.	Dec.	Jan.	Feb.	Mar.	May.	July.
Thursday	....	....	....	....	....	...
Friday	102¾	104	...	106⅛	106½	...
Saturday	102¾	104½	....	106½	106⅝	...
Monday	103⅜	104⅝	....	106⅝	106⅞	...
Tuesday	103⅜	104⅜	105½	106⅜	106⅜	...

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

Day.	Dec.	May.	June.	July.
Thursday	....	....	....	....
Friday	94⅜	101½	....	....
Saturday	92¾	100⅜	....	....
Monday	92⅜	101½	....	....
Tuesday	92⅛	100⅛	....	....

NEW YORK, Dec. 3.—Wheat—$1.05¾ for cash, $1.04 for December, $1.05 for January, $1.06⅛ for February, $1.07⅛ for May, and $1.01 for July.

CHICAGO, Dec. 3.—Wheat—92¼c for December and $1.00¾ for May.

Eastern Wool Markets.

NEW YORK, Nov. 28.—*Bradstreet's* will say tomorrow: There is only a limited inquiry for wool in the seaboard markets, and the situation favors buyers. Strong holders, however, are not disposed to grant further concessions, as the liberal sales the past month have reduced their stocks. Australians in many instances are nominal. Dispatches from London say that the sales which opened on Tuesday are not very encouraging for sellers. Though the demand was fair, prices declined at the outset. Buyers for the American market are doing but little.

Boston holders are showing more disposition to sell. A fair trade for Thanksgiving week resulted. The sales amounted to 212,000 lbs of foreign and 1,792,200 lbs of domestic. Full late ranges for California.

Visible Supply of Grain.

NEW YORK, Dec. 1.—The visible supply of grain is as follows: Wheat, 24,527,000 bushels, an increase of 338,000; corn, 3,144,000, a decrease of 1,184,000; oats, 3,359,000, a decrease of 170,000; barley, 4,750,000, an increase of 345,000.

Dried Fruits.

NEW YORK, Nov. 29.—California dried fruits are extremely quiet, the feeling extending to raisins. The top price for apricots was 20c; plums, 15@16c; unpeeled peaches, 15@17½c. London raisins declined to $2.40@2.50; Three Crowns, $1.90@2; seedless, 8¼@9c; Sultan, 10c. The dark color operates against the latter. Prime big raisins are being largely repacked in the one-pound carton. This package is greatly favored by a large class of grocers.

NEW YORK, Dec. 1.—A local commission house closed out last week about 600 bags of California dried unpeeled peaches at 15c for ordinary to 17c for choice. They were sold chiefly in Philadelphia.

Local Markets.

BAGS—The market is dull, although the rains appear to contribute a more hopeful feeling among some holders. Standard sized for May-June delivery are quoted at 6¼@6⅝ cents.

BARLEY—The market held to fairly firm prices up to Monday, when a weaker feeling set in resulting in lower prices under a rain scare. At the decline, trading was more active in futures on Call. The following are to-day's Call Board sales:

Morning Session: Seller 1890—100 tons, $1.42⅜. Buyer season—100 tons, $1.46; 100, $1.46¼; 300, $1.46¾; 200, $1.46⅝ ₩ ctl. Afternoon Session: Seller 1891—200 tons, $1.06. Buyer season—100 tons, $1.45¾; 300, $1.45⅞; 100, $1.46¼ ₩ ctl.

BUTTER—The market has eased off, closing weak. Free receipts of Western creamery butter and rains at the close have undermined the market. The demands from distant points are less urgent.

CHEESE—The market is higher and strong under limited receipts and a good demand.

EGGS—Although receipts have been light, yet prices have shaded off. The demand is said to be lighter.

FLOUR—The market is fairly active for the season. Concessions are necessary to place a large parcel.

WHEAT—The sample market has held to steady prices. Vessels on berth are receiving fair dispatch. In futures, trading on Call has been light. The following are to-day's Call Board sales:

Morning Session: Buyer 1890—100 tons, $1.29⅞; 1500, $1.30. Buyer season—1200 tons, $1.39¾; 100, $1.39½; 1800, $1.39⅝ ₩ ctl. Afternoon Session: Buyer 1890—100 tons, $1.30. Buyer season—800 tons, $1.39⅝ ₩ ctl.

Market Information.

Cereals.

H. Kains Jackson in London *Farmer*, Nov. 10th, writes: What the world says about last year's harvest is to the effect that in 1890 some 267,000,000 qrs of wheat were grown and that the world wants 272,000,000 qrs to eat; therefore, there will be short commons to the extent of about 5,000,000 qrs. In other words, instead of having a £5 note to spend, the bread-eater must be content with about £4 18s 6d. Hungary and Austria are credited with 10,000,000; France with 1,000,000; Germany with 1,000,000; Italy with 3,000,000; Roumania with 2,000,000 qrs more wheat than in 1889. Plus 17,000,000. But on the debit side of the harvest ledger: India is short by 1,000,000, Russia by 2,000,000 and the United States by 11,000,000 qrs of the total grown last season. Without much heeding these figures as to the world, it may be noticed, in regard to these "right little, tight little islands," where an average crop has been grown and where some 18,000,000 qrs have still to be bought and brought from beyond the seas, that the purchasing of this bulk of food from various quarters is a different matter to buying it from old and regular shippers accustomed to the trade like Americans. For instance, the United States are minus, Mid Europe is plus, say 10,000,000 qrs. The question is, can England buy as well of Austria-Hungary as from America? From the latter, big ships are always crossing the Atlantic ferry. In the other case special vessels will have to be chartered, while the country is surrounded by centers of wheat consumption. Probably 10,000,000 surplus qrs available in America would be bought for less money than the same quantity from any other country except Russia. Whatever the reason, this autumn the market feeling is decidedly stronger than it has been of late years, and the foreign wheat is 2s to 4s harder to buy. Farmers are now somewhat slowly following the lead of foreign wheat-sellers, and asking certainly 1s to 2s per qr over the cheapest rates accepted early in October. This upward tendency, while the season keeps still open, is well supported by the movement in a similar direction of flour, maize and oats, so that the advent of wintery weather is expected to give a further enhancement to prices.

The local market for wheat has held fairly strong. While the absence of rains is in favor of holders, yet the increasing tonnage on the way is the most important. Ships will begin to arrive quite freely toward the last of this month, with heavy arrivals looked for in January. These arrivals should make charters weak and lower. The tonnage on the way, compared with like time in 1889, is as follows:

To	1890.	1889.
San Francisco	291,525	209,747
San Diego	12,388	8,955
San Pedro	3,244	904
Oregon	35,491	29,780
Puget Sound	35,747	16,222
Totals	378,395	265,608

As the carrying capacity is about 60 per cent larger than the tonnage, the above is a good showing for holders of wheat. Of the above, fully five per cent is engaged in the coast trade and cannot be classed as wheat vessels.

Barley ruled weak throughout the week. The market did not shade off as much as it was claimed it would. This, doubtless, was due to the fact that although more warehouses (Stockton's included) are added to the Call Board, yet the stock on Dec. 1st is not much larger than on Nov. 1st. Considering the heavy receipts in last month, this showing is greatly in holders' favor. The supply in the interior is light, but then Oregon and Washington are sending us considerable.

Notwithstanding the high prices ruling for oats, the stocks held in Call Board warehouses show a falling off last month of about 500 tons. The demand continues fair. As receipts are moderate, buyers are compelled to pay full prices.

Corn is weak at lower figures. This is due to stocks in the city warehouses showing an increase in last month of over 1500 tons. The supply to draw from is said to be larger than held at this time last year. Dealers buy only in a hand-to-mouth way.

Rye shows a fair degree of firmness, as does buckwheat.

Heavy rains last night, with general rains reported this morning throughout the State, have caused the barley market to go off slightly. As the stock here and the supply to draw from are light, there does not appear any good reason, outside of speculation, for the decline. The consumption in the interior will increase in certain sections and decrease in others.

Feedstuff.

The ground feed market has ruled barely steady, with, toward the close, a disposition to shade prices. Rains throughout the State are generally accepted as forerunners of abundant natural pasturage, which later on will lessen the demand for ground feedstuff.

Hay is essentially unchanged. While the rains will lessen receipts, owing to poor roads, the demand is liable to fall off. The supply in the State is light, much more so than at this time in last year. There are those who claim that if we have severe weather from now into spring, prices will go higher, but others contend that prices are high enough now.

Fruits.

Grapes have been pressing the market, causing a slight shading in prices.

The receipts of apples are very large, and as the demand has not enlarged, the market, except for the more choice varieties, is lower. Large choice highly-colored red apples fetch top prices. Oregon is sending us more liberal supplies than at this time in 1889. The quality is generally good to choice.

The dried fruit market is dull, with prices in buyers' favor. This is always the case toward the close of the year. Sellers who meet buyers when they are in the market for Eastern shipments, are, as a rule, the better off when loss in weight, interest charges, etc., are taken into consideration. Several well-informed parties say that the market will probably do better when the spring trade opens in March and April of 1891. Of course while this is problematical, yet past experience has proven it correct. Peaches are offering quite freely, causing lower prices to be quoted by buyers. It is quite safe to say that no fruit will command top quotations if pressed on the market.

Raisins continue to be shipped quite freely to the East, while receipts at this port are large. The distributive demand this season has been large, causing the very large parts of the pack to go into consumption. The quality has averaged much better than any former season, which speaks well for the future, provided the standard is maintained.

Vegetables.

Green corn from the southern part of the State put in an appearance the past week. The quality is good.

Tomatoes are generally poor. Marrowfat squash are higher. Egg-plants are weak. Cabbage and cauliflower are in good supply, as is celery. The bulk of the latter is bleached and consequently has ready sale. Root vegetables are unchanged.

Onions are firm under lighter receipts and a fair demand.

Potatoes show more strength. An advance has been established in the more choice good-keepers. It is thought that the rains, if continued, will make bad roads and interfere with farmers' deliveries. Oregon and Washington are not sending us as liberal supplies as usual at this season of the year.

Live-stock.

Bullocks are a shade firmer for the better conditioned that cut up without much wastage. Mutton sheep are steady. Small calves are scarce and wanted. Hogs are offering quite freely, but ready buyers are secured for both packing and block. Cows are in fair inquiry. There has been a fair demand for fair-sized work horses. General utility horses and matched teams find ready sale at prices ranging from $150 to $300 for the first and $500 to $1000 a span for the latter.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4½@4¾c ₩ lb; dressed, 7@8c ₩ lb.; heavy, 4@4¼c ₩ lb.; dressed, 6½@7½c ₩ lb. Stock hogs, 3@3½c ₩ lb.

BEEF—Stall fed, 6¼@—c ₩ lb.; grass fed, extra, 6@—c ₩ lb.; first quality, 5¼@5¾c ₩ lb.; second quality 4¾@5c ₩ lb.; third quality, 4c@— ₩ lb.; bulls and thin cows, 2@3c ₩ lb.

VEAL—Small, 8@9c ₩ lb.; large, 6@7½c.

MUTTON—Wethers, 7c ₩ lb.; ewes, 6½c ₩ lb.; lamb, spring, 8@9c.

Miscellaneous.

From the *Commercial News* of Dec. 2d the following summary of tonnage movement is compiled:

	1890.	1889.
On the way to this port	291,525	209,747
On the way to neighboring ports	15,632	9,854
In port, disengaged	11,655	23,009
In port, engaged for wheat	50,040	74,772
Totals	368,852	317,382

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to Nov. 25, 1890, the following are the exports from this port:

	1890.	1889.
Wheat, ctls	4,521,867	4,893,126
Flour, bbls	470,988	456,357
Barley	165,626	790,844

Poultry has ruled in buyers' favor, although toward the close a steadier tone has set in under lighter receipts.

Hops are firm, although buyers are offish. The small stocks are in favor of holders.

Honey is wanted at an advance. This year's small crop at the East favors California honey. Eastern advices indicate a good crop next year.

Beans are steady at unchanged quotations.

Wool is more or less neglected. The lateness of the season and last month's disturbed money market are against holders. Dealers appear to have confidence in better prices after the turn of the year.

Rains, it is said, will stimulate the demand for grass seed.

Nuts continue to go off fairly free for the holiday trade. Prices are about the same as heretofore reported.

Exports by sea the past week aggregate as follows: Wheat, ctls, Dunkirk, 232,252; Waterford, 37,799; Liverpool, 15,934; Cork, 60,446. Flour, bbls, Liverpool, 5000; China, 11,888; Japan, 1627. Beans, lbs, Victoria, 7298; China, 19,937. Raisins, boxes, Victoria, 100. Brandy, gals, Liverpool, 125. Canned fruits, cs, Liverpool, 2432. Dried fruits, lbs, China, 985; Japan, 2400. Wine, gals, Japan, 1973.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

GEN. BIDWELL'S REMINISCENCES.—**The leading article of the December *Overland* will be a paper by General Bidwell, containing his estimate of the situation of affairs in California at the outbreak of hostilities under Fremont and reminiscences of the Bear Flag episode. This paper was written many years ago to assist a friend in the historical study of the period, and as it antedates all the standard histories, has the value of an original document, being his first fresh and entirely independent understanding of the matters treated, unaffected by later developments. It has never before been in print.**

Indorsement by San Francisco Draymen.

SAN FRANCISCO, Cal., Oct. 29, 1890.

Messrs. Lawrence Williams & Co. Cleveland, Ohio—GENTLEMEN: Having recognized the value of your Gombault's Caustic Balsam from a sample which we procured some months ago, we beg leave to tender you our earnest recommendation of your goods.

The Balsam gave so much satisfaction in the treatment of our horses that we have several times endeavored to purchase it for troubles which it so easily remedies, but we found that it was not established in our market, so were compelled to content ourselves with less satisfactory medicine. Truly yours, C. B. RODE & Co.

All wholesale druggists, also J. O'Kane, keep it in stock.

THE Crosby Steam Gauge and Valve Company of Boston manufacture a chime whistle, which is musical and a great improvement over the harsh and noisy things in use at the present time by many firms.

HORSE-COLLAR TRUST—A BIG HOLE MADE IN IT. No Collar Trust! No Leather Trust! No Labor Trust! Competition is the life of trade, and Trusts kill competition. A business house which becomes fossilized to the point of requiring a Pool or Trust to hold it up, should be left severely alone, and those not leaning on Pools or Trusts be preferred. What chance has the rising generation for a fair share of this world's goods if they are hampered and shut out from many undertakings by Trusts? To all persons interested in Harness Goods: Please take notice that the firm of W. Davis & Son withdrew from the Collar Trust on September 13, 1890, and can, therefore, furnish Horse Collars at a Big Reduction on the Trust Prices, as we are the only Wholesale Saddlery House in San Francisco not tied up with High Prices. W. DAVIS & SON, 410 Market St., S. F.

EXPLANATION. Cl. for clear; Cy., cloudy; Fr., fair; Cm., calm; — indicates too small to measure. Temperature wind and weather at 5 P. M. (Pacific Standard time) with amount of rainfall in the preceding 24 hours. T indicates trace of rainfall. P C, partly cloudy. Rn., rain.

NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & Co., Publishers,
No. 220 Market St., S. F

Improved Ranch
FOR SALE.

Artesian, Raisin and Fruit Lands.

Located seven miles southwest of Tulare City and three miles from Tokay Switch on the Southern Pacific Railroad. It is centrally located in the artesian belt of Tulare county, and has one flowing well, capable of irrigating 100 acres, the depth to the main flow being only 308 feet. The water is soft for washing, healthful to drink, and contains no substance injurious to vegetation. A reservoir of one acre, surrounded with handsome trees, receives the water from the well. Several ditches carry it in different directions on to the land.

The whole 160 acres (quarter-section) is unusually level, is entirely enclosed with fencing, and cross-fences partition the land into several enclosures for pasturage pur oses.

The improvements consist of a modern style, two-story, hard finished house, containing seven rooms, with walled cellar, kitchen and porches additional, surrounded with elegant shade trees, etc.; a large barn, storehouse, blacksmith shop, windmill, sheds, stables, etc.

In front of the place is a row of about 40 well-grown elm and Carolina trees. There are eight acres of orchard and vineyard, mostly in bearing, 30 acres of alfalfa, several miles of ditches and 40 acres of land checked and leveled.

The soil is dark Tulare lake bottom land, very productive, grows all kinds of tropical and semi-tropical fruits, except apples, and is especially adapted to the growth of alfalfa and for stock range. Water of good quality is found at ten feet from the surface. There are three surface wells on the place.

The climate is as healthful as any part of the Sacramento or San Joaquin valleys Adjoining lands aresupplied with water for irrigation from Elk Bayou, a never-dry stream, lying one mile from these lands, and wate can be had on the land from the same source.

The simple fact that abundance of artesian water can be had so cheaply on this land will soon make the water alone worth more than the land is now offered for.

The owner (not being a farmer) is determined to sell at the best price offered soon The land is under cultivation, except necessary pastures. Terms easy.

Three hundred and twenty acres of improved land adjoining will also be sold cheap and on easy terms, in tracts of 40 acres or upward, to suit.

Also 160 acres just outside of Tulare City limits, surveyed out in five-acre lots. The whole will be sold for cash for much less than its real value if applied for soon.

Call on or address E. M. DEWEY, Porterville, or A. T. DEWEY, 220 Market Street, San Francisco.

THE LIGHTEST DRAFT PLOW IN THE MARKET.

SOLE AGENTS:

BAKER & HAMILTON,

SAN FRANCISCO AND SACRAMENTO.

ASK YOUR COUNTRY DEALER FOR THEM.

WHEELER'S CARBON BISULPHIDE IS APPLIED AS ABOVE.

Works Best in Winter and Spring.

The following letter is only one of the many like it carrying the approval of our leading agriculturists:

U. S. DEPARTMENT OF AGRICULTURE,
DIVISION OF ECONOMIC ORNITHOLOGY AND MAMMALOGY.

WASHINGTON, D. C., April 22, 1889.

MR. J. R. LOCKE, Bleudon, Davison Co., Dakota—DEAR SIR: Your postal card addressed to the Entomological Division of this Department has been handed me for reply. The best remedy we know for the destruction of Pocket Gophers is bisulphide of carbon. You can obtain important information in regard to the use and cost of this article by applying to J. H. Wheeler, Melrose, Alameda Co., Cal.

Respectfully, [Signed] C. HART MERRIAM, Ornithologist.

WHEELER'S CARBON BISULPHIDE is endorsed by 8000 California Farmers as the best destroyer of ground squirrels. Sold by dealers. Will be sent by the manufacturer on receipt of price. Address

J. H. WHEELER, Melrose, Alameda Co., Cal.

THE JUDSON WIRE & PICKET FENCE.

Cheaper & Better than ever. The Coming Fence.

Rabbit Proof, 2 ft. high, 3 double Steel Cables, 36c per rod, in carload lots. Put barbed fencing wires above it and it will turn rabbits and pigs or any stock whatever. All of our Fence is COLORED RED by boiling in a chemical solution that preserves the wood. Rabbits will not gnaw them.

Address, JUDSON MANUFACTURING CO., 14 & 16 Fremont St., San Francisco.

Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS U. S. and Foreign Patent Agency, the following are worthy of special mention:

HOSE REEL.—Rockwell S. Chapman, S. F. No. 440,838. Dated Nov. 18, 1890. This reel belongs to that class adapted to be permanently secured to the walls of buildings in convenient positions whereby the hose wound thereon can be drawn off for use in case of emergency. The invention consists in the novel rotary joint by which the water connection is effected, and also in the guiding device on the front of the reel for directing the hose properly in any direction when being drawn off. The joint is a simple and effective one, admitting of the rotation of the hose reel, and is self-tightening. The guides are rollers neatly and serviceably placed, to direct the hose without friction.

TRAVELING THRASHER AND CLEANER.—George W. Haines, Stockton, Cal. No. 440,843. Dated Nov. 18, 1890. The object of this invention is to improve the cleaning mechanism of traveling harvesters or other thrashers and cleaners by a peculiar construction and operation of the shoe which carries the sieves, and a means for changing the motion from a plain end shake to a combined end shake and vertical tossing motion, the amount of this motion being regulated to suit the quality of the grain while the machine is running. It also relates to an improved construction of chain driving and sprockets, by which the power is transmitted from the main driver by a single chain and distributed from this to the thrashing and the separating and cleaning parts of the apparatus.

SICKLE GRINDER.—Henry Thibault, San Francisco, Cal. No. 440,337. Dated Nov. 11, 1890. This machine consists of a support for the sickle, a means for fixing said support upon one of the wheels of the mowing or reaping machine, an adjustable standard, with a grinding disk mounted upon a shaft thereon, and means for adjusting said disk to the teeth of the sickle and for rotating the disk to grind the teeth.

WATER-WHEEL.—William H. Gunsolus, Sutter Creek, Cal. No. 440,353. Dated Nov. 11, 1890. This wheel is of the "burdy-gurdy" type. The novelty rests in the bucket, which is made heart-shaped, each bucket having a divisional rib formed by the rim of the wheel plate or disk extending from the back of one bucket into the wide end of an adjacent bucket. The object is to receive the impact of the water to the best advantage and to discharge it equally on each side, avoiding splashing and consequent interference of the discharging water with succeeding buckets.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

Acme Spray Pump.

This is a strong, light bucket pump, and is just what has been needed by small Orchardists, Farmers, Stock and Poultry Raisers. This pump will stand a pressure of from 50 to 75 lbs. to the square inch. When charged it will keep up a continuous spray from 5 to 15 minutes, without pumping, according to the amount of air in the reservoir.

Sample pump sent complete for Spraying, with Suction Hose, Strainer, Discharge Hose, Rod, one Lime and one Chemical Nozzle, for $13. All my pumps have brass and Rubber Valves

Spray Rods made to spray, from the ground, from 1 foot to 30 feet high and at any angle.

For Orchards, Farms, Stockmen and Poultry Raisers there is nothing like them.

MANUFACTURED AND FOR SALE BY

SMITH McGARVIN, San Jose, Cal.

Size No. 1. $13.50.

THE CELEBRATED

CHAPMAN-CLIMAX SPRAY PUMP

Is still ahead of all competitors, and is the most popular spraying machine in the market. The CLIMAX NO. 1, represented by this cut, is the cheapest reliable sprayer made, and its economy in the amount of wash required for a given amount of work will save its cost in a few days' operation.

IMPROVED CLIMAX NO. 2

Is a large double pump, made entirely of brass, and equipped complete with two lines of hose, four improved Pacific Cyclone Spray Tips, extensions, shut-off valves, etc. Guaranteed the safest, most satisfactory, and, in the end, the cheapest large spraying outfit in existence. Correspondence solicited. Address all communications to

Arizona Everbearing Strawberry.

BY PLANTING QUITE A NUMBER OF THE LEADing varieties of Strawberry together for five years, I have produced a variety unlike any of the former. I have picked the fruit daily since April 20th to the present time, October 18th, and the vines are still full of bloom and berries. Roots are long and stand the drouth well. The berries are large, fine flavor and high color, and resemble the Jessie in shape somewhat. I am prepared to furnish them in small lots at $1.50 per doz., postpaid. R. E. FARRINGTON, General Nurseryman, Phœnix, Arizona.

GROUP OF HEREFORDS OF WILD FLOWER STOCK FARM, OWNED BY A. HEILBRON & BRO., SACRAMENTO.

Heilbrons' Herefords.

In our State Fair issue in September last we gave a group of Shorthorns, owned by A. Heilbron & Bro. of Sacramento, who won a fine string of premiums for this breed. Heilbrons have also on their fine Wild Flower Stock Farm in Fresno county, a splendid band of about 35 Herefords, representatives of which were shown at the State Fair and captured all the awards made in the Hereford class. Owing to this record and to the greater recognition being constantly gained on this coast by the Herefords as a beef breed, we give on this page a handsome group of the "White Faces" from the Wild Flower herd.

The group does not include Howard 31772, which stands at the head of Heilbrons' herd. He was probably too busy to have his picture taken. He is, however, entitled to mention as descending from Grove 3d, one of the most noted Herefords in the United States, having sold for $7000. The lord of the picture in Howard's absence is Sir Stanley 27796, bred by the famous pioneer Hereford breeder, T. L. Miller of Beecher, Ill., calved in March, 1886, consequently coming five years old and in his prime. He is a splendid animal in all respects.

The cow in the background of the picture is Jessie M., an imported cow bred by T. Mydolliton of England and now coming ten years old. Her weight is 1800 pounds and she is massive, shapely and carries her years well. The cow in the foreground is Mabel 17417, bred in Ohio and coming seven years old next May. Her lines are faultless and bespeak an animal rich in best cuts. The Heilbrons' experience with the Herefords is a reaffirmation of the characteristics of this breed. The prepotency of the thoroughbred Hereford sire is marvelous. He puts the White Face on almost all his offspring, whatever may be the blood of the dam; and not only that, but when crossed upon the common cows of the country, he endows the progeny well with the form as well as the markings of the Herefords; consequently the direct value of this breed in improving stock where the improvement is desired in the line of beef, form, size, early maturity, hardiness, seem to be all secured by the use of the Herefords upon common cows, and it is a question whether any of the breeds used for crossing can approach the historic White Face in these directions.

A NEW FREIGHT SCHEDULE.—Produce shippers will be interested in the announcement that a new schedule of overland freight rates is to go into effect about February 1st. The Southern Pacific authorities give the assurance that "the changes in freight rates will not materially affect the shipper or consumer, and have been made in accordance with advances on lines all over the country. In some instances the advance is even more than ten per cent, in most cases it is below, while for wool, green fruit and certain classes of dried fruit there has been no change made." We shall have to wait awhile before it can be told just whose ox is gored.

THE great money lottery of the city of Hamburg, Germany, is bidding to be the successor in this country of the great Louisiana Lottery.

Poultry Yard.

Seasonable Poultry Talk.

Editors Press:—About this time of the year people seem to need reminding that poultry must be taken care of or sickness, loss of life, or at least non-production of eggs, when eggs are high, will be the result. People must be reminded that instead of losses by disease and non-production, they could have poultry in good condition and productive by exerting care when the fowls most need it.

The time of molting and change of season from the mild, even temperature of summer to the colder and more boisterous weather of late fall and winter is a trying season, and not only do the fowls need at this time extra care in food and drink, but hen-houses must be looked to and put in condition to exclude all drafts through cracks and holes directly on the fowls. All places in the roofs where rain may enter should be repaired and the houses thoroughly overhauled as to proper ventilation both above the fowls and below them, for, although cold, damp winds blowing directly on the fowls are productive of diseases of various kinds, yet they absolutely need such ventilation as will effectually carry away from the house all effluvia arising from their droppings. This may be done by raising the house a few inches at the bottom and putting blocks or bricks under the corners, or, if the houses are large enough to make it necessary, by putting them along the sides and ends in sufficient number to form a proper support to the house and make it steady, or by leaving a long opening just above the sill on the sides and ends sufficient to insure a draft of air directly through the house along the floor or ground which will carry away the objectionable atmosphere. As for that which may arise from the breath of the fowls or their bodies, it will rise because of its warmth and pass off above, thus insuring to the fowls a pure atmosphere which, in the case of young and growing fowls, is very necessary to insure health and condition.

Then in the matter of the various parasites that infest the houses and live upon the fowls, to their great discomfort and loss of life even, much may be necessary to be done, as even where considerable care has been exercised to keep everything neat, these pests will sometimes make their presence manifest, and a thorough scalding of roost-houses and nest-boxes with hot water and carbolic acid mixture is pretty sure to eradicate them. For the fowls themselves one can by the help of a dust bath of dust and sulphur and carbolic powder—say one part carbolic powder and sulphur in equal quantities and four parts dust—cleanse them also. Smearing the roosts with a mixture of sulphur and grease of any kind will operate as a preventive, and I have seen it somewhere stated not long since that small open-mouthed bottles or jars containing bisulphide of carbon renewed occasionally was effectual in driving away these pests. Whitewashing with hot whitewash in which carbolic acid has been mixed is also excellent as a preventive, and serves also to coat over and fill up all crevices or small places where lice could harbor.

Fowls infested with lice not only will not lay but as a result of low condition take on disease more readily, will become roupy, with swelled heads and putrid eyes, choked up with diphtheria, lame and helpless with rheumatism, drooping and sickly, finally dying from these causes, and many others not as yet well known, but which are becoming better understood as the importance of the industry is more and more recognized.

For roup I do not know any cure after it becomes roup, but in the incipient stages of the disease, before it gets to be confirmed roup, it may be treated successfully mainly by keeping the fowl in warm, clean quarters, and getting it into good condition, using also some disinfectant carbolic acid sprinkled on the walls and floor, or hung in a wide-mouthed bottle below the roosts where it will impregnate the atmosphere to be breathed by the fowl. Always separate the sick ones from the well ones, but give all the same treatment.

Deadly Diseases.

When once a fowl is decidedly and unmistakably roupy, there is, so far as my experience goes, no remedy but the hatchet and burying the diseased body off the range deeply in the ground. I have not found roup to be contagious, and have tested it fairly, I think, having kept fowls in all stages of it, some even which were dying from it, in confinement in hospital (a close house) with well ones all eating and drinking from the same dishes and breathing the same atmosphere, and the well ones were not affected in any way that I could see, and this continued for between three and four months. Still, as a precautionary measure, it is safe and in all ways better to separate the infected ones from the well ones, if only to give them the greater care, but where roup has made its appearance all are liable to it, for what causes it in one may cause it in another, and prevention is always better than attempts to cure, so extra care and treatment is necessary for all. Fowls in good condition and properly housed are not very liable to take on disease.

For diphtheria, a deadly disease also, but more amenable to treatment than roup, unless in its last stages, much the same treatment should be observed, separating always the sick ones as fast as they show any indication of disease, giving them sulphate of potash in their drinking water, and allowing them no other, or at any rate, seeing that they drink plentifully of it before changing it for fresh. Lime in the water may do as well where it has not become very serious. Do not omit the thorough disinfecting of their quarters, which, while warm and free from all drafts in them, should be sufficiently ventilated to insure pure air.

A great many inquiries come to me at this time of year, such as "Can you tell me what is the matter with my fowls; their heads swell up and their eyes get sore, and finally the ball turns white and becomes solid," or "My fowls go around choking and opening their bills, and finally choke to death," or "They go about limping and finally droop and die." The first is one and the most common form of roup, and in that state is already incurable, and the only thing to be done with a fowl in that condition is to kill and bury or burn it. The first indication of sore eyes is the commencement of roup, and should be attended to at once. Frequently bathing the eyes with coal oil or alum and water or salt and water will correct it, but the other remedies spoken of above must not be neglected, for causes are operating to produce roup and should be combated.

The lameness may indicate rheumatism or disease of the liver and is more difficult to treat, but not more incurable than it is in the human animal and requires about the same treatment. I have several times advocated the advisability of adding to the knowledge of the veterinary surgeon, the old-time horse and cow doctor, the ability to diagnose the diseases of poultry and treat them. How many hens, particularly of the finer breeds, would it take to amount to the value of a horse or cow? To save them, the owner would at once call in the services of a "Vet," and yet how often will one lose in poultry by disease three or four, and even 10 or 20 times the value of such horse or cow because no one can tell him what he ought to do to check it and he himself has not the requisite knowledge. I think that poultry journals should interest themselves in this matter. Now the usual course among sufferers is to inquire of each other of or some one recognized as a poultry keeper, "What is the matter with my fowls and what must I do to keep from losing them all?"

One difficulty with people having poultry is as a general thing that they don't take any poultry journal or any agricultural paper that gives poultry literature, and so don't benefit by what they might read therein. Often one finds in a paper of that kind just the information that he needs to help him through his difficulty, and which has been worth to him many times the price of the paper.

The statistical records of our country for 1882 show that the value of cotton raised was $410 000.000; hay, $436,000.000; dairy products, $254,000,000; wheat, $484,000.000; poultry and poultry products, $560,000,000, which goes to show that even in those days the poultry interest was of some importance, as you will see by comparing figures; and now I venture to say that it has increased in importance more than any other one interest, and represents a larger value in dollars and cents. In 1885 the egg production of the Atlantic States was set down at 1,820,000 dozen, at an average value of 12 cents per dozen, which I think was far below the mark. This was, however, a mere estimate and not a part of the statistical record.

Hints on Feeding.

At this time of year, corn and coarsely ground meal may be fed somewhat more freely to laying hens; the first dry and the latter mixed with middlings and made into a stiff mush with scalding water, or better yet, scalding milk, and fed as warm as the fowls can eat it with safety and as early in the morning as they can see to eat it, as well as at noon, substituting, say twice a week, meat scraps with the hot broth, putting in cayenne pepper, say a tablespoonful to 20 fowls. Take what vegetables you like, such as onions, beets, carrots or potatoes, to boil up with the meat scraps, and it makes a rich, nutritious food much relished by the fowls, and it never fails to set them singing, and so, of course, to think about laying.

With all this, do not fail to keep their houses and yards, where yarded, thoroughly clean, and see that they have water in the morning fresh from the well, and not water of the day before in their vessels with ice in it, or at least cold enough to counteract the benefit to them of the warm mush which you give them. It is better to throw the water out of their drinking vessels at night and give them water with the chill off if you care for eggs; if you do not, perhaps this would not be necessary. In this connection, perhaps it would not be considered out of place to say

A Few Words About Eggs.

As a general thing, the average poultry keeper outside of well-conducted poultry ranches realizes more from his fowls in eggs when they are from 15 to 20 cents per dozen than he does when they are worth in market from 40 to 60 cents at retail, and very evidently the reason for this is to be found in the fact that the time of high prices in eggs is the time when only those fowls which have been kept in good condition and are receiving the best of care are the ones, comparatively speaking, that are producing eggs, and during this difficult season of the year, at least paying their way, or, perhaps even better, while others which do not receive this care are getting through the difficulties of molting and the discomfort caused by the change in the season as best they can, are apparently satisfied to barely live through it without the added care and exhaustion of laying eggs which they decide to put off until the weather changes and they feel better.

As to which breed of fowls is the best egg-producer throughout the year, opinions differ somewhat, and no doubt locality, difference in soil and climate, has a great deal to do with this difference of opinion. While true that one breed shows best results under one form of treatment which would not do at all with fowls of another breed, it is equally true that the same treatment will not answer for all localities and climates, even for the same breed, and so while one may adopt general rules for his guidance in the care of his stock, yet it must be with such modifications and changes as the intelligent and earnest poultry-raiser may find to be necessary in his locality.

The successful poultryman is never the man who takes things easy and does not care to profit through the knowledge of and the practice of the best methods known, but the one who, by all means in his power, thoroughly informs himself and industriously puts in practice the best known means of rendering his business profitable and satisfactory—attending strictly and untiringly to the comfort and well-being of his fowls, which in such cases will not fail to make him grateful returns.

I can't see why there should be any conflict between Eastern or imported eggs of the best grade even and choice fresh-laid ranch eggs, as there is certainly no comparison that can be made between them that will not result, with those who have a true appreciation of the qualities of a fresh-laid egg, in favor of our home eggs, those I mean which are the product of properly-kept fowls and not of those which are expected to forage for themselves and live as best they can. The produce of such fowls is known as "store eggs." They are gathered once or twice a week and taken to market in a jolting wagon packed in bran. Eggs that are gathered twice a day (not the same egg twice, however), carefully handled and put in market within a few hours with all care, must be easily distinguished by all who have a true knowledge of the egg from those that are gathered and marketed, as the greater part, if not all, of the Eastern eggs are, and then packed into a jolting rail car, the first and last stages of their journey in a sweltering atmosphere and the middle or mountain portion exposed to an extreme of cold, and constantly shaken and jolted as they are by the motion of the car, cannot fail to have their character entirely changed. The Eastern egg can in no way compare and should never be allowed to compete with our choice ranch eggs in price, neither do they yet in full measure, although many dealers endeavor to induce their patrons to think them at least an equally good egg, but they never can be. Should they, however, in the distant future reduce the price of our home production to a non-paying basis, then I suppose our only hope for aid and comfort rests in the McKinley bill.

Lodi. T. B. Geffroy.

The Rustler Breed.

Editors Press:—We have a queer breed of chickens here, which is a natural production of this vicinity, having first appeared on several ranches here in the spring of 1889. The chickens do not have feathers, but instead are covered with a long, hairy-like down. They are fine layers and we call them "Rustlers" from the fact that they are very industrious and hardy and wander farther in search of food than other chickens. They cannot fly and are very desirable on that account. It would be well for some one to collect them and experiment with them, as I believe that they are the "boss." I think that they would furnish excellent down for pillows, bedding, etc. They seem to have sprung from crossing the Plymouth Rock with other breeds of chickens; or has one ever heard of such chickens in other localities? They are new here. T. B L.

Briceland, Cal.

Clover for Poultry.

Editors Press:—Is burr clover good for poultry? Can any one tell me where to apply for *genuine* clover—if, indeed, it is raised on the coast? C. P. N.

Hayward's, Cal.

[We hardly know what our correspondent means by "genuine clover." If he means "red" and "white" clover as grown at the East, he can get the seed of any seedsman and can grow either kind successfully in the bay region with a moderate amount of watering.—Eds. Press.]

The Field.

A Great Potato Crop.

Nearly 1000 bushels of potatoes, or to be exact, 974 bushels and 48 pounds, have been grown on one acre of land in Johnson county, Wyoming, the past season. This crop wins the first prize of several hundred dollars offered by the *American Agriculturist* for the largest yield of potatoes on one exact acre. It was grown on virgin soil, without manure or fertilizer, but the land was rich in potash, and the copious irrigation was of water also rich in saline material. There were 22,800 hills on one acre, and 1560 pounds of sets, containing one, two and three eyes were planted of the Early Vermont and Manhattan varieties. The profit on the crop on this first prize acre was $714 exclusive of $500 in prizes. Another large crop was that of R. A. Chisholm of Del Norte, Colo., of 847½ bushels on 1000 pounds of fertilizer. There was great interest in the competition in the famous potato-growing county of Aroostook, Northern Maine, where the crops secured ranged from 450 to 746 bushels per acre. These crops largely exceed those grown in a similar competition last year, when 738½ bushels of potatoes in Aroostook county took the grand prize of $1100. Other prize crops last year were—135 bushels of oats on one acre, 80 bushels of wheat and 255 bushels of shelled corn. It appears from the forthcoming issue of the *American Agriculturist*, in which the results of the contest are to appear, that the average Western potato crop on virgin soil is hardly up to that under ordinary culture in the East, while intelligent fertilization seems equally profitable in both sections. The wonderful operation of the mysterious laboratory of the soil is emphasized by the evidence in this competition that crops were increased 50 or 100 per cent by the application of actually pure plant food at the rate of only one pound to 100 or 200 square feet of land. The superiority of fertilizers or chemical manures over stable manure for potatoes is also emphasized by the two years' contest.

The Vineyard.

The Fresno Raisin Interest.

Through the kindness of Mr. George W. Smith, and at no little expense and time and work, the *Expositor* is enabled to furnish its readers to-day with exact information on this subject which was never before published. Mr. Smith is compiling a directory for the Viticultural Commission and has been appointed to canvass Fresno, Merced, Tulare and Mariposa counties. He began his work on the first day of last August and has now completed a list of Fresno and Merced counties.

Heretofore the Viticultural Commission was content with the names of vineyardists; in the present list, however, is included the postoffice address of each owner, the name of the vineyard, the total number of acres in grapes; whether they are wine grapes, raisin grapes or table grapes; also the number of acres in bearing, and whether the owner of the vineyard is a wine-maker.

This new departure was made at the suggestion of George West, Commissioner of Viticulture for the San Joaquin valley district, who deserves great credit for it, as the list, when entirely complete, will be most valuable.

It will surprise even the knowing to learn that there are 1600 vineyardists in this county, that the total acreage of grapes is 49,086, that the acreage in bearing is 22,280, and the acreage in wine grapes, 5908. The increase in the acreage during the season of '89–'90 has been particularly heavy, the planting to vines of tracts of from 250 to 1000 acres being quite a frequent occurrence.

What is especially interesting to the home-seeker in connection with this information is the fact that every one of these vineyardists is prosperous. No other horticultural industry is so profitable as the culture of the raisin grape, in no other is the work so pleasant and no other yields a return so quickly.

An acre of Muscat vines in full bearing will yield from two to three tons of grapes on good heavy soil; at 5½ cents a pound in the sweatbox, this means from $225 to $325 per acre, gross. Numerous instances are known; however, where the yield of an acre of Muscats amounted to as much as $450, this being the result of careful cultivation and favorable circumstances. Some grapes are borne on the vines when they are one year old, while two-year-olds have been known to bear a crop. At three years the vines pay the expenses and interest on the money invested, and at four years from planting they bring the first large paying crop.

An acre of wine grapes will yield from seven to nine tons. These may be sold either wet or dried. The former will sell at about $12 a ton, or from $85 to $100 for the yield of an acre. Dried, the yield will shrink to from one and one-half to two tons, which will bring $60 a ton. These figures are for land that is of fair quality and which has received intelligent cultivation. Some vineyards yield less and others more, so the figures given are a fair average.

Multiplying the yield of an acre of grapes by the total number of acres in bearing, the value of its vineyards to Fresno county at once becomes apparent. There is a difficulty, however, in striking an average for an acre of grapes for the purpose of making this calculation, for the bearing vines are of all ages, and the differences in soil and methods of cultivation also cut an important figure. Of the 28 000 acres in bearing, the vines on about 20,000 must have attained their full growth by this time. A very moderate estimate of the amount of money to be gained from an acre of grapes is $200; this would bring the total for the 20,000 acres to $4,000,000.

In about four years more, the total acreage now in grapes, 49,086, will be in full bearing; multiplying this by $200 the value of one acre, the immense total of $9,817,200 is reached for the entire grape crop of 1894 off of the vines now

planted. What a grand source of wealth to Fresno county!

Of the 5,600,000 acres of land comprising this county, at least a fourth may be classed as agricultural land. Owing to the absence of water in sufficient quantities, however, only one-third of this amount, or about 400,000 acres, is suitable for the culture of the grape. But these 400,000 acres are here awaiting the coming of the enterprising capitalist, the industrious home-seeker. What has been and is being done in raisin-growing may still be done, and the careful perusal of the list that follows must convince the most skeptical of the great importance of this industry.

The statement which is put forward now and then that the raisin industry is being overdone has no foundation in fact. Though the increase in this year's crop is considerable, there will not be enough to meet the demand. The importations from Southern Europe seem to be on the decrease, while the demand here is rapidly increasing. Fresno raisins are already driving the imported from some of the Eastern markets, and the time will soon be here when part of this county's product will find its way to foreign markets.—*Fresno Expositor.*

HORTICULTURE.

The Fruit-Growers' Convention at Santa Cruz.

Culture of Citrus Fruits in Northern California.

At the recent convention of fruit-growers at Santa Cruz, under the auspices of the State Board of Horticulture, the following essay was read by S. S. Boynton of Oroville:

The culture of citrus fruits in Northern California is no longer theoretical or experimental, no longer a conceit, a supposition or a belief, but is a solid, enduring, self-evident and living fact. The orange and lemon are there not door-yard ornaments, set as curiosities, placed in sheltered and protected spots, and are not grown under conditions more favorable than are elsewhere in this State awarded to these fruits. The "Northern Citrus Belt" has long been the butt of good-natured ridicule, the subject of jest and laughter by those who had interests to subserve by crying down its merits and deriding its possibilities. The time is, however, near at hand when its true light will burst forth with a vividness and brilliancy little dreamed of by those who have not studied its grand capabilities and its enormous territorial extent.

Within the next few years such a quantity of citrus fruits will be produced and shipped from that region as will forever set at rest any aspersions or reflections upon that land as a citrus-fruit region. The day is by no means distant when its orange and lemon trees will be numbered by millions, and when its annual output of these fruits will amount to thousands of carloads.

We are not talking at random upon this subject nor carried away by enthusiasm. We have given the subject not only months but years of careful study, and know whereof we speak.

For a full score and ten years the historic orange tree at Bidwell Bar, in Butte, 200 miles north of where we now are, has blossomed and borne fruit without the loss of a single crop, and stands to-day a mute but eloquent green and living witness whose testimony is worthy of consideration and belief. While in a hundred spots throughout the counties of Butte, Yuba, Placer and others that might be named, oranges, olives and lemons have been in bearing for the past 20 years, yet citrus culture in its broad and commercial sense is still in its swaddling-clothes.

In September of 1885, in the town of Oroville, the first suggestion was made of holding a citrus fair in Northern California. Then the Sacramento *Bee* caught up the idea and asserted that the citizens of Oroville knew that oranges could be grown there, but what was needed was to convince others of that fact. It urged that a citrus fair held in Sacramento, the capital of the State, ought to and would accomplish this purpose. The residents of Oroville coincided with the statements of the Sacramento journals and those of other towns fell into line. The business men of the capital city made that exhibition a reality, and fruit from 12 different counties was displayed at the first citrus fair of Northern California. That extensive, marvelous, and splendid display of the semi-tropical productions of the northern part of this State, at once, and for the first time, awakened the people of that region to the possibilities of their soil and climate, and was the direct cause of the great planting of citrus trees that has since taken place. The first fair was held in January of 1886, so that the oldest trees, set out since that date, and which comprise more than nine-tenths of the total number of the whole region, are only four years old at the present time.

It will thus be seen that citrus culture on an extended scale is a new industry in Northern California. The first man to be aroused and stimulated to action was Hon. John C. Gray of Oroville, who left the pavilion in which that fair was being held, hurried to his home, had 20 acres of land prepared, went to Santa Clara county and purchased 2000 young olive trees, and while the fair was still fresh in the minds of all, he had these 2000 young trees planted in Butte county soil. He has since continued in the line thus begun and has now 10,000 young and thrifty olive trees, and from several hundred of these he will this year gather fruit. That he made no financial mistake is evident from the fact that he has since been offered $500 an acre for his olive plantation. Other citizens of Oroville were quickened to activity by his example and an organization of the leading business men of that town was speedily effected. Thirty acres of good land were secured; two of the company went to Riverside and purchased 2100 Washington Navel orange trees, and during May and June these were planted on the north bank of Feather river in what is now the colony of Thermalito. The land cost them $100 an acre, the trees were $1.25 each, and to this must be added the cost of transportation, planting and caring for them during the intervening years. It will thus be seen that these gentlemen were not afraid to back their ideas and opinions of citrus culture with their coin. This grove has since been increased and at present numbers 3300 orange trees. They are now loaded with fast ripening fruit and this year will yield a large and abundant crop.

Citrus-fruit planting was by no means confined to Butte, but all the other counties of the Sacramento valley felt the influence. A second citrus fair was held in the capital city in December of 1886, two fairs thus being held in one year, one in January and the other in the following December, and at this last fair fruit from 22 counties was displayed. These fairs, and liberal advertising by newspapers, caused much attention to be paid to citrus culture in Northern California, especially in the Sacramento valley and its adjacent foothills. Trees were planted not only in the sheltering foothills and on high and well-drained land, but in the open valley, and even along the low river bottoms, the very last place where an orange grove should be set. As a result of this movement continued during the past three years we have in the vicinity of Oroville, Thermalito and Palermo in Eastern Butte 98,349 orange, 6812 lemon and 49,600 olive trees, a total of 154,761, or in round numbers about 1500 acres. The number of citrus trees planted in other Northern California counties I am unable to state with exactness, but know that Placer, Sacramento, Colusa, Tehama, have all large numbers, and that Yuba in addition to her smaller tracts has planted one splendid young orchard of 130 acres or 13,000 orange trees in a single body. I believe it would not be unjust to the other counties in that section to estimate that Butte has planted as many citrus trees as all the others combined, which would then make 309,000 trees or 3000 acres devoted to the culture of citrus fruits in that part of the State.

It is unnecessary that I should go into particulars regarding the planting of orange seed, the manner of growing the young trees, budding and grafting and other practical details of that kind. To one point I will, however, call particular attention. Hitherto, all the young trees—orange, lemon and olive—planted in that section have been brought from Florida or from Southern California; now there are vast numbers of young trees being raised, and the future planting will be done with these home-grown trees. In the vicinity of Oroville there are at least half a million young trees from one to four years old, and there are a large number of these trees at Palermo, Wyandotte, Marysville, Chico, Newcastle and other places that will ere long be set out in orchards, and thus will be largely extended citrus culture in that part of California.

Markets.

The market for oranges is considered almost unlimited. On the north lie the great States of Oregon and Washington with a population of 600,000, while to the east lies a vast territory, a portion of which we may with confidence expect to supply with its citrus fruits. With these certain and ever-increasing markets in view, the prospect for growing oranges in Northern California is an alluring one. The profits of those who have bearing trees are such as to encourage others who have planted out young orchards and are now awaiting their coming into bearing. So flattering are these prospects that during the present year a ten-acre tract of two-year-old Washington Navel orange trees at Thermalito sold for $650 an acre. Sales at Palermo have also been extremely flattering.

If the citrus-fruit outlook is now so attractive and brilliant, some may ask why this industry was not pushed ahead long ago, for orange trees have been in bearing in that part of the State for the past 30 years. May we ask in turn, are there no other latent and undeveloped resources left in that and other parts of our grand State? The olive flourished for fourscore years in Southern California ere the manufacture of olive oil by Mr. Cooper and others attracted general attention to that tree. Fig-growing as a commercial enterprise is a comparatively new one, yet it has been known for 40 years that the fig flourished in all our warmer valleys. Fifteen years ago California raisins were a rarity, while now our output is enormous and is rapidly increasing; yet the vine was known to flourish here in great perfection many years ere raisin-making became a business. Cork is worthy of attention here, is adapted to our soil and climate, and in Spain and Northern Africa immense fortunes have been made in cork, yet it is a neglected industry in our State. It is certain that money can be made here in producing camphor, and that tree grows readily in all the warmer parts of California, yet who thinks of planting camphor trees from which to make money? Why is it that we still import rhubarb from Europe when it can be so readily produced here? There is money in licorice, yet that is among the neglected industries of California. Our prune production has grown into a marvelous and gigantic enterprise, yet prune trees bore in this State long ere the fruit in any quantity was put upon the market. Various reasons prevented the earlier planting of citrus fruits in Northern California upon a large scale, and one of these by too many has been overlooked.

The orange and lemon have been most successful along the low foothills, as in Butte, Yuba and Placer. The earth there is mostly a reddish clay soil mixed with gravel, and which requires considerable water to make productive. Nearly all the water for irrigation in those localities was brought from the mountains for mining purposes and was held at a high price. Now, until the general decline in mining, no man could afford to buy water for irrigating purposes, and from this cause more than any other may be traced the lack of planting citrus-fruit trees. When mining declined the price of water was lowered, men saw that they could afford to experiment, and they began to increase the number of their citrus trees. Another reason was in the great expense in caring for an orange grove and bringing it into bearing. If the orange is king of fruits, it requires a royal revenue to pay the great expense during the time it is growing and coming into bearing. If to this we add the lack of knowledge regarding the cultivation of citrus fruits among the residents, and the further fact that many believed they could only be grown in sheltered and protected spots where the conditions were unusually favorable, the reason is fairly explained why citrus culture was not sooner begun upon an extensive scale.

The first citrus fair at Sacramento was the great awakening. When the fruit from 12 grand counties had been gathered and the productions compared, it was seen that citrus culture extended over a far broader area than people had heretofore realized. The moment this fact was fairly impressed upon the minds of the people, an almost instantaneous change was effected. It was like the traveler who emerges from the dark forest into the open sunlight of the broad valley, like the view presented from the top of a noble mountain when the earth grows at once tenfold larger than ever before. Vast and almost unlimited possibilities spread out before the inhabitants of that region, and some of these bright visions they set about converting into living realities. Nearly 300,000 orange, lemon and olive trees now growing as green and thriftily as they do upon Sicily's bright isle attest the faith and belief of the people of Northern California in citrus culture in the northern citrus belt. In the single colony of Thermalito there are 61 orchards, many of which are entirely of citrus fruits. In the colony of Palermo there are 65 orchards, containing 40,348 orange, 5112 lemon and 23,646 olive trees. Arrangements are already made to plant to citrus fruits 500 additional acres in that part of the State.

The essays, papers and discussions before this honorable body have always been of the most practical character. Facts relating to the best varieties of fruits, to the growth of the trees, to the methods of pruning, the various styles of packing and curing fruits, the destruction of insect pests and a hundred other useful points are yearly discussed. In presenting some facts upon citrus-fruit culture in Northern California, I cannot go into these details because this industry is yet immature and undeveloped. The citrus trees are free from scale except in one or two spots, the varieties planted are mostly those that experience in the southern part of the State has shown are most likely to be successful. The young trees in nearly all localities are grown without any kind of protection. But little attention has so far been paid to pruning, and no washes or sprays have been used except in the one or two spots where the trees have scale. There is none so far in Butte county, which is the leading section. In the matter of grading, packing and boxing citrus fruits, no new or novel ideas have been developed. I have only been able to present general facts to you without those practical and useful details that have made the meetings of this honorable body of such great value to all the fruit-growers of California.

That a grand future opens before the northern part of this State as a citrus-fruit region I am fully convinced, and ask your indulgence a moment longer, in presenting some figures that may be of interest. You are all aware that to grow citrus fruits successfully, three climatic conditions are necessary: First, that the annual average must not be too low; second, that the winter average must not be below 40 degrees; and third, that at no time during the winter must the cold be so great as to kill the trees. In order to present the claims of Northern California in a fair and candid manner, we have selected ten places in the citrus regions of Italy, ten in Southern California and ten in Northern California, and given the annual average, the average of winter and the lowest temperature of the winter. For convenience we have arranged these in tables.

LOCALITIES IN ITALY.

	For Year.	For Winter.	Lowest.
Palermo	63°	53	28°
Naples	61	48	23
Rome	60	48	19
Florence	58	44	1
Pisa	60	46	20
San Remo	60	48	25
Genoa	60	44	10
Mentone	60	46	23
Nice	59	46	26
Cannes	60	46	30

The average of these ten places for the winter is 47.7 degrees, for the year 60.2 degrees, and the lowest temperatures run from 10 to 32 degrees.

SOUTHERN CALIFORNIA.

	Av. Winter.	Av. Year.	Lowest.
Colton	52°	64°	20
Daggett	47	65	20
Santa Barbara	51	61	30
Los Angeles	53	60	30
San Diego	54	60	32
Newhall	48	60	18
Riverside	51	60	25
Poway	50	59	21
San Bernardino	49	60	
Spadra	54	64	28

These figures give the average for winter at 50 degrees, for the year at 60.5 degrees, and the lowest temperatures run from 18 to 32 degrees.

NORTHERN CALIFORNIA.

	Av. Winter.	Av. Year.	Lowest.
Auburn	46°	56°	18°
Chico	47	64	26
Oroville	52	65	20
Orland	52	67	26
Williams	48	63	22
Knight's Landing	48	63	20
Sacramento	48	62	19
Redding	48	64	24
Red Bluff	47	62	22
Marysville	50	64	24

A recapitulation shows that the winter average for Europe is 47.7 degrees, for Southern California is 51.2, and for Northern California 48.6. The annual average for Europe is 60.5 degrees, for Southern California is 61.3, and for Northern California is 63.3. The lowest temperatures may be seen by inspecting the table.

These figures are taken from the best authorities and may be considered correct and reliable. Upon the evidence of the figures here presented we see no reason why even the most prejudiced should hesitate in believing that Northern California will become famous in time as a citrus-fruit region. We firmly, honestly and sincerely believe that in years to come its low foothills and extended valleys will become as noted for their fruit as its mountains have for their gold and its wide plains for their grain. It is true the Almighty Creator in His infinite wisdom has wisely withheld from man the ability to foresee the future with certainty and precision. The Elijahs and Jeremiahs of old are no longer with us. That Supreme Being has, however, given us, in thought, fancy and supposition, the power to rend aside the mystic veil that hides the morrow from to-day, and permitted us to picture to ourselves in the roseate hues of hope and anticipation what the coming years will bring to pass; and as we gaze with prophetic eye into the unnumbered cycles of time when the land we have attempted to describe shall be enriched by the labors of ourselves and our children, we behold that vast region teeming with millions of happy, prosperous and progressive people; a country made thrifty and productive by their enterprise and their energy; a land bright with fruits and gay with flowers; its foothill slopes covered with extensive, luxuriant and profitable olive orchards rivaling in extent and richness those of Italy and Greece; its broad and beautiful valleys dotted here and there with splendid groves of that noble tree,

"Laden with fairest fruit,
Blossoms and fruit at once of golden hue;"

Its warm and sheltered nooks adorned with the continual blooming and ever-bearing lemon; far-spreading vineyards laden with grapes so large, sweet and delicious that none but California soil could have produced them. Magnificent fig trees lift their gigantic tops, filled with rich and luscious fruit. Lofty and towering date palms, of which the poet says:

"To man the palm is a gift divine,
Wherein all uses of life combine—
House and raiment and food and wine,"

Ornament the pleasing and fruitful landscape; and as we note the hill-slopes adorned with noble forests of chestnuts and walnuts, and the valleys green with vineyards and fair orchards—orchards of prune, pear, apricot and almond—orchards where

"Peaches glow 'neath sunny skies,
Like maidens' cheeks when blushes rise"—

Orchards where

"Pomegranates, rich and sweet,
Show the print of the sunbeams' feet"—

Orchards where

"On the grass land on the fallow
Drop the apples red and yellow'—

May we not apply the thought if not the exact words of the poet and say,

"This is the land of the orange and vine,
Where the flowers ever blossom, the beams ever shine"—

A land so rich, bountiful and prolific in the most favored fruit for man's use that all within the borders of our grand and noble State will be proud of it; a region so promising, so hopeful, so assuring, and one in which we have such unbounded faith and confidence, that I would the power were given to us for a moment to sweep aside the dim, opaque and mysterious curtain that hides futurity and permit us to see Northern California in all her splendid and crowning glories as she is destined in reality to become.

S. S. BOYNTON.

Oroville.

PATRONS OF HUSBANDRY

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

San Jose Grange.

Past Master Flint to Visit the Garden City, December 13th.

EDITORS PRESS:—San Jose Grange held its regular weekly meeting yesterday and although the weather looked threatening in the morning, the attendance was quite liberal. After electing three candidates and filing an application from one and attending to some routine business, we took up the order of the day and proceeded with the election of officers. [See list published elsewhere.] The election passed off very quietly. There was very little if any trading done. There was no "whooping up" of candidates, no transcendent oratory and no appearance of heartburning or jealousy on the part of disappointed aspirants. Defeats were accepted with resignation and the officers-elect accepted congratulations without any appearance of exultation. Installation will take place the first meeting in January, 1891.

A letter from Bro. Flint of Sacramento was read by Bro. Jones, accepting an invitation to attend our next meeting, December 13th, and confer the third and fourth degree on a class of four, and also assist at the Harvest Feast which follows. You who know Bro. Flint can appreciate the pleasure we anticipate on this occasion. By the way, in your last issue you stated that this meeting would take place on the 20th inst. The THIRTEENTH inst. is the correct date. Open meeting at 2 P. M., to which all interested in agriculture are cordially invited. Yours fraternally, F. DUNN.

[Bro. Past Master Dunn has written us so good a report we hope he will be elected regular correspondent for 1891.—EDS.]

Pescadero Grange.

EDITORS PRESS:—This Grange held its regular monthly meeting Dec. 6, and initiated a class in the third and fourth degrees in the forenoon, followed by the usual Harvest Feast, a nice musical entertainment and a real good social time. It looked like rain in the morning and some were deterred from attendance, but the meeting was the largest we have enjoyed for years.

Bro. and Sister Roache and our Grange baby had been invited to be with us on the occasion, but were prevented by duties at Watsonville Grange.

Charity begins at home. I hope it will not always stay there. There is a magic in those names that inspires Grange enthusiasm, and we wait with fond anticipation the realization of their promised visit. In the meantime we have a picture of Bro. Cressey with his fragrant blooming lyre at his side and our beautiful Grange baby on his knee—a touching memento of the late State Grange meeting at Watsonville, constantly awakening pleasant recollections.

At 2 P. M. the Grange was again called to order and a full set of officers elected. With satisfaction I am able to say that the gloom that enveloped Pescadero Grange in January has given place to the light and warmth of prosperity in December.

Patrons laboring under discouragements, remember that there is always light beyond the clouds. Don't yield to discouragements; changes are constantly occurring; new material and new conditions will surely offer opportunities that only need diligence and wisdom to mold into success. I. C. STEELE.

Santa Rosa.

EDITORS PRESS:—Santa Rosa Grange celebrated the anniversary day very pleasantly on Thursday, Dec. 4th.

Although the day was cloudy and rather disagreeable, there was quite a large number in attendance. Especially were we glad to see so many of the brothers and sisters from Bennett Valley and Sebastopol Granges.

A short closed session was held in the morning, adjourning at noon for the Harvest Feast.

In the afternoon there was an open meeting.

Bro. S. T. Coulter opened the meeting with a few introductory remarks, followed by a song of welcome by the Grange; reading of the Declaration of Purposes, by Bro. J. Talbot; recitation, "The Church Choir," Miss Bessie Murphy; instrumental solo, Miss Margaret Smith; recitation, Miss Ella Sutherland; instrumental solo, Miss Ella Murdock; reading, Don Mills; song, Bro. Harris; recitation, Miss Alice Bumbaugh; instrumental solo, Miss Smith; select reading, Miss Sutherland.

Instructive and interesting speeches were made by J. M. Talbot, Dr. R. P. Smith, Martin Litchfield, W. P. Crane, E. A. Rogers and others.

The next session of the Grange will be held Saturday, at half-past 1, the 13th inst., at which we will elect officers for the ensuing year. Fraternally, F. L. GAMBLE, Sec'y.

Santa Rosa, Dec. 8, '90.

The Master's Desk.

E. W. DAVIS, W. M. S. G. OF CALIFORNIA.

Now is the seed-time. Sow for the Grange as well as for the wheat-field and the garden.

The Natal Day of the Order for 1890 is past. December 4th was duly observed by several Granges in California.

Install your officers as early as possible in January, so that your Grange may get the annual word for 1891, and also so that the work of the new year may be begun in season.

The Legislature will soon be in session. Keep an eye on your Senator and on your Assemblyman! See that they work and vote for measures that will help agriculture—that means prosperity for all. E. W. D.

Worthy Master Davis' Return.

Worthy Master Davis returned from the National Grange last week and gladdened our office with his presence for an hour or so, telling us of the stanch manner in which the old leaders of our Order stand by their principles and show their determination to work more vigorously than ever for the grand old Order of Patrons of Husbandry.

He pronounced the speech of Bro. J. W. A. Wright before the National Grange one of the best heard during the session. It was ordered published in the proceedings and will no doubt be read with interest by his old friends and Patrons in this State. The debate on the Stanford Land Loan bill (endorsed in modified form), was one of the most animated discussions of the session. Although there was a diversity of opinions on the subject, the decision of the majority was duly respected. The weather was excellent and the session very much enjoyed, the hotel accommodations being very good after the close of a political meeting being held in Atlanta. The next session is to be held in Springfield, Ohio.

The Worthy Master is anxious that every Grange should elect and install its officers promptly and give official notice to the Secretary of the State Grange, so that the "A. W." can be dispatched in due season. We are happy to see Bro. Davis return looking so well, and hope he will continue to improve. The Patrons of California have important work to do. The prospects for the year are excellent. We hope and expect a good harvest of new Granges and increased numbers will result before our next annual meeting at Haywards.

Pure-Food Bills.

WASHINGTON, D. C., Nov. 28.

Worthy Masters California, Oregon and Washington State Granges: Kindly call the attention of your State Grange and all the Pomona and subordinate Granges in your jurisdiction to the fact that the National Grange has again indorsed the Conger "Lard Bill" and "The Pure-Food Bill."

That our National Legislative Committee in their report earnestly urge the prompt passage of the Conger Lard bill. Please have resolutions drafted and passed by your Grange, also petitions and resolutions sent in by all Granges in your jurisdiction, if possible, before January 1st.

Send such resolutions and petitions to each of your Senators and one to me.

Personal letters to each Senator will do much to aid this work.

Personal letters should also be sent to Senator A. S. Paddock, Chairman of the Agricultural Committee of the Senate, and to such other members of that committee as you can spare time to write to.

The committee is composed of Senators Paddock, Blair, Plumb, Higgins, McMillan, George, Bate, Jones and Gibson.

Trusting you will aid in completing this grand work pushed so successfully through the House of Representatives by Grange work. Yours fraternally, ALEX. J. WEDDERBURN.
Chairman Com. State Grange of Virginia.

Worthy Master Hayes Coming.

We learn from Bro. Davis that Bro. Hayes is expected within a few days in California on his return from the National Grange; also, that he will answer calls for visitation from Granges not too far out of his way in returning North. We hope he will stop at Tulare and assist the brothers in securing new Granges at Visalia, Portersville, Kings River and some other places in Tulare and Fresno counties. Should this meet his eye while in Los Angeles county, we hope he will telegraph us what time he will be in Tulare. Bro. Hayes will have much of special interest to Patrons to say about the late session of the National Grange, and to the whole farming public concerning his observations and experiences on the other side of the continent. California should give Oregon's noble Master a hearty welcome.

Sixth-Degree Certificates.

We wish to announce that we have forwarded to the different Secretaries of the Grange the sixth-degree certificates for distribution, among their members who received the degree of Flora at Watsonville. They were received from the Secretary of the National Grange just after Bro. Davis started for Atlanta, and had to await his return for his signature. If any sixth degree members fail to get their certificates within a week or two, they should notify us at once, and not delay a month or two.

The Secretaries are also notified that we have on hand delinquent notices which can be had upon application. These blanks are for notifying delinquent members to pay up. Price, 1 cent each.

Woman's Work in the Grange.

On the first day session of the National Grange, Mrs. Hiram Hawkins of Alabama, Chairman of the Committee on Woman's Work, submitted a very excellent report, full and complete, showing what the women are doing in the various States. Mrs. Hawkins is a hard worker, an educated lady, and one whose report shows her to fully comprehend the great work of woman in the Grange.

Worthy Master. The Committee on Woman's Work during the past year has been diligent in carrying out a systematic plan of work for the Good of the Order. The general supervision of the States having been divided between three, each one of us has tried to do our part.

We have sent out upward of 30,000 circular letters of instructions, besides several hundred written communications in answer to special inquiry.

We have felt the need of juvenile rituals in many places, and have found it hard to satisfy the repeated calls for something of the kind.

Many of the State Committees have sent out circulars and Grange literature suitable for their local needs. And while some few of the States have not sent in their reports, I feel confident that all have done their part in this important work.

From the reports from the different States, the following points were suggested:

First, that the 4th of July be kept by all the Granges as an open meeting.

Second, Juvenile Granges.

Third, Masters' wives to be made chairmen of State committees.

From the chairman of the Woman's Work of the Colorado Grange, we extract the following: I see no use for a separate committtee on Woman's Work in her State, as her women go hand in hand in all work pertaining to the Good of the Order. Organizing and reviving Granges; planning programs for literary and social entertainment; preparing for children's days; helping to raise money; dispensing charity; looking after the sick and absent members, and in all things working for the Good of the Order.

For completeness, correctness and excellence, we commend the report to our readers, and only our want of space prevents us from printing it entire.

Good Work.

West San Joaquin Grange.

EDITORS PRESS:—Had you boarded the six o'clock train as it pulled out from Stockton depot last Monday morning, you would have been surprised, and we hope pleased, to have stumbled upon various Patrons on their way to complete the good work begun at Tracy a few days before.

Bro. Overhiser was there of course, delighted with the zeal of Patrons who would start out on a labor of love so early in the morning. Waterloo Grange furnished Bros. Bert Dowd, George Light, C. A. Merrill; Sisters Jennie Holbrook, Myrtle Macomber and Hattie Nason. Lodi was represented by Bro. J. D Huffman, and Stockton Grange sent Worthy Master McIntosh, Sister M. F. Merrill and Bro. Kellogg.

Soon after our arrival at Tracy, we proceeded to the Grange hall, where Bro. Overhiser conferred the first and second degrees upon eight candidates. The meeting was then closed, and we were conducted to the Tracy hotel and treated to a good, substantial dinner, to which we all did ample justice. (N. B.—In a pie-eating contest between Bro. Overhiser and Sister Jennie Holbrook of Waterloo Grange, Stockton Grange was forced to acknowledge her champion defeated.)

At 2 o'clock the Grange was called to order and Bro. Overhiser proceeded to confer the third and fourth degrees upon a magnificent class of 36. Our members had been reinforced by the arrival of Bro. McConnell of Elk Grove and Sister Alling of Stockton Grange. Sisters Alling and Holbrook added greatly to the enjoyment of the occasion by the efficient manner in which they took charge of the music.

After the degrees had been conferred, Bro. McConnell, Bro. Stockings of West San Joaquin Grange, Bro. Huffman, Bro. McIntosh and Sister Merrill each made a few remarks to the newly-fledged Patrons.

Early twilight had by this time filled the hall with gloom, so the Grange was closed and we proceeded again to the hotel, where supper was served. Soon after the 7:30 train rolled in and we said good-by to our new brothers and sisters with many expressions of good-will and affection.

May the future conduct of this resurrected Grange prove as laudable as the beginning is promising. Yours in F., H. and C.,

Stockton, Dec. 6, 1890. M. T. M.

Temescal Grange.

EDITORS PRESS:—The year 1890 is fast drawing to a close. There is a feeling of winter in the air, but it could not lessen the fraternal warmth with which the members of Temescal Grange greeted one another on Saturday, December 6th, when the usual goodly number of Patrons met in Odd Fellows' hall, Oakland. They came together to hold their annual election and to participate in ceremonies designed to keep green in their memories the birthday of the Order.

The fall of the Master's gavel called the Grange to order promptly at eight o'clock After the usual routine of business, the Master announced the election of officers in order and the members proceeded to decide who should preside over the destinies of the Grange for the ensuing year. [See "Grange elections."]

When the battle of the ballots had ceased, on motion of Bro. Dewey, a resolution, thanking Worthy Master Goodenough for the faithful and efficient manner in which he has performed the arduous duties of his office during his three years of service, was unanimously adopted. According to previous announcement, the larger portion of the evening was devoted to commemorating the birthday of the Order. Nearly every one present responded to some excellent remarks and sentiments appropriate to the occasion.

The Worthy Master called attention to the great work which the Grange has accomplished and is still doing. He then alluded briefly to the kindred organization, the Alliance. He saw no reason for a conflict between the two fraternities. They both aimed to accomplish the same thing. The Alliance was going ahead with a rush, just as the Grange did at first. It would take great foresight and caution on the part of its leaders to steer it safely past the rocks.

Bro. Gibson gave the Grange one of his interesting and instructive talks. He drew a picture of the contrast between home life in the country and in the city. He told of how the family gathered around the fireside in the evening in the country. They were all there reading or playing games. They had no other distractions, while in the city, the family were seldom all together in the evening. The father would be at his Lodge, the son, perhaps, at a dance, and the daughter at the theater. He drew the inference that the home ties are stronger in the country.

Sister Nellie Webster of Creston Grange, being called upon, recited "The District School," which was well received.

Sister Payne read an extract containing excellent thoughts and suggestions relating to woman's influence in the Grange.

Bro. Dewey spoke in glowing terms of the noble band of brothers who organized the Grange. He alluded to the early growth and the succeeding period of depression and disappointment. Speaking of the Farmers' Alliance, he said that it was the existence and work of the Grange that made such organizations possible to-day, so that whatever the Alliance accomplished, the Grange was entitled to a share of the credit. In reference to the position of woman in the two organizations, he thought that the policy of the founders of the Grange in setting apart certain offices for her to fill had had the result of making the sisters take a more prominent position in the work of the Order than was the case in the Alliance, where the titles of all officers were adapted to either sex.

The Grange voted to install its officers on the first Saturday in January, and instructed the Secretary to invite Eden Grange to unite in a joint installation and Harvest Feast at that time. Also, to solicit the attendance and assistance of Worthy Master E. W. Davis and others. W. H.

[It is hoped that many visiting Patrons will be present at the installation.—EDS.]

Two Rock Grange.

EDITORS PRESS:—What is the matter with our brother and sister Secretaries, that we do not hear more from their respective Granges? Did they have such a fine time at Watsonville during the session of the State Grange that they have forgotten the RURAL PRESS and their brothers and sisters of other Granges? Now we do not wish to be inquisitive, but we should like to hear from you—but hold on; excuse me; perhaps that is what you are thinking of Two Rock Patrons, who were just located in their new hall before the State Grange meeting, and nothing has ever appeared in the RURAL PRESS as to what we are doing in our new home. Perhaps you think we have ceased our meetings, surrendered our charter, and gave our new hall up to the State Grange? No; not much we haven't. We have special meetings, potato-growers' meeting and our regular meetings with good attendance.

At first we felt as though we were from home, but now we have become reconciled to our new quarters, and all are—well, we will say proud of their new home. The sisters as well as the brothers are more talkative. The afternoons are too short for our meetings. "Old Sol" is almost hid beneath the horizon before the Worthy Master's voice is heard in the closing ceremonies. M.

FARMERS' ALLIANCE.

To Organizers and Secretaries of Subordinate and County Alliances.

I desire that each organizer will send me the name and P. O. address of the President and Secretary of each Alliance organized as soon as possible. Also that the Secretaries of County Alliances will forward a full list of all Sub-Alliances in their county, with the name and P. O. address of the President and Secretary, so that I may be able to prepare a directory for my use and have the list published in the RURAL PRESS for the benefit of all.

As I will have many circulars of information to send out soon, it is very necessary that I have the list immediately.

I am prepared to fill orders in the line of general groceries, and some lines of building material; also some other things now, and will add new lines to the list every week. It will be of advantage to members of the Order to be in communication with me soon, for I must have the P. O. address of Secretaries before I can send price lists, etc.

Address all letters at present to me at No. 433 California St., S. F.

J. M. MOORE, State Bus. Agt.

State Agent Moore Files His Bond.

The following shows that our State Agent has duly filed his $25,000 bond:

This is to certify that Mr. J. M. Moore, State Business Agent of the California State Farmers' Alliance and Industrial Union, has this day filed with me the official bond required by the Executive Board of said Farmers' Alliance and Industrial Union.

Dated at Fresno, California, this third day of December, A. D. 1890. JOHN S. DORE,
Chairman Executive Committee.

National Farmers' Alliance.

(Continued from last week.)

The following information should be read by members of the Order, as well as others, with a good many grains of allowance, and not as report of the proceedings made on good authority of any individual within the doors of the Alliance, but picked up and furnished by the newsgatherers of dailies, somewhat mixed as to their views and relations toward the powerful organization.

Further and more complete details by mail will be awaited with interest, both in regard to the doings of the National Alliance within its doors and the third party believers outside.

SECOND DAY.

On the second day resolutions were adopted condemning the Force bill and calling upon the members of the Senate to defeat it and denouncing the Louisiana Lottery as a blow at American civilization and morals and asking for the submission to the people of an amendment to the Constitution prohibiting the operation of lotteries in any State.

THIRD DAY.

The session was taken up by a visit from the National Colored Alliance. The visit was one of fraternal greetings and introductions.

At the afternoon session a delegation representing the Citizens' Alliance of Kansas was introduced by Colonel Livingston of Georgia, and all the members made addresses, the substance of which were that their organization was deeply interested in the success of the farmers' movement; that both bodies were practically working on the same line, and they saw no reason why merchants, traders, druggists, etc., should not unite in promoting this movement. They asked for a committee of conference to arrange for closer relations between the Citizens' Alliance and the National Alliance. The request was granted and a committee appointed.

FOURTH DAY.

Upon the reconvening of the Alliance, a resolution reciting that the United States census returns with respect to farm mortgages are grossly incorrect, and calling upon all the county and sub-Alliances in all the States to take immediate steps toward securing accurate statistics from the county records, and to make prompt reports thereon. A resolution asking that the World's Fair be closed on Sundays was passed without opposition.

National Secretary Turner submitted his annual report. During the past year 1069 new charters were issued to sub-Alliances, as follows: West Virginia, 252; Colorado, 152; Indiana, 132; Michigan, 106; Virginia, 95; Illinois, 87; South Carolina, 83; Ohio, 61; Pennsylvania, 59; New Jersey, 20; Minnesota, 5; Iowa, 5; Oregon, 1; Oklahoma, 1.

State charters were issued to the following States: Indiana, Illinois, Colorado, Michigan, West Virginia, Oklahoma and North Dakota.

The St. Louis Platform Indorsed.

Some question having been raised as to the unanimous indorsement of the St. Louis platform by the National Alliance last year, Livingston of Georgia moved its adoption by the present body.

Some debate followed, but the motion was adopted, with an amendment so as to demand the Government control of railroads and telegraph lines, and if this shall not result in relief to the masses and in checking or curing the existing evils, the Government shall become the actual owner of such lines.

The annual election of officers was held during the afternoon. President Polk and Vice-President Cover of Kansas were unanimously re-elected. J. H. Turner of Georgia was re-elected Secretary and J. S. Willetts of Kansas the National Lecturer.

FIFTH DAY.

The morning session discussed the amendments to the platform adopted yesterday, looking to restricting the powers of the President in disciplining the editors of Alliance newspapers. A complaint is made that the Government Crop Statistician relied too much upon information furnished by uninformed Congressmen.

The Committee on Agricultural Statistics reported, proposing that a committee of five Alliance Congressmen make arrangements to get statistics, so that the people may not be dependent on reports from the Government Statistician. They are to co-operate with the Alliance Crop Statistician.

Powderly Attacks Machinery.

Grand Master Workman Powderly addressed the Alliance delegates at the Exposition hall this afternoon. He advocated reform in the employment of child labor, insisted that the Government had the right to control railroads, and then made a fiery attack upon the employment of labor-saving machinery as defrauding workmen of the right to work. He was especially bitter against all electric devices, declaring that capitalists, in their greed, had cornered God's wrath and compelled it to do their bidding. He denounced sectionalism and said:

"No matter what politicians may say, we of the two sections are together again, and together we will fight monopoly."

This sentiment brought forth great applause.

During the evening session, President Polk's suggestion for a National Legislative Council was adopted.

SIXTH DAY.

Early in the forenoon session of the Farmers' Alliance, the financial policy of the Order came up for discussion under a report from the Committee on Legislation. It contained the following amended demands:

First—Abolition of national banks; the establishment of sub-treasuries in the several States to loan money direct to the people at a rate of interest not to exceed two per cent per annum, on non-perishable farm products and real estate, with proper limitations on the quantity of land and amount of money, and that the amount of the circulating medium be speedily increased to not less than $50 per capita.

No More Gambling.

Second—Congress shall pass laws to effectually prevent dealing in futures on all agricultural and mechanical productions, preserving a stringent system of procedure in trials to secure the prompt conviction of offenders, and such penalties as shall secure the most perfect compliance with the law.

Third—Condemns the Silver bill recently passed, and demands the free and unlimited coinage of silver.

Fourth—Demands the passage of laws prohibiting the alien ownership of land and that Congress will take prompt action to devise some plan to obtain all the lands now owned by aliens and foreign syndicates, and that all lands held by railroads and other corporations in excess of what are actually used and needed by them, be reclaimed and held for actual settlers only.

No Special Privileges.

Fifth—Believing in the doctrine of equal rights to all and special privileges to none, we demand that our national legislation be so framed in future as not to build up one industry at the expense of another. We further demand the removal of the existing heavy tariff from the necessaries of life that the poor of our land must have. We further demand a just and equitable system of graduating tax on incomes. We believe the money of the country should be kept as much as possible in the hands of the people, and we demand that all national and State revenues be limited to the necessary expenses of the Government, economically and honestly administered.

Sixth—We demand the most rigid, honest and just State and national control and supervision of the means of public communication and transportation, and if this control does not remove abuses now existing, we demand the Government ownership of such means of communication and transportation.

Congressman-elect Simpson of Kansas, Mr. Clark of Texas and others favored the Sub-Treasury plan. An amendment by Mr. Livingstone that the amount of circulation shall not be less than $50 per capita was agreed to. Many other speeches for and against the Sub-Treasury scheme were made, and a vote was finally taken, resulting in the adoption of the demands set forth above by a vote of 99 to 79.

Delegate Carr of North Carolina presented a memorial to Congress heartily approving and asking the passage of the Paddock Pure-Food bill, and emphatically protesting against the passage of what is known as the Conger Lard bill, which he denounced as a measure tending toward more taxation and unjust discrimination against the cotton-seed oil of the South and the beef fat of the West. The memorial was unanimously adopted.

At the evening session a resolution was passed urging the establishment of postal savings banks.

After passing the customary resolutions of thanks, the National Alliance at 1 o'clock Tuesday morning adjourned.

A Farmers' Feast.

We give below a detailed account of the banquet given by the County Alliance at San Jose to the delegates to the State Alliance on Thursday evening, November 21st.

The banquet took place at the popular St. James hotel, and there was a large attendance of ladies and gentlemen and the greatest interest was manifested. The menu was a varied one and was served in good style.

After the guests had given ample proof of their appreciation of the many good things spread before them, the party squared themselves for "a feast of reason and a flow of soul."

J. W. Hines acted as master of ceremonies and proposed the toast of the evening—"The Farmers' Alliance and Industrial Union; the reserve force of the nation, the vanguard of a new Order and the hope of liberty."

This was responded to in a fitting manner by D. G. Wright of Monterey and C. W. Pedlar of Gilroy.

Mr. Pedlar then read a witty poem, "Hayseed is Risin'," which provoked much laughter and applause. It predicted the final triumph of the farmer when hayseed would be the fashion.

Mrs. J. S. Witherill of Stanislaus recited a poem in an effective manner—"The Sale of the Octoroon"—and was highly applauded.

The Speeches.

Deputy District Organizer J. B. Rigdon then addressed the audience. He said:

We are battling for the same principles for which our forefathers fought in the Revolution. It is not against the red-coated British soldier, but against the giant monopoly of money. We are going to grow stronger and stronger. We are going to stand hand in hand until we rejoice in this victory, and then we can afford to smile at the present time when we have just begun to march. But let us not deceive ourselves with the thought that we have already won the victory. We have the hardest part of the fight before us. Let us join together; we can accomplish most by unity, and united the victory will be ours.

J. S. Barbee, National State Organizer, was received with great enthusiasm. He recounted the history of the Alliance in this State from its organization last April to its present standard of 8000 members in this State. Mr. Barbee continued: A great many people say that the farmers will never stick together. They will not accomplish anything. The Farmers' Alliance will fall by the wayside. But without being cast down by their evil forebodings, I have kept on until the organization has reached its present standard in this State.

Mr. J. Nixon of Yolo county said: I have been in California over 28 years, and never in my life have I seen a body of men and women of greater intelligence than those present here to-day and to-night. I believe the time is coming when the Farmers' Alliance will be a power in the land.

J. L. Gilbert said: Fresno county sends greeting to you to-day. There you will find hearts as warm and hands as willing to do battle in the cause of humanity as anywhere else in the State. So far as this Alliance is concerned, we are organized upon several grand principles that are founded in the very elements of manhood. We feel that we have the bone and sinew of the land and we believe in and we stand pledged to the principle that the producer should receive the benefit of his labors. We cannot but feel that our end will be victory and success.

The President.

M. Cannon, temporary President, said: "We have been the producers and distributers of this country and we have not made much by it. The products of our fields have gone to the bins of others and we are now determined to keep some of it at home.

"We are organized not against capital, but against the abuse of it. There is not one of us here but would like to have a little of the filthy lucre. We propose to get it fairly, but if we cannot get fair play we hold the club in our hands and if the other political parties will not grant it we propose to take it by the force of the ballot."

P. S. Deurfy from Los Angeles stated that the people of his county were great boomers and could drive more pegs during a boom than any other county, but since the Farmers' Alliance had come along there a change had come over the spirit of their dreams and they had determined to go to work and do something in legitimate farming.

Mr. J. S. Witherill, from Stanislaus, made an eloquent address, in which he compared the Alliance to a mighty river which would go on increasing until, like another Mississippi, it poured a resistless flood into the mighty ocean.

Senator John Roth of Tulare county said: "Up to the time of the Civil War the farmers were the most happy and contented class of people in the world, but since the advent of the protective policy a class of millionaires had sprung up who dictated to the farmers just what they should pay for their money, and also said what they would give them for their crops. It was the bounden duty of every man to oppose this system, but if the farmers would unite in opposing it they would soon be in a position to demand their rights."

Mrs. M. E. Barker of this city said she was glad to see so many and happy faces. There was only one way in which to right the wrong, and that was to hang together with the other industrial organizations. If they failed to do this, the Farmers' Alliance would be replaced by other names.

T. A. Gallup of Colusa complimented the Alliance upon the appearance and attendance of the members. He spoke highly of San Jose, saying that he had supposed it closed in by the mountains. He was glad to know that such was not the fact.

Mr. Shilling of Santa Barbara was encouraged by the presence of an organization which gave the appearance of carrying them on to victory.

B. F. McClellan of San Jose made one of the stirring anti-monopoly speeches for which he is noted, and was handsomely received.

Mr. Dewey of the RURAL PRESS stated in substance that he rejoiced to belong to an Order (the Grange) that was educated high and liberal enough to permit its members to extend the right hand of fellowship most heartily to other organizations, like the Farmers' Alliance, working for the same great objects heartily. The Grange had driven its stakes firm and to stay. If the Alliance can drive more stakes in the same line of work, well and good.

Master of Ceremonies J. W. Hines responded happily, paying a noble tribute to the pioneer labor and laborers of the Grange, affirming that the Alliance would work shoulder to shoulder with the Grange in the noble work of reform.

The banquet broke up by all standing and singing the national hymn, "America."

Each member spoke plainly and with zeal, and we regret not being able to quote from every one.

The Third Party.

The following telegraphic newspaper statements regarding the national third-party movement are of interest, however imperfect may be the reports. Many will hail the prospects with enthusiastic delight, owing to their belief in the great necessity of immediate and radical reform. Later official reports will no doubt throw much greater and truer light on the important transactions of the National meeting:

DEC. 8.—The third-party movement has been gaining ground rapidly. The presence here of so many representatives of national labor industrial organizations strengthens the opinion that the entire "reform" element of the country will join the new movement. The Western and Northwestern delegates are said to be practically united on indorsing the Rice-Davis call, and it is predicted that they will demand of the Southern Democrats in the Alliance that they join in the movement.

Third-Party Conference.

The call for a third-party conference, signed by Governor Rice and John Davis of Kansas, and about 75 other leaders, reads as follows:

WHEREAS, In unity there is strength; therefore it is desirable that this should be a union of all the variously named industrial organizations that stand on common grounds.

To this end the individuals from various States, whose names are hereto signed, issue this call for a National conference, to be composed of delegates from the following organizations, namely: The Farmers' Alliance, Farmers' Mutual Benefit Association, Citizens' Alliance, Knights of Labor and all other industrial organizations that support the principles of the St. Louis agreement of 1889; each State organization to send one delegate from each Congressional district and two from the State at large; each district organization to send not less than three delegates, and each county delegation not less than one delegate, to be chosen according to the custom of each respective organization during the month of January, 1891.

Also that the editor of each newspaper be hereby invited as a delegate whose paper has advocated the principles of the St. Louis agreement and supported the Alliance candidates nominated in 1890.

These delegates are to meet in the city of Cincinnati, O., on Monday, Feb. 23, 1891, for the purpose of forming a National Union party, based upon the fundamental ideas of finance, transportation, labor and land, in furtherance of the work already begun by those organizations, and preparatory for a united struggle for country and home in the great political conflict now pending that must decide who in this country is sovereign, the citizen or the dollar.

Mr. Davis thought the convention would undoubtedly result in placing a Presidential ticket in the field in 1892. The call will not be presented to the National Alliance, but be circulated for signatures through the 36 Alliance States and perhaps in all the States of the Union.

OCALA, FLA., Dec. 9.—The gentlemen having in charge the call for a third-party convention have received telegrams from Kansas heartily approving of the movement. They succeeded to-day in securing the signatures of 15 out of 16 of the Colored State Alliances now here.

C. W. PEDLAR, Secretary of the State Alliance, was in San Francisco on Thursday of last week, on business connected with his office. As a straightforward, diligent officer, we wish him all success.

Two Lives.

There is a language of the soul,
That mortals feel but cannot see,
Which none can fathom or control
Save those who hold the dual key;
And two may touch unplighted hands
And strive to loose that key in vain,
While two that dwell in wedded bands
In awful solitude remain.

O hungry hearts that search through years
For something missed, but never found!
O lips that smile to hide the tears
Of weary lives in fetters bound
To those who fail them in the hour
When soul and eye and lifted palm
Are pleading for some higher power
To guide them to the isles of calm!

They met when life and hope were new,
As rills beside each other run,
And, gliding on through grass and dew,
Go singing to the golden sun.
They came together in their course
Without a dream of coming times,
When, crossed by Fate's dividing force,
Their paths should lead to separate climes.

They parted on the rocky crest,
No more to meet in faith's embrace;
She drew the cypress to her breast,
And shadows gathered in her face.
He, like the torrent of the hight,
Poured out his life on thirsty lands;
To darkened lives he brought delight,
And gave new strength to tired hands.

The world upon his pathway smiled,
Yet in its crowds he walked alone;
For he was Nature's birthright child,
And she baptized him for her own.
To him her ancient hills were young,
He felt her calms above her storms,
Through him her voiceless wonders sung,
And shapeless things took souls and forms.

The secret of the haunted pine,
The midnight's soft and holy hush,
The distant star, the lowly vine,
The strains of mocking-bird and thrush,
The morning on the mountain slope,
The spirit of the ocean side,
The hidden springs of pain and hope,
Touched by his rhyme, were glorified.

He sang of "home" he never knew,
His bold words made the timid brave,
The rich absorbed his light and dew,
And barely thanked the life that gave.
He lavished all the gifts he had
To cheer his race and make it strong;
And withered joys grew fresh and glad,
Thrilled by the current of his song.

She groped in shade toward the main
Where all the streams of time unite.
He watered many a sunburnt plain,
And blessed the world by day and night;
And, while he wandered, toiled and sang,
With heart of love and voice in tune,
New hopes around his presence sprang,
Like flowers around the feet of June.

They move in lines more wide apart
Than strangers who have never met—
One burdened by a troubled heart,
One haunted by a vain regret.
There stands between their life-ways now
A mountain broad and steep and high;
The drifted snow lies on its brow,
And down its glens the low winds sigh.

And just below the high divide
I read this lesson, cold as fate,
"Who wins the wide world for a bride
Should never woo another mate."
And then I hear an undertone
Come floating from the sunset sea,
"Lo, here each stream shall find its own,
And all be reconciled in me."

But sweet and clear and pure, and far
Above the ocean's changing calls,
And gentle as the morning star,
This message from the mountain falls:
"The life that peace immortal seeks
Must rise o'er passion's ebb and flow;
For none except the loftiest peaks
Retain their shining crowns of snow."

—James G. Clark in Christian Register.

More About Cooking.

[Written for the RURAL PRESS by CLARA S. BROWN.]

Like Maude S. Peaslee, I feel that I must say something in response to Margaret B. Harvey's statements about cooking.

It is quite evident to me that she has never been obliged to look at the matter from the standpoint of people of small means. What she urges so strongly is feasible for the wealthy but utterly impracticable for the great majority who have to eke out the necessities of life from meager incomes. If I am wrong, I ask her to point out the way by which the wives of workingmen may afford to live without doing manual labor themselves.

Coming from generality right down to practicality, I ask her how Mrs. C., whose husband earns perhaps $2.50 a day, out of which a family must be fed and clothed, rent must be paid (or if a home is partly owned, interest, insurance, taxes and repairs are inexorable), fuel and a hundred other expenses must be met—how is this worthy woman to pay for the services of a professional cook while she teaches her children? Good cooks know their value and charge accordingly, while the children may be sent to public schools at almost no expense. *That* is one reason why "the mother does not do the teaching and hire the cooking done." Some women do not bear children. Is it right for them to hire servants while their husbands toil?

It is impossible for a man to keep a servant of any kind unless he earns more than the sum mentioned. Besides the wages, there is the board to consider and the waste. The hired cook who is as economical of her materials as a faithful wife is an exceedingly rare jewel.

Now for question No. 2. Why is it "unwomanly" for Mrs. C. to care for the home in all its details, as her part of the business side of marriage, any more than it is unmanly for her husband to go forth in all weathers, sick or well, to his daily labor, which is to bring in the means of subsistence for them all? Should not the wife be a help-meet?

What is there about cookery under any circumstances that is "unwomanly"? Why is a woman "degrading" herself by cooking, or making of herself "a serf," any more than by the performance of any other task?

It is not unpleasant or unclean work; there is art in it and science, too.

I, for one, boldly confess that I like to cook, and that I never for a moment supposed I was unwomanly in doing so. Rather, I had flattered myself that I was doing my duty in a quite exemplary manner by taking the entire care of my house while my husband gave up all his time to earning the income, especially as my tastes are such that, if single, my life would be spent in a far different manner. I know that a woman may spend much time in the kitchen, and do her work in it well, without being "wedded to pots and kettles," or satisfied with the grosser things of life. She may be intellectual and refined, fond of books, art and music, and in every way the equal of a lady whose white hands never knew labor. Indeed, it is a fact well proven, that the best educated minds are the most careful and hygienic in the details of every-day life.

I suppose no woman will argue that it is not a pleasant and desirable thing to be able to command all one's time and spend it in the improvement of the intellect and the enjoyment of things that refine and ennoble the soul. The weary worker cannot help sighing at times, "Oh for more time to read and think and learn!" The vital question is, "*How* can labor be relegated to professionals when money is scarce? *How* can lectures and lessons be had when every dollar must go another way?" If Margaret B. Harvey will solve that question she will confer a great favor upon me, and, without doubt, upon many others. It should be borne in mind that for one woman of independent means who reads the RURAL PRESS, there are many who are forced to economize in every way in order to live within their incomes. By this I mean strict economy in every direction, not economy as a self-indulgent person of extravagant tastes understands it.

I would like also to be told how a girl—the daughter of hard-working parents—can afford to spend "two years in studying anatomy and physiology," then "two years more in drawing the human figure," etc., in addition to the usual education. How are the bills to be paid? How is the girl to be supported all these years? Don't say you did not have reference to paupers. The average girl has to do something for herself as soon as she is old enough, unless she has parents with plenty of money.

The Princess of Wales taught her daughters dressmaking and had them thoroughly drilled in the care of a yacht—why wasn't that as degrading as cookery? I don't think it is, by any means, a conceded fact that men make better cooks than women, and certainly I do not think it is such appropriate work for men as for women. Their big, strong hands are better employed in some labor that women cannot do than in weighing out "sugar and spice and all that's nice," turning an egg-beater or frosting a cake.

Why inveigh against cooking more than against other housework? I am sure that I am not alone in the opinion that cooking is the pleasantest part of a housekeeper's cares. If I had the means to hire any of my work done, it would be the heaviest tasks that I should release myself from, such as washing, scrubbing floors, cleaning windows, etc. I could then watch the rising of my bread, the browning of my cakes and pies, the roasting and boiling of my meats, the preparation of my vegetables, etc., with increased satisfaction, knowing there would be no weak back or tired feet to prevent me from enjoying some good book in my sitting-room ere the day was done.

True, Margaret, "womanly character does not depend on cookery," neither is it in the least deteriorated or cheapened by it.

THE Holy Synod of the Russian or Greek Church has just issued a decree imposing a religious penance from three to five years in length upon all widows and widowers who are wicked enough to attempt matrimony for the third time; and for all widows of 60 who are found guilty of the second offense a rigid penance of two years' duration is prescribed.

THE DEATH RATE among the Indians who aim to live like white people is three times that of those who continue to live a semi-wild life.

Betsey Snow's Art Trials.

DEAR EDITOR:—I hope your readers have missed me the last year and will be as glad to hear from me again as I am to write. A farmer's wife must not expect to keep house, do all the family sewing, see to the chickens and cows, do literary work and pursue art studies at the same time. I gave up writing for the sake of art, and I want to warn the sisters not to venture to thread its thorny mazes as I have done. My heart is filled with pity for poor old Raphael, although I suppose he had more genius and money to begin with than I had.

I found, by reading, that one cannot be a farmer's wife and be thought much of, or attend strictly to farm duties and be an agreeable companion for such a high-minded, cultured gentleman as Mr. Snow. We do not always want to stand behind our husbands like some heathen women I have heard of, and so we get restless and ambitious as perhaps we ought not to do.

When we read the productions of the gifted, in which they delineate the beauties of the country, they represent the farmer and his wife as ignorant, illiterate, and put bad grammar into their mouths and old-fashioned clothes on their backs. They sometimes, in their romances, allow them to visit the city, where the women appear on the streets, afraid to cross, like lost cats, and at hotels blow out the gas. The farmers lose, by confidence men and women, from six to eighteen hundred dollars, and go home penniless.

So, in order that I might be thought something better than a woman who says "hern" and "yourn" and "right smart" and "I reckon," Mr. Snow thought I had better be an artist like Sybil Stowe. He's a great admirer of Sybil's paintings, though some of our envious neighbors say it is not the painting but the artist he admires. That is very cruel, but Fred is forgiving and told me I might take lessons of her. He said I could attend to my poultry and vegetable garden and make butter while I pursued my art studies. As compensation for my lessons I proposed to do plain sewing for Sybil.

As I had no money to pay for material, Sybil suggested that I should begin on more common subjects than landscapes to develop taste. My first lesson was a toasting-iron. I had one that I seldom used because Fred does not like toasted bread, and I am never so unwifely as to put anything on the table that he does not eat. I gilded it and on one corner tacked a bow of blue ribbon and hung it in a conspicuous place in the parlor. When Mr. Snow came home I took him proudly by the arm and led him up to admire it. He smiled sweetly and asked me if it was a Van Dyke. "Oh, no, dear," I answered, eagerly, "it is a toasting-iron."

Pleased with my success, I next covered a hatchet that was so worn that I could not split kindling with it any longer with blue sateen, a piece of Hephzibah's Sunday dress. This I hung opposite the toasting-iron. Then I covered one of Hephzibah's baby shoes with the same blue and attached a cord to it and suspended it from the looking-glass for a match-safe. Later on, I painted a molasses jug that was no longer serviceable, as it leaked, and a small wooden tray and a pale-blue blotter. Pink roses and blue pansies were my chief decorations, which, with ribbon bows, gave a very artistic look to my sitting-room. Mr. Snow says that drawing-room is much more stylish than parlor or sitting-room, but as Sybil has a "blue-room," we decided, on account of my new ornaments, to call it by that name. So far I had expended only thirty-five cents besides the plain sewing, and I felt well repaid for all my trouble.

The crowning glory of Sybil's artistic work was a linen spinning-wheel. It was bronzed, ribbons tied to the spokes, the distaff a mass of crocheted work, and a dainty, painted gauze throw tied to the wheel. I had no wheel, but instead had two boot-jacks and she had but one. Mine were covered with drab silesia and suspended by garnet ribbons. My grandmother, who died in Connecticut, left me a wheel for spinning woolen yarn, and as I had no use for it, I had left it there. Fred says this is the *renaissance*, and so I thought I would send for the wheel and spoke to Sybil about it. She laughed at my ignorance and said a woolen wheel was too modern. Only a linen one came under the head of art.

A new idea occurred to me. Why not save pieces of old furniture or kitchen utensils for Hephzibah to decorate for her own house when she marries, as I hope she will? They will be pretty old by that time. We have decided not to let her learn to cook, as we have read lately that cooking is degrading to women; they should be artists. As I am obliged to cook, I think I shall make no change, and Mr. Snow says Hephzibah may wash the potatoes and peel the turnips, but must go no farther.

While happy at the thought that I had acquired that culture that the world would respect, and though I am a farmer's wife, I hoped to be recognized as a leader of society, my hopes and aspirations were suddenly blasted. On Mr. Snow's return from San Francisco, he told me that during his stay in that highly cultured city he never saw a bread-waster, hatchet, wooden tray or hardly a painted jug!

It was a severe blow, but I smiled on the hearth as my husband took from the walls the product of my artistic labor and put them in the kitchen cupboard. BETSEY SNOW.

[We are glad that Betsey still survives her struggles for progress and still hangs on to the heart-strings of Mr. Snow. That during the pursuit of such aspirations and ambitions she does not forget the readers of the RURAL is also very gratifying.—EDS. PRESS.]

The Coming of the Rain.

The sky is low as it would fall,
And to the south the vane;
The robins in the orchard call,
Impatient for the rain;
I hear them through my windows wide,
And feel myself to them allied.

"The dooryard flock their feathers trim;"
I hear my farmer say,
Who have not been more pleased with him,
"It argues rain to-day."
Say what we will, old saws we heed
That promise what we wish or need.

The day is dark, the air is soft,
The rain must soon be here;
And hill, and wood, and field, and croft
Seem conscious it is near.
And to the grass, it seems to me,
The wind has told the change to be.

It is the wind that blows the bait
Into the fish's mouth,
That comes so welcome though so late,
All tepid with the south.
Hark! what is that that warns my ear?
It comes! it comes! the rain is here!

Is here, by lightest patter known—
A green and quiet rain.
Now let us thank it! let us own
Ourselves, for days of pain,
More thankful that at last it comes,
Like one long-wished-for to our homes.

—Ralph H. Shaw in Portland Transcript.

Ironing-Day and Conveniences.

Where one must iron for a large family, ironing-day is one to be dreaded, especially if the outfit be a limited one and the weather warm.

Time and strength may be saved by having a convenient folding-board, as well as a light and easily handled clothes-rack.

If the board is without supports, it, as well as the smaller bosom board, may always be kept well wrapped and in clean cover in readiness for ironing-day. The white covers may be kept clean a long time, if after the ironing is done a cover of old calico be drawn over to protect it from soot and dust.

With the holder and iron-rest, a wiper may be kept in a pocket in the outside covering. The wiper may be of cotton cloth, the under side lined with sandpaper, or it may be of stripes of bed ticking sewed together and crocheted plain stitch with large needle, round or oval in shape. Clean irons are a comfort; a cake of wax is often a convenience.

When the irons are the common flats, and must be heated upon the kitchen stove to get them hot enough, it is often necessary to cover them. A long baking-pan will usually prove to be the very thing. Insist upon the other members of the household helping to keep the cover of the ironing-board clean, as we recall a morning when a daughter had been dyeing green articles, pressing them while damp upon the clean board, not thinking of the sad plight the mother would find it in next ironing-day. Summon to your aid all the possible helps, as ironing at best is hard work when there are many garments to smooth.—*Portland Transcript.*

THE INVISIBLE WORLD.—I am glad I live in the nineteenth century, when mysteries are being lifted, and every day multiplies the analogies between science and religion, and we may hope to see the crown yet which glitters on the tripartite kingdom of science, religion and grace. Is there an invisible world? and do we enjoy our homes alone, or is the air filled with loved ones and aerial beings? Science says "Yes," and it depends upon the number of senses we have whether we agree with science. Our minds are in prison, from which they look out through windows in the walls, and that mind which enjoys the greater outlook must see more than others. Our present inability to see angels is no argument against their existence, as what we know depends upon the number of our senses. The windows of the house in which we live are glazed or stained. We cannot see or hear all. The dog accompanying us through the forest scents the game of which we had no knowledge. The atmosphere is populous with particles that elude the prism and the scales, yet they lend the sky its azure and distribute the sunbeams over the earth. Sound consists in the movement of the air and the existence of an auditory nerve. The deaf are insensible to thunder, yet it thunders. Negative scientific schools say they cannot find our God anywhere! Does not their science teach them that there is another world which neither scalpel nor microscope can explain or explore? Scientific men know that the atmosphere is crowded with life germs, and is it too much to ask that we be permitted to believe that back of these life germs higher lives and more distinguished organisms exist? Were our ears properly attuned, we might hear the atmosphere, now silent, musical with the tread of angel feet, and it may all come in good time. Do angels tread the air we breathe?—*Rev. J. Sanders Reed.*

THE EARTH is nearest the sun on the second day of each year, on which day she is only 90,822,000 miles from his solar majesty.

YOUNG FOLKS' COLUMN.

A Serenade.

[Written for the RURAL PRESS by MARTHA T. TYLER.]

Grey's Hill Seminary was the name of the school, so called because the house stood on a slight prominence at the end of the shadiest street in the village. The front windows faced the river and commanded a lovely view of the woods beyond.

A short distance down the road rose another large frame structure, more substantial but less home-like in appearance than the house on Grey's Hill. This was an academy for boys, and Miss Dixon, the principal of the girls' school, was always wishing it were a mile away instead of being almost at her own gate, for the "young ladies" of her establishment would make acquaintances among the students, and the latter for their part were altogether too fond of extending their walks past the aforesaid gate and of scrutinizing the above-mentioned windows for chance glimpses of the bright young faces under her charge. Miss Dixon, however, had been a pretty girl in her youth, and cherished certain recollections of auld lang syne, which really moved her to be more lenient to the pranks of her fun-loving pupils than one would easily have divined from her extreme propriety of speech and manner.

Stella Langley was the youngest girl in the school, only eleven years of age, but fond of associating with older girls, and with an especial aptitude for scrapes which made her a general favorite. She never meant to be particularly naughty, either, but whenever she attempted a little mischief, she was sure to be caught at it, and this was the whole secret of her troubles. Being so much younger than many of the others and outspoken and odd, they had a great deal of fun at her expense, nor did they scruple, sometimes, to make her the scapegoat for their own peccadillos.

Stella was not only a peculiar girl when awake, but she was a peculiar girl when asleep. When she had once crossed the boundary line of the land of Nod, it was almost impossible to awaken her. She walked in her sleep occasionally, but this was not known to the teachers, as she had never wandered out of her own room, and it had happened but three or four times during her sojourn at the Hill. Her room-mates, Issie Carrington and Mabel Ellis, were in the secret, and of course it had been whispered round the classroom among the other girls; but it just happened that Miss Dixon's keen ears had not caught the report.

It was toward the middle of October, and the school on Grey's Hill had reopened after the long summer holiday, so recently, however, that the pupils had not quite settled down to the regular routine of study and discipline. The three girls, Issie, Mabel and Stella, had retired to their own room one evening, in the peaked roof of the house. It was a very pleasant room, though rather high up and solitary. Miss Dixon slept on the second floor just below, and as the trio prepared to rest each in her little white cot, they laughed and chattered all the while school-girl fashion, but in a subdued tone lest Miss Dixon should hear and reprove them. After a time, however, the lights went out all over the house and the inmates were soon sleeping peacefully—Miss Dixon included.

The village clock struck ten, eleven o'clock, when Issie, who slept as lightly as a bird, was awakened by strains of music. She sat up in bed to listen, not comprehending at first, but realizing by degrees that the students were giving them the benefit of a serenade. She knew this, because the same thing had occurred several times the year before, and Miss Dixon had sternly declared that no notice should be taken of the delightful attention.

Issie hearkened awhile with a satisfied smile, and then stole out of bed in her little bare feet across the room to Stella's corner.

"Stella! Stella! wake up. Oh, of course, it's perfectly useless to try to rouse you. You would sleep through a fire or a thunder-storm," and she ran over to Mabel, who, by this time, was as wide awake as an owl.

"I say, Mabel—oh, *you're* up to snuff, aren't you? Isn't it lovely? Wonder who the boys are."

"Sh!" said Mabel; "let's peep."

So the two children tip-toed over to the window and looked out behind the dimity curtain.

"If it were only moonlight we might distinguish them," said Issie.

"Can't we wake Stella—it's a shame she should miss the fun!" and the twain scampered back to where poor innocent Stella lay slumbering as soundly as if nothing unusual had happened, forgetting by this time that they were making a great deal of noise.

"We promised that we would surely wake her, next time," exclaimed Issie.

"But how on earth are we to do it?" queried Mabel.

How, indeed! They pulled and pushed and shook her, all to no purpose.

At last a mischievous thought struck the ingenious Issie.

"Let's take her over to the window," she said; "perhaps the music will rouse her there."

So poor Stella was hauled out of bed and half dragged half lifted to the window, where she was seated on a low stool so that her frowsy brown head just reached above the level of the broad window-sill, and the curtain partly drawn.

"O Issie!" whispered the half-frightened Mabel, "suppose Miss Dixon should find out!"

"Such fun!" cried the reckless Issie, who was almost suffocated with laughter.

"Hush!" said Mabel. "I hear a footstep."

The startled pair had only time to run softly across the floor and jump into their respective beds, counterfeiting sleep when there with gravity befitting a better cause, when the door opened and in stalked Miss Dixon with a lighted candle in her hand and an expression of countenance that would have done justice to Lady Macbeth.

"Stella! Stella!" she exclaimed as she caught sight of the small figure at the window, "why, what in the world do you mean?"

Now whether it was the sound of Miss Dixon's voice, which she was accustomed to obey, that from force of habit penetrated to Stella's understanding, or whether the music began to prove effective, I cannot say; but she awoke broadly at this juncture and stared with wide-open blue eyes at the approaching figure of Miss Dixon, though of course she knew no more than the man in the moon how she had got over to the window, or why Miss Dixon had come to question her.

The irate principal would not trust herself to say any more. She jerked the curtain back into place, thrust the terrified Stella back into bed, gave a parting glance at the other cots, and walked out of the room with all the majesty of offended dignity.

Issie and Mabel were too thoroughly alarmed to speak or stir, lest Miss Dixon should be listening at the keyhole. They conjectured from her silence that she was very angry, and looked forward to the morrow with great trepidation.

As for Stella, she lay still, thinking that she must have been walking in her sleep again, and realizing how hard it would be, under the circumstances, to make Miss Dixon accept that explanation of what had happened. She did not fall to sleep again until long after the serenaders had departed, and went down to breakfast next morning with a heavy heart.

When prayers were over in the schoolroom, Miss Dixon said she desired to have the attention of the pupils for a moment. Something had taken place the night before which she regarded as a most serious act of disobedience. She had determined that the subject of her displeasure should offer an apology to the whole school. After explaining to them all that had occurred, she ordered Stella to stand up and offer her excuses for such outrageous behavior, if she could find any to offer.

Stella arose trembling, but could only falter that she knew no more about the matter than Miss Dixon herself did.

Issie and Mabel fidgeted in their chairs and looked uncomfortable, but were determined not to confess as long as there was the least possibility of escape for Stella.

"Miss Dixon," said Helen Harrington, one of the older girls, "I think what Stella has just told you may be exactly true. She walks in her sleep."

Mabel, who sat next to Helen, drew a long breath of relief.

"I was unconscious of everything until you spoke, Miss Dixon," continued Stella.

"You made a great deal of noise for an unconscious performer," said the principal, grimly, "but with all your faults, Stella, I have never known you to deceive me, so that I shall accept your statement; only, if you do not soon outgrow the habit of perambulating in your sleep, I shall have to move you into a back room."

I am sorry not to be able to record that Issie and Mabel acknowledged the facts in the case, but I am afraid, on the contrary, that they were disposed to congratulate themselves upon their fortunate escape from justice.

A Tale of Two Shillings.

Once upon a time, two shilling pieces, fresh from the mint, started in life together.

It was not many days before they were separated. One traveled east and west, north and south, and, after being cast into many different purses and pockets, learned much and became quite polished from contact.

The other, afraid of being contaminated, slid himself into a miser's purse, whose strings were never loosened except to imprison other unfortunates. And there the stupid shilling remained until the miser died, and his money was distributed among his heirs, when suddenly he found himself again in company with the traveling shilling, who, when he recognized the dull bit of silver as his once brilliant friend, cried out, "Ha, ha, friend! Wast thou so fond of the bowels of the earth that thou must needs go back again when we parted?"

"Thou hast learned much in thy travels, I suppose," grunted the discolored shilling.

"Much indeed!" returned the other. "A shilling buys many a thing, my friend. I have been exchanged for bread for hungry children and sweets for pretty maids. Once I was given to buy a monkey a cap. I have been thrown in charity. I have been the servant of the rich and of the poor. I have traveled in company with gold pieces and coppers. And this one thing have I learned—gold or copper, all things must serve, or grow to be like thee."

"Thou art a bit polished, I trow," said the dull shilling, "but thou hast wasted thyself. I will wager that my weight to-day is more than thine."

"I dare say," returned the bright shilling, "that thy weight may exceed mine; but I still pass for a shilling, and nobody gives me a bite to know that I be not lead;" and his new master, opening at that moment his purse, out darted the bright shilling once more into the world to learn and to serve.—*Christian Register.*

DOMESTIC ECONOMY.

FLANNEL CAKES.—Two eggs beaten light, one pint of milk, salt to taste, two teaspoonfuls of yeast-powder and flour enough for a batter. Serve hot in round cakes with maple syrup.

APPLE CUSTARD.—Pare and grate two large, tart apples; add four tablespoonfuls melted butter, eight of sugar, juice and grated rind of one lemon, yolks and whites of six eggs, separately beaten. Line dish with puff paste and bake like custard.

LYONNAISE POTATOES.—Cut some cold boiled potatoes into small square blocks; shred half an onion finely; drop potatoes and onion into boiling lard and fry a light brown; drain on paper and serve in a very hot dish. Dust with powdered parsley before serving.

APPLE AND TAPIOCA PUDDING.—To a teacupful of tapioca use a quart of boiling water; let stand awhile and soften; sweeten a little, add a lump of butter the size of a walnut, then slice in tart apples, sufficient to make a layer over the top. Bake until the apples are tender. Eat with sweetened cream.

YEAST.—It was found some 50 years ago by Cagniard, Latour and Schwann that the mysterious substance known to brewers as yeast or barm was really composed of a vast number of minute oval particles endowed with the powers of growth and multiplication, and therefore undoubtedly living.

FRUIT CAKE.—Raisins and spices to taste, one cup molasses, one cup brown sugar, one cup shortening, two eggs, two teaspoonfuls soda, three cups flour, two cups dried apples (not soaked). Beat all together and stir in raisins and spices to suit. Soak the apples over night. In the morning, put in the molasses and sugar, boiling down quite thick.

ROLLED OATS.—Put two teacupfuls of rolled oats into a double boiler, Add one teaspoonful of salt and four teacupfuls of *boiling* water; boil 15 minutes. Best if eaten either slightly warm or cold with cream and sugar or with plain sweet milk. A bright, new tin pail, tightly covered, set in a kettle of boiling water, is a good substitute for a double boiler.

CRABAPPLE SHORTCAKE.—Two cupfuls of thick, sour cream, a pinch of salt, a small spoonful of soda, and flour to make a stiff batter; place in a deep pie-tin and bake a light brown. Have ready a quart of sauce, made of crabapples and sugar stewed thick. Split the cake when done, butter each half and spread with the sauce. Serve with the juice sweetened and slightly thickened with cornstarch.

CHEESE SANDWICHES.—One-fourth pound of crumbled cheese, the yolk of a hard-boiled egg, a tablespoonful of melted butter, half teaspoonful of salt, a dash of pepper, half teaspoonful of made mustard, a tablespoonful of milk, and thin slices of bread or biscuits, lightly but evenly buttered. Put the hard yolk in a small bowl, make smooth with a spoon, add the butter, cheese and seasoning, mixing well, and lastly the milk.

SALT-FISH CHOWDER.—Shred up a pint bowl full of salt fish and let it soak in cold water about two hours. Fry a few slices of fat salt pork the same as for clam chowder and put in the bottom of your kettle, then about three pints of sliced potatoes, three sliced onions and one pint of breadcrumbs, sprinkle with half teaspoonful of black pepper and add hot water enough to cover; boil until the potatoes are soft, then add one pint of milk and let it boil up once, and it is ready to serve. If the fish and pork do not make it salt enough, season to your taste.

SPONGE CAKE.—One cup of sugar, one egg, two teaspoonfuls of baking powder, a scant half cup of sweet milk, 1½ cups of flour and one-third cup of boiling water; flavor to taste; beat the egg thoroughly, add the sugar and milk, then the flour, slowly, stirring well, having sifted the baking powder in thoroughly; add seasoning, and when the whole is beaten well and the cake bar is ready, add one-third cup of boiling water quickly and put into the oven at once. This is nice for layer cake also. Milk, in place of egg with sugar, is better for filling and frosting too.

AN IMPROVED SEWING NEEDLE has been patented which secures the end of the thread in the eye, instead of having a running thread as in the case of ordinary needles. The eye of the needle is round or oval at the bottom, and tapers away chisel-shape at the top or head, thereby causing sufficient elasticity at the top of the eye to hold the thread perfectly rigid. This invention does away with all cutting of the thread, which is the case with ordinary needles where a running thread is used. The object of this invention is to allow the cotton thread to be easily passed through the hole and pulled up toward the head, so as to fix the thread in the chisel-shaped slit, and thereby prevent the thread from slipping out, as is the case with ordinary needles.

GOOD HEALTH

About Expectoration.

Aside from being an exceedingly filthy habit, the custom of free and careless expectoration involves dangers to health which are not generally understood, but which are nevertheless in no sense fanciful.

It is well established that the poison of certain diseases appears in the expectoration. The germs of consumption are known to be minute, rod-like vegetable bodies, visible only by the aid of the most powerful microscope. In the matter expectorated by those afflicted with this disease the germs are met in large numbers. By experiment it has been determined that they are very tenacious of life, and can be destroyed only by certain fluids or by exposure to a high temperature for a considerable length of time.

It is easy to see, therefore, that if the expectoration from the lungs is allowed to lie exposed till it becomes dry, the germs will be taken up and scattered abroad by the air currents, and in this way a fruitful source of contagion will be provided.

Fortunately, most people in good health remain unaffected by the germs which have found entrance into the body. It is only when the powers of resistance are weakened by some defect of the constitution, or when some unusually favorable opportunity for infection has been given, that the poison gains a mastery and produces disease.

When we consider that in a hall of moderate size, which has been occupied by an audience for an hour or more, there are millions of germs of various kinds, some of which, under favorable conditions, are capable of producing disease, then the wisdom of such a provision of nature becomes apparent.

No doubt every one has felt a certain disgust at the hawking and spitting which is met with to a greater or less extent in all public places, and it is well for every one to know that there are excellent sanitary reasons for the observance of a rule which good breeding and a care for the feelings of others ought to be sufficient to enforce.

It is in the discovery of the real causes of disease that we shall most surely find the valuable ounce of prevention. If we must expectorate, let us at least refrain from doing so in public places.—*Youth's Companion.*

POWER OF THE IMAGINATION.—The Philadelphia *Times* tells how a dream of death was accurately carried out to the peaceful end. The story is as follows: A remarkable instance of the hold superstition has upon the mind of even the educated and religious was recently exhibited in the case of Mrs. Rebecca Byrnes of Helena, Ark., a lady noted for her intellectual attainments and pious life. One morning, rising in what seemed her usual health and spirits, she summoned her children to come to her. One son was residing in Topeka, Kan., one in New Orleans, two daughters were married and living in Sedalia, Mo.; but obedient to their mother's call, they came at once, though ignorant of the reason of their summons. When all were about her, the lady informed them that she had had a dream in which her husband, who had been dead for nearly 15 years, had warned her that she had only ten days more of life. She had sent for her children to bid them good-by, which she proceeded to do with much calmness, but with the air of one who had not the slightest doubt that she was already dying. Her friends attempted to reason with her and to point out the folly of placing such perfect confidence in a dream, but all to no purpose, for the lady persisted in asserting that she would depart from earth on such a day and exactly at a certain hour. Her pastor remonstrated with her and even brought the severest censure to bear on her superstitious credulity, and at last Mrs. Byrnes ceased to speak of the matter, so that her family had begun to think she had conquered her fancy. She continued in excellent health and pursued her usual daily life, but just before the hour she had predicted would be that of her death she sought her children and bade them good-by, then seating herself quietly in an arm-chair, expired just as the hour was struck. The physicians declare that her death was due solely to her imagination.

INTELLECTUAL WORK.—"It is not intellectual work that injures the brain," says the London *Hospital*, "but emotional excitement. Most men can stand the severest thought and study of which their brains are capable and be none the worse for it, for neither thought nor study interferes with the recuperative influence of sleep. It is ambition, anxiety and disappointment, the hopes and fears, the loves and hates of our lives, that wear out our nervous system and endanger the balance of the brain."

CREMATION is more extensively practiced in Italy than in any other country. The first crematory was established in Milan in 1876, and there are now 50 in operation in Italian territory.

SMALL HURTS.—A medical journal declares that a healthy man will actually suffer more from the prick of a pin than he would from the pains of dissolution in case he died a natural death.

The Week.

The rains ceased quickly after depositing varying amounts of water according to locality, as is their usual way. In the Bay region, and probably in some other parts, the rains were in such volume that much ran off without deep penetration, consequently some districts, though having a good record in inches, still have soil too dry to plow well. In other parts the penetration was sufficient and the plows have gone afield with all haste and are rapidly breaking turf and stubble. More rain is needed in most places. Another of Lieut. Finley's cyclones stole in upon Washington on Tuesday, but up to this writing on Wednesday evening the skies and prophecies are all clear for California.

As the deciduous fruit season is closing, the citrus season is beginning to sustain the reputation of California as a fruit-all-the-year country. The orange product will be large and will bring much money to the fortunate producing regions.

Planned for the Home of a Great People.

If ever Nature plans with a purpose of the kind, it was clearly her design that California should become the home of a great nation. Look at her and study her advantages and possibilities in all their aspects and bearings; consider her incomparable climate, her prolific soil, the motive-power of her many rivers and her wealth of forests and mines. Translate these into the language of industry and commerce, and what do they teach? Clearly that California was destined to be the seat of wealth and power—the home of a numerous, rich and prosperous people.

While the Pacific ocean on the west will forever serve as a cheap highway to countries abroad, her great bays and far inland-reaching rivers will remain the channels of domestic trade and traffic. Starting at the seashore and traveling east, we pass over a succession of low mountains and fertile valleys till the foothill region of the Sierra is reached, with the great forest-clad, snow-crowned cordillera beyond. Issuing from these mountains more than 20 large rivers, besides numerous smaller streams, flow west, affording ample means for irrigation and water-power of almost illimitable extent. That the flow of these rivers might not fail when most required for irrigation, Nature took the precaution to pile up every winter enough snow about their sources to keep them well replenished till this need is no longer stringent. Through this wise provision the propulsive power generated by these streams never wholly fails, nor is it ever more than partially abated. As the fall in these rivers varies from 5000 to 10,000 feet, their value for propulsive purposes can hardly be overestimated.

The lack of a good coal has ever been considered an insurmountable obstacle to the establishment of large and successful manufacturing industries in California. But with the immense water-power afforded by so many mountain streams, this difficulty is in large measure overcome, the practicability of transmitting this power to distant points through the electric cable adding largely to its value. Besides the propulsive power derived from this source, both wind and wave power can in this State be made largely available for driving machinery, and that they will in good time be so employed admits of no doubt. What will greatly aid manufacturing in this State is the extent to which we produce the raw material in almost every required form. In this respect no country in the world is richer than California.

But a good country is but half of a great nation, and the poorer half at that. It is their character rather than their possessions that makes a people truly great. And who can tell us what manner of man is this who is coming to inhabit California? We have here assumed that he would be worthy the country he is to occupy; but about this opinions differ. The best countries do not always produce the best races of men, and possibly California may not prove an exception. Our predecessors here were not much to boast of, nor have we as yet made ourselves conspicuous by our intelligence or our virtues. Occupying the best country in the world, we have shown ourselves neither better nor worse than the average of mankind.

The Pomona Station.

The outfitting and equipment of the new University Agricultural Station at Pomona is progressing favorably. The buildings are about completed and the foreman, Mr. K. McLennan, who has long acted in a similar capacity at the Berkeley Station, will soon install his family in his new quarters. Mr. McLennan has had a long experience in horticulture and in the treatment of the newer economic plants which have been introduced, and it is expected that he will soon be able to show results interesting and of value to the region to which he is accredited. Mr. Richard Gird, the patron of the Pomona Station, and who has contributed largely to its establishment, is taking an active interest in the progress of the work, as are the other contributors and friends of the enterprise.

The new station was recently visited by two members of the governing board of the University, Regents Hallidie and Ainsworth, who expressed themselves much pleased with their observations. At the meeting of the Regents on Tuesday of this week, Mr. Hallidie is reported to have spoken at length of his visit. He was delighted with its location, pleased with the local pride in the station and its work, and expressed confidence in the wisdom of the Regents in selecting the location for the station. He suggested that a conspicuous sign and possibly a flagstaff be placed at each of the University stations.

Mr. Hallidie's suggestion is a good one. These institutions should be distinctively known as integral parts of the State University, and should serve to localize the work of the agricultural department thereof. This was Prof. Hilgard's idea in proposing their establishment and it will prove promotive of this idea to have the establishments distinctly marked for the information of local residents and travelers. The unfurling of a flag at each of the stations is also a good idea, for the fund for their maintenance is derived from direct appropriation by the United States Treasury. No doubt it will be found feasible to carry out Regent Hallidie's suggestion in some appropriate manner.

Naming Country Roads.

In the RURAL of June 21st we published a description of a progressive undertaking in Contra Costa county, which included a proposition for the systematic naming and numbering of country roads as devised by A. L. Bancroft of this city, who has extensive agricultural property in Contra Costa and earnestly desires the advancement of the county in all progressive lines. The system was called the "ten-block system" because it divides each mile of highway into ten imaginary blocks, each of which is numbered.

The proposition, as published in our columns, attracted wide attention and called forth favorable comments from perhaps 100 journals located in different parts of the country. There was a claim on the part of a gentleman residing in Pennsylvania that the system proposed by Mr. Bancroft had been mooted by him about four years and by him urged upon the attention of the "Road Commission" of that State. We have before us a copy of the address upon which priority is claimed for the Pennsylvanian, and though his work is honorable and original, it is so different from the idea proposed by Mr. Bancroft that it cannot be regarded as an earlier presentation of Mr. Bancroft's plan. It must be still claimed that the California idea is an original one and that the State is entitled to the credit which it has secured by the wide publication of the plan as Californian in its origin.

The question will soon come up on the realization of the plan which has received such favorable consideration throughout the country. It has been credited to Contra Costa county in many cases as a project already carried out, but it was not published as such. It was given out as a project still under consideration. It rests of course with the Supervisors of the county to put it into effect and to enjoy the distinction of being the first county in the United States which has its roads fittingly designated and so marked that the traveler can tell his location and directions as well as he can on city streets. We understand that there will soon be presented to the Contra Costa Supervisors a report of a committee urging upon them the necessary steps to authorize and carry out the undertaking. This report will no doubt be published in the local papers. In order, however, that the minds of our readers may be refreshed on the proposition presented, we give the following brief statement:

The roads being named in as long stretches as practicable, they are then measured, commencing at the county seat or the end nearest to it, and each mile along them is divided into ten equal parts or imaginary blocks having a frontage on the road of 528 feet, 176 yards or eight chains. Two numbers are allotted to each block, the odd ones on the left side of the road and the even ones on the right. Each and every house located within a given block has the number of that block. In very few instances in any part of our county will the country houses be nearer together than ten to a mile. Whenever this occurs and two or more are located within the same block, they all have the same number and all but the first are followed by the letters of the alphabet in regular rotation—438, 438a, 438b, 438c, etc. Should they in any extreme case run as many as 250 to the mile, they could all be numbered by this system equally well and the numbers indicate their location. The numbers give the distance from the commencement of the road in such a way that it can be calculated almost instantly. As there are two numbers to each block, divide the house number by two to ascertain the number of blocks from the commencement; as there are ten blocks to the mile, divide that amount again by ten or point off one decimal and the distance in miles and tenths is obtained. In case of odd house numbers add one, divide by two and point off one decimal and the same result is shown.

Some of the great advantages of this plan are here briefly mentioned. Any new dwellings along the roads can have their correct number applied to them at any time, to any extent and without interfering with the existing numbers. Distances can be quickly calculated from any house number to any other house number in the county. Houses of residents can be found readily and with confidence. Strangers can be directed how they can find the residence desired. The fees of jurymen, constables and other officials can be accurately calculated. Road work to be done can be accurately defined by stating in which blocks it is located. If the divisions between the blocks are permanently marked by means of stone monuments, they can be used as starting-points to describe the boundaries of farms which are sold and for which deeds are required, etc. With this system established, a directory of the town and country residences upon the same basis of city directories becomes feasible, or the addresses of all voters may be given in the Great Register of the county, which will be useful to a limited extent.

We are informed that the cost of carrying out this plan of designating and numbering will not be great. It is estimated that it will cost perhaps 62 cents for each $1000 of assessed value. It seems to us this will be a small tax commensurate with the advantage of having a county's roads thoroughly marked and divided so that even a stranger can easily find any desired location without miles of useless travel or waste of time in seeking directions from people along the roads. We shall be glad to see the enterprise carried out, because it is in the line of progress and development, and promises to become popular everywhere. Great credit will, of course, attach to the county which first puts the plan in practice.

The Northern Citrus Fair.

The State Board of Agriculture has located the Northern Citrus Fair at Marysville and the Southern Citrus Fair at Los Angeles. The latter will be held the first week in March; the former will open in Marysville on Monday, Jan. 12, 1891, to continue one week.

Arrangements for the Marysville Fair are going forward actively. All the $2500 from the State appropriation will be devoted to premiums. There will be 27 classes. The county making the finest show will get $200. The same amount is offered for the best show of Navels, the display to contain no less than 2000 oranges. Exhibits of olives, persimmons, figs, raisins, pomegranates, lemons, limes, shaddocks, dried fruits, preserved fruits, wines, nuts, plants, flowers and nursery stock, are also desired, and $50 are offered for the best essay on orange culture. For the most artistic display $50 are offered. In an early issue we shall be able to present the premium list in exact form, so that exhibitors may know precisely what is open to them.

It is announced that the W. R. Strong Co. shipped the first carload of northern-grown oranges on Tuesday of this week. The fruit is from Butte county and destined for New York.

The Sale at Souther Farm.

The first annual horse sale at Souther Farm, which was fully announced in the RURAL in advance of its occurrence, was duly held and was very creditable to Gilbert Tompkins, the enterprising proprietor. The arrangements were first class in every respect, and the proceedings were without a hitch. An old stockman who has attended sales for the last score of years in different parts of the country, and is consequently a good judge, assures us that the sale was the best arranged and fitted out he has ever attended in this country. There was a large crowd in attendance, they were treated handsomely, and every convenience provided for their entertainment. Ample and well-planned seating arrangements during the sale were provided, which is a comfort too little thought of at such affairs. The sale was honest and square, and though prices did not meet anticipations in all cases, they were, we believe, to be fairly considered encouraging. We have not space at command for the details in this issue, but we desire to compliment Mr. Tompkins upon his manifest skill, enterprise and spirit of hospitality, as shown at his first annual sale, and to express the hope that it may prove but the first of a long and successful series.

A Government Spraying Device.

B. T. Galloway, Chief of the Division of Vegetable Pathology, U. S. Department of Agriculture, has devised an apparatus for spraying plants which need the application of fungicides or insecticides. Although it seems a small affair from a California point of view, and though the Californian would object on principle to packing on his back the bug and fungus medicine, the arrangement may prove of much value to our people who have to deal with diseases or insects affecting vines, nursery stock, garden plants and other low growths which can be best reached by a man walking among them. Apparently because of the large need for such application at the East, what is called the "knapsack sprayer" seems to best answer the demand. In this State the larger outfits, so contrived that the horses can move the weight, leaving the men free to handle the nozzles, will not only be used for work among trees, but will also be employed among vines and wherever else it may be practicable. Still the hand machine has important uses, and we publish the device of Prof. Galloway because it is public property and any one is at liberty to manufacture it for private use or for sale.

Fig. 1 shows the outfit in use, the pump being operated with the right hand, the nozzle held with the left.

Fig. 2 shows the reservoir and its appurtenances in detail. The reservoir is made of 16-oz. copper and holds a little over four gallons. Mr. Galloway says: "The hight of the reservoir is 16 inches, its breadth 15 inches and depth 5 inches, ten pounds of copper being necessary for a tank of these dimensions. When filled with the Bordeaux mixture, or any of the copper solutions now in use, the machine weighs practically 50 pounds, which is about as much as a man wishes to carry on his back for any length of time. In fact, we find very few men able to carry such a load constantly for more than a few days at a time. This is why we did not make the reservoir larger, as some advised us to do, thinking one of six gallons' capacity about the proper size. Where the pumps are being used three days out of every 15, as is the case with many vineyardists, a six-gallon reservoir would probably not be too heavy, but for a man using the machine six days in the week for three or four months, as must be done in large nurseries, it is simply out of the question."

FIG. 1—THE KNAPSACK SPRAYER IN OPERATION.

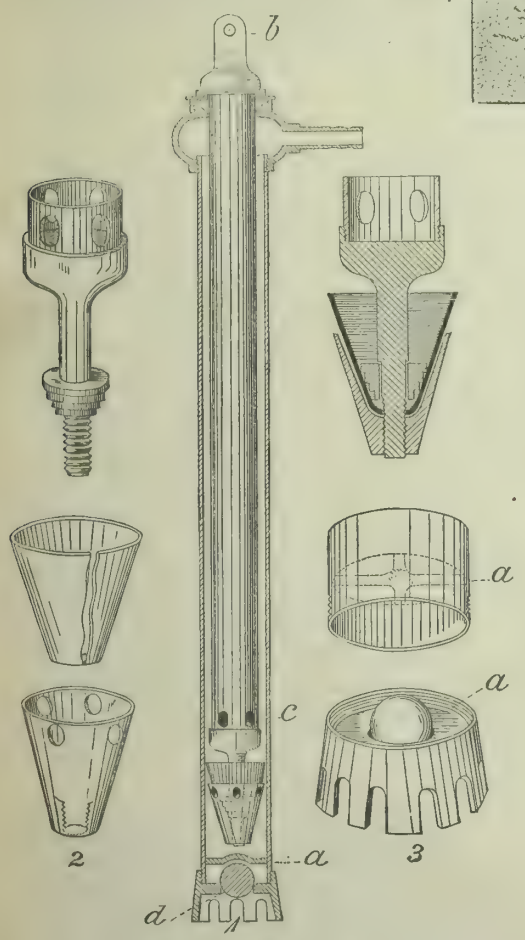

FIG. 4—THE PUMP.

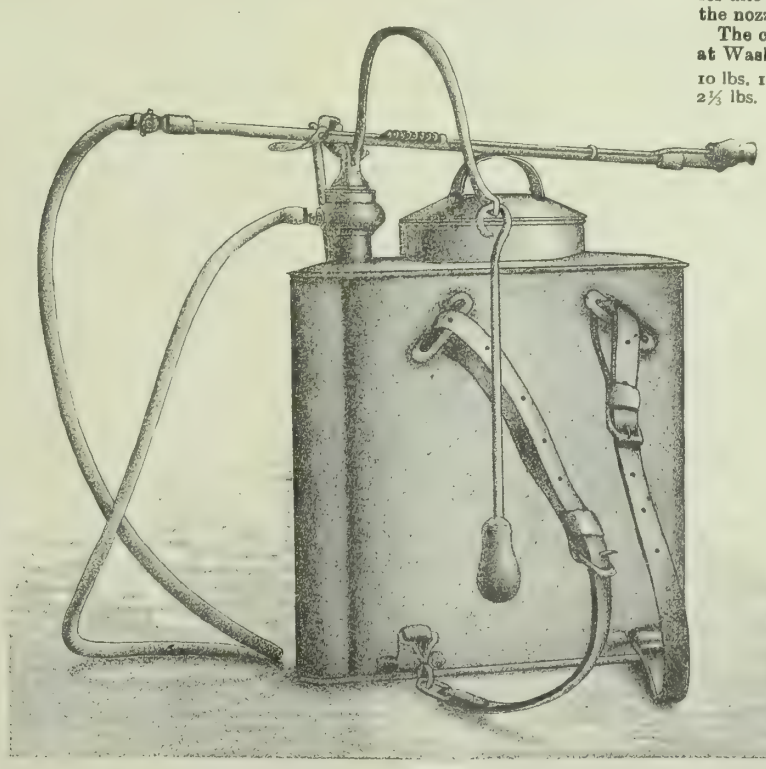

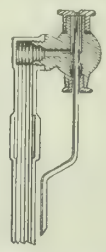

FIG. 2—THE RESERVOIR AND ITS APPURTENANCES.

SECTIONAL VIEW OF NOZZLE.

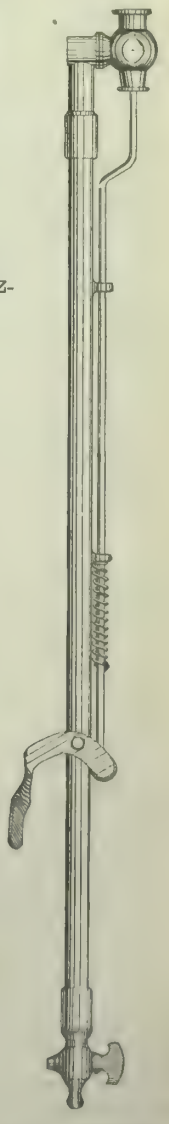

FIG. 6—THE ROD AND NOZZLE.

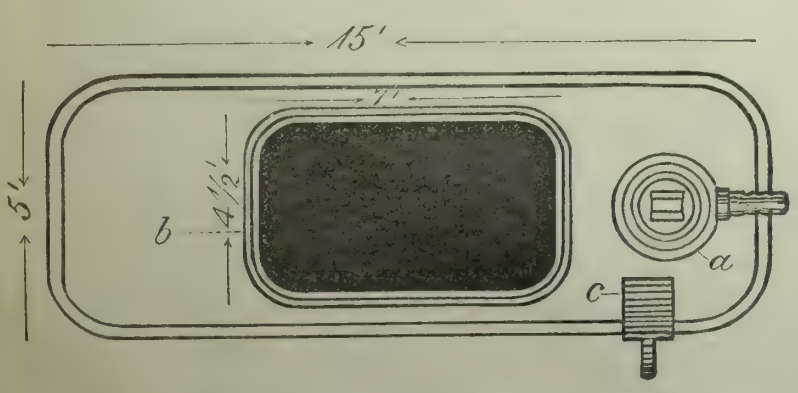

FIG. 3—THE TOP OF THE RESERVOIR.

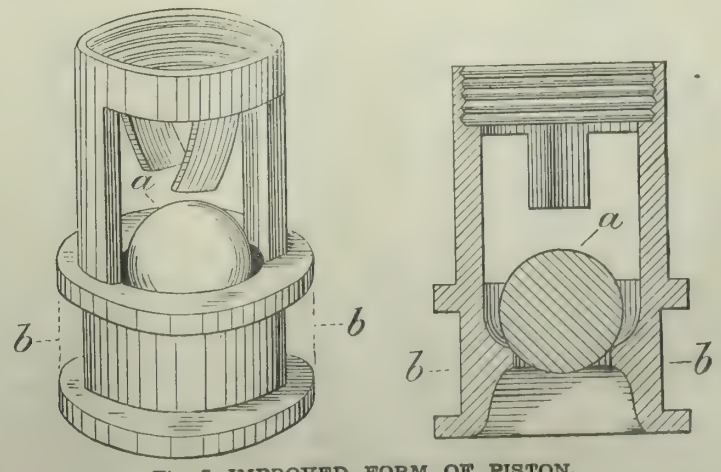

FIG. 5—IMPROVED FORM OF PISTON.

The bottom of the reservoir as well as the top is soldered in, and, as is shown in Fig. 3, the top is provided with two openings, one for the pump and the other for introducing the liquid. The pump orifice, *a*, is 1½ inches in diameter, while the opening for the liquid, *b*, is 4½ inches wide by 7 inches long. Above and surrounding this opening is a rim 1½ inches high, into which is fitted a strainer, made of fine copper wire. The strainer rests on a slight projection made in the copper at the bottom of the rim, and is removed by means of a handle across the middle. For closing the opening a lid made of copper, is used, this fitting down tightly in the rim.

Fig. 4 shows the pump, which is 17½ inches long and 1½ inches in diameter, and for making it 6 castings, weighing 2⅓ pounds, 15½ inches of 1½-inch brass tubing and 14¾ inches of 1-inch brass tubing, are required.

It is not necessary to go into the details of the various parts of the pump, as the figures and explanations thereto will, we think, enable any one to understand the offices of the various parts. The pump is soldered to the bottom of the tank, the solder being placed at the several points.

It is fastened at the top by means of solder, also; for some reasons this is objectionable, but as it will not be necessary to remove the tube, it is not a serious inconvenience after all. To obviate the difficulty, however, a nipple might be soldered in the tank, into which the tube could be screwed. The plunger is made in two styles, but for various reasons we have abandoned that shown in Fig. 4, and now use only the form illustrated at Fig. 5. This is screwed to the end of the tube, the end being left open to do away with the necessity of side portholes, as shown at *c*, Fig. 4. As seen in the cut, the plunger is not packed, the space *bb* being left for this purpose. Ordinary wicking is used for packing.

In using the pump the hollow piston is drawn up, creating a vacuum into which the liquid rushes through the opening *d*, Fig. 4. The piston is then forced down and this closes the valve *d*, Fig 4, and opens the one at *a*, Fig. 5. This operation being repeated, the liquid is forced out of the opening in a continuous stream, the latter being effected by means of the air-chamber in the piston. The figures show plainly the various parts necessary for working the pump, attaching the reservoir to the back, etc. We use, as a rule, about 4 feet of ⅞-cloth insertion hose, and this is fastened to the pump and lance by means of copper wire.

Fig. 6 shows the lance or rod and nozzle, the mechanism being clear in the drawings. The rod operating with a spring is a "degorger" for allowing sediment to be thrown out from the nozzle.

The cost of this apparatus, as manufactured at Washington, is as follows:

10 lbs. 16-oz. sheet copper at 23 cts. per lb.	$ 2 30
2⅓ lbs. castings at 25 cts. per lb.	62
Castings and labor on lance	2 00
Straps and hose	5
13 hours' labor at 40 cts. an hour	5 20
Total	$10 87

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

VEGETABLE FARM.—Irvington *Express*, Dec. 6: Robbie Crowell and Jim Millard have rented ten acres of land near Mr. Stivers' place, on the Niles road, and are busy getting it ready for the fine vegetables which they intend raising for market.

HAY FREIGHTS.—Livermore *Herald*, Dec. 4: Our haymen are making complaint of a new freight rating of the Southern Pacific Company for hay shipments, which they characterize as not only unjust but absurd. There are two sizes of box freight-cars in use for hay shipping, one 28 and the other 34 feet in length. One has been rated at 10 and the other at 12 tons capacity, the hay rate to the city being $1 44 per ton. The change was an arbitrary advance on hay in large cars, of 20 per cent. This makes the freight on ten tons of hay to San Francisco in a large car $18, while in a small car it is but $14.40. The shipper cannot discriminate, but must take cars, large or small, that are given him.

Butte.

SACRAMENTO VALLEY RAISINS.—Chico *Enterprise:* The last car of raisins from the Rancho Chico was loaded up to-day. Mr. Brown, the raisin expert, who has been superintending the curing and packing of the raisin crop, informs us that this last car makes a total of 13 car loads of raisins shipped to Chicago by the firm of Lossee, Kuhn & Larger from the Rancho Chico. Each car contains 1000 boxes, so that the total output is 13,000 boxes.

THE FLEMING CANAL.—Oroville *Mercury*, Dec. 5: Work has been commenced on the Fleming irrigation canal. This canal taps the Feather river in Thermalito, west of Oroville, and will extend over the country for many miles. The canal is 65 feet wide, and it is calculated that it will carry 50,000 inches of water. Work is now being pushed vigorously and water will be turned in next June. The canal will flow through a rich fruit country which is now covered with young orchards. It is this kind of work that is the making of our citrus belt. Oroville *Register:* With the big irrigation canal in Colusa, that of Brown's Valley in Yuba, the work now being prepared in Butte, together with one contemplated by the Big Bend Company and one by the Golden Feather, it looks as though this part of the State was rapidly waking up to the value of water.

Fresno.

IRRIGATION.—Fresno *Republican:* The Panoche Irrigating Canal Company is a corporation which has just been organized in this city. The purposes for which the corporation has been formed are to do all the acts generally accorded land and water companies and to exercise for those purposes the right of eminent domain. The capital stock of the company is $50,000, which has been subscribed for. The preliminary surveys for the reservoir sites and canals of this company have already been made, and Mr. Hughey, who is the engineer, will soon take the field to make permanent locations. The canal will be built this winter, but the construction of the reservoirs will have to be deferred until next summer, when the conditions will be more favorable. The company expects to impound enough water to irrigate 20,000 acres of land. The valley in which the company will operate is one of the finest in the State, and has simply been waiting for water, to make it the most productive in the county.

RAISIN PACK.—Fresno *Republican*, Dec. 5: Williams, Brown & Co. are already closed up, having shut down for the season Saturday night. The company would not make known their exact pack in boxes or by cars, but it easily reached the figures they started out to gain. The Home Packing Company has shut down, and has no cause for complaint concerning its first year's business. The pack was not all that was expected, but larger than was estimated immediately after the September rains. Schacht, Lemoke & Steiner stopped receiving raisins yesterday, but it will take them a week or ten days to use up the fruit now on hand. The pack has fully come up to expectations. Griffin & Skelley stopped receiving fruit on Saturday night, but it will require all the week to close up the business. A. Lusk & Co. are still receiving fruit, but will make an effort to close down by Saturday night. Cook & Langley were still receiving fruit yesterday, but are pushing matters so as to close up by Saturday night. It is somewhat difficult for the packers to stop operations this year; more difficult than they have ever before found it. The weather has been so fine that vineyardists have continued to cure raisins up to this time. The pack of the season will be considerably larger than that of last year, and in the main it is of excellent quality. It is not possible to get figures now, but all the houses profess a willingness to "furnish them as soon as we close and can foot it up." The only reliable figures on the subject will come from the railroad office at the end of the year.

RAISIN PACK AT MALAGA.—Malaga, Dec. 4: The El Modelo Vineyard Co. has shipped 87 carloads of raisins this season. Several lots of raisins were purchased by the firm from vineyardists about Traver, and Mr. Frazier says for quality they averaged well with any lots purchased in Fresno county or elsewhere. Their packing-house closed for the season last Saturday.

Inyo.

LAND CONSIDERED WORTHLESS NOW GROWS GOOD CROPS.—Independence *Independent*, Dec. 5: Twenty acres of alfalfa land on Watterson's ranch, near Bishop, got flooded last winter, and in the spring was so tramped over by stock that the alfalfa was ruined. The ground was plowed and sown with wheat. Twenty-six tons of first-class wheat was gathered from the 20 acres. A few years ago this land was considered utterly worthless, like much of the same kind in Owens valley.

Mendocino.

HAY IS SCARCE.—Ukiah *Republican*, Dec. 4: Hay is now selling at $16 to $18 per ton, and almost unobtainable at that. During the last two weeks a number of carloads have been shipped in from Petaluma at a cost of $15 or $16 per ton there. The cause of the scarcity lies in the fact that it was impossible to even put in volunteer last winter, and also because the increased acreage of hops and fruit is crowding out the grain and hay fields. The large amount of hauling to be done at the asylum early next spring will be apt to make hay still dearer.

PRUNE NOTES.—Ukiah, Dec. 4: Sam McGimpsey of Boonville and Mr. Weller of Belle Valley intend to plant prunes to a considerable extent this spring. McCowan of Anderson will erect a fruit-drier of good capacity soon. Mr. Eldred of Christine had 50 bearing prune trees this year. The crop was 1800 pounds of dried fruit, bringing 7 cents per pound or $126 from a half acre of fruit, which is certainly encouraging.

Napa.

VINTAGE OF 1890.—St. Helena *Reflector*, Dec. 5: Jno. H. Wheeler of Bello, Napa Co., who was for several years Chief Executive Officer of the Viticultural Commission, speaking of the vintage, said: "There has never been a season in this State, in my judgment, when there has been so much good wine made as this year. Everything has been favorable, especially the weather of the past few weeks, which has brought a large second crop of grapes just to the right perfection for wine purposes. The second crop was unusually large this season. I only finished my grape crushing last week. I expected I would crush about 250 tons. Instead of that, nearly 350 tons have gone into the press. It is a good thing for the State that the year's product generally is of excellent quality. More fine varieties of wine grapes have been picked this year and fewer Zinfandel or Malvoise have been crushed. For red wine around my way, the grape known as Crabb's Burgundy has been planted largely, and this season has yielded heavily. This, undoubtedly, is one of our best claret grapes. A quantity of Cabernet, Grenache and Carignan has also gone into the press this season. For white wines, our growers started better a few years ago than those who planted Zinfandel for claret. The Riesling is a fine white grape. The Sauvignon Vert, which has been also widely planted, has given a good crop this year."

Orange.

AN ANAHEIM FARMER'S WAY.—Los Angeles *Herald*, Dec. 4: Victor Schumacher sowed two acres to barley for hay Nov. 15, 1889; the following April he took off four tons of hay, plowed, irrigated and planted the same piece with corn; about the middle of August he planted potatoes between the rows of corn, then took off his cornstalks and all, regular Eastern style, and inside of 12 months from Nov. 15, 1889, he had his third crop from the same land sacked and ready for market at $1.40 per cental for his spuds. His potato rows were unusually far apart, and he had only 30 sacks per acre.

Placer.

A WONDERFUL TREE.—Grass Valley *Tidings:* What may be styled the "boss fruit tree" of California and the world is on the ranch of R. Hector in Placer county. In a paper read before the recent convention of fruit-growers at Santa Cruz, he said that his famous cherry tree had during the past five years brought him a gross return of $1800. Last year, 300 ten-pound boxes of cherries were picked from this tree. The fruit has brought an average return of $1.50 a box during the five years. The tree is of the Black Tartarian variety, is 35 years old and 60 feet in hight, while its trunk has a girth of over ten feet at a point six feet above the ground. It stands upon bench land, of sandy loam, near the American river. The soil is very deep and rich. The ground is irrigated immediately after the fruit is picked from the tree. The location is warm and sheltered, and the fruit comes very early into the market.

San Benito.

STOCK NOTES.—Hollister *Free Lance*, Dec. 4: Stock men are happy. Cattle have stood the summer and fall season well and are in excellent condition for the winter. Feed was beginning to start before the rain of Tuesday night, and it is now coming out rapidly. In a short month the hills will be green with verdure and cattle will be luxuriating in plenty of new feed.

San Diego.

BIG SHIPMENT OF WHEAT.—San Diego *Union:* It is a good sight to see the Stracathro taking on wheat at the railroad wharf. Carload after carload is daily going into her capacious hold. She loaded steadily for about ten days at Spreckels Bros., wharf, and two days ago moved to her present berth. When she sails for Liverpool she will have on board 1700 tons of wheat, 34,000 sacks, equal to about 170 carloads, making one of the largest cargoes of grain ever shipped from this port.

San Joaquin.

FINE PERCHERON STALLION.—Stockton *Independent*, Dec. 2: George Warren of France arrived in Stockton Sunday, his mission being to deliver to C. K. Bailey, the Linden farmer, a draft horse, a celebrated two-year-old Percheron stallion that is a beauty and weighs about 1300 pounds. Mr. Warren sold several other horses in the United States. When he started from France he had a French coach horse for L. U. Shippee, which he says was as fine an animal as he ever saw. After nine days out, the horse took sick and died.

San Luis Obispo.

NURSERY TRUST.—S. L. O. *Tribune:* Owing to the scarcity of nursery stock and the exorbitant prices charged, but few trees will be planted this season. We have suffered greatly from this state of affairs for the last three seasons. Why do not the nurserymen increase their production to meet the ever-increasing demand? When questioned on this point lately, one of them replied that it was to their interest to keep down the supply and keep up prices; that in fact they were making a big thing out of it. This, then, is the explanation. The most prosperous industry in the State and the one on which the future prosperity of this section of country is based is being throttled by a few nurserymen who have undoubtedly combined to enrich themselves by robbing the farmers. Surely it is the duty of the whole community to join hands with the Farmers' Alliance to crush this and the many other combinations that meet us whichever way we turn, ready to sap our strength and drink the very life-blood of our prosperity.

Sonoma.

A PROFITABLE SEASON.—Sonoma *Democrat:* All the way from Cloverdale down the Russian River valley, by way of Geyserville, Dry Creek and Healdsburg to Santa Rosa, and down the Los Guilicos valley toward Sonoma, the winemen are jubilant. The fruitmen who are fortunate enough to have orchards in full bearing of prunes, peaches and the like, likewise have reason for congratulating themselves. During the past season larger prices by far were realized for the deciduous fruits than ever before. The wineries, which barely bid enough in 1889 to pay for picking and hauling the common grapes to press, the past season found the farmers picking and drying their grapes, and the latter have realized a better price for their grapes in that form than in any other. It was the first chapter after the new leaf was turned in the prosperity of this coast.

Sutter.

FINE RAISINS.—S. H. Raub is packing some fine raisins at his place down the levee. He packs them in what is styled London layers, with fancy label and wrapper. From 142 square rods Mr. Raub will put up 800 cases of raisins. A pretty good showing of this land's productiveness. His ranch is Government land along the Sacramento river, and was overflowed last winter only by breaks in the levee on his own land.

A FLOATING DAM.—Yuba City, Dec. 5: The Levee Commissioners of District No. 1 finished putting in a floating dam at O'Neil's Landing last Tuesday. At that point there has always been considerable wash on the bank caused by the current of the river, and the idea of the dam is to prevent further damage and to cause the sand and slickens to fill in and form a new bank. Large logs are lashed together in threes or fours and fastened to a heavy cable a short distance apart and the entire chain of small rafts is fastened to the bank securely, but allowed to float in the water. The logs act as a check on the current which forms an eddy and the debris is deposited under the logs and thus improves the bank. This system has been successfully tried heretofore.

A BENEFICIAL RAIN.—Yuba City, Dec. 5: The long-looked-for rain began falling here last Tuesday about noon, and has continued with high winds with but short intermissions. It is to be hoped that during the remainder of the month there will be fine weather, as our farmers are anxious to begin plowing. Besides considerable summer-fallow to be plowed and sown, thousands of acres of winter plowing will be put in if the season is favorable. There is now plenty of moisture to start the seed to growing and insure comparatively good plowing. The pasture lands will also soon produce an abundance of feed.

OUR VINEYARDS AND NEW VARIETIES OF GRAPES.—Yuba City *Farmer*, Dec. 5: In passing over our county recently, we noted many young vineyards which will add greatly to our already large grape product. We note that nearly all grapes planted now are the raisin varieties, with a small percentage of Zinfandel for wine-making. Among the varieties most sought after, the Thompson's Seedless takes the front rank at present, and it is without doubt a grand acquisition to our raisin varieties. It has always been a mystery to us that our vineyardists have experimented so little with the vine. No effort has been made in this State to produce new varieties from the seed. It is not only possible but it is highly probable that many improved varieties could be had if an effort was made. Here both the American and foreign grapes reach perfection side by side, which makes it possible by hybrids to combine the best qualities of both. Grape seed for sowing is entirely freed from the pulp and then mixed thoroughly with pure sand, to be kept moist but not wet throughout the winter. It should be placed where the temperature is evenly cool, above the freezing point, but a little freezing will do no harm. The seed should be sown rather thickly in the spring in a cool frame and transplanted to the field when thoroughly rooted, after danger of frost is over, or if specially strong plants are desired, they can be picked out three inches apart in the frame and allowed to reach a larger size before transplanting.

Stanislaus.

WHAT A SQUIRREL EATS.—Oakdale *Leader*, Dec. 6: C. W. Austin shot a squirrel that had 1020 grains of wheat stored away in the pouches of its cheeks. At this daily rate of consumption, 100 squirrels would probably eat a sack of wheat in five days, or about six sacks a month. This would keep an ordinary family provided with flour.

Tehama.

THE RIGHT KIND OF WINTER.—Red Bluff *Cause*, Dec. 6: The outlook for the farmers at the present time is most encouraging. One farmer said to-day he had set six or seven plows at work, and that he would take a winter of the kind we have been having in preference to the kind we had last winter every time. When the rain comes late in the season, it usually continues late in the spring, and growing grain is greatly benefited by it. A great deal of grain will be sown between now and next March.

MORE TREE-PLANTING.—Anderson *Enterprise*, Dec. 4: Mr. Hopkins has closed the purchase of the 8000-acre Barry tract of land opposite Cottonwood, in Tehama county. He will superintend the planting there, this season, of 500 or 600 acres of fruit trees on the bottom adjacent to the town of Cottonwood. Mr. Hopkins will also, besides replanting all of the trees lost on the Hopkins Model Colony this year, add thereto about 65 acres. The additional orchard will be on the east side of the road running through the tract. The Barry tract of land adjoins on the west the 4000 acres recently purchased by A. T. Hatch of Wm. Owens, showing that the extreme north of Tehama county, adjacent to Shasta, is becoming a region of vast improvements.

Tulare.

ORCHARD AND VINE NOTES.—Visalia *Delta*, Dec. 4: The Visalia Fruit and Land Co., an incorporated company with $88,000 capital, has purchased the S. C. Brown ranch, consisting of 440 acres, paying therefor $100 per acre, or $44,000. The land lies southeast of town, and will be planted to fruit this season. One hundred and forty acres will be planted to trees, 30 acres in vines. There are at present 30 acres in vines on the place. Next year the remainder of the ranch will be planted to fruit.....F. B. McKevitt of Vacaville has purchased the D. G. Overall ranch. The ranch consists of 240 acres, and the place will be planted to peaches and prunes. Mr. McKevitt and business associates have filed articles of incorporation (capital $100,000) in the Secretary of State's office at Sacramento. The name of the organization will be the Giant Oak Fruit Company.

LARGE CORN.—Visalia *Times*, Dec. 4: U. D. Switzer last year secured some seed corn from Arkansas, from which he raised a crop this season. The ears of corn are ten inches in length, and girt over eight inches. The seeds are extra large and full. The corn was planted late, on ground from which a crop of hay had been harvested this season, and it is probable that the corn crop would have produced better had it been planted earlier. Then again, it was not cultivated after being planted, which probably retarded its growth also. Nevertheless it is larger corn than is generally raised in this vicinity.

ARIZONA.

BEANS IN THE MOHAWK.—Yuma *Times*, Dec. 3: Charles Landon, a rancher in the Mohawk valley, has shown this season that beans can be made a profitable crop there. He planted several acres to beans on the 20th of last March, but as he did not know exactly the best way to treat them, the yield was only enough to replant two acres and a half. He replanted with the seed obtained from the first crop on the 25th of August. This time he plowed first, then irrigated and then sowed his beans broadcast, harrowing afterward. The result was a yield of a ton to the acre. He sold 1000 pounds at home for $45, which would give a return of $90 per acre, and this, with two crops a year from the same ground, makes beans a good crop to raise. California ships beans to Boston, and Yuma county might do the same.

CALIFORNIA CATTLE TRAIL.—Tucson *Citizen*, Dec. 6: Saturday last a number of prominent cattlemen met in this city and perfected a temporary organization. Among other objects of the new association will be to arrange for the driving of cattle to California, which it is the general opinion of cattlemen can be done via the trail taken by W. L. Vail last spring, at a cost of not more than $1 per head. Already $10,000 has been subscribed for the purpose of locating wells along the route and constructing a ferry-boat on the Colorado river. Owing to the heavy rains the present year, the necessity of wells will not immediately arise, but the money will remain in the hands of the treasurer for any contingency. The organization starts out sufficiently strong to carry out its work.

NEVADA.

ANGORA GOATS.—*Central Nevadan:* Twenty miles south of Battle Mountain, on the foot-

hills of the Lewis range of mountains, where Mill creek enters Reese river valley, is located the most prosperous Angora goat ranch on the coast. Fourteen years ago a small band of goats with silky hair was taken from the Sheriff Swift ranch, half a mile out of Carson, to the Mill creek country, where the goats have since flourished on the rich bunch-grass of an average Nevada cattle range, until now the band numbers many hundreds, from which yearly clips of long, silky hair are taken and in baled form shipped to the Chicago market, there commanding the highest price. C. P. Bailey, owner of this ranch, is also the proprietor of two Angora flocks in California, one in Texas and one in Mexico. The large glove factory in San Jose is run by him; so altogether he is a practical goat man. Of the five flocks mentioned, the Nevada-nurtured gives the best returns, showing more increase, largest averaged clips and fattest animals.

CROP NOTES.—Virginia City *Chronicle:* The Monthly Weather Review of the Nevada State weather service reports as follows: Belmont, Nye county—Geo. Nicholl, Observer: The farmers are finishing up their third crop of alfalfa, also their threshing. The hay crop generally has been over the average and of excellent quality, while grain has been a fair crop and in places exceptionally good, yielding in some instances over two tons to the acre. The apple crop has been enormous. The Duckwater orchard (Irwin's place) showed acre upon acre of apple trees of every known variety, the branches of which were literally bent to the ground with luscious fruit. The vegetable crop has been fair, although some varieties suffered from the late cold spring weather.

ENTOMOLOGICAL

Chemical Fumigation for Scale Insects.

[An essay by H. K. SNOW, Tustin, read at the Santa Cruz Convention.]

I have not the time to write any extended remarks on fumigation by the use of hydrocyanic gas treatment, but as I feel deeply interested in citrus culture, and having been using this gas for several months, I feel it my duty to report, according to the request of many fruit-growers, my experience. I made my tents and commenced February 15th of this year under the instructions of A. D. Bishop. I made two large tents 30 feet high and 20 feet in diameter and the other two were 22 feet high and 17 feet in diameter out of ten-ounce blue denim; sized them first and then painted them, using lead, oil, lampblack and spirits turpentine, which makes them perfectly dark and tight. My first work was done on my lemon orchard by using on trees from 12 to 14 feet high about four ounces cyanide of potassium and four measured ounces of sulphuric acid turned into eight ounces of water and let the tents remain over the trees for 15 minutes; but as the work progressed I found that the time was not long enough and that the gas was not as strong as it ought to be, so now we use about one-fourth more material and let it remain under the tents 25 minutes and trees 20 feet high 30 minutes.

The work is very simple and any one with ordinary intelligence can use it after seeing it done. The first thing we do to prepare to gas a tree is to take an earthen vessel that will hold six or eight quarts and set it directly under the tree with, say eight ounces of water. We then weigh out four ounces of cyanide and put it into a tin cup and then measure out four ounces of sulphuric acid and put that into an earthen mug or pitcher and set them alongside of the vessel with the water under the tree. We then place our tents over the trees and one man lifts up one side of the tent and another man crawls under and empties the acid and cyanide into the vessel with water and puts a tin pan with cleats nailed inside over the vessel so that it will turn the gas downward and not spatter on the tents. He then crawls out and the tent is let down; then see that the folds of the tents are well on the ground, and in 25 minutes the tree is fumigated. I will say right here that there is not one scale left alive where there are 100 on the best-sprayed tree ever done. I cannot say that it kills every bug when done in the best way, for there will once in awhile one escape for some reason unknown at present, but I think it is the only solution of the raising of marketable citrus fruits where the red scale has a foothold. Spraying with the best washes known so far will not do it, and therefore too much honor cannot be given to Prof. Coquillett and Alex. Craw for discovering the gas treatment and Messrs. Bishop, Wall and Jones for putting it into practical use by persistently working with it until they proved that it could only be done successfully in the night-time, the rays of the sun having such an effect upon the gas as to burn the trees in daylight.

To show the difference between gassing trees and spraying I will state that I went into an orchard that I had treated and picked an orange each from seven different trees that were covered with red scale, and in coming home I passed an orchard which had been sprayed with the resin wash about two weeks, so I picked off an orange and thought to myself it was a good job. When I got home I took my glass to examine it, and found several young red scale. I then took a pin and in a few minutes killed 70 young scales crawling on that one orange. I then took from my pockets the seven oranges taken from seven different fumigated trees and could not find a *live* scale on them.

Fumigation by hydrocyanic gas treatment is the greatest boon ever discovered for the orange grower. It kills the black and brown scale as well as the red scale, and I have no doubt in my mind but what it will kill the white cottony cushion and San Jose scale also.

The cost is not over one-fourth to one-half more than for spraying. In fumigation, there is no missing a limb nor half spraying the top; no chance to be careless or slovenly. Every part of the tree from top to bottom is completely enveloped in gas, and if you have used good judgment in the amount of your ingredients, you may depend upon it that not many scale are left to tell the tale.

In making the tents, I would recommend that the diameter be nearly as large as the hight. You can place the tent over the tree easier and quicker and with less injury to limbs and the fruit. The tent folds together so completely that it can be adjusted to a small tree and not waste the gas.

Lime, Salt and Sulphur Wash.

This is at present the most popular application as a winter wash for scale insects on deciduous trees. The progressive fruit-growers of Sutter county have given special attention to the preparation of the material to secure the best results, and we give below the formula approved by R. C. Kells, J. C. Gray and H. P. Stabler, Horticultural Commissioners of Sutter county, as follows:

The Horticultural Commission, at a recent meeting, decided to recommend to the fruit-growers of Sutter county the application of this popular wash this winter to all deciduous trees infested with San Jose scale. The following formula has been used with great success throughout the State:

40 pounds unslacked lime.
20 pounds sulphur.
15 pounds common stock salt.
Water to make 60 gallons.

Boil 10 pounds of lime and the 20 pounds of sulphur in 20 gallons of water for half an hour or more, or until both lime and sulphur are dissolved. The sulphur must be thoroughly dissolved and mixed with the lime; the mixture will then be of an amber color. Then slack in an empty half barrel 40 pounds of lime with soft hot water, using enough water to thoroughly slacken the lime, and keep it in a liquid form. After the lime is slacked, add 15 pounds of common stock salt, while the material is still hot.

When the salt is well dissolved, mix the two lots together with sufficient water to make 60 gallons of spraying material, which will then be a thin whitewash. The material should be strained, after being thoroughly mixed, through a fine wire strainer.

Apply the wash milk-warm or warmer, with a spray pump.

Use either a "New Bean nozzle," or a San Jose nozzle. If the latter is used, the usual brass disc accompanying it should be replaced with a rubber disc to prevent the material clogging the nozzle. Use only when foliage is off the tree.

A Great Event

In one's life is the discovery of a remedy for some long-standing malady. The poison of Scrofula is in your blood. You inherited it from your ancestors. Will you transmit it to your offspring? In the great majority of cases, both Consumption and Catarrh originate in Scrofula. It is supposed to be the primary source of many other derangements of the body. Begin at once to cleanse your blood with the standard alterative,

Ayer's Sarsaparilla

"For several months I was troubled with scrofulous eruptions over the whole body. My appetite was bad, and my system so prostrated that I was unable to work. After trying several remedies in vain, I resolved to take Ayer's Sarsaparilla, and did so with such good effect that less than one bottle

Restored My Health

and strength. The rapidity of the cure astonished me, as I expected the process to be long and tedious."—Frederico Mariz Fernandes, Villa Nova de Gaya, Portugal.

"For many years I was a sufferer from scrofula, until about three years ago, when I began the use of Ayer's Sarsaparilla, since which the disease has entirely disappeared. A little child of mine, who was troubled with the same complaint, has also been cured by this medicine."—H. Brandt, Avoca, Nebr.

Ayer's Sarsaparilla

PREPARED BY

DR. J. C. AYER & CO., Lowell, Mass.

Sold by Druggists. $1, six $5. Worth $5 a bottle.

THE ONLY TRUE FERTILIZER

Is the GENUINE Compound of the MEXICAN PHOSPHATE & SULPHUR COMPANY prepared from GUANO and rendered soluble by the application of acids.

This manure is an ENRICHER of the soil and not, like others, a STIMULANT only; it will do for the land what no other can in rendering it PRODUCTIVE without IMPOVERISHMENT.

Its analysis is reliable; its work is immediate and effective, and for results we point with confidence to the ORCHARDS of RIVERSIDE, where it has been liberally used for the past three years.

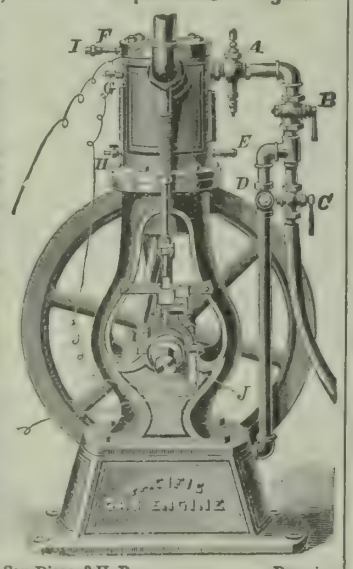
It can be prepared to suit any land, with or without potash, as occasion may require. It is rich in PHOSPHORIC ACID, and can be made as rich in NITROGEN as the most deficient soil may exact.

WE GUARANTEE ALL WE CLAIM FOR IT,

Viz.: TO BE THE MOST COMPLETE FERTILIZER ON THIS COAST.

For Sale in Lots to Suit by

H. M. NEWHALL & CO.,
AGENTS.
309 & 311 SANSOME STREET, SAN FRANCISCO, CAL.



N. B.—By courtesy of the Southern Pacific Company we have low rates on this Fertilizer to all parts of the State.

PACIFIC GAS OR GASOLINE ENGINE.

PATENTED JUNE 17, 1890—NOS. 430,504, 430,505, 430,506.
Also in Great Britain and other foreign countries.

Starts Instantly Without the Necessity of Boiler, Fire or Experienced Engineer.

The Champion Spray P

The cut used herewith illustrates Woodin & Little's new spraying pump, the "Champion," and its adaptability for the work for which it has been especially designed.

After ten years' experience in the spraying ipump business, and the wants of orchardsts therein, we have built this pump as being best suited to their requirements. Before putting it on the market we submitted the model to several prominent fruit-growers, and as the design met with their unqualified approval also, we have no hesitation in declaring it the best spray pump ever made, and justly entitled to be named the "Champion."

As will be seen from the illustration, the pump is very compact and strong. It is perfectly double-acting and has a brass-lined cylinder. The motion of the piston is horizontal. The handle is so arranged that the leverage is very powerful, and the movement is easy and natural. The air chamber is unusually large, admitting of the continuous and even discharge necessary for good and thorough spraying.

The valves are metal and have metal seats. They all lie directly beneath the air chamber and are readily exposed on loosening four bolts, and without touching the cylinder. The plunger is a solid disk of vulcanized rubber, and is made so that the wear may be instantly taken up by merely turning a nut.

The pump has a double suction and a double discharge, one each on either side. The cut shows the pump in operation with four lines of discharge hose. It can be readily arranged for a less number if desired. With this pump one man can easily keep four men busy spraying, as well as attend to the team and the stirring of the liquid.

WOODIN & LITTLE,

San Francisco, Cal.

Christmas Presents—Unique, Elegant, and Useful.

The Sterling Furniture Co., one of the leading firms in San Francisco in their line of business, were obliged some months ago, from the magnitude to which their business had increased, to remove from their original location on Sutter St. to the Rosenthal building, Nos. 1039 and 1041 Market St.. Here they occupy six floors and the basement. The intending purchaser will find in their extensive stock all the novelties that have been recently introduced in furniture, as well as furniture of the latest designs, notably antique and 16th century and richly upholstered. Folding beds with the latest improvements, supplied with woven wire mattresses of the Byington pattern. Carpets of all kinds in the latest patterns. Rugs—genuine Persian rugs. Curtains of every description, including those of the finest lace and the richest satin damask. In fact, purchasers will find a superb assortment from which to select, suited to their requirements and the weight of their purses, and the goods, like the name of the firm, *Sterling* in quality, and prices at the lowest rates. The firm besides being importers are also manufacturers, having an extensive manufactory located at the corner of 17th and Folsom streets, where is manufactured to order anything required in their line. To facilitate parties in going to housekeeping, the firm offers to furnish four rooms for $150, the outfit consisting of a parlor set of 7 pieces, a bedroom set of 10 pieces, a dining-room set of 7 pieces and a kitchen set of 3 pieces; and carpets for the four rooms, of which the one for the parlor is of fine Brussels, the dining-room and bedroom of Ingrain, all of superior quality, and the kitchen to be covered with Linoleum. All these appointments are first class, and the wonder is that any one will continue to live in lodgings when they can furnish a home so elegantly and for so little money, and enjoy the comforts of their own fireside. For the convenience of those who may for a time wish to store their furniture, there is fitted up on the upper floor of the building a number of small rooms furnished with lock and key where their goods can be stored separately, the storage being furnished at the lowest rates. It is not in the scope of this article to describe in detail the many unique and elegant pieces of furniture with which these warerooms are filled. Suffice it to say there can be found here whatever one may desire to have in furniture, carpets, curtains, etc., from the most costly and elegant to that of plain, every-day use, every article of which is first class and furnished at popular prices.

"Battle of Gettysburg."

The celebrated Panorama of the Battle of Gettysburg and Museum, corner Market and Tenth Streets, San Francisco, is a wonderful production. It has captured the entire State, doing a great deal of good. There is no better way of passing an hour or so, and in studying American history, than by visiting this Grand War Panorama. If any of our readers have not seen it, it will pay them well to do so.

A CONVENTION of labor leaders and workers of the United States is to be called in February, at which a platform of principles will be adopted to be presented to the country for ratification at the fall elections.

THE 41,000,000 gallons of spirits made in the United Kingdom in 1889 were mostly used in England, and nearly three-fourths of this vast quantity were drunk as a beverage.

The correctness of the maxim "nothing succeeds like success" is well exemplified in Ayer's Sarsaparilla. The most successful combination of alteratives and tonics, it always succeeds in curing diseases of the blood, and hence its wonderful popularity.

NEW LANDS TO BE TILLED.

The fruit boom this season has apparently had a stimulating effect upon agriculture of all kinds. Hundreds of acres of new land are being cleared, and orchards and vineyards will be set out during the coming winter and spring. H. B. Litton, of Forestville, while in town Saturday informed a *Democrat* reporter that he expected to increase the tillable area of his ranch by several acres this winter. "I have discovered the cheapest and easiest means of clearing my land," he continued, "and in consequence shall do more grubbing than I had first intended."

"Is it not quite expensive to grub an acre of hill land that is well covered with scrubby timber?" queried the reporter.

"It used to be when we had to rely on hand-grubbing, but now we use a machine and save thereby $50 an acre. I use the machine made by George Harvey, and to say that it works like a charm would be expressing the unanimous verdict of all who have seen it in operation. By the use of this machine I can grub out a tree in two or three minutes that one man could not take out in half a day. This will afford an idea of the great saving which the machine must be to any one who has any land to grub. I made a test on one occasion to satisfy myself and some of the neighbors who had come over to my place to see the machine work, and the result was most surprising to those who had never seen a tree removed from the ground except by hand. I hitched on to a tree 2½ feet in diameter, and in less than three minutes it lay on top of the ground with its every root clean and free from the soil. Some of the roots were nine feet in length. The power of the machine is practically unlimited and it works on a sidehill or on level ground. The power of one horse is multiplied 36 times without an extra block, and every block used adds the power of 36 horses. Thus you see the power may be multiplied indefinitely, and when once the chains are attached to the base of the tree, it is bound to come."

Mr. Litton is enthusiastic in his praises of the machine, and asserts that no land-owner in California can afford to be without one. One of the great advantages possessed by the machine is the thoroughness with which it does its work. Every root is taken out clear and clean, which is almost an impossibility in hand-grubbing.—*Santa Rosa Daily Democrat.*

Traction Engines.

A RURAL representative visited the Best Agricultural Works one day last week. There is now a full force of men at work on traction engines and combined harvesters. A 50-horse traction engine was nearly completed, destined for Grayson, Stanislaus county. Four more were on the stocks and will be finished before the 1st of February. Ten combined harvesters (horse-power) were well along and will be completed with quick dispatch to make room for 10 combined steam harvesters. The agricultural machinery and implements built at these works are gaining an extensive notoriety. Mr. Best has received letters from Sweden, Europe, Ohio, Illinois and Mexico making inquiries concerning his traction engine.

A very fine illustrated catalogue has just been issued, which will be sent on application. Any one interested in this new development of industrial advancement through locomotive power of traction engines would do well to visit the Best Agricultural Works at San Leandro, one-half hour's ride from San Francisco.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

ENGLAND'S military garrison in Ireland is numerically larger than the regular army of the United States.

A Pioneer Horse Firm.

Considerable interest pertains to the advertisement of H. Wilsey & Co. of Petaluma, Cal. They were pioneers in the introduction of French draft horses to this State and have long been known for their work in this direction. Perhaps their importation in 1882 was the first direct from France to this State, and they have made several since. They now announce bargains because of the necessity of closing a partnership.

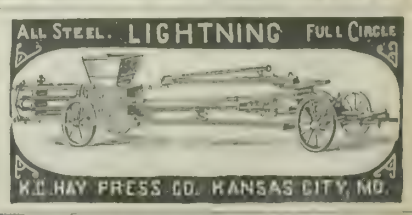
Sold by all druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars. Address LAWRENCE, WILLIAMS & Co., Cleveland, O.

Land to Rent.

A Splendid Opportunity



To rent on exceedingly favorable terms, either for cash or a reasonable portion of the production, 164 acres of well-tilled land, a very comfortable house, with abundant shade trees, and splendid well of excellent healthy artesian water flows through the garden and door-yard. Water sufficient to irrigate 100 acres or more. Much of the land leveled, checked and ditched. Large barn and convenient outhouses. About 25 acres of alfalfa, and seven of orchard. The land is conveniently fenced into subdivisions, including a good pasture, large reservoir, etc. This place is one of the pleasant, healthfully located places in the Tulare valley, seven miles S. W. of Tulare city. Possession given immediately. Also, 156 acres adjoining on the east side and 160 acres on the west side of the above tract, making FOUR HUNDRED AND EIGHTY ACRES all well-tilled, productive land for all kinds of grain-growing, etc. Also 640 acres three miles from Pixley, and 160 acres within one mile of Tulare city, also on very favorable terms.

Apply soon to Capt. Thos. H. Thompson, Tulare; E. M. Dewey, Porterville; or A. T. Dewey, 220 Market Street, San Francisco.

Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

MESSRS. H. H. MOORE & SONS, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (10½ gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful blisters. Respectfully yours,
FRANK H. BURKE,
Breeder of Registered Holsteins and Berkshires.
Menlo Park, Cal., January 22d, 1889.

S. F. Market Report

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Dec. 10, 1890.

As the year draws to a close, general business falls off. Although trading the past week was quiet in cereals, there was a hardening tendency in wheat and barley; oats were firm, while corn was easier. Rains last week have been followed by outdoor work. With more rains soon, the effect for the better will be quite marked. The money market at the East and abroad continues to work close, causing failures, destroying confidence and working against farm products, and yet the attention of Congress is drawn to political measures instead of laws for our relief. The English and Eastern wheat markets have fluctuated slightly. The following is to-day's cablegram:

LIVERPOOL, Dec. 10. — Wheat — Hardening. California spot lots, 7s 4d@7s 6d; cargoes off coast, 37s 3d to 37s 6d; just shipped, 37s 3d; nearly due, 37s 3d; cargoes off coast, steady; on passage, quiet but steady; Mark Lane wheat, quiet but steady.

Foreign Grain Review.

LONDON, Dec. 8.—The *Mark Lane Express*, in its review of the British grain trade, says: Although supplies of English wheat are limited, prices are barely supported. Foreign wheats are stronger. Corn is firm; American advanced 6d. At to-day's market English wheat was neglected, except fine whites, which were steady at 37s 6d. Foreign wheats were firm.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per ctl. for the past week:

	Dec	Jan.	Feb	Mar.	April	May.
Thursday	7s8½d	7s8½d	7s8½d	7s8½d	7s8½d	7s8½d
Friday	7s8½	7s8½d	7s8½	7s8½	7s8½d	7s8½d
Saturday	7s8½	7s8½d	7s8½d	7s8½d	7s8½	7s8½d
Monday	7s8½d	7s8½d	7s8½d	7s8½d	7s8½d	7s8½d
Tuesday	7s8½d	7s8½d	7s8½d	7s8½d	7s8½d	7s8½d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday	37s6d	37s3d	37s3d	Firm.
Friday	37s6d	37s3d	37s3d	Quiet.
Saturday	37s6d	37s3d	37s3d	Firm.
Monday	37s6d	37s3d	37s3d	Quiet.
Tuesday	37s6d	37s3d	37s3d	Dull.

Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

Day.	Dec.	Jan.	Feb.	Mar.	May.	July.
Thursday	102½	103½	....	105⅝	105½	...
Friday	102⅝	104⅛	105⅝	105⅝	105⅝	...
Saturday	102⅛	103½	....	105½	104⅞	...
Monday	101⅛	102½	103⅝	104½	103½	...
Tuesday	102⅝	103⅛	....	105⅝	105⅛	...

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

Day.	Dec.	May.	June.	July.
Thursday	90⅝	99½	....	....
Friday	....	99	....	....
Saturday	....	97⅝	....	....
Monday	....	97⅝	....	....
Tuesday	....	98⅛	....	....

NEW YORK, Dec. 10.—Wheat—$1.04¾ for cash, $1.03 for December, $1.03¾ for January, $1.05½ for March, $1.05⅝ for May, and 99c for July.

CHICAGO, Dec. 10.—Wheat—91⅝c for December and 98⅝c for May.

Dried Fruits.

NEW YORK, Dec. 4.—The *Commercial Bulletin* says: The present condition of the market for California raisins is not as flattering as holders could desire. There is no considerable supply of first-class goods on the spot or offering to arrive. More or less trouble has been experienced with buyers who deem it expedient to reject goods coming in on contract for the most trivial reasons in some cases, and the adjusting of such cases is not unfrequently the means of unsettling values somewhat. A somewhat similar experience with the deliveries of prunes and peaches has rather a depressing effect upon the market. Those goods and prices are therefore rather unsettled at the moment. Doubtless the money situation has some bearing on the market.

NEW YORK, Dec. 5.—Prime California prunes, 60@70s, in bags, are offered here to a limited extent at 11⅜c spot.

NEW YORK, Dec. 6.—Dried pears, good quality, 12½c; sacked, 60@70c. Prunes, 11¼@11¾c. The supply of boxes is not large. Unpeeled peaches range from 14@18c; peeled, 30c; both nominal. No canned fruit of any account in first hands.

Florida Oranges.

NEW YORK, Dec. 5.—The Grixbaum, the first vessel of the new Jacksonville and New York Steamship line for carrying fruit, is expected to arrive at Jacksonville to-day and bring back 10,000 boxes of oranges at 30c ₩ box. It is expected the line will send 1,000,000 boxes this year.

Hops.

NEW YORK, Dec. 6.—Hops ruled dull. Not enough spot trade to alter recent rates. Strictly cash buyers might obtain some concession in the opinion of many, but not in a large way, as a sound future is accorded all choice growths. Exports, 473.

Eastern Wool Markets.

NEW YORK, Dec. 7.—The trade in wool here is of a groping character. Western owned lots are largely advised to be sold, but sellers are forced to use caution while awaiting the outcome of the late Passaic, N. J., failure. Besides, a sudden free offering at this time would tend to unwarrantably weaken prices. Carpet wool, active. Boston exhibits large sales for the season. The movement incidentally is a pressure to realize among some holders. Some concessions are made, but a general decline is not feared. Philadelphia quiet; prices fairly upheld.

Speculating in Apples.

BUFFALO, Dec. 8.—The failure of the apple crop in this region gave some of the local speculators a cue for a venture that is panning out big. Last fall the speculators went out West and purchased fully 200,000 barrels of apples, which are stored at points along the Niagara Falls branch of the New York Central. They were purchased early in the season, principally in Kansas, Texas and Missouri, at an average cost of $3.15 to $3.25 a barrel. Dealers in Buffalo have options on most of the apples and they are in no hurry to sell, although from $4.50 to $4.75 has been offered at the points of shipment. Orders have already been received by the holders of the fruit from New Orleans, Chicago, Pittsburg, St. Louis and other points. The speculators expect to clear at least $1 a barrel and possibly more.

Local Markets.

BAGS—The market is reported quiet at 6⅛@6⅜c for May-June delivery standard-sized, hand-sewed grain bags.

BARLEY—The sample market shaded off under bear raids and fair receipts from up North, but it strengthened as soon as the stock returns were published. In futures, trading has been only fair, short sellers fearing to venture in, except at higher prices. The reported sales on to-day's Call are as follows:

Morning Session: Buyer season—100 tons, $1.53⅛ ₩ ctl. Afternoon Session: Buyer 1890—100 tons, $1.46. Buyer season—200 tons, $1.51¾ ₩ ctl.

BUTTER—The market after easing off shows, toward the close, a stronger tone for gilt-edged, but no perceptible change for other grades, but, if anything, a weaker tone. The supply of gilt-edged is light and dealers have no trouble in selling, but poor to good is hard to sell. Receipts are larger. Pickled is being taken more freely.

CHEESE—Receipts are freer, yet the market is strong at full prices for the better grades.

EGGS—The market is steady, with the tendency to stronger prices. It looks as if supplies are held back to meet the usual demand in Christmas week.

FLOUR—The market is steady, with a good local and export inquiry.

WHEAT — The sample market is unchanged. Oregon and Washington are sending us liberal supplies. Receipts from these two sources aggregated the past week nearly 2000 tons. The stocks in this State are not as large as many had been led to believe. In futures, trading has been moderately fair. The following are the reported sales on to-day's Call:

Morning Session: Buyer 1890—300 tons, $1.30. Buyer 1890, season storage paid—100 tons, $1.31¼. Buyer season—1700 tons $1.40¾ ₩ ctl. Afternoon Session: Buyer 1890—1000 tons, $1.30; 600, $1.30⅛. Buyer season—600 tons, $1.40¾ ₩ ctl.

Cereals.

The local wheat market has dragged at unchanged quotations. To force a large parcel on the market, lower prices would have to be accepted; to go into the market to secure a fair parcel, full quotations would have to be paid. The stock of wheat in the State on December 1st is smaller than many had estimated, but it is fully up to our estimate of the crop outturn. The stock returns give only about 400,000 tons for export, with more to carry over into the season of 1891–92. The tonnage in port and to arrive has a carrying capacity of about 500,000 tons, which gives a surplus over our requirements. The wheat surplus in Oregon and Washington is not as large as heretofore claimed. Close money markets at the East and abroad have been against wheat in the markets of the world. At this writing it looks as if money will work into easier position after the turn of the year. It is openly asserted at the East and charged by the Treasury that a pool controls gold; this goes far to prove that this country is in want of more money, and this can be secured only by remonetizing silver. With silver at par, wheat and other farm products will appreciate in price. The decline in the price of wheat at Chicago and New York is due to higher freights, and has not in any way been brought about by foreign market advices.

Our exchanges are enthusiastic over the late rains. Plowing and general outdoor work is being pushed. The cool nights keep the moisture in the ground, while it retards vegetation.

Barley has been strong and active. The small stock in the State confirms our early estimate regarding the crop and consumption. The available supply in Oregon and Washington is said to be lighter than many claimed, which, if true, ought to make our market do better after the turn of the year. It looks as if an increased acreage will be put in in this State, but, of course, this will be controlled by the weather later on.

The high prices ruling for oats have attracted more liberal supplies the past week. Confirmed advices report the available supply in this State, Oregon and Washington as being light. With Eastern oats not available, holders on this coast appear to have control of the situation.

Corn is easier. The attempt to advance prices above buyers' views has proven a failure. The large stock in the interior and an offish demand are against holders.

Rye is steady at current quotations.

Report of flour and grain remaining in the State of California on December 1, 1890:

Feedstuff.

Ground feed is in good demand. Bran, middlings and rolled barley are strong at an advance. Feed-meal and cracked corn are weaker. Receipts of bran and middlings are light,

Hay continues strong. Receipts have fallen off. The demand is fairly free. Rains started the plows in nearly all localities, which generally causes a freer consumption of hay on farms. The prevailing opinion is that prices will not shade off, even with rains. Cold weather has checked the growth of grass in all sections except farther south.

Fruits.

Oranges are slow in coming in. Those received are generally poor in quality and do not command attention from the trade except at low prices. It is said that from now on we can reasonably look for freer receipts and a steady improvement in the quality of oranges.

The receipts of apples continue large and under a strong selling pressure the market is lower, with the

Japanese oranges are selling from 25c to 30c a box in quantities from store.

Pears are in light receipt. Some foothill and mountain pears are coming to hand. The demand is fair.

poorer keepers suffering the most. Receipts are not confined to any particular section, for all localities are sending us liberal supplies with Oregon increasing its shipments to us. Humboldt, Siskiyou and other northern and mountain apples sell alongside of Oregon at top prices. Bellflowers are generally over-ripe and as the stock is large it takes something very fine to fetch over $1 a box. Humboldt greenings if choice fetch $1.25, while Valley greenings fetch $1 as the highest price. Spitzenbergs sell at from $1.25 to $1.75 at box. Other varieties sell in like proportion.

Grapes are slow of sale and hard to quote. Frosts will soon stop receipts.

The dried-fruit market is decidedly dull, but not more so than obtains in the closing month of the year. Selling offers are not large and neither are they pressing, while buying orders are equally light. To press a large parcel of peaches or other fruits on the market, concessions would be necessary, and to fill a large order, full prices would have to be paid. No improvement is looked for until after the turn of the year.

The raisin-packing season is over. The pack is larger than expected, owing to long-continued fine, clear weather.

Vegetables.

Tomatoes coming in show the effects of frosts. Cauliflower, except from favorable localities, will soon stop coming in owing to heavy frosts. Bleached celery is in fair receipt, but the bulk is being held back for the holidays. Green peppers are going out. Egg plant is about out of market.

Onions are weaker under freer receipts and no increase in the demand. Oregon and Washington are sending us liberal supplies. Shipments have come to hand by overland railroads.

Potatoes, which were strong at an advance, are easier at the close. The prevailing opinion is that supplies are being concentrated to force prices higher. The supply in both Oregon and Washington is said to be light. In this State the supply is said to be only fair, and with a backward season still higher prices are apt to obtain. Last year at about this time the market began to advance, but last year continued rains and high water, with very bad roads, were against receipts, which caused the high prices for potatoes. This year heavy shipments of potatoes out of the State decreased the supply.

Live-stock.

The market is reported unchanged in quotations. A weak tone prevails in bullocks and mutton sheep. Hogs are steady. Calves are scarce and command full prices.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS — On foot, light grain fed, 4½@4¼c ₩ lb; dressed, 7@8c ₩ lb.; heavy, 4@4¼c ₩ lb.; dressed, 6½@7½c ₩ lb. Stock hogs, 3@3½c ₩ lb.

BEEF—Stall fed, 6½@—c ₩ lb.; grass fed, extra, 6@—c ₩ lb.; first quality, 5¼@5½c ₩ lb.; second quality 4¾@5c ₩ lb.; third quality, 4c@— ₩ lb.; bulls and thin cows, 2@3c ₩ lb.

VEAL—Small, 8@9c ₩ lb.; large, 6@7½c.

MUTTON—Wethers, 7c ₩ lb.; ewes, 6½c ₩ lb.; lamb, spring, 8@9c.

Miscellaneous.

The poultry market exhibits a strouger tone, due to light receipts and old stocks cleaning up. Large, fat poultry is wanted, but scrubby stock goes begging.

A consignment of beans has come to hand from Chili. The general market is barely steady, notwithstanding light receipts. Free shipments continue to be made East.

Honey is in good inquiry, with full prices obtainable.

Seeds are dull, more rain is wanted.

Buyers are bearing hops. A parcel of gilt-edged (200 bales) from Oregon was offered at 37½c; the highest bid was 33¾c. Dealers look for better prices as soon as money gets easier at New York.

In wool there is nothing doing. Close money market at the East is against holders. A consignment of 113 bales has come to hand from Honolulu.

Exports by sea the past week aggregate as follows: Wheat, ctls, Havre, 64,800; Antwerp, 73,860; Cork, 102,599; St. Nazairn, 55,176; Dunkirk, 59,041. Flour, bbls, China, 15,191; Manilla, 600; Honolulu, 1040; Hilo, 100; Nanaimo, 200; Mahukona, 125. Barley, ctls, Honolulu, 1888; Mahukona, 1550. Rolled barley, lbs, Honolulu, 145,309; Mahukona, 35,500. Beans, lbs, China, 10,856; Victoria, 4214; Boston, 70,562; Honolulu, 30,370; Mahukona, 300; New York, 11,785. Hops, lbs, China, 412. Canned fruits, cs, New York, 1975. Brandy, gals, China, 2457; New York, 29,017. Hay, bls, Honolulu, 578. Mustard seed, lbs, New York, 240,776. Apples, bxs, Honolulu, 515. Bran, sks, 3325; Mahukona, 850. Corn, ctls, 501. Potatoes, sks, Honolulu, 924. Wine, gals, Honolulu, 15,569; New York, 196,672.

From the *Commercial News* of Dec. 9th the following summary of tonnage movement is compiled:

On the way to	1890.	1889.
San Francisco	320,076	195,829
San Diego	7 908	10,412
San Pedro	3.244	904
Oregon	36,656	31,366
Puget Sound	33.685	17,517
Totals	401,569	256,028
In port at		
San Francisco, disengaged	9,826	21,940
" " engaged for wheat	38,703	80,160
San Diego	7,184	.....
Columbia River	11,802	.....
Puget Sound	.....	.....
Totals	67,575	102,100

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to Dec. 4, 1890, the following are the exports from this port:

	1890.	1889.
Wheat, ctls	4,931.092	5,289.083
Flour, bbls	500,788	478,312
Barley	165,626	790,844

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

HORSE-COLLAR TRUST—A BIG HOLE MADE IN IT. No Collar Trust! No Leather Trust! No Labor Trust! Competition is the life of trade, and Trusts kill competition. A business house which becomes fossilized to the point of requiring a Pool or Trust to hold it up, should be left severely alone, and those not leaning on Pools or Trusts be preferred. What chance has the rising generation for a fair share of this world's goods if they are hampered and shut out from many undertakings by Trusts? To all persons interested in Harness Goods: Please take notice that the firm of W. Davis & Son withdrew from the Collar Trust on September 13, 1890, and can, therefore, furnish Horse Collars at a Big Reduction on the Trust Prices, as we are the only Wholesale Saddlery House in San Francisco not tied up with High Prices. W. DAVIS & SON, 410 Market St., S. F.

POULTRY-MEN, ATTENTION!

Every disease known to Poultry can be cured, and every flock made to lay, now, when eggs are high—by using

Wellington's Improved Egg Food,

The Standard for 12 YEARS. Do not get discouraged because you foolishly tried some preparations "called Egg Food" and got no results, but immediately get some of Wellington's Improved Egg Food, and you will have no more trouble. You will then have healthy Poultry and plenty of Eggs. It never has failed and it will not now. You try it.

B. F. WELLINGTON, Proprietor,

Importer and Dealer in Seeds,

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

FOR WEEK ENDING DEC. 2, 1890.

442,003.—BOOT-CALK—A. J. Armstrong, Coronado, Cal.

442,006.—CRUSHING-ROLL—H. C. Behr, S. F.

441,863.—NIGHT DIRECTORY—Henry Bergstein, Reno, Nev.

441,937.—BURIAL APPARATUS—G. H. Clark, Sacramento, Cal.

441,869.—HOOP-COUPLING—L. R. Fulda, S. F.

441,871.—FRUIT-DRYING TRAY — Hammon & Sechrist, S. F.

442,088.—DOSE-MEASURING BOTTLE — H. S. Herrick, S. F.

441,763.—VAPOR BURNER—C. W. Ingraham, Eight Mile, Or.

441,690.—FUMIGATOR—A. McLain, San Diego, Cal.

441,965.—PROPULSION OF VESSELS—S. A. Owen, West Berkeley, Cal.

441,862.—STEAM BOILER—J. & W. Paterson, Stockton, Cal.

441,859.—FRUIT-GATHERER — Florian Stanke, S. F.

441,861. — COIN-ACTUATED LIQUID-VENDING MACHINE—Vansant & Eames, Dixon, Cal.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co, in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

The harsh, drastic purgatives, once deemed so indispensable, have given place to milder and more skillfully prepared laxatives; hence the great and growing demand for Ayer's Pills. Physicians everywhere recommend them for costiveness, indigestion, and liver complaints.

Successful Patent Solicitors.

As Dewey & Co. have been in the patent soliciting business on this Coast now for so many years, the firm's name is a well-known one. Another reason for its popularity is that a great proportion of the Pacific Coast patents issued by the Government have been procured through their agency. They are, therefore, well and thoroughly posted on the needs of the progressive industrial classes of this Coast. They are the best posted firm on what has been done in all branches of industry, and are able to judge of what is new and patentable. In this they have a great advantage, which is of practical dollar and cent value to their clients. That this is understood and appreciated, is evidenced by the number of patents issued through their SCIENTIFIC PRESS Patent Agency (S F.) from week to week and year to year.

TESTIMONIAL.

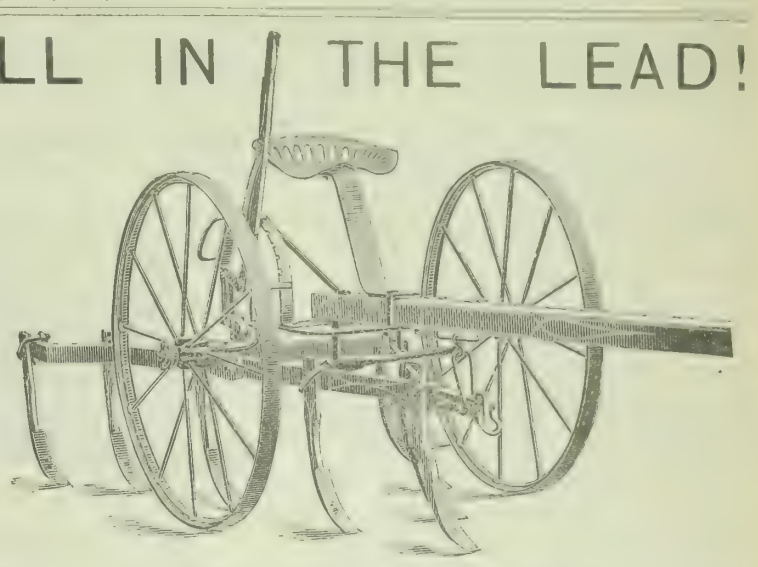
Our readers will notice the advertisement of Gombault's Caustic Balsam, imported by Lawrence, Williams & Co., of Cleveland, Ohio. This remedy is well known by many of our readers as being one of the best veterinary medicines in the market in all cases for which it is recommended, and the fact that any one can apply it with perfect safety and no danger to the animal whatever, makes it of more than special interest. This firm is well known by the trade, and we are personally acquainted with them, and our readers need have no fear in sending them money. Descriptive circulars sent free on application to their address, and goods forwarded same day order is received.—*Dixie Farmer.*

Raisin, Fruit and Grain Lands

At Extremely Low Prices,

Seven miles S. W. of Tulare city. 164 acres of rich land is offered for sale, with well-improved homestead, large flowing artesian well, reservoir, alfalfa, orchard (seven years old), pasturage, one of the healthiest and most comfortable seven-room, two-story residences in Tulare valley. Must be seen to be appreciated. Will be sold soon at a very low price and extraordinary reasonable terms to a good purchaser. Some 320 acres of good and well-cultivated land adjoining is also offered low.

Address E. M. Dewey, Publisher, Porterville, Tulare Co.; A. T. Dewey, 220 Market St., S. F.; or call on Capt. Thos. H. Thompson, Tulare City, Cal.



THE JUDSON WIRE & PICKET FENCE.

BEET SUGAR FACTORIES

E. H. DYER & CO.,

Sugar Chemists, Engineers and Draughtsmen, and Practical Manufacturers of Beet Sugar.

ALVARADO, CAL.

The members of this firm have spent many months in the largest beet sugar factories of Europe, studying the details of German and French methods of manufacturing sugar from beets, and also at works of the leading manufactories of beet sugar machinery. Having had many years' experience in manufacturing sugar from beets in California, and having fully demonstrated the feasibility of producing sugar from beets in this country in almost unlimited quantities, and in successful competition with cane sugar imported from foreign countries, we are prepared to furnish designs for factories, plans and drawings of the latest improved machinery now in use in Europe and this country. Can also furnish skilled engineers to superintend the construction of factories, and the necessary technical skill to operate the works successfully when completed. Will make personal examination of localities with regard to their fitness for the production of beet sugar, free of expense, except traveling expenses. Successful results guaranteed when the conditions are considered favorable.

The Evolution of the Horse.

At the recent National Exhibition of horses in New York, more good animals were brought together than were ever seen in one collection in this country. With this statement goes another fact, that some of the fastest horses in the world are produced in the United States, and that California is one of the foremost States in the matter of horse breeding. But there is much more than this apparent. The trotting horse is an evolution brought about in this country. Such horses make no prominent figure in England. The running horse is always in the lead. Now, one of the greatest gains in the evolution of the horse in this country is the production of a roadster. Racing is a mere incident. The runner is never a roadster, and is in no prominent sense a utility horse. But the trotter comes to this at last that he is a superb road horse. Beyond all other gains, this is the greatest. The best of these will go over the road at the rate of ten miles an hour for several consecutive hours. A mile in six minutes is fast enough for any horse not designed for the race-track, but the same roadsters will frequently do a mile in three minutes.

Some recent criticisms touching the evolution of the horse are to the point that the swift horse is no longer a handsome animal; that he is frequently under size and is far from the ideal of a symmetrical animal. The form has been sacrificed to speed. It is seldom that the winners of prizes on the race-track are 16 hands in hight or weigh much over 1000 pounds. They are comparatively small horses, and very few of them would be suitable for the road. The Kentucky horsemen produced two famous classes of horses. One was the saddle horse, which for pluck, speed and endurance probably never had a superior in this country. The other class was the road horse, which became famous all over the country. He was not a small horse, but was well up on the withers, high-spirited and of splendid action. Of course there was also the running horse, which was the especial pet of the Kentucky breeders.

But the evolution of the trotter has probably brought more wealth to the country by his general utility than any other class of horses. He is now everywhere on the road—high-spirited, strong and swift, he is the pride of thousands who take no interest in the race-track and care nothing for runners, because they are not adapted to the road. The road horse is an evolution which has been brought about by special training. There were never so many good ones in the country at any former period. Not one in a thousand of these ever makes any prominent figure on the race-track, but they figure as never before in the wealth of the country. That is by far the greatest gain which has resulted from this modern evolution of the horse.—*Exchange.*

DENISON, TEXAS,
Introducer of the Great **PARKER EARLE STRAWBERRY**, now begins the introduction of a few of his thousands of wonderful **Grape Hybrids.** This season he offers four varieties, viz:
BRILLIANT, early red; **CAMPBELL**, early golden; **ROMMEL**, early white (promising for North and South), and **HERMANN JAEGER**, late purple; larger cluster and berry than *Herbemont*, suitable for south of Cincinnati and St. Louis, *all equal to best foreign in quality.* Descriptive circular and terms on application.

Arizona Everbearing Strawberry.
By planting quite a number of the leading varieties of Strawberry together for five years, I have produced a variety unlike any of the former. I have picked the fruit daily since April 20th to the present time, October 18th, and the vines are still full of bloom and berries. Roots are long and stand the drouth well. The berries are large, fine flavor and high color, and resemble the Jessie in shape somewhat. I am prepared to furnish them in small lots at $1.50 per doz., postpaid. R. E. FARRINGTON, General Nurseryman, Phœnix, Arizona.

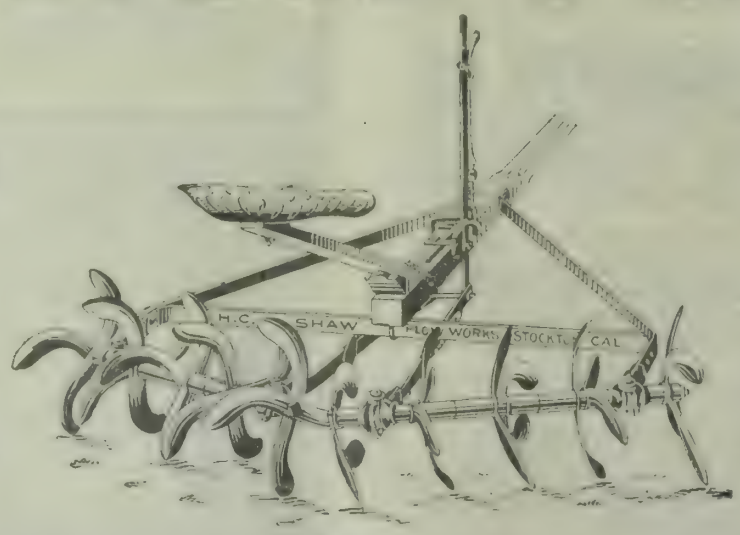
THE "TRIUMPH"

— ALL METAL —



SPADING HARROW!

The Best Pulverizer in the World.

JUST THE THING

— FOR WORKING —

Summer Fallow Land.

Specially Adapted

— FOR —

ORCHARDS AND VINEYARDS.

FOR TWO HORSES. Works the soil about six feet wide. Angle of teeth adjustable to work the soil at desired depth. THIS HARROW is something entirely new. IT IS THE GRANDEST ACHIEVEMENT of its inventor, C. LA DOW, who is the recognized authority on Harrows, there being but few leading harrows at the present time not built under his patents. We have made exclusive arrangements for its sale and it can be obtained only through us or our agents.

THE NAME "SPADING" refers to its action on the soil. The action of each cutter is like that of a small spade, lifting and turning the soil from a depth of four to six inches, doing more perfect work than is possible with any other Harrow in the world. THE BLADES are made from spring steel, in operation vibrating and shaking off sticky soil. IT NEEDS NO SCRAPERS to clean the revolving cutters.

Considering the immense amount of labor done, the draft is very light, as the pulverized soil passes through the gangs of revolving cutters, being left smooth. THE GANGS are so arranged that the most uneven ground is thoroughly harrowed and left level. IT LEAVES NO FURROW or ridge; when the field is harrowed it is all left smooth. 10, 12 and 14-ft. sizes in stock. Send for circular.

THE CHRISTMAS SPIRIT.—"Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me."

Christmas Thoughts.

Again the merry Christmas season is at hand. Again the city streets are thronged with people speeding to and from the marts which have spread new and tempting wares in the service of Santa Claus. Again the country hillsides are made to yield their annual tribute of green and scarlet, that the homes may express in evergreen foliage and bright-red fruit the ever-living Christmas idea and the ever-warm Christmas emotion.

The condition of our people and our industries favor the free outflow of holiday spirit. Peace and prosperity rule in our blessed land, while turmoil and suffering are unfortunately too prevalent elsewhere. Though we have issues which stir and excite the public mind, their settlement no longer calls for conflict and bloodshed. We have had our evil hour; let it suffice for a thousand years or until war becomes a lost art in the history of mankind. It is fitting, then, that we should make merry and be glad. It is fitting that the gentle spirit of Him whose birth we commemorate should pervade the people, and that peace, good-will and earnest thanksgiving should everywhere prevail throughout our land.

But the Christmas spirit is not one of selfish joy or self-gratification. On the contrary, it is happiness through the rich rewards of self-denial; it is reaping peerless pleasure while sowing happiness for others; it is the blissful emotion of giving—greater than that of receiving. He who gathers the most precious blessings is he who gives to those whose need is greatest, and to those who can but bestow in return only the homage of thankful hearts. Thus Christ gave and thus in a finite degree may we give also.

Thus the day becomes one to be observed thoughtfully and inquiringly. Blessed is he who provides for his own, but it is Christ-like to give gifts to those whose lives are darkened by want and whose claims upon the giver are but the angelic warrant—good-will to all men. It is our wish to emphasize this idea, which is the mainspring of Christmas joy and the secret of true beneficence. Two Christmas stories in this issue of the RURAL enforce this idea and show how generous thoughts and deeds are gifts to the sum of the world's happiness. Our artist also accepts the same thought for his sketch upon this page. Into the humble abode where lies the invalid surrounded by loved ones, for whom merely scanty subsistence must suffice, there comes a joyous Christmas group laden with gifts which bring new light to the eyes of the sufferer and fill the hearts of the little ones with ecstasy of which they had hardly dared to dream, much less hope for. The brilliance of the invasion almost appalls the little ones, but fear is lost in admiration and the extended hand welcomes the proffered gift, and the face of the invalid is lighted with contemplation of the generous impulse which thus brings happiness to her household. The artist has done his work well. May the picture recall to many minds the injunction: "Go thou and do likewise!"

IT is reported that a number of wealthy Arabians purpose forming a fruit-growing and silk-raising syndicate in this country which will give employment to all immigrants from Arabia arriving in the United States.

HORTICULTURE

Cherry-Growing in Placer County.

The following essay was read at the Santa Cruz Convention by Robert Hector of Newcastle:

Early in the "fifties," the rich auriferous gravel deposits of that portion of the American River canyon about Manhattan, Rattlesnake and Horseshoe bars had attracted a large population of miners. Among others drawn by the common loadstone was Dr. L. E. Miller, a German of education and culture, who in the "Fatherland" had acquired a love and knowledge of gardening and tree-growing that here, in a sheltered nook on an alluvial bench near the river's edge, he found means to indulge in and carry into practice. Beginning as an amateur, he found that his favorite pastime was a profitable one, the mining camps furnishing a very convenient and remunerative market. His garden and orchard increased in size, and in the spring of 1854 he imported from France, and planted, the cherry trees which form the older portion of the orchard which I now own. Mr. J. Bost, at present a resident of Nevada City, a brother-in-law of Dr. Miller, dug the holes and otherwise assisted in the planting of the trees, and from him I learn that they were originally planted in squares 20 feet apart.

The gradual growth during the past 35 years has rendered necessary a gradual thinning out in the rows, so that now in places there is but one row occupying the space originally occupied by three.

Casual inspection would hardly determine which trees have grown to the greatest dimensions. Measurement shows, however, that the largest tree is 65 feet in hight, and the branches cover a space 60 feet in diameter. The trunk branches about six feet above the ground, and here has a girth of over ten feet.

This, being the largest tree, is the one I have naturally kept the closest record of as regards its crop. It is of the Black Tartarian variety. The crop of 1886 amounted to 200 boxes of ten pounds each; 1887, 180; 1888, 300; 1889, 220; and 1890, 300 boxes.

Prices have varied somewhat during these years. The tree matures its fruit early for a tree of its variety, and the prices received for its crop have been good, the first cherries picked from it for some seasons bringing as high as $4 per box. They have averaged, during the years mentioned, at least $1.50 per box of ten pounds. The crop of this tree for the past five years has therefore sold for a gross total of $1800. Inquiry made by me in France and Germany has failed to bring to light a single instance of a tree having a record at all comparable with this. Some of its neighbors will closely approximate it, but how nearly I have not kept the records so as to determine; the hurry of the picking and packing season rendering it a very difficult matter. As these results are exceptional, we shall of course look for exceptional natural causes, and we shall not fail to find them.

The trees grow in a bank of rich alluvial deposit, which may be described as a sandy loam. It is located above the north edge of the bank of the American river, which here in its winding, runs almost due west. It is in a valley formed by the depression between two spurs of the ridge which forms one side of the river canyon. This valley is sheltered by hills on the east, west and north, and opens to the river on the south. It is, therefore, protected from cold winds and has the advantage that southerly exposures always have.

The soil in its quality is exceptional and its depth is undetermined.

In the year 1852 or 1853 a test pit was dug to ascertain the possibility of reaching the gold-bearing gravel that might lie beneath it. The shaft was sank to a depth of 60 feet through sandy loam without reaching the desired material and was then abandoned.

The top of the bench or table upon which the orchard is situated lies about 40 feet above the level of water in the American river at its ordinary stage in summer. My records of temperature are somewhat meager, but sufficient to show the results of the protection afforded by the peculiar location. During the severe cold weather of three winters ago, while the thermometer on the hills, within a mile of this spot, registered a depression as low as 18° F., the temperature at my house did not go below 22°.

The treatment the trees usually receive during a season is as follows: Plowing begins as soon as weather will permit. The plowing is shallow, the furrows being from four to six inches deep, the cherry having many surface roots which I believe it best not to injure. The plow is followed by a disc harrow, and the latter by an Acme harrow. This finishes the cultivation. The trees were never fertilized until within the past 15 years. It is now my practice to spread common barnyard manure broadcast to a depth of five or six inches during the winter.

I doubt not it would be the better practice to plow under as soon as distributed, but this has not usually been done. Irrigating is begun immediately after the gathering of the crop; the rather severe handling that each limb receives at picking-time, in spite of extreme care, seeming to make water particularly acceptable as a tonic (if such a term be allowable in horticulture) at this time. It has the effect of strengthening the fruit spurs and invigorating the tree generally.

The picking is the most laborious as well as most carefully prosecuted work in connection with the tree. Ladders of extra length made portable by being attached in erect position to a stout pair of wheels are generally used. These are held in place and kept steady by a system of guy ropes. Directions to pickers call for extreme care that fruit spurs and smaller limbs be not broken, that the fruit prospects for ensuing seasons may not be jeopardized.

My old cherry trees are never pruned and young ones are not pruned after the third year. I prefer to have the limbs spread out in approximately horizontal position, my theory being that fewer blossoms have all their pollen washed out by driving rains than when limbs grow stiff and perpendicular. I also believe that I secure more air and sunlight in the center of the tree. Where growth is rapid, as it has been with my trees, I have found it advisable to slit the bark in the fall and spring to prevent the natural splitting which results sometimes from trees becoming hide or bark-bound.

In extending the original orchard, I planted seven years ago some cherry trees of the Black Oregon variety, which are now 35 or 40 feet in hight, whose branches cover a space 30 feet in diameter, and whose trunks are four feet and 10 inches in circumference.

I have at different times planted cherry trees in the granitic soil of the foothills farther up from the river's bank on my place here and they have done well and matured valuable crops, but I have never found the tree growth to be anywhere near as rapid or as vigorous as in my river orchard. ROBERT HECTOR.

Cherryvale, Newcastle.

Peach-Growing.

EDITORS PRESS:—One of the early emigrants to this State has been permanently located in and around Bakersfield nearly 30 years and quite extensively engaged in the breeding of fine cattle, horses, hogs and sheep, as well as the cultivation of the soil, who is favorably known here as Solomon Jewett. Parties have commenced an untried enterprise in opening up a large peach orchard upon a tract of very fine level and rich soil of loam within the facilities of irrigation, if necessary, and have contracted for plants sufficient to cover a quarter-section of 80 acres in one orchard direct from the nurseryman. Besides this, they have now on the grounds adjoining 20 sacks of peach-stones buried in the sack—in numerical count, say 120,000, to thus remain till the best time for planting. The parties engaged are desirous of obtaining general information from experienced cultivators of this kind of fruit, the proper methods of taking up the nursery trees and protection previous to transplanting, the distance as standard trees set and the most popular mode of training and protection from insects, etc., all of which will be pleasing to learn through your journal. INVESTIGATORS.

Bakersfield.

[These matters are fully discussed from time to time in our columns, and we shall always be glad to hear further concerning them. Our book, "California Fruits and How to Grow Them," is directly designed to meet just such needs as our correspondent desires and is especially full and explicit on all details of nursery work, orchard planting, pruning, cultivation, etc. The subjects are always open for discussion in our columns.—EDS. PRESS.]

THE COMING ORANGE CROP.—An indication of the coming orange crop at the south can perhaps be found in the estimates of the railway managers who have to provide cars. The estimate of the Southern Pacific Company for the Southern California orange crop is 3780 carloads. Of this San Bernardino county alone will require 2019 cars, Rivereide contributing nearly one-half of the county's product. Two thousand of these carloads are valued at $800 a car and the remainder at $600, so that the estimated value of the total shipment is about $2,608,000.

WHY LEAVES CHANGE COLOR.—The green matter in the tissue of the leaf is composed of two colors—red and blue. When the sap ceases to flow in autumn, and the natural growth of the tree is stopped, oxidation of the tissues takes place. Under certain conditions the green of the leaf changes to red; under different conditions it takes on a yellow or brown tint. The difference in color is due to the difference in combinations of the original constituents of the tissue and to the varying conditions of climate, exposure and soil. There are several things about leaves that even men of science cannot explain; for instance, why one of two trees of the same species growing side by side in the same soil should take on a bright red color in the fall and the other a pale yellow, or why one branch of a tree will turn a beautiful crimson, and the one just above or below it turn a dull brown.

COLOR OF PURE WATER.—It has been quite fully demonstrated that pure, distilled water has a bluish color, independent of its surroundings.

THE FIELD.

An Australian Report on California Industries.

The following report, published in Melbourne, Victoria, Oct. 21st, was made by Mr. John West, who was appointed early in the year by the Government of Victoria to visit the United States and report on the question of irrigation and fruit culture:

Sir: I have the honor to report that I have completed my investigations in regard to irrigation and its products in Western America, and am now returning home.

The progress of irrigation in Western America, originally confined to California, is assuming vast proportions in all the States west of the Missouri river. A national aspect, too, has been given to the question by the Federal Government, setting apart a sum of £75,000 for an irrigation survey of the Western States, and the appointment of a royal commission to investigate the subject. A great mass of valuable data has been made available by the Survey Department and the Commission. They show that over two-fifths of the area of the United States is arid and dependent upon irrigation for anything like profitable farming; and, indeed, it is an aridity for the most part that we have little conception of in Victoria.

You would have to go right out to the Barrier Ranges country and strip it of its salt bush to find a counterpart of much of Southern California in its natural condition, and the whole of Utah and Colorado. The soils, too, are in places largely impregnated with "alkalies" which rise to the surface with irrigation and kill off vegetation, and "hard-pan" causes serious saturation in others. In Utah and Colorado one is surprised to find, with all their elaborate and costly systems of irrigation, the farmers growing only such low-priced products as cereals, lucerne and potatoes.

To the query why a greater variety is not attempted, the answer comes with all its significance that the average elevation of the farming land is 3000 to 4000 feet above sea level! In addition to these natural disadvantages, endless difficulties have been caused by the utter absence of anything like comprehensive irrigation laws. These were felt more in California than in the other States, and there is scarcely a great scheme there that has not been subjected to litigation at some period of its history. This continual annoyance gave rise to the passage two years ago of the Wright Irrigation law—a measure constructed on similar lines to our own Irrigation Act. Since it became law, a great number of the irrigation colonies have banded together, organized corporate bodies, issued bonds, bought out vested interests and placed themselves on a similar footing to our irrigation trusts. Colorado, where the laws, though defective, were yet much better than previously obtained in California, has benefited by a large influx of British capital, which, in the shape of organized investment companies, has brought out established irrigation enterprises or originated new ones. Throughout the whole of the irrigating States, but more particularly in California, where most of the pioneering work had to be done, though the ultimate results have been great and far-reaching in their effects, there are not wanting evidences that these have only been attained at the cost of great hardship and suffering in the earlier stages of the enterprises which have made the desert to become so productive.

In regard to the practical details of irrigation, there are one or two points that are of interest to engineers as well as farmers, and may be mentioned here. Both in California and Colorado the alignment of the channels is now being run on comparatively straight, in preference to "contour," lines. At Bakersfield, in Southern California, where there is a very fine and a very extensive system of channeling, covering over 50,000 acres, they are going over some of the old channels and straightening them out, while all the new ones are being run on straight lines. The average fall of the land is 10 to 15 feet to the mile, but the channels are checked up so as to give a uniform fall of two to three feet to the mile. At Forts Collins and Greeley, in Colorado, on land with a fall of 12 to 15 feet to the mile, the same innovation has been adopted. The old channels follow with great persistency the "contour" levels, while those of recent construction are straight. The fall usually given there to channels 15 feet wide or over on the bottom is 15 to 20 inches; for smaller ones two to three feet per mile. It is claimed, and apparently with good reason, that the face of the country is not so disfigured by the straight as by the contour channels, that the farms and orchards are much more conveniently worked, that there is less erosion, and that the water travels more quickly between any two given points.

Preserving Green Grapes.

Your letter directing me to inquire into the methods of preserving grapes in their natural condition for long journeys led to very interesting results, although at first I almost despaired of getting any information worth recording. I learned that last season New York imported 140,000 barrels of grapes, weighing 40 to 45 pounds net, from Spain. They are invariably of the Muscat of Alexandria variety. The fruit is handled very carefully, being cut from the vine with a knife or shears when matured, but not overripe. It is then spread on benches to a depth of 12 to 18 inches in a close room, and there left for a couple of days to sweat. Then all bruised and defective berries are cut out with long-pointed scissors and the fruit packed in dry cork-dust in barrels made of hard wood and tightly put together. First a layer of cork-dust is put over the bottom of the barrel, then a layer of grapes; then another layer of dust, care being taken that it is well shaken into the interstices of the fruit; and so on until the barrel is well and tightly filled. The fruit is shipped in the ordinary hold (not a cool chamber) of the vessel, well ventilated, and generally goes by way of Liverpool, making the passage to New York in 20 to 25 days. The fruit is often stored for weeks in cool chambers after its arrival in New York before it is sent to the auction-room.

The Dried-Fruit Industry.

I had received an invitation from some of the Fresno raisin-packers to witness the processes of drying and packing raisins. I had the good fortune not only to see the raisin harvest at Fresno, but also the prune and dried peach and apricot crops, which have brought wealth to a large population in the Santa Clara valley. A volume could be written about these charmingly attractive industries.

They are a safeguard to the small grower against the caprice of the green-fruit market and the monopoly of the canneries. If the price from either of these sources does not meet his expectations, he can, without the expenditure of much capital, and with a large assistance from his wife and children, set to work and dry his crop and wait for his market. There were two points in regard to our treatment of raisins in Australia that I was anxious to clear up when I left home. The one was whether we were doing right in not providing for the escape of moist air from the drying kilns that are being built, and the other why our pudding raisins invariably turn out darker in color than the imported ones. The Californian experience returns a very complete answer to both these problems. It shows that we have blundered in the first case, and that the remedy in the second is exceedingly simple and remarkably effective.

In all the Californian drying kilns (and they have many patterns) ample provision is made for carrying off the moist air, and all the experts whom I consulted insist on this being necessary. For getting a bright color into all dried fruits where a bright color is required, the universal plan is to subject the fruit, immediately after it has been dipped in the lye, where dipping is resorted to (or after it has been divided and the stone taken out, as in the case of peaches and apricots), to the fumes of sulphur for a few minutes. This fixes the color and prevents the discoloration which otherwise takes place in drying, while it does not injure the flavor of the fruit.

Institutions which Aid the Horticulturist.

There are three institutions in California which have done an immense amount of good in aiding settlers to develop the natural resources of the State. These are the State Board of Horticulture, the State Board of Viticulture and the State Board of Trade. The two former are subsidized by the Government, the latter by the municipalities. The members of the first two bodies are practical fruit-growers and meet monthly, conduct experiments, publish information for the assistance of the farmers and convene annual conferences of the growers, just as has been done by our departments. The Board of Viticulture has a permanent exhibit of products in connection with the industry in San Francisco, attached to which is a restaurant where the public may at any time obtain samples of all wines grown in the State at a reasonable cost. This idea has done much to popularize the native wines. The State Board of Trade has its headquarters in San Francisco and branches in all the important rural towns. At the head office is a fine permanent exhibit of the natural productions of California and a vast quantity of printed matter dealing with these for free distribution to the public. There is a very intelligent staff of officers connected with the institution, who take great pains in aiding immigrants to settle in suitable localities. At the branch offices there are permanent exhibits of the productions of the particular locality where they are situated, and a local committee is carrying out precisely the same work as the parent institute.

But this is not all. It has remained for the Board of Trade to carry out a remarkably bold and successful enterprise. It fitted out three Pullman cars with a splendid display of California products and sent them out in charge of a good man to travel throughout the length and breadth of the United States. Whenever a city or town is reached, the cars are sidetracked and the public admitted free. During the first six months that the cars were out nearly a million of visitors passed through them. Abundance of printed matter setting forth the advantages of California as a field for settlement is distributed broadcast, a daily telegraphic report is sent to headquarters, and the cars are continually supplied with fresh specimens of perishable exhibits. "California on Wheels" is the not inappropriate title of this novel exhibition. It suggests an idea that Australia may some day use with great effect in advertising her natural resources in the mother country and Europe.

Agricultural Science.

Distribution of Seeds and Plants.

University Experiment Station Bulletin No. 89.

The heavy and continued storms of last winter interfered seriously with our seed distribution, partly because the stoppage of mails, in some places for long periods, discouraged applicants, and partly because even when seeds and plants were ordered and received, the unfavorable condition of the soil during the winter and the rush of other work in the spring precluded attention to experimental efforts. Still, considering the character of the season, the distribution was large and some supplies were exhausted before all applications were filled.

For this reason, and to accomodate newcomers to the State, and some older residents who are slow in hearing of or understanding this branch of our work, we are under the necessity of including in our announcement many things which have been distributed in previous years, as well as novelties. There is in our correspondence constant inquiry and demand for many seeds and plants which we had expected would before this have attracted the attention of commercial propagators, but apparently have not yet done so, hence they are continued in our distribution lists.

Terms.—As there is no appropriation available to meet the expenses of packing and postage, applicants are requested to send the amount specified in connection with each description below.

CEREALS.

The establishment of outlying stations for culture experiments has afforded opportunity for trial of our collection of cereals under climatic conditions different from those prevailing at Berkeley and in some respects more favorable to the growth of these grains. The following varieties have bad one year's trial at Tulare and Paso Robles, in addition to several trials at Berkeley, and in most cases have demonstrated their value in these three regions. We commend them, therefore, with considerable confidence to those who desire to experiment in the search for varieties more hardy and prolific than those usually grown. The seed we distribute this year was grown at the Tulare Station. The supply is not large; applications will be filled in the order received so long as the supply lasts:

Wheats—

1. Arizona Indian.
2. Archer's Prolific.
3. California Spring.
4. Greek Atlanti.
5. Michigan Mixed.
6. Missoyen.
7. Pringle's Best.
8. Pringle's Defiance.
9. Palestine.
10. Petali.
11. Whittington.
12. Volo.
13. Hybrid Dattel.

The last named, No. 13, Hybrid Dattel, is a variety just received from the Department of Agriculture. Its origin and history are given in a letter from Hon. Edwin Willits, Assistant Secretary of Agriculture, dated Oct. 17, 1890, as follows:

"This Dattel is a cross between the Prince Albert and the Chiddam d'Antome, both parents, without question, being of English origin, but acclimated after a long series of years to France. The Chiddam is a very productive wheat with a rather small straw. The Prince Albert has a very long, large straw, very high, very leafy, strong and stiff. It is a variety of great development, productive in grain, and especially in straw. The Chiddam, as above said, has a very small straw. It came from the county of Sussex, in England. It is adapted to strong soil, providing it has a calcareous element. It is claimed for the Dattel that it has all the advantages of the Chiddam, so highly esteemed, and has besides a better straw. The claim has been justified by its cultivation in France."

Barleys—

1. Himalayan.
2. Bluish.
3. Earliest Black-bearded.
4. Large Naked Two-Rowed.
5. Scotch Two-Rowed.
6. Kalina.
7. Manchurian.
8. Italian.
9. Nepaul.
10. Berkeley Hybrid.

The last-named, 10, Berkeley Hybrid, originated on the grounds of the Berkeley Station. It has been so favorably reported upon by our correspondents, and so highly approved in our own experiments in Berkeley and at other stations as an exceptionally good hay barley, that we repeat from a previous bulletin its history, as follows:

"Several years ago two heads were noticed in a plot of Scotch two-rowed barley, which differed from that variety by absence of beards and in having spoon-like appendages like the Nepaul barley, from which it also differs in being distinctly two-rowed and having the husk adhering to the kernel. This variety has been grown year after year, a continued effort being made to fix the type by eliminating all heads showing beards and those exhibiting a tendency to become four-rowed. In cleaning the seed, naked kernels have been removed as far as possible. The result is an approximation toward a fixed type which shall have the slender, leafy stem of the Scotch two-rowed, but beardless and with adhering husk. The primary object of the effort to fix this type has been to secure a variety suitable for hay like the Nepaul, but less liable to rust than that sort."

Ryes—

1. Spanish.
2. Saxon Perennial.
3. St. John's Day.
4. Excelsior Winter.

The increasing popularity of rye as a winter feed for dairy cows in the interior, foothill and mountain valleys warrants experiment to determine if other varieties are better than the one commonly grown.

Oats: Rust-proof—

1. Heavy Winter. 2. Mox Rust-Proof.

We have secured a supply of these varieties from a reputable source in Georgia to determine if the success which Georgia oat-growers have attained in avoiding rust by choice of resistant varieties can be reproduced here. The "Heavy Winter" is commended to us as a heavy, tall oat which resists rust if sown early. "Mox Rust-Proof" very seldom shows any injury from rust, grows to medium hight and is very productive. It is counted in Georgia as the "surest and only reliable spring oat."

Terms for Cereals.—Applicants for seeds of the cereals named above may order a single package of any one or of all varieties, but we cannot furnish more than a single package of one variety—15c. for each variety in 1 lb. sacks, postage paid.

TOBACCO.

In spite of the difficulties which have attended the curing and marketing of California-grown tobacco, quite encouraging progress has been made within the last few years, and it is possible that the crop may become of considerable importance. In view of this fact and to supply seeds of the best-known varieties to those desiring to experiment, we have secured from Major R. L. Ragland of Hyco, Virginia, seeds of his best sorts, viz.:

1—"Ragland's Conqueror"—a healthy, vigorous grower of the best form and texture and curing to the brightest color.

2—"Bonanza"—a superior variety for wrappers, cutters and fillers.

3—"Safrano"—yielding a product of a rich saffron color, soft silky texture and superior flavor.

4—"Gold-Finder"—a Yellow Oronoko crossed on White Burley, and held by some planters to be the most beautiful yet produced.

5—"Ragland's Improved Yellow Oronoko"—developed by careful, continuous selection from old standard yellow Oronoko.

6—"Long-leaf Gooch"—leaf longer and finer than Broad-leaf Gooch, and considered one of the best varieties.

7—"Lacks"—broad leaf, tough fiber; a good and reliable sort.

8—"Bradley Broad Leaf"—a popular variety both for manufacturing and for cigars.

9—"Connecticut Seed Leaf"—the largest and finest selected varieties of this indispensable kind,

10—"Big Havana"—the best Americanized Havana; the earliest cigar variety, a heavy cropper and of fine texture and flavor.

Of these ten varieties, the first seven are of what is called the "commercial-leaf class;" the last three are cigar varieties. Experimenters may order the whole or part of the collection, as they see fit, at the rate of 3c for each variety, postpaid. Instructions for growing will be mailed to each applicant for the seed.

TREES AND PLANTS.

Seedling Olives.—Trees grown from imported seeds of six European varieties, which were planted in 1882, have borne freely this year. Some of these seedlings promise to be of value, and we desire to send scions for grafting to those inclined to experiment in this direction. *We do not commend these varieties for planting*, but simply invite experiment to secure a wider trial of them with a view of approving or condemning them.

No. 1—Resembles Rubra, fruit good sized, pit small, growth and fruiting good.

No. 2—Resembles Nigerina closely, very productive.

No. 3—Resembles Præcox; large bearer and a strong, upright grower.

No. 4—Another strong, upright grower, and productive.

No. 5—Resembles Atroviolacea; early maturing, foliage rather open.

No. 6—Resembles Uvaria; good, compact grower, fruit-clusters large and abundant.

No. 7—Resembles Atroviolacea; very open grower and fair bearer.

No. 8—Resembles Rubra in leaf and growth; fruit of good size.

Packages of these scions will be sent at the rate of 4c for each variety, postpaid.

Date Palms.—Some confusion and misunderstanding have followed the announcement, in the newspapers, that we had received from the U. S. Department of Agriculture a collection of the best varieties of foreign date palms. We have received only a few such palms, and they have all been planted at our stations at Tulare and Pomona. In the future there will be distribution of these, when they produce suckers. We have, however, a few plants grown from the seed of the date of commerce, which we will send to applicants in localities where the date is likely to prove hardy, in order that the local climates may be tested in advance of the distribution of better varieties. Two plants to each applicant, so long as the supply lasts, for 25c, by express.

Carobs.—In view of the continued inquiry for this forage-producing tree of the Mediterranean region, we have grown a small lot of seedlings for distribution this year. The Carob tree (*Ceratonia Siliqua*) is the true "Algaroba," or St. John's bread of the Mediterranean region, and has been heretofore recommended for cultivation in the southern part of the State, on dry and otherwise unavailable hillsides as well as in richer and moister lands, for the production of an excellent milk-producing feed. (See report College of Agriculture of 1884, page 100, and report 1886, page 108.) The Carob is about as hardy as the orange, but owing to its drouth-resisting qualities when once established, is destined to have a much wider range than that tree. Four plants to each, it being necessary to make sure of having both staminate and pistillate trees together; 25c by express.

Kai Apple (*Aberia Caffra*).—The Kai apple is a native of Natal and Caffaria. It is a tall shrub, yielding an edible fruit of a golden yellow color, about the size of a small apple. It is commended as a hedge plant, as it is densely clothed with strong dry spines. The leaves are small and of a rich green hue. The plant grows readily from seed, but can also be multiplied rapidly by cuttings, using bottom heat. In this way plants can be secured for hedge-planting without waiting for the stock plant to reach bearing age. We send by express two plants to each applicant: 25c.

Caper bush (*Capparis spinosa*).—It is possible that the production of the "caners" of commerce, which are the pickled flower-buds of this plant, may become one of our minor agricultural industries. The plant is a free bloomer with us from June to October; the flowers are strikingly beautiful and the foliage attractive. It is of low habit, and plants should be set at least six feet apart. Three plants to each applicant by express: 25c. Larger quantities can be furnished at cost of packing to those desiring to plant for trial on a commercial scale.

English Oak (*Quercus robur, var. pedunculata*). Each year furnishes additional evidence of the exceedingly rapid and satisfactory growth of this tree in California. It can be earnestly commended for planting in most parts of the State, both upon lawns and in forest plantations. One-year-old trees by express, five to each applicant: 25c. Young trees should be guarded from gophers, squirrels and cattle—all these animals eat them greedily.

Black Wattle (*Acacia decurrens*).—This tree has demonstrated its adaptation to most California climates, is a rapid grower and very desirable as a shade or ornamental tree as well as for its economic importance as the source of the wattle-bark of commerce. Small trees sent out from the University are already bearing seed in several localities in the State. General success is reported with seed previously sent out where the seed has been put in boiling water and allowed to stand and cool 12 hours before planting. Otherwise the seed may not germinate until the second year. The seed is small, and a packet properly handled should give trees for a large plantation; 2c per packet by mail.

Licorice.—This important commercial plant has demonstrated its adaptation to California conditions, and offers inducements to those who have suitable lands. The importation of licorice from Europe to the United States is very large, and the market for the local product is promising. Mr. Isaac Lea of Florin, Sacramento county, our largest producer, obtains 14c per pound for dried medium-sized roots such as druggists use, and the manufacture of stick licorice would probably pay even better, if one would give the effort needed to succeed in its production. Licorice produces best on low, moist ground. Land that is overflowed in winter suits it well, and submergence does not injure the plant. It will, however, grow on almost any soil. The roots should be planted in rows four feet apart, the roots placed one foot apart in the row and cultivated like corn. Harvesting is done by plowing out with a strong team or digging with spades. The plants which we send to each applicant will soon give roots enough to plant a large area if desired. Let it be remembered, however, that licorice in land which is desired for other purposes is a troublesome weed and hard to eradicate. We send five root cuttings to each applicant: 10c by mail, postpaid.

CUTTINGS AND SCIONS.

Osier Willows.—The demand for the choice varieties of Austrian Osier willows which we grew from cuttings received from the U. S. Dept. of Agriculture soon exhausted the supplies available last year. We have therefore produced a larger supply for this year's distribution.

No. 1: "Smooth Golden" (*Salix viminalis*)—rather a small, slim growth; bark smooth, bright yellow.

No. 2: "Belgian" (*S. viminalis*)—a stronger grower; bark greenish yellow.

No. 3: "Hybrid Viminalis" (*S. viminalis var.?*)—very long canes; bark greenish yellow.

No. 4: "Improved Viminalis" (*S. viminalis meliorata*)—medium growth; bark greenish yellow.

No. 5: "Noble Viminalis" (*S. viminalis nobilis*)—a strong grower; bark greenish yellow.

No. 6: "Broad-leafed almond willow" (*S. amygdalina latifolia*)—rather a small cane with broad leaf; bark dark green; wood hard.

No. 7: "Yellow-branch almond willow" (*S. amygdalina vitellina*)—bark dark green.

No. 8: "Caucasian almond willow" (*S. amygdalina Caucasica*)—bark black or very dark.

No. 9: "Silver-leaf willow" (*S. hippophæfolia*)—a strong grower, with reddish bark.

Sent in lots of 10 of a kind; 10c. per lot, or one dozen assorted, 20c. by mail.

Mulberries.—Cuttings of the following kinds can be had: (1) Multicaulis; (2) Alba; (3) Russian; (4) Downing's Ever-bearing; (5) Lhoo; (6) Nagasaki. Sent in lots of 10 of a kind; 10c. per lot, or 12 cuttings assorted, 20c. by mail.

Resistant Grape Vines.—These vines are not desirable for fruit-bearing, but are offered to those desiring to test them as stocks for grafting. Cuttings of the following species of *Vitis* can be had: (1) Cinerea; (2) Aestivalis; (3) Cordifolia; (4) Candicans; (5) Riparia; (6) Arizonica; (7) Californica; (8) Monticola; (9) Novo-Mexicana; (10) Rupestris; (11) Vulpina (12) Romaneti; (13) Spino-vitis Davidii. Sent in lots of 10 of a kind; 10c. per lot, or a dozen assorted, 20c. by mail.

Fruit Tree Scions.—The University orchard contains upward of 500 named varieties of fruit, and our report on "Agricultural Experiment Stations," 1890, pages 182 to 187, contains a full list. This report will be sent to all applicants who may order any of the varieties named. We may not be able to supply all applications for some of the newer varieties, because the trees are small.

We do not furnish rooted trees, but scions, for grafting. We do not send large quantities of any variety, because the object is to test varieties and not to furnish material for commercial propagation. Send 10c. for each dozen ordered of a single kind, or 20c. if a dozen of assorted varieties is ordered.

FORAGE PLANTS.

Texas Blue Grass (*Poa arachnifera*).—This grass can now be commended as especially valuable in many parts of the State. Experimenters who have received roots from us or from other sources agree in its favor. An interesting statement furnished us by Mr. Austin J. Roberts of San Leandro, Alameda county, after three years' growth of the grass, contains these points:

"It stands our warm dry summers without dying out, and springs into vigorous growth as soon as the rainy season commences. It has r own with me successfully even on a gravelly soil without a drop of water from May until October, yielding a crop of hay the ensuing summer at the rate of 2½ tons to the acre. Planted on good soil and occasionally irrigated during the summer, its growth is luxuriant, affording many cuttings and producing an enormous yield of feed. It is highly relished by stock both in its green state and as hay. The roots planted in rows 18 inches apart and 12 inches apart in the rows, soon spread and form a matted turf."

We can furnish root-sets in 8-oz. packages for 8c. each by mail. By planting a small plot, the grower will soon have roots to plant a large area if the grass commends itself.

Other Forage Plants.—There is still demand for the forage plants which we have formerly distributed. Some of them have proved very successful and valuable. It is desirable to have as wide trial as possible of all of them:

Japanese Wheat grass (*Agropyrum japonicum*), 4-oz. packages, 4c.

Tall Oat grass (*Arrhenatherum avenaceum*), 4-oz. packages, 4c.

Schrader's Brome grass (*Bromus unioloides*), 8-oz. packages, 6c.

Hungarian Brome grass (*Bromus inermis*), 4-oz. packages, 4c.

Hairy-Flowered Paspalum (*Paspalum dilatatum*), 2-oz. packages, 2c.

Millet grass (*Milium multiflorum*), 2-oz. packages, 2c.

Snail clover (*Medicago turbinata*), 4-oz. packages, 4c.

Esparcet or Sainfoin (*Onobrychis sativa*), 4-oz. packages, 4c.

Jersey Kale—a tall-growing collard producing a vast weight of feed on moist land. Plants should be grown and set out like cabbages; 2-oz. packages, 2c.

FIBER PLANTS.

Cotton.—Cotton was more widely distributed in California last year than ever before, and excellent samples were produced. We have seed of two leading Texas varieties: "Big Boll" and "Poor Man's Relief." Seed in 8-oz. packages, 8c. each by mail.

Jute.—Adapted to moist lands away from the coast and should be sown after the ground is well warmed in the spring and danger of frost is over. Seed in 4-oz. packages, 4c. each.

New Zealand Flax (*Phormium tenax*).—Grow well in the coast regions of the State. Valuable for tying plants, vines, etc. Five plants to the lot; 25c. per lot by express.

Esparto Grass (*Stipa tenacissima*).—Grows well on sandy beaches within reach of salt water, and in some other situations. Used for cordage, basket-weaving and paper-making. Ten plants to the lot; 25c. per lot by express.

Ramie (*Boehmeria candicans*).—The famous "China grass." Several processes are now being advocated as successful in extracting the fiber, and some foresee an important industry resulting therefrom. Ten plants to the lot; 25c. per lot by express.

Flax.—Four varieties of the best European fiber flaxes, which attain about twice the length of stem of the variety grown for seed in this State. No. 1, White-flowering French; No. 2, Royal of Germany; No. 3, Russian; No. 4, Yellow-seeded; 4-oz. packages of each or all, 4c. each.

MISCELLANEOUS.

Beans.—"Tall Mont d'Or," an excellent variety; 4-oz. packages, 4c.

Beets.—"Eclipse" and "Osborn," very early and excellent; 4-oz packages, 4c.

Sugar Beets.—In view of the renewed interest in the beet sugar industry, we will furnish seed of approved varieties in 4-oz. packages to those who desire to test their local conditions with reference to the production of beets acceptable to the sugar-makers. Growers of such trial beets can have the product assayed at the Station laboratory. Seed for large plantings can of course be obtained through commercial channels.

Spinach.—New Zealand (*Tetragonia expansa*); described by Von Mueller as a good culinary herb and as useful for restraining drifting sands. Seed in 1-oz. packets: 2c.

Chapman's Honey Plant.—A "globe thistle," much liked by bees and suitable for planting in waste places. Seed in 4-oz. packages, 4c.

Pyrethrum (Insect Powder plant).—The Dalmatian (*cinerariæfoleum*) and Red (*roseum*) in 1-oz. packages, 2c. each.

Bamboos.—A few applicants can be furnished with rooted plants of the *Metake*, one in a lot; 25c. per lot by express.

Reports from Recipients.—Those who receive seeds and plants are expected to report results to us, that the data may be embodied in our publications. A large number of such reports is now being prepared for printing, and we earnestly request those who have not yet complied with our desires in this respect to do so at once. We wish to hear of failures as well as successes, that the exact standing of each plant may be ascertained. In reporting failures, please state from what apparent cause, if possible.

N. B.—All applications for seeds and plants should be made as early as possible. We expect to send out *seeds about January 1st, and* PLANTS ABOUT FEBRUARY 1ST. All applications should be addressed to

E. J. WICKSON,
Berkeley, Cal.

December 10, 1890.

Patrons of Husbandry.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

The Master's Desk.

E. W. DAVIS, W. M. S. G. OF CALIFORNIA.

To the Officers of the State Grange.

We are now entering on the last half of our official term. Though we may not have won the laurels for the Order that we each expected to win, or that the Grange expected us to win, yet the race is not lost, nor is the time to win it passed. Won't each one of you try to organize a new Grange this coming year? If you are unable to do that, then make a terrible effort to reorganize some dormant Grange. Please remember that the springtime insures new life. Now to the work of scattering Grange thought, influence, purpose, and work. Who will come and keep the fires burning bright? Let's all rally to the work of the Grange.

Attention, Deputies!

All Deputies now holding commissions (whether General, County, District or Special Deputies) are by this notice reappointed. You may each of you consider this your authority to act till the meeting of the State Grange in October, 1891, at which time my official term will expire by limitation.

You did well by the Order last year, and for that service in my own behalf, and for the Grange everywhere, I sincerely thank you. But the work of another year demands our attention. Please renew your efforts, and, if possible, *doubly increase* them, in behalf of an Order and for a people actuated by the highest and noblest of purposes. Join, with bright eye, willing hands, fleet feet, attentive ear, instructive tongue and honest heart, in planting, in California's thrifty, sunny farm homes, "Peace on Earth, Good-will toward Men."

The fee for membership in a Juvenile Grange is so small that any child would soon save the amount. *Fifteen cents* could not be expended by a child when a greater return for good in after-life would be sure to follow. Encourage the Juvenile Grange, and the subordinate Grange will soon reap an extra harvest.

By the action of the recent session of the National Grange, Organizing Deputies will receive $5 from the *National* Grange fund for every charter list of a new subordinate Grange. This sum, in addition to the sum allowed by the Executive Committee of the California State Grange for a new Grange organization, will surely pay any live, wideawake organizer to make a house-to-house canvass for the Grange. The principles of our Order are so pure, and the purposes of the Grange so noble and helpful, that if they are fairly and intelligently explained to the farmers there ought not to be, and I believe there will not be, much difficulty in organizing 50 or more new Granges in this State during the new year. The demands of the farm are so reasonable, and the legislation asked for by the farmers is so fair and forcible, that all required to insure success is a thorough organization and hearty co-operation among those who till the soil. The Grange offers to farmers and to their families, for a small fee, all these glorious opportunities. Where will the first Grange be organized in the new year? Who will secure the first list?

The Journal of Proceedings of the National Grange will soon be here, so I will say little of what was done.

By the next issue of the Rural, the names of the Committee on Experimental Stations, Co-operation and Farmers' Institutes will be announced. The trip to the National Grange, and the work of answering accumulated mail during said absence, have absorbed all "spare time" since my return; therefore your indulgence for another week is asked.

As per request of the State Grange of California at its late session, I have the honor to submit the following as the result of labors in the direction required. The Committee on Constitution and By-laws of the National Grange, after hearing your representative, considered the argument worthy the action of the National Grange, and as a result has submitted to all State Granges the following proposed amendment to the Constitution of the National Grange:

Amend Section 1, Article I, under the head "State Grange," by inserting between the words "Matron" and "provided," where they occur in the third line of said section, the following: "And such fourth-degree delegates as may be found necessary to secure to each subordinate Grange two representatives. The fourth-degree members above provided for to be chosen in such manner as the respective State Granges may prescribe."

Which subordinate Grange in California will be the first to organize a Juvenile Grange? The ritual for Juveniles contains but one degree. It is now in the hands of the printer, and will soon be ready for distribution. Children of the farm between the ages of 8 and 14 years are eligible. The Juvenile Grange is under the direction of the subordinate and of the State Grange. Remember, Patrons, that little Grangers will soon be big Grangers. Encourage the girls and the boys.

The Legislature soon convenes. See that your Assemblyman and your Senator do their duty. They *know* what we need. See that they vote accordingly.

If the officers whose duty it is will forward the result of the election in each subordinate Grange, *at once*, to the Worthy Secretary, it will materially assist the Master in communicating the Annual Word. The new word is ready and will be communicated to the *Master elect* as soon as he is installed and the *December quarter's* dues are paid. Let all be prompt, and the *new word* will soon be yours.

Sacramento County Pomona Grange expects to install officers on Saturday, Jan. 10, 1891. The Legislature will be in session at that time, and it will be a good opportunity to see two attractive bodies, viz.: The Pomona Grange and the Legislature.

Bro. H. E. Hayes, Worthy Master of Oregon State Grange, has promised to "stop over" in California on his way home from the National Grange. We may be able to get him to do some Grange work for us. An effort will be made; we hope success will follow.

E. W. D.

Bro. Flint at San Jose.

At the meeting of San Jose Grange on Saturday morning the members considered it fortunate that they could have so thorough a Granger as Daniel Flint of Sacramento to act as temporary presiding officer. A class of four received the last chapter of instructions, and can henceforth be observant Grangers as well as active members of the Order.

The illness of W. A. More of Los Gatos was announced. Among the customs of the Grange is the very pleasant one of celebrating the graduating of a class of candidates, or some other appropriate event, with what is known among them as a "Harvest Feast." Such a feast was had on Saturday at the close of the regular business meeting, and the long tables in the smaller hall were loaded with good things and surrounded by hearty farmers, their wives and daughters. One of the peculiar California features of the occasion was a fair-sized squash neatly hollowed out, and from its cavernous depths fair hands drew forth squash pies sufficient to supply the multitude there assembled, and some believed that it was like a conjurer's box—inexhaustible. Apples, pears, figs, grapes and plums, all fresh and nice, were the representatives of the horticultural products—a wonder indeed to some from the East who were present.

Assembling again in open meeting after the feast, Dr. and Mrs. Mintie, who were present by invitation, favored all with a finely rendered duet. This was followed by an essay by Mrs. Lillian Jones and a song by Mrs. Frost, also one by Mr. Morgan.

Daniel Flint of Sacramento made rather a pointed address, alluding incidentally to Congressmen who cannot write their own speeches, much less deliver them, and the further fact that with money a man of very few brains may make a pretty fair intellectual show in this world by purchasing the brains of others for the purpose. Mr. Flint favored the Grange as tending to promote and favor the pursuit of happiness, one of the inalienable rights of man. He was himself greatly interested in Grange-work and expected to die in the service. The address was full of encouragement, and will do much to promote the popularity of the Patrons of Husbandry.—*San Jose Times.*

Wheat Prices Since 1864.

We are indebted to Albert Montpellier, Manager of the Grangers' Bank, for the following very important table showing the

PRICE OF WHEAT IN THE SAN FRANCISCO WHEAT MARKET FOR 26 YEARS FROM JUNE, 1864, to DEC. 15, 1890.

Year	Highest.	Lowest.	Difference.	Average.
1864-65	$3.30	$2.30	$3.00	$4.15
1865-66	2.15	1.40	.45	1.97
1866-67	2.22	1.25	.97	1.76
1867-68	3.10	1.50	1.60	2.31
1868-69	2.50	1.17½	1 32½	1.71
1869-70	1.95	1.05	.90	1.70
1870-71	3.15	1.55	1.60	2.25
1871-72	2.85	1.52½	1.32½	2.29
1872-73	2.16	1.25	.91	1.95
1873-74	2.37½	1.60	.77½	2.02
1874-75	1.85	1.30	.55	1.60
1875-76	2.32½	1.65	.67½	1.96
1876-77	3.00	1.45	1.55	1.93
1877-78	2.45	1.82½	.62½	2.10
1878-79	1.77½	1.57½	.20	1.63
1879-80	2.15	1.45	.70	1.81
1880-81	1.67½	1.25	.32½	1.40
1881-82	1.75	1.30	.45	1.62
1882-83	2.05	1.60	.45	1.73½
1883-84	1.87½	1.42½	.45	1.64½
1884-85	1.50	1.17½	.35	1.32½
1885-86	1.50	1.25	.25	1.36
1886-87	2.10	1.22½	.87½	1.62
1887-88	*2.12½	*1.22½	.90	1.37½
1888-89	1.63⅝	1.25	.38⅜	1.43
1889-90	1.38½	1.25	.13½	1.29½
Crop 1890	1.40	1.27½	.12½	...

*Wheat collapse.

Not Professor Linscott.—Editors Press: The Linscott on whom our Grange passed resolutions was not Prof. Linscott who welcomed the State Grange when here (as erroneously mentioned in the Rural), but a cousin of his and the Principal of Public Schools at Scquel for a number of years.—J. C. Drew, *Watsonville, Dec. 15th.*

A Word to California Patrons and Farmers

From Past Master Hale of Connecticut.

Editors Press:—Here I am at home once more, and while I feel like writing a personal letter to each one of the many dear Patron friends of the Pacific Coast who helped to make my business trip there so extremely pleasant and satisfactory, a press of work here prevents my doing so, and as I know that your bright paper will (or at least ought to) reach the home of every good farmer in the Pacific States, this letter will have to answer for all at present and later on I will try and write some personal letters, at least to those who care enough about it to punch me up in the matter, for, as a matter of fact, I am a "poor shiftless critter" like all the rest.

After leaving the northern central part of California early in November, I thought I should get out of the range of Patrons, but while making a three-hours' wait at Sanger for train to Santa Barbara, I met an active member of Carpenteria Grange who, when he learned I was a Patron, treated me like an old friend and gave me much valuable information. Somehow, that "I am a Patron" is a passport to the hearts and homes of people that can be reached in no other way, and later on when I went to San Diego, and bright and active Mr. Frank Kimball, after showing me all about and furnishing me many points in the line of my investigations, drove me to the home of Mr. Warren Kimball and turned me over to that true woman and loyal Patron Mrs. Flora Kimball, with the request that they look after me as long as I was in that part of the country on business. Her greeting was a most cordial one to a stranger, but a little later on when she learned I was a Patron and was with the National Grange party when there last year, you may rest assured that we soon had many things to talk about just as all do who are interested in the same line of thought, and the time spent at that delightful home, where we all had the "rosebud lunch" after our return from Tia Juana on Dec. 4th of last year, will be long remembered by me. It is too bad that such good Patrons as the Kimballs are at heart cannot be kept in the Order.

I found many old Patrons from the East all through Southern California, and some way should be devised by your State Grange to start a *live* Deputy at work down there; then, when they have enough sub Granges, organize a Pomona and bring the Patrons of that part of the State together at least four times a year. You see, about the only chance that old National City Grange members had to see other Patrons of the State was to travel once a year 400 to 600 miles to attend the State Grange sessions. No wonder it could not live. The average Patron is "a mighty sociable critter" and must be given a chance to touch elbows now and then if the Grange is to thrive. Now, Bro. Davis, put some one on this track and you can have 25 new Granges in the southern counties during the next year. Then wake them up with one of your live State Grange sessions and "the thing is did."

From San Diego county I made a jump back up to Tulare and Merced for two public meetings. At Tulare, we talked of Farm Institutes. The Grange and Alliance people there evidently believe in a better understanding of the science of agriculture, and propose to build up from the bottom on educational lines. I would be glad to take up a whole letter on this one subject, but suppose long ere this you have printed a full report of the meeting. I will get at it some day, but for the present the Rural Press is filed away along with a host of other unread papers that have accumulated here for me.

From Tulare I went up to Merced (where, by the way, I had hoped to meet some of your State Grange workers, as the meeting had been advertised two weeks), and was taken in hand by Bro. Smith and driven all about the place, then out six miles to the home of Bro. and Sister Atwater, where I found a ten-acre orange and lemon orchard two years planted that has made such a grand start as to give one great faith in citrus-fruit culture in that section of the State, especially after seeing the fine oranges that are ripening on the dozen or more trees in the courthouse yard. In the evening we had a very pleasant call from the bright Secretary of Merced Grange and her father and mother, all of whom are very earnest Patrons. You have been wonderfully fortunate in California to secure so many bright women for Grange Secretaries, and I am of the opinion that much of your success is due to their promptness and efficiency. Any way, Merced is a very bright Grange and conferred the third and fourth degrees in very good form, after which we had the usual feast—just such as only the Matrons of our Order can furnish. Then for an hour and a half I gave them a rambling talk on Grange and farm work, and then by fast train made a bee-line for Arizona, where I spent a few days looking up the orange and lemon lands and trees along the Salt and Gila River valleys. There being an abundance of water and plenty of cheap lands there ($10 to $30 per acre), the prospects are that both these fruits, also the raisin grape, will be very largely planted there the next few years.

Passing on across Texas, I spent some little time in and about the quaint old city of New Orleans and then home via Atlanta and Washington. It was two weeks or so after the close of the sessions of the National Grange, but I was fortunate enough to meet a number who had been in attendance, and all were loud in their praises of good Bro. Davis, the bright representative from California. I spent a few hours at the home of Bro. Whitehead in Washington, and as he is one of those bright men who know and remember every one, we just sat and talked you all over and our pleasant trip of a year ago. He is a true-blue friend and Patron sure. To attend a three-days' Farm Institute at Worcester, Mass., I had to just make a call at home and then skip out again, but was just in time to catch Bro. Hayes of Oregon visiting Mrs. Hale (who, by the way, I found fat and "sassy" as ever), Sister Hale I mean, not Bro. Hayes—he is the same good fellow as ever, and if Sister Hayes does not send for him to come home, will attend our State Grange the middle of January. I reached Worcester in time for first evening meeting, and you know how it is where two or three are gathered together in the name of agriculture, there will the Patrons be found also, so I was not much surprised on entering the hall to see on the stage Bro. Rice of Worcester and Sister Wasson of N. H., and bless my heart if she didn't sing "The Farmer Feeds Them All" just as bright and happy as at Sacramento one year ago; then in the audience were Bro. and Sister Draper and Bros. Putnam, Hartshorr, Ware and Hadwin—all of our Grange party last fall. Somehow, even though I was in Massachusetts, the whole thing carried me back to California, and as soon as the good friends had a chance at me, we had to talk it all over once more.

This is a big old world, Bro. Dewey, but somehow such meetings bring us all nearer together, and California is not half so far away to most of us since our visit last fall; and I shall feel mighty homesick if I cannot get over there at least once more before I die. I am now settled down at home, and find any amount of work that has accumulated during my absence. It had been a lovely fall up to December 1st; then it started in for a real old-fashioned winter, and I at first thought this was no place for Hale and his summer pants. However, I did not pucker up much, and now really enjoy the clear dry cold. Find all my trees and plants went into winter quarters in fine shape, and so I had much rather have the snow and ice than the previous two warm winters. The children are having lots of fun skating and sliding down-hill, and I rather think we "old folks" will have to take a hand in it just for fun. You will remember how I told the National Grange last year of our inspection service. Well, this year we have so many Granges, that aside from the regular Deputies, Worthy Master Bowen has appointed seven others, two of whom are ladies, and the work of inspection is now going on so as to be able to report at State Grange in four weeks. I had been home just one day when I received marching orders to go out on this inspection work. I inclose you one of the blanks showing the 22 questions covered in our work. To get at these to my satisfaction and then go through the unwritten work once will keep a Grange on the jump for about three hours; but it stimulates the work all along the line, especially if a Deputy is bright and crowds in instruction at every point. Each one of the questions furnishes a text for a good Grange lecture. Possibly if you can spare the space some time, you will copy the blank which I inclose. Some folks know enough to "run down," but I never do when talking to or of Pacific Coast Patrons. I know this letter is much too long. Still, where could I stop before? and even now I have a dozen things I would like to say to or of a host of good friends whose names and faces are with me now and always will be through life. I am a good deal like Bro. Overhiser—have to scold some when attempting to do good. So as this may be my last kick, I must say for such good Patrons you are all mighty careless about giving a fellow "the grip" or any "sign" when on the road, and so no doubt in my travels over the State I missed many Patrons, whom, had I known, it might have been handy to borrow a little cash of or beat out of a good "feed," as I did many of you who could not escape "the tramp Deputy" Patron. Fraternally, J. H. Hale.

South Glastonbury, Conn., Nov. 10, '90.

Alive to Work.

Past Master I. C. Steele writes from Pescadero, Dec. 12th, to the Secretary of the California State Grange as follows:

Pescadero Grange is in condition to do effective work, and I am desirous of aiding our Legislative and Congressional Committees as best I can. Would like a few copies of the Australian Ballot law and two or three blank petitions, and any other petitions that it is desirable to have signed and returned, with any information that will be of use to me in making the most, or rather the best use, of our power.

My confidence in the Grange is as strong as ever. I feel that it has a mission that no other organization can fill. [We have complied with Bro. Steele's request, and would gladly respond to other wide-awake Patrons accordingly.] Fraternally yours, I. C. S.

Eden Grange.—Sister Sharai, Secretary, writes that the invitation of Temescal Grange to meet in Oakland for joint installation of officers, Jan. 3d, was unanimously accepted at the last meeting of Eden Grange.

EXECUTIVE COMMITTEE—JNO. S. DORE, Fresno; JESSE POUNDSTONE, Grand Island (Colusa Co.); JAS. MORGAN, Santa Barbara; E. M. WARDALM, Monrovia (Los Angeles Co.); DAVID REED, Monterey.

NATIONAL DELEGATES—J. S. BARBEE, Santa Barbara, and D. C. VESTAL, San Jose. [Session of 1890 opens at Osceola, Fla., Dec. 2d.]

Organizing Deputies.

J. B. RIGDON for Alameda and San Benito counties.
KATE L. SQUIRE for Santa Cruz and Santa Clara counties.
F. P COOK for Merced and Stanislaus counties.
H. W. RHYNE for San Luis Obispo county.
J. W. HINES, San Jose—Deputy-at-Large.

Selling and Purchasing Depot.

The Farmers' Alliance movement is certainly growing in this section, and judging from present indications is bound to be a power which, if properly controlled, will do a world of good.

In this county there are at present upward of a dozen sub-Alliances, having a membership, in round figures, of one thousand, and scarcely a week passes but some new Alliance is reported. The organization has finally got into good working condition, and is bending all its energies to the commercial side of the "agricultural depression" bugaboo that "bobs up serenely" at every election. At its last meeting R. Sherer of Compton was appointed as its business representative, with headquarters at 245 South Main street, with full power to buy and sell farm produce and farm supplies.

The main feature of the Alliance movement in commercial matters is to find new markets for Southern California farm productions, and so far as practicable, sell direct to the Eastern buyers, thereby saving to the producers the margins of the middleman. By shipping in carload lots the Alliance also expects some concessions from the transportation companies. Implements, seeds and general farm supplies will be bought by the business representative of the Alliances at different points, in large lots, and furnished to the farmers at cost.

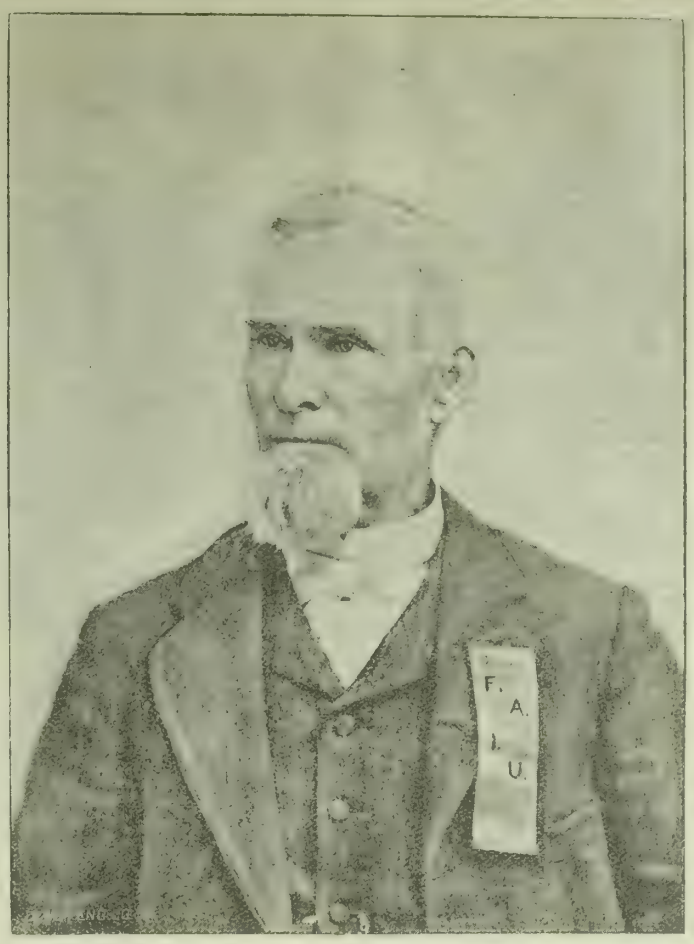
We understand several sales have already been made, while purchases are quite extensive in the way of seeds and implements.

So far as could be learned the Alliance in this State will take no independent action in politics so far as candidates are concerned, contenting itself rather with matters of business and legislation calculated to be of benefit to its members. In so far as supporting any political party, it will rather aim to support the best candidate in the field of either party. It is pretty well conceded that the California Alliances condemn the political move that has evidently captured the National Alliance. The California farmers as a class do their own thinking, and are not to be cajoled into any third party movement.

The County Alliance meets in secret session on the first Saturday of each month in the Chamber of Commerce rooms in this city.—*L. A. Express.*

Alliance Resolutions.

At a convention held at Oakdale, the State Farmers' Alliance passed the following sensible resolutions:



That we are in favor of the next Legislature establishing a Railroad Commission whose duty it shall be to regulate and control freights and fares, said Commission to be chosen by the Governor and composed of three members, all of said members not to be chosen from any one political party, said Commission to serve until the next general election, when such Commission shall be elected in the same manner in which the State officers are elected. No elector shall place more than two names on his ballot.

This demand is one that the farmers should push until their wishes are acceded to. A Railroad Commission is a necessity.—*Goldendale (Wash.) Courier, Dec. 13th.*

To Kern and Fresno Counties.

Without solicitation, the undersigned has been appointed a Deputy Organizer of the Farmers' Alliance for Fresno and Kern counties. Being willing to give some time to the work of organizing, I shall be pleased to correspond with any persons who desire lectures in their schoolhouses with a view to organizing sub-Alliances. J. W WEBB,

Box 76, Fresno, or Box 66, Hanford.

MARION CANNON, PRESIDENT CALIFORNIA STATE FARMERS' ALLIANCE.

Marion Cannon.

The President of the California State Alliance is a man of no ordinary quality. Coming to the late meeting in San Jose for organizing this State Alliance, unacquainted with and known to but few delegates, he shrank from the appointment of temporary chairman. Finally accepting the charge, he used his best unbiased judgment in the appointment of assisting officers and committees for the session. The work of organizing proved his good judgment and gave great satisfaction to the very earnest members of the meetings. During the labors of the session, he gave abundant proof of his large perceptive faculties, keen, quick discernment of character and ability and adaptability. For the position of permanent officer, he was elected with great unanimity after frequent requests to be excused from that important position.

The S. F. *Examiner* has given the following pen-picture of Mr. Cannon in its issues:

"Born in Virginia in 1834, he removed here in 1852, and has been for the past 16 years a resident of Ventura county, where he is engaged in conducting a large ranch. President Cannon is a man of great force of character, a good speaker, and of pronounced executive ability. He is a prominent Mason.

"He is a typical California rancher. This afternoon, when the correspondent met him under the arcade porch of the Revere house, Ventura, he was smoking a large cigar and had just finished a substantial noonday meal. He had on a black slouch hat that effectually concealed his gray hairs and his rather broad forehead, a suit such as a man might wear to go a-plowing, or to come to town for his mail, and the lack of a vest showed that he wore a brown cheviot shirt with white pearl buttons in front, with collar attached to the shirt and with no necktie."

It is the intention of the PRESS to print from week to week the portraits and lives of other men who from their natural worth have brought themselves before the public in the interest of true reform.

A Colusa Farmer's Ideas.

I wish to assure you and the readers of the *Sun* as well, that the aim and object of the Farmers' Alliance is not to obtain or advocate female suffrage or prohibition, though any member or body of its members can believe and advocate such measures. The constitution of the Farmers' Alliance plainly declares that "There *shall* not be any political or religious test for membership," and if any "stuff" makes its appearance, remember, "It is human to err," etc., and don't blame the Alliance—National, State and subordinate—for it. The Alliance, politically, is not in any way sectional, State or local. Sectionalism shall suffer, for its constitution declares: "To suppress personal, local, sectional and national prejudices, show any broader or higher aim." You caution the farmers to "go slow," a fact that you must know they have been doing, since you have been telling them for "years and years" of the very evils they now complain. The farmers need encouragement, not censure or criticism. Our interests need not nor do not antagonize. The prosperity of the farmer measures the prosperity of the country, one and all. If the farmer fails to look out for his own interest, who will? In unity there is strength; so let the farmers unite and pull together for their good and the good of our common country, and let it not be said that any man raised his hands to retard the farmer in his honest effort to free himself from the unequal and unjust burdens now bearing on his calling.—*Cor. Colusa Sun.*

Farmers' Alliances.

P. T. Durfy of Monte Vista, who was a delegate to the Farmers' Alliance meeting at San Jose, says that new Alliances are being formed right and left, while the membership is increasing with marvelous rapidity. Organizers are out all over this lower country forming new Alliances at many points.

Mr. Durfy thinks the future of the organization depends mostly on maintaining its purity of elements and of purpose. One of the great troubles is to keep the membership confined strictly to farmers, to those who are directly interested in the cultivation of the soil in some shape. The great success of the organization is attracting attention, and all sorts of combinations seem anxious to get into the new Order. Many labor organizations are coming to the door to make inquiries as to terms of affiliation, and the Nationalists are asking for direct admission. While the labor people are practical, their interests are not by any means identical with those of the farmers, and the Nationalists are mostly theorists. To let in all sorts of people means to complicate the aims and workings of the organization. Antagonisms and divisions, misunderstandings and strife will ensue.

As it is desirable to keep the membership free from entangling alliances, so is it to preserve the Order from the interference of the old political parties.—*L. A. Herald.*

Seaside Alliance.

EDITORS PRESS:—Your request in issue of 6th inst. to give names of officers of sub-Alliance Granges is herewith complied with. We will be pleased to see our Alliance in your directory.

Seaside sub-Alliance, No. 87, Ocean View District, Ventura county: Pres., J. D. Goodyear; Vice-Pres., F. Petit; Sec., L. W. Gray; Treas., G. E. Kaltmeyer; L., W. E. Goodyear; Doorkeepers, Z. E. Goodyear and R. Phillbrook; S., Fanny Goodyear; C., G. W. Wolff. Total number of members, 56—38 males and 18 females. Yours truly, L. W. GRAY.

Hueneme, Cal., Dec. 8th.

RIGDON AT WORK.—Deputy Organizer Rigdon organized a sub-Alliance at Irvington last Saturday afternoon with 20 members. G. W. Huff was elected President and C. C. Chase Secretary. He later organized the third Alliance in Alameda county at Pleasanton. Mr. Rigdon is now up at Lodi, where we expect to hear of some more good work.

ALLIANCE MEETING.—The Farmers' Alliance held a meeting at Garden Grove on Saturday. Visitors were treated to a great spread by the Grove people. The next meeting will be held at Tustin some time next month. The Tustin folks have promised to provide dinner for all visiting Alliance people. There are four hundred members of the Alliance in the county, and new members are constantly being added. —*Anaheim Gazette, Dec. 11.*

Alliance Items.

The Soquel Farmers' Alliance held an open meeting Tuesday evening. The National and State Organizer, Mrs. Squire, being present, addressed a large and interested audience. The remarks were received with applause, and at the close of the lecture a number of new names were added to the list, and some candidates were initiated by the Organizer. The Soquel Alliance meets every Tuesday evening, and all farmers and others interested in that locality are invited to join them.

Aptos Alliance has grown rapidly, and has quite a list of names to be admitted at its next meeting.

Corralitos Alliance initiated about 30 members at its last meeting, having 64 members, with a good prospect of more.

The County Alliance will meet in Watsonville, Saturday next, for the purpose of electing a County Business Manager.

The Watsonville sub-Alliance is rapidly increasing in membership, and is very enthusiastic.—*Santa Cruz Sentinel.*

J. W. HINES, publisher of the *Pacific Union*, is an able and zealous worker in the cause. He elicited the enthusiasm and praise of all for the able and fraternal manner in which he presided at the State Alliance banquet at the St. James hotel, San Jose. President Cannon has appointed Mr. Hines a General Organizing Deputy, and he is to go forth into those counties where no Alliances have been organized, and establish new altars, and if possible, secure good workers to light the fires on many other living altars of the good and helpful faith. We hope he will give us good reports of progress for publication from time to time.

To Organizers and Secretaries of Subordinate and County Alliances.

I desire that each organizer will send me the name and P. O. address of the President and Secretary of each Alliance organized as soon as possible. Also that the Secretaries of County Alliances will forward a full list of all Sub-Alliances in their county, with the name and P. O. address of the President and Secretary, so that I may be able to prepare a directory for my use and have the list published in the RURAL PRESS for the benefit of all.

As I will have many circulars of information to send out soon, it is very necessary that I have the list immediately.

I am prepared to fill orders in the line of general groceries, and some lines of building material; also some other things now, and will add new lines to the list every week. It will be of advantage to members of the Order to be in communication with me soon, for I must have the P. O. address of Secretaries before I can send price lists, etc.

Address all letters at present to me at No. 433 California St., S. F.

J. M. MOORE, State Bus. Agt.

The Raisin Industry.

We had the pleasure of announcing, some months ago, that Dr. Gustav Eisen had in preparation a book on the raisin industry, a work for which he is especially fitted by years of research, observation and practical operation. It is a matter of general satisfaction that the undertaking has been most successfully prosecuted, and that California is thus enabled to give to the world the first comprehensive work on this special subject that has ever appeared in any language.

The title of Dr. Eisen's work is "The Raisin Industry," a large octavo of 225 pages fully illustrated. The book opens with a very interesting historical study of the raisin and its production, followed by descriptions of the districts of the world, where the product is of importance, including of course those of California, which are sketched with much skill from full personal acquaintance therewith. Next come discussions of climatic conditions, soils, location and irrigation, as related to raisin-growing. Diseases and insect pests follow, and then the author begins his treatment of the actual production, the planting of the raisin vineyard, cultivation, grafting, pruning and the best tools for all parts of vineyard work. Drying and curing, packing and the packing-house and all devices used therein—all these are treated in detail and constitute a practical guide by which any intelligent man, though inexperienced, may proceed safely and successfully in the building up of a raisin enterprise. Statistics of the raisin of California, brief sketches of leading producers and a carefully prepared outline of the fragmentary literature of the subject, complete the volume.

Dr. Eisen's work is broad and scholarly, and yet compact, and definite in the development of the subject. It should find a place on the book-shelves of all California horticulturists, and will no doubt go to the uttermost parts of the world, where there is much curiosity to know how California is proceeding to turn back the tide of European raisins from the profitable market which they have so long enjoyed in this country. Dr. Eisen's book is sold only by subscription. James A. Johnson agent, with H. S. Crocker & Co. of San Francisco.

"Inasmuch."

An Incident of an Early California Christmas

THEY say that you want a meetin'-house for the boys in the gulch up there,
And a Sunday-school with pictur'-books? Well, put me down for a share.
I believe in little children; it's as nice to hear them read
As to wander round the ranch at noon and see the cattle feed.
And I believe in preachin', too—by men for preachin' born.
Who let alone the husks of creed, and measure out the corn.
The pulpit's but a manger where the pews are gospel-fed;
And they say 'twas to a manger that the star of glory led.
So I'll subscribe a dollar toward the manger and the stalls.
I always give the best I've got whenever my partner calls.
And, stranger, let me tell you; I'm beginning to suspect
That all the world are partners, whatever their creed or sect;
That life is a kind of pilgrimage, a sort of Jericho road,
And kindness to one's fellow's the sweetest law in the code.
No matter about the 'nitials; from a farmer you understand,
Who's generally had to play it alone from rather an or'nary hand.
I've never struck it rich, for farming, you see, is slow,
And whenever the crops are fairly good the prices are always low.
A dollar isn't very much, but it helps to count the same;
The lowest trump supports the ace and sometimes wins the game.
It assists a fellow's praying when he's down upon his knees—
"Inasmuch as you have done it to one of the least of these."
I know the verses, stranger, so you needn't stop to quote;
It's a different thing to know them or to say them off by rote.
I'll tell you where I learned them if you'll step in from the rain;
'Twas down in Frisco, years ago—had been there hauling grain;
It was near the city limits, on the Sacramento pike,
Where stores and sheds are rather mixed, and shanties scatterin' like.
Not the likeliest place to be in, I remember, the saloon,
With grocery, market, baker shop and bar-room all in one.
And this made up the picture—my hair was not then gray,
But everything still seems as real as if 'twere yesterday.
A little girl with haggard face stood at the counter there,
Not more than ten or twelve at most, but worn with grief and care;
And her voice was kind of raspy, like a sort of chronic cold—
Just the tone you find in children who are prematurely old.
She said, "Two bits for bread and tea. Ma hasn't much to eat;
She hopes next week to work again, and buy us all some meat;
We've been half starved all winter, but spring will soon be here,
And she tells us, keep up courage, for God is always near."
Just then a dozen men came in; the boy was called away
To shake the spotted cubes for drinks, as Forty-niners say.
I never heard from human lips such oaths and curses loud
As rose above the glasses of that crazed and reckless crowd.
But the poor, tired girl sat waiting, lost at last to revels deep,
On a keg beside a barrel in the corner, fast asleep.
Well, I stood there, sort of waiting, until some one at the bar
Said, "Hello! I say, stranger, what have you thar?"
The boy then told her story, and that crew, so fierce and wild,
Grew intent and seemed to listen to the breathing of the child.
The glasses were lowered. Said the leader, "Boys, see here;
All day we've been pouring whisky, drinking deep our Christmas cheer;
Here's two dollars—I've got feelings which are not entirely dead—
For this little girl and mother suffering for the want of bread."
"Here's a dollar." "Here's another." And they all chipped in their share;
And they planked the ringing metal down upon the counter there.
Then the spokesman took a golden double-eagle from his belt,
Softly stepped from bar to counter and beside the sleeper knelt;
Took the "two bits" from her fingers, changed her silver piece for gold.
"See there, boys; the girl is dreaming." Down her cheeks the tear-drops rolled.
One by one the swarthy miners passed in silence to the street.
Gently we awoke the sleeper, but she started to her feet
With a dazed and strange expression, saying, "Oh, I thought 'twas true!
Ma was well, and we were happy; round our door-stone roses grew.
We had everything we wanted, food enough and clothes to wear;
And my hand burns where an angel touched it soft with fingers fair."
And she looked and saw the money in her fingers glistening bright,
"Well, now, ma has long been praying, but she won't believe me quite,
How you've sent 'way up to heaven, where the golden treasures are,
And have also got an angel clerking at your grocery bar."
That's a Christmas story, stranger, which I thought you'd like to hear;
True to fact and human nature, pointing out one's duty clear.
Hence to matters of subscription you will see that I'm alive;
Just mark off that dollar, stranger; I think I'll make it five.

—Wallace Bruce in Harper's Magazine.

Mending.

[Written for the RURAL PRESS by MAUDE S. PEASLEE.]

In a family of children this becomes a very important part of the week's work; heavier and more burdensome if allowed to accumulate from week to week, only reduced as a garment is needed.

Much annoyance will be saved if one day is set apart for this especial work, or if this may not be, it might be well to devote one or two evenings to such duties.

Just as soon as possible after the washing and ironing are over is the best time, as it is well to get the clothes out of the way—repaired and in their proper places—as soon as convenient.

The rest of the week is then left free for other mending, and there are no piles of mending, no baskets of undarned hose to appall the weary housewife on Saturday evening.

The socks and stockings can be paired and sorted out when taken from the line, and those that need mending put into a convenient basket or box.

Oh, the delight of a basket well stocked with darning material, needles, scissors and darning-ball! When carefully attended to, week by week, a pair of stockings can be so quickly disposed of that one can mend a pair or two while waiting for the potatoes to boil or while, perhaps, hearing Harry recite his "piece" before starting for school Friday morning.

This kind of mending may be picked up and speedily accomplished in odd moments, if one has the faculty of dovetailing her work, one part into the other.

Some people, however, prefer to take up such a task as a burden and rush it through in an afternoon, thus relieving the mind of it.

Sometimes a patch is needed in the knee or heel of an otherwise good stocking, and it would be well to keep tops of half-worn stockings to be used in this way.

A very neat patch can be put in at the knee, or one may darn a thin knee over a patch, thus saving the stocking much longer.

I remember an aunt who used to darn the toes and heels of new stockings with a fine thread run back and forth. I have no doubt it strengthens them very much. I would not treat the knees of stockings so, however, till they needed it, as it makes an unsightly looking thing of a new stocking, especially on a child whose clothes are short.

It isn't worth while to throw the pile of mending down anywhere, or even to pile it up loosely on a table. It is much better to have a basket or box where it may be protected from dust, and run less risk of having school books and toys piled on top of it.

If buttons show signs of pulling loose, the best way is to sew a strong patch under the button and sew on again strongly.

It is quite an art to be able to sew on a good patch, and every girl should learn how to do it well, principally because such work is likely for a good many years yet to fall to her share.

In mending a slit in underclothing, nothing will be gained by sewing it up, since the additional strain will only cause more.

Instead, sew a rather large patch directly under it and darn back and forth, drawing the edges together.

In mending silk or woolen goods in this way ravelings of the goods may be used with excellent effect especially if the work is well pressed after being finished.

It is very important to look over the pockets carefully and stay them where needed with strong thread and perhaps even a patch.

It is of great importance to accustom a girl to like to wear whole, carefully kept clothing. Nothing that I know of will do more toward giving an awkward growing school-girl self-possession than such knowledge.

It leads, as all good habits do, onward and upward to better and higher tastes and inclinations.

Mrs. Westlake's Christmas Experience;

OR,

Charity at "The Knolls."

[Written for the RURAL PRESS by L. H. S.]

PART I.

"It is more blessed to give than to receive."

CELIA Westlake, who had been married two years and a half, was as charming and sweet a young matron as ever trained flowers around a California home. Besides a fair allowance of beauty, good taste and good temper, she had everything to make her happy. Her home, small but tasteful, stood on an elevated spot known as "The Knolls," on a wheat farm of 320 acres. Her dearest friends in California—Mr. and Mrs. Burdick—lived but a pleasant walk from her home on a large and well-cultivated wheat ranch.

Dick Westlake was a devoted husband, and he was learning to be a model farmer despite the predictions of some people around there who had said that so fine a scholar and gentleman would make a failure raising wheat and horses. Better than all, the sweetest baby boy in the world was "drumming with his silver spoon" on the snowy damask of the dinner-table. The baby was about a year old and not so badly spoiled as would have been expected; and Celia being well and so blessed withal, was looking forward to Christmas with the feeling that this was the happiest time of all her life.

She knew that her husband was a little short of money, as nearly all "ranchers" are about tax-paying time, so she prudently subdued a strong desire to send some handsome remembrances back to her old school friends in Vermont. Yet she felt that she ought to do something for somebody on Christmas to manifest to her Maker her sense of thankfulness for all her blessings; but it was something of a problem to know just what to do.

She had dined Thanksgiving Day at the Burdicks' with a number of other friends of this genial couple, all of whom were as well provided for and seemingly as happy as she herself. She did not wish to give these people presents, as they would each return the compliment, and that was not the effect she wished to produce. Mrs. Burdick was already provided for with a handsome table scarf.

In Vermont, where she had lived until recently, there were many open opportunities to make the poor glad and grateful Christmas-time. There were widows and children of sailors, war widows living on small pensions, and many poor left needy by changes and failures among factories. Mrs. Westlake had been educated at a seminary on a small allowance left her by her mother, but the mother's will had provided that Celia should have a small sum for charity purposes each Christmas-time, so that Celia's mind naturally turned to this pleasurable recreation at this time of year.

So she spoke of this Eastern custom of hers at the breakfast-table one morning and asked her husband if he knew of any real poor people in the neighborhood.

Dick arched his eyebrows at her and tried to blow some curls out of the baby's hair, in a reflective manner, before he replied in a chaffing way:

"There's the Methodist minister's family, Celia; try them. Preachers are always poor in this country, so they say."

The minister's fat horse and well-dressed wife and rosy little girls did not fill Celia's idea of poor people.

"Now, Dick, do be serious; I don't mean that way at all. I mean people who have no coals, or shoes, or turkeys for Christmas."

Dick brightened up.

"That's like us, wifie. The coyote took our last turkey this morning. I suppose coyote breakfast or Christmas dinner is all the same to him, poor fellow! He's gone, anyway."

Here Celia fell into a sad vortex of regrets. Out of six turkeys hatched out by the old yellow hen, who had to sit a week over her time, here was the last one gone. Three were killed by the horses when young, and the last three, after thriving all summer, had taken to roosting on the barnyard fence and had disappeared one at a time, like the remnant of an Indian race. This one was particularly fat and fine, and now she had no Christmas dinner after all her trouble.

In the midst of her reflections, Dick kissed her, tossed the baby, and was off to his work, for he was anxious to get his place all in by midwinter. Mrs. Westlake broached the subject again after tea. Dick looked thoughtful a few moments, but he could not keep serious long.

"Things are different in California, I can't tell exactly how or why. Never mind the presents this year, Celia. Make me a dressing-gown or baby a cap, or me a cap and baby a gown, for we don't need either, do we, Tommy, old boy?" And he snatched the rollicking baby and held him high overhead.

"Do quit calling that baby Tommy, now do stop, please, Dick," protested Celia.

"Get him a better name, then."

"Dick, you know there isn't any name good enough for that precious child; don't scold."

"Call him Richard, and this renowned Richard will be himself again."

Celia flew at him, administered the punishment he deserved, and rescued the baby; and thus ended one of a series of skirmishes frequent in this otherwise happy family.

Mrs. Westlake concluded by this time that her husband did not have much sympathy with her charity scheme, so she said no more about it to him, but the idea still expanded in her own mind. One day, driving home from town, a daring thought came to her.

On the road to town, some distance from the main road, in a low, mean-looking collection of cabins, lived a family named Graber. Mrs. Westlake had driven out to this place one day in the spring to purchase turkey eggs, and had then remarked to her husband that it was the most wretched-looking habitation she had ever seen.

First, there had been a cabin of one room built when the entire valley was one stock ranch; then a room of undressed lumber had been built on to this with an open porch on the side; later, the porch had been inclosed with rough lumber, and another porch had been added, which now was inclosed with sacking and strips of old machine belting. This motley collection of huts, looking like a nest of old boxes, had once been whitewashed, but now this dressing remained only in spots and patches. The barn, larger than the dwelling, was much more rickety and was liable to be laid in ruins any time by the winds, only for its usual winter stuffing of hay and straw, which made a very good support. The only good improvement on the place was a new barnyard fence of redwood and barbed wire, which was the only fencing to be seen.

Chickens and turkeys ran unrestrained about the buildings, roaming at will into the wheat in summer and picking worms far out in the wet furrows in winter. These fowls, doing credit to their unfettered lives, were renowned for excellence and beauty. Of no breed in particular, the hens were most prolific layers, and the turkeys—very common and runty fowls several generations back—now strutted around undisputed champions of the entire turkey neighborhood.

None of the fowls were ever sick, and though the chicken-house was too small, and the surplus roosted anywhere and everywhere, yet they were boycotted by the coyotes, and no varmint of any kind ever disturbed their repose.

It was the fame of this hardy stock that led Mrs. Westlake out there to purchase eggs for setting the previous spring.

No fences preventing, Celia drove her horse to the entrance of the house, and Mrs. Graber received her standing in the open door. She was a gaunt, tired-looking woman, with good features, but from which the play of joyousness and hope seemed entirely stamped out. Through the open door behind her, Celia could see an utterly bare and cheerless room, furnished only with a table, chairs and benches.

Two little children in coarse clothing, wretchedly made, clung to her skirts, while an older boy and girl, at a sign from the mother, flew off like deer to look for eggs.

Mr. Graber, a large man in dirty clothes and hat pulled over his eyes, was working around an old wagon at the barn, and did not look up or notice her presence.

Celia thought this a very miserable family indeed, and drove away, thankful that she did not have them for near neighbors. She never spoke of them, and it chanced that she had not happened to hear the family spoken of by any one else.

And now with her Christmas thoughts her mind reverted to the meager and joyless life of the Graber family as she saw them that spring morning. She thought that with a little effort she might give this apparently poverty-stricken family a Merry Christmas. Her benefactions must be in gifts—she knew no other way. She gave much care to the maturing of her plans, deciding to give practical and useful presents. She said nothing about her purposes to her husband, who was out of the house all day, because she felt that as he had not taken any interest in her original idea, it would be best to wait and tell him only of her success and pleasure.

First, she made a dainty collarette of lace for the mother, then, taking two fine steel engravings, she set them neatly in frames of pasteboard covered with crimson plush. Out of an old dress she fashioned a stylish little wrap for the little girl. She knit a soft zephyr cape for the older girl, made fine wool shirts for the boys and pretty lace-trimmed aprons for the girls. Story-books from her own childhood treasures and handsome Christmas cards completed her generous list.

The two weeks before Christmas were fair and warm, and a rich blue sky bent over green fields and grassy lanes. Celia packed her gifts neatly in a long pasteboard box, saying over to herself with a happy heart, "It is more blessed to give than to receive," forgetting, however, to thank her Heavenly Father that it was she who was giving and not accepting.

She had been so busy, withal, that she decided not to have a special dinner on Christmas. If Dick would rest that day and spend the day with her, it would be sufficient.

A few days before Christmas, Dick came

home from a trip to town with a troubled face.

"Wifie, here's everything in a tangle. The first mortgage on our place is due to Goldstine & Co. next week."

Celia came to his side anxiously.

"And here's a letter from father. He says everything is behind in the mines, and he can't meet the note he owes me for six months yet. I expected to have it to pay this mortgage. This is too bad. I will have to borrow the money somewhere."

"Won't Goldstine & Co. wait?" suggested Celia.

"They might, but they are charging me too much interest. Put on your hat, Celia, and bring the boy, and we'll go over and see Burdick before I put out my horse."

"He'll help you if any one can; he's a friend worth having," said the wife, wrapping the baby in a shawl and tying on his warm blue hood.

And so it proved. Tom, always ready and kind, thought the money could be readily borrowed somewhere among his friends, and he volunteered to give his influence and sign as security for Westlake.

And so it happened that early in the afternoon, the day before Christmas, Tom Burdick called with a lively young horse harnessed to a breaking cart, and the two friends went off together.

This was just the opportunity Celia wanted to make her visit alone to the Graber family; so she put a clean dress on the baby, who cooed a loving approval to all she did, then left him in a safe place while she harnessed gentle old Dolly to the buggy. Then she tied the baby in beside her with the robes, put in her box, and drove off in good spirits on the hard, smooth road—her top buggy bright and clean, the spokes of the wheels glistening in the sun.

All was quiet at the Graber house when she drove up. The older boy and girl were far out in the field herding a few horses, and the younger ones were far away down another road with some young turkeys. This was not just as she had planned it, but there was the mother. She tied her horse to the wheel of a heavy wagon, left the baby asleep in the robes, took the box, and knocked at the open door.

She heard the slamming of an oven door. The door from the low kitchen opened, and Mrs. Graber came out surrounded with a cloud of sweet odors from baking mincemeat. Her calico dress was plain and ill-fitting, and her face wore a look of cold surprise.

"How do you do?" said Celia, sweetly. "I am Mrs. Westlake. I live at 'The Knolls.' Do you not remember me?"

"Yes'm. How de do?" and the woman stood before her, her apron over her arm, her look of surprise unmoved.

After Celia had peered into the room and made a motion as if to enter, Mrs. Graber stood back and placed a chair, but still stood, as if waiting.

"This is a pleasant day," ventured Celia, smiling and seating herself.

"Yes'm; getting kinder dry."

Here Mrs. Graber looked about as if she meditated sitting down.

"Are your children well?" continued her caller.

"Oh, yes. They're never sick. Herding turkey's healthy work."

She moved across the room and seated herself, watching her stove.

Celia's heart began to fail her; there was nothing approachable in this stolid woman. But she went on bravely, tapping the box nervously with her fingers.

"I suppose the children are quite impatient for Christmas to come."

Mrs. Graber shook her head calmly.

"No ma'am; we never make no fuss on Christmas except what we have to eat. Them pies are done now;" and she darted out into the kitchen, and Celia thought she never smelt such delicious mince pies in her life.

When she returned, Celia thought she looked a little more friendly and the conversation continued more easily. In a short time Celia hastened to her point. She untied the box and laid off the cover.

"Mrs. Graber, I always try to do something for Christmas, and as I am not much acquainted here, I thought of you and your children."

Mrs. Graber rose from her chair, advanced to the middle of the room and stood looking at her curiously.

Mrs. Westlake went to the table and began to take the things out of the box, speaking nervously as if she had begun to feel that all was not right.

"These aprons, I hope they will please the girls, and that the shirts will fit the boys; and this collar of lace I made for you, and the pictures are for you. How do you like my original frames?" and she held one of the engravings at arm's length looking at it.

Suddenly she felt a hard, labor-worn hand fall not softly on her arm.

"Did you bring them things for us?"

Celia turned and looked into a hard face where scorn was now mingled with the surprise.

"We ain't poor. What do you take me for? I can get things for my young 'uns!"

Poor Celia's arms dropped nervously at her side, and a multitude of confused thoughts rushed with the blood to her heart.

"But this is for Christmas," she stammered.

Mrs. Graber, cold and cool, lifted up the garments and laid them back into the box.

"You come to the wrong house. We ain't charity folks," she said, and walked out of the room.

Celia only saw her through a mist of tears; she grew weak and trembling all over; she dropped into a chair and hid her face in her hands on the table. This was dreadful. The misery of her chagrin could not be expressed. She thought slow and fast, then did not think at all. She only wished she could be transported in forgetfulness back to the seclusion of her own room. Before she had succeeded in thinking out just what to do, Mrs. Graber came back, and Celia looking up, saw a softer expression on her face.

"Well, I reckon you didn't mean no harm," she said not unkindly, looking down upon the young woman in tears, "but you won't get into no such scrape again."

Poor Celia dropped her head with a fresh burst of tears. Kindness was more than she could expect.

Mollified more by such complete subjection, Mrs. Graber continued:

"I won't say anything outside to nobody, Miss Westlake, and if you don't care, I'll keep the books for Jim and Meg. They like books, but the old man thinks it's all foolishness." Then she placed her hand gently on Celia's shoulder, and said kindly: "You needn't mind, anyway."

Mrs. Westlake rose up and took the woman's hand bravely.

"You may be sure I meant no offense, Mrs. Graber. Only forgive me, will you?"

It would have taken a very hard heart indeed not to have forgiven such a lovely, impulsive young woman, and Mrs. Graber grew even friendly under the influence of Celia's pure and gentle spirit. They were feeling very kindly toward each other as they went out together to the buggy; and when the elder woman saw the sweet, clean baby sleeping like a rosebud among the robes, she grew more womanly and tender and kissed the little pink fingers, and was so sorry Meg was not there to see it.

When Celia reached home, feeling quite as weak as if she had just come out of a steam bath, she saw that Dick and Tom Burdick had just driven up to the house, and that Sallie Burdick had walked over and was on the steps waiting for her return.

Three such bright people could not fail to see that Celia had been on some tiresome journey, and coming together in the cosy sitting-room, questions began to fall thick and fast around her. Where had she been? why had she gone alone? and what did she have in her box?

Thinking it better to tell her error than to be found out, and trusting her friends as she did her husband, she stammered out her miserable experience, smoothing it over with Mrs. Graber's good nature at the last.

All at once, Tom and Dick, who had been looking strangely at each other, burst out into paroxysms of laughter.

"Shake, old friend," cried Tom; "the joke is on your side of the house now."

They shook hands and walked around each other, like dizzy minstrels. Dick threw himself on to the lounge, making the house shake, and Tom took a turn in the kitchen. Their laughter was uncontrollable.

The wives were amazed. Mrs. Burdick was angry.

"Tom, don't be a fool!" she exclaimed. "Do stop, both of you; you will make Celia cry. There's nothing to laugh at, anyway."

"Yes there is," groaned Dick. "That old Graber is a mean old money-bags to keep his family that way. I just borrowed two thousand dollars of him in town. He said he was glad to lend it. Oh dear! what a blunder you made, Celia!"

"Oh! he will be so angry! What have I done?" gasped poor Celia, rising. She held out her hands to her husband, who, seeing her white face, came to her, and in a moment she had fainted in his arms and out of her misery.

PART II.

"Peace on earth, good-will to men."

That evening, Mr. and Mrs. Westlake discussed the situation seriously. Celia lay on the lounge weak and tired. Dick walked the floor or knelt beside her to comfort her. The dilemma was, that the insulted woman would tell her husband, and he, if he did nothing more disagreeable, would tell the story in town and it would go the rounds of the neighborhood. For ambitious young people who wished to be well regarded, the situation was certainly serious.

"There is one thing certain," said Celia at length; "this teaches me that we are not doing our duty by our neighbors to be so ignorant about them. What that woman needs is a good, kind woman to visit her as a neighbor, and influence her by example how to live."

"Possibly that is true," returned her husband; "and Mr. Graber also—he seems like a good-natured man at heart, but he is rough and ignorant, and no one notices him in particular. No doubt he thinks he does all that is needful for his family. I hope he won't do anything savage. Anyway, he ought not to live like a beggar when he has all his debts paid and money ahead."

"I know, Dick, it is too bad. But I was to blame. I gave a stone for bread. I offered common charity where I might have offered sympathy and friendly interest. I am rightly punished. Hereafter I will look into people's needs before I try to do anything for them. We have lived here two years and over, and what have we done to improve the spiritual condition of that family?"

"There, there, don't preach, wifie. Anyway, we have thrown away our chances now."

It was yet early in the evening, and Dick, seeing that Celia was nerving herself and feeling better, left her and went out to the barn to do his evening's work among his horses.

Celia, lying alone thinking, was startled by a step on the front porch and a light knock at the door. She was not afraid, her husband being so near; so with the lamp in her hand, she opened the door. In the bright flood of light streaming out, stood Mrs. Graber.

"My dear Mrs. Graber!" ejaculated Celia, much surprised, "are you here, and alone? Come in."

Mrs. Graber pushed back her bonnet and lifted up her face with a kindly smile.

"No; Johnnie's out there in the cart. I want to see you alone, can't I?"

"Why, certainly. Do come in, come into the parlor and sit down." And she led the tall, awkwardly clad woman into the pretty room, and placing the lamp on the piano, turned about to give her visitor her easiest chair. But Mrs. Graber gave a nervous grasp at the long sleeve of Celia's soft blue wrapper, and began to talk hurriedly.

"I came over to ask your pardon for what I said to-day. The old man made me come right over. I didn't get the sense of what you wanted, but the old man said, as soon as he came home, that most like you wanted to sell me the things. He gave me a going over about it. If you had a told me out plain you wanted to sell the things, I would have bought the shirts anyway. Graber, he says you've grit to start out peddling, but he says there's too much money in the country for a lady like you to be doing that kind of work."

Mrs. Westlake felt revived as with a dash of cold water. She gently pressed Mrs. Graber into a cushioned chair while she recovered herself. The trouble was righting itself. Mr. Graber had placed a man's construction on her visit, after the loan he had made in town, and not wishing to offend a good money borrower, he had sent his wife over to apologize for her rudeness in refusing to buy anything.

Celia remembered that she had not made herself very plain, and Mrs. Graber had been easily convinced by her husband that her supposed gift-bearer was in reality a peddler. But Celia was not willing to have herself cleared by this rough guess ng. She could not add deceit to ignorance and misery; besides, to be known as a peddler was nearly as bad as being known as a blunderer. In a moment she had knelt down at the feet of the elder woman, who never in her life had seen so lovely a picture, and made a full confession of her experience. She plead her ignorance of her neighbors; she explained that a poor shabby house was most always a sign of poverty in the East; she told of her longing to enjoy the pleasure of giving, and dwelt on her real wish to be a friend to those she could help in any way.

Her confession completely exonerating herself and winning the heart of this uncultivated woman was also an unspoken prayer that these people would hereafter spend more of their money for the pleasures and comforts of life.

"I would do anything for you, Mrs. Graber," she said, "to make you more happy. Not but what you are already happy, but to help you to enjoy life more, and to make your children as happy as other children."

Mrs. Graber was silently weeping.

"The old man says nobody ever comes to see us, and nobody cares for us hoosiers; so it don't make no difference how we live."

"No, no, you are wrong," cried Celia, rising and sitting beside her. "Somebody does care for you, and we will come to see you, and then he will find out the difference."

Meanwhile Dick came in and would have gone to bed but for his curiosity, and poor Johnnie was fast asleep in his cart, and yet these two newly made friends talked interminably, and the conclusion of the matter was that Mrs. Graber consented in good spirit to take the box and its contents home, and her husband never found out whether she bought them or received them as gifts; but the children enjoyed them.

Before her caller went out, Celia slipped in and whispered the pleasing sequel to Dick, who at once gave her a practical idea.

"Why not invite them all over for Christmas? The old man has done us two good turns, and we ought to show our appreciation."

Celia shrank from the thought. She was so tired, and there was no turkey, and nothing ready.

"Never mind," whispered her husband; "we must try, anyway."

Mrs. Graber was very willing to come. No one had ever invited her to dinner before since they had lived in California.

"And don't you go to killin' no chickens," she remarked as she woke up Johnnie and climbed into the cart. "We folks like bacon, and we'll have a good enough time without stuffing ourselves. Suppose I send Meg early in the morning to help you," she continued. "Meg will be tickled to death just to hold the baby."

Celia could not refuse so friendly an offer, and the cart rattled away.

She thought long and earnestly before she slept. A Christmas idea had taken possession of her that was a life work.

"'Love thy neighbor as thyself.' Love him with my heart and soul, not alone with goo gifts which are a sign of unpaid favor. 'For God so loved the world that He gave His only begotten Son.' And should I not give the best I have—my trust, my companionship, my sympathy, my helpfulness. *Good will*—this is the gift that must be offered."

How trifling seemed her presents when she thought over the greater needs of this peculiar family. How much she could do for them now with the friendship and co-operation of the mother! She could teach that tall girl how to sit, to stand, to walk, to sew, to love books and music; and the father, seeing her home, would perhaps be willing to make his own home more comfortable. And the shy boy with an intelligent face—something could be made of him.

She was dreaming of all this at seven in the morning, when her husband woke her suddenly.

"Sleeping all day on Christmas, wifie? Merry Christmas to you! and get up quick and see what Santa Claus sent you."

"O Dick! you're fooling. You didn't get me anything."

"Well, you dress and come out in the kitchen quick."

Wide awake and wondering, Celia hurried out. There sat Maggie in the dim light with the long box in her lap. Celia's heart fell; what change had come now? But on the table lay a large fat turkey, picked and dressed, his head and feet stretched out showing his great size.

"Mother sent the pies and pap sent the turkey," explained the girl simply. She opened the box and revealed two of those wonderfully odorous mince pies.

Celia stood puzzled. The tables were turned. Her husband stood back enjoying her confusion. He was quietly laughing at her. But she gave him one saucy glance and paid no more attention to him. She took the box, untied the girl's lank bonnet and kissed her white forehead.

"Thank you, Maggie; these are splendid Christmas presents. But did you carry the box and the turkey too?"

"No; Jim packed the gobbler."

"But where's Jim?"

"Oh, he scud back across the fields. I come to stay to help. We're 'fraid you'll work too hard."

Maggie was not a bashful girl, and she was soon blissfully happy learning to dress the baby, and she only unwillingly parted from him, while he sat up to the table and pounded his plate and upset his milk in lieu of eating breakfast.

It proved a jolly Christmas for all. The Burdicks were invited over and let into the spirit of the occasion, and Tom Burdick behaved very well for a mischievous man, except that he and Dick suffered from smothered fits of laughter whenever they saw the turkey.

So Celia stuffed it with a savory dressing and put it out of sight in the oven.

Under the curious eyes of Maggie she made a handsome cake and a delicate pudding. She brought out her best silver and glass, her jellies and condiments. She spread the table with her best cloth she had never used before, and stripped her garden of flowers for decorations for house and table.

When the Graber family appeared in rather unique dress-up, everything was bright and shining.

Mr. Graber created a drawback at first by insisting that the "painted up" steps were good enough for him to "set on;" but Mr. Burdick finally coaxed him into the parlor when no one else was looking.

Celia made no attempt to talk to him, but she sat merrily at the piano and sang old ballads such as "Coming Through the Rye" and others.

Before the day was over, Celia could see the fruit of her Christmas idea. Not an item of that cosey home was lost on that beauty-starved family. Mrs. Graber asked questions about her carpet, her home-made curtains, and many of her little devices for beauty and comfort.

The boy Jim, having taken an old RURAL PRESS out on the porch and read a short sketch of the life and works of Edison, held a long consultation with Maggie, after which the two came boldly and asked permission to name the baby Edison.

"I don't see how we can refuse them anything to-day," said Mr. Westlake. "Besides, this is a long quarrel settled for us, wife. The children are right; that is a good name."

The entire company agreed with him, and Edison Westlake was passed around for kisses and congratulations.

As Mrs. Westlake sat alone in the gathering dusk, she felt that she saw many new meanings to the celebration of Christmas Day.

If there is anything to forgive, let it be forgiven; what there is to forget, may it be forgotten. Let the needy be clothed and fed. But they who are ignorant, neglected and forgotten, they who are "poor in spirit," let the blessed spirit of Christmas hover around them and lead them into light and happiness.

California is not a land of poverty. Unnumbered acres lie untenanted, and it is the children of our neighbors who will grow up to tenant those barren hills. Love them, educate them, give them culture and truth, and we will clasp hands under the Star of Bethlehem, and we can sing together: "Hosanna in the Highest—*Peace on Earth, Good will to Men.*"

"OUR YOUNG FOLKS" will be found upon a subsequent page of this issue.

The Week.

Before another issue of the RURAL could reach readers in more distant parts of the coast, Christmas of 1890 would be gathered among other pleasant memories. Therefore we present this week our usual entertainment of fact and sentiment pertinent to the joyful Christmas season. With this also goes our sincere wish that to all the homes to which the RURAL is welcomed there may come that old and honored blessing, a "Merry Christmas."

We could have wished that before this another good rain could have fallen to assure all that the precious water will not be withheld, and consequently that no anxiety would arise in any mind during the holiday season. But there is still time before Christmas for such a gift, and even a later dispensation will answer growers' purposes. Another good rain is the earnest desire of all.

HOMESTEADERS TO DOUBLE THEIR AREA.—It is announced by telegraph from Washington that the Senate Committee on Public Lands has authorized Senator Dolph to report favorably the bill introduced by Senator Mitchell to permit a person who has taken up 80 acres of surveyed lands under the homestead laws to extend the claim over 80 adjoining acres of unsurveyed land. An amendment was inserted to include settlers who have taken up land under the pre-emption law. Settlers may therefore look about them to see in which direction they can best extend their fences.

Christmas in California.

Can this be Christmas, sweet as May,
With drowsy sun and dreamy air,
And new grass pointing out the way
For flowers to follow, everywhere?

Has Time grown sleepy at his post,
And let the exiled summer back,
Or is it her regretful ghost,
Or witchcraft of the almanac?

While wandering breaths of mignonette
In at the open window come,
I send my thoughts afar, and let
Them paint your Christmas Day at home.

Sweet eyes with home's contentment filled,
As in the smoldering coals they peer,
Haply some wondering pictures build
Of how I keep my Christmas here.

Before me, on the wide, warm bay,
A million azure ripples run;
Round me the sprouting palm shoots lay
Their shining lances to the sun.

With glossy leaves that poise or swing,
The callas their white cups unfold;
And faintest chimes of odor ring
From silver bells with tongues of gold.

A languor of deliciousness
Fills all the sea-enchanted clime;
And in the blue heavens meet, and kiss
The loitering clouds of summer-time.

This fragrance of the mountain balm
From spicy Lebanon might be;
Beneath such sunshine's amber calm
Slumbered the waves of Galilee.

O wondrous gift, in goodness given,
Each hour anew our eyes to greet!
An earth so fair, so close to heaven,
'Twas trodden by the Master's feet.

And we—what bring we in return?
Only these broken lives, and lift
Them up to meet His pitying scorn,
As some poor child its foolish gift:

As some poor child on Christmas Day
Its broken toy in love might bring;
You could not break its heart, and say
You cared not for the worthless thing.

Ah, word of trust—His child! That child
Who brought to earth the life divine
Tells me the Father's pity mild
Scorns not even such gift as mine.

I am His creature, and His air
I breathe, where'er my feet may stand;
The angels' song rings everywhere,
And all the earth is Holy Land.

—*Edward Rowland Sill.*

Honors for the California Poppy.

On Friday of last week the State Floral Society held an interesting meeting which was well attended. An item of the proceedings which will attract widest attention was the adoption of the Eschscholtzia as the State flower of California, so far as it is within the province of the society to accomplish such adoption. No doubt if this action by the State Society is ratified by other floral societies throughout the State, the selection of this popular favorite will be made sure. We hope such action will be had, and take this occasion to urge it upon our readers who have membership in such societies.

Those who desire to add to their own observation of the honored plant some facts on its history and occurrence should read again the charming essay by Miss Pratt which was published in the RURAL of November 29th ult., page 459. We trust some enterprising art publisher will bring out a brochure with a portrait in colors of this distinguished plant and accompany the portrait with Miss Pratt's essay. Such a publication should be popular.

A CHRISTMAS SERVICE IN THE OLDEN TIME.

Christmas Observance.

Though truth is always the same, methods of its presentation vary. We have thought our readers might like to contrast with the forms of worship with which they are familiar the homage of the early Christians when in the very caves of the earth they gathered to declare their trust in the Savior even at peril of their lives. We live in a freer, happier age, but do we remember our duty as well as they? Christmas is a day of deep religious significance. Let this fact not be forgotten in the joys which come to us with a "Merry Christmas."

FARMERS' INSTITUTE.—A report of the interesting meeting held last week at Tulare has to be laid over for our next issue. Santa Claus rules the roost this week.

Sugar and Syrup.

This ought to be a proper Christmas subject, even though we intend to give its treatment an industrial bent, for sweets are trumps in the holidays, if at no other time. The fact of the matter is that sugar affairs, because of the bounty outheld by the Government, are brightening considerably, and general interest in them is awakening. On this coast most interest pertains to beet sugar, for it has been clearly shown that, with our peerless conditions of climate and soil for the root, the beet is the best source of sugar. It is time that this should be recognized, and that we should receive the money now going abroad for beet sugar. It is telegraphed this week from Washington that H. F. Merritt, United States Consul at Chemnitz, in his report to the State Department, says that $16,000,000 were paid by the people of the United States to the beet-sugar makers of Germany within one year. This sum, Mr. Merritt says, is nearly three times as much money as our people pay for any other given article imported from Germany. It is time this outgo of American money was stopped, for Germany scouts our pork and taxes other articles which we export, and yet we pay vast money for German sugar.

The latest beet-sugar enterprise is one in which Californians take a leading place, but the scene of which is not within our borders. We find in the *Louisiana Planter and Sugar Manufacturer* the following:

Messrs. E. H. Dyer & Co. of Alvarado, Cal., are now building near Salt Lake City, Utah, a 350-ton daily capacity beet sugar factory. The factory is owned principally by capitalists of Salt Lake City, and the machinery is all American, being built by the Kilby Manufacturing Company of Cleveland, Ohio.

Among the practical manufacturers of the beet sugar, in fact, the pioneers of that industry in California, the name of Messrs. E. H. Dyer & Co. is well known. Having made a thorough study of the beet industry, especially as to the methods practiced in France and Germany, and having their own experience in successful manufacture in California, they are perhaps the best-informed men in the United States on the subject of beet manufacture. Appreciating the grand impetus and development that this industry will now receive here in the United States, they have concluded to extend the scope of their usefulness, and are now offering their services as consulting engineers and draughtsmen for the erection of beet-sugar factories.

We are glad to see that the skill and energy of the Dyers is so widely recognized. In our advertising columns they make an announcement offering their services as sugar chemists, engineers, etc., to all who desire such information as they can furnish in these lines. Readers of the RURAL will remember the Dyers as the first parties who made beet sugar in California on a successful commercial basis. Their establishment and their enterprise have been frequently alluded to in our columns and we are interested to learn of the extension of their field of operations. We trust, however, that their engagements outside of the State may not interfere with their California work. We desire to see the beet-sugar interests of this State extended as they should be, and such progress will require all our experts in that line.

Another saccharine line which seems to have scored progress during the year is the manufacture of sorghum syrup. This is, of course, chiefly an individual undertaking and requires very little capital. The article produced has been in some cases notably fine, and though the great city markets do not, as yet, offer much opening for it, because, perhaps, of the volume of refinery syrup which offers, the sorghum syrup is finding quick sale at interior consuming points and is there making such a name that producers contemplate extending their operations another year. In our next issue we will give some notes on sorghum syrup as gained from letters from several producers,

ENTOMOLOGICAL.

Insect Friends and Foes.

[An essay read at the Santa Cruz Fruit-Growers' Convention by ALEXANDER CRAW, Entomologist of the State Board of Horticulture.]

Entomology is a very important study for the fruit-grower, for nearly every branch of his industry is more or less affected by injurious importation and distribution of that wonderful insect, the *Vedalia cardinalis?* Fig. 1. I am positive nothing could; for money was expended without stint by fruit-growers, not in a spasmodic way, but with a determined effort to gain the mastery over the "cottony cushion scale" (*Icerya purchasii*).

This is a very good argument in favor of the introduction, propagation and distribution of parasites and predaceous insects, as suggested by President Cooper in his opening address before the Thirteenth State Fruit-Growers' Convention, held at Los Angeles, March 11, 1890. If the insects to which he called the attention of the convention were introduced into California they would be of immense benefit, not only directly to the fruit-grower, but indirectly to the other industries of the State. So let us persevere in our search for insect friends, and not relax our efforts in securing from the State or National Government laws and appropriations for the carrying out of this grand work.

Foes.—These are innumerable, but I shall only mention those that to-day are attracting the most attention.

"*Red Scale,*" *Aspidiotus aurantii, Maskell.*—Fig. 2. This foe to citrus trees is to-day the most serious pest the orange-growers of the State have to contend with. In the absence of internal parasites, recourse for their suppression has been had to the application of rosin washes, and also to fumigating the trees with hydrocyanic acid gas. Improvements have been made the past season in the manner of applying the latter remedy and in reducing the expenses, that will aid in keeping this scale in check until an effective natural remedy can be found, a full account of which will be found in the reports of the State Board of Horticulture for 1889-90. The twice-stabbed ladybird, *Chilicorus bivulnerus*, Fig. 3, and its larvæ, and various other species of coccinellidæ feed upon this scale. The larvæ, Fig. 4, of the lace-winged fly, *Chrysopa Californica*, Coquillett, also destroy great numbers. Fig. 5 shows the mature insect.

"*The Yellow Scale,*" *Aspidiotus citrinous, Coquillett.*—This scale (formerly known as the red) is found in the San Gabriel valley, and has been for years a very serious pest in that section, and caused a great loss both in quantity and quality of citrus fruits. Since the discovery of an internal parasite (Coccophagus) which attacks this scale, the growers have done very little spraying in that district, and the good work of this parasite is very noticeable in a number of groves, where not over three years ago it looked as if the growers had a long fight before them. The parasite is so small it can hardly be detected with the naked eye, and parties undertaking the colonization of it upon Aspidiotus aurantii should select a tree or trees remote from large groves, so that the trees can be left without having to disinfect them for at least two years; in that time it can be determined whether it can be bred on the aurantii.

In order to stock trees with this parasite, scale-infested branches should be obtained from an orchard known to contain them. It is not necessary to place the branches on the trees; the best way is to fill boxes with wet sand or earth and insert therein the ends of the branches and place them under the tree in the shade (and on this account a low tree would be preferable); in this way the branches remain

longer fresh and allow the parasites to mature and hatch. As the branches dry up, more should be secured, and the operation repeated a number of times so that it may prove a success.

A great many conflicting reports have been circulated about this parasite, but as I am conversant with the condition of the groves in that section for the past 14 years, I know that the present healthy appearance of the trees is due to the work of this little parasite.

Pernicious Scale, Aspidiotus perniciosus, Comstock.—Figs. 6–7. This scale is also well known, and like the preceding species has an armored hard shell; but it confines its attacks to deciduous trees, and is a very serious pest. The remedies given in the Reports of the State Board of Horticulture are so cheap and effective, if properly applied, that no excuse can be tolerated for a seriously infected orchard.

About ten years ago a parasite, *Aphelinus fuscipennis*, Howard, Fig. 8, a minute four-winged fly, made its appearance in the Santa Clara valley on the so-called San Jose scale, *Aspidiotus perniciosus*, but so far very little good has been observed from it in that section. A few years since, this same parasite was found to be doing effective work in subduing this pest in an orchard in the neighborhood of Los Angeles, and from personal knowledge of the facts, I am confident that the restoration of that particular orchard is attributable to this parasite—Nature's remedy. Scales can still be found on the trees, but not in such numbers as to cause any damage.

Black Scale, Lecanium Oleæ, Bernard—Fig. 9. This scale is too well known in California to require any extended notice. Attention is again called to Mr. Cooper's address at the last convention, wherein he quotes from the report of Mr. Henry Tyron of Queensland of the existence of a highly beneficial moth, *Thalpochares coccophaga*, the larvæ of which prey upon the black scale and destroy them in great numbers, and have been known to free trees of the scales. Public attention was first called to this moth by G. Masters at a meeting of the Linnean Society of New South Wales, in 1885. The larvæ feed at night and form coverings for themselves with the empty skins of the scales. In this connection, I may state here that I have taken the proper steps to have this moth introduced, and hope, through the assistance of Mr. Tyron, to be able to establish such a friend in our California orchards.

Upon this scale we have a native internal parasite, *Dilophogaster Californica*, Fig. 10 (male), that assists very materially in keeping this pest within bounds. From 30 to 75 per cent of the black scales are annually destroyed by them. From the fact that only one generation is produced each year, and that this parasite only attacks the mature scale, the 25 per cent that escaped, each containing eggs, are sufficient to again cover the trees.

Soft Orange Scale, Lecanium hesperidum, Linn.—Fig. 11. Previous to the introduction of this scale in the early fifties, the orange trees in California were bright and clean, as I have been informed by Mr. J. W. Wolfskill of Los Angeles. The scale spread so rapidly, even killing some of the large orange trees, and for a few years was such a serious pest, it was then thought that orange-growing would have to be abandoned. Insect warfare in those days was not understood, and instead of spray pumps or fumigating tents, the trunks and branches of the trees were scrubbed with soapsuds and sand. This had a beneficial effect upon the trees. After a few years the scales diminished in numbers, and it was thought they had run their course and would finally die out. This scale still exists, but not in such numbers as formerly, and with them we find the probable cause of their decrease. This is a small four-winged chalcid fly, *Eucyrtus flavus*, one of the most beautiful of this important family. The female is furnished with a sharp stinger ovipositor with which she pierces the scale and deposits from one to seven eggs in each. In three or four days these hatch into small, footless, blind grubs that eat out the scale, and the dead scale answers as a covering for the naked pupæ. This parasite can be found all over the State. Wherever the soft scale is numerous, it is owing to the fact that numbers of ants are continuously around them, preventing the parasites from depositing their eggs. To remedy this, a band should be placed around the stem of the tree, and over this tie a piece of rope, previously saturated in coal oil; this will prevent the ants from ascending and give the parasites a chance. Another chalcid parasite is found in numbers upon this scale. It is the *Coccophagus lecani*, Howard.

Brown Apricot Scale, Lecanium (species unnamed).—Fig. 12. This is another of the scales that infest deciduous fruit trees, especially the apricot and prune, and cause great damage from the amount of honey dew it excretes, and the consequent black smut that covers the foliage and fruit. Like other lecaniums, the greater period of its existence it is soft and easily destroyed by the washes recommended for deciduous trees.

Mealy Bug, Dactylopius Adonidum, Linn.—Fig. 13. The climate of California is too dry for this family of scale insects to ever become a serious pest. Where they appear to thrive is in a warm, moist situation, and on this account are very troublesome in hothouses. The fact that we have three native species in this State, and not in very great numbers, would indicate that the conditions are not altogether suitable for their increase, for otherwise I believe it would be as troublesome a pest as the woolly aphis. I have found plants, the roots of which were covered with them. Among garden plants, where it is moist and sheltered, they are occasionally found.

In my experience with this pest I have found whale oil soap the safest and most effective remedy. Use one-fourth to one-half pound of soap to each gallon of water, according to the class of plants to be treated; dissolve by boiling, and apply at a temperature of 100 to 130 degrees.

About five years ago I discovered an internal parasite preying upon this coccid that was then new to science—*Rileyia splendens*, Howard. This was a case of complete extermination, for I have been unable to find either mealy bugs or parasites in that place since.

Cottony Maple Scale, Pulvinaria Innumerabilis, Rathvon.—Fig. 14. This is the cottony scale that infests grapevines, more especially those growing upon arbors, and has frequently been taken for and reported as the "cottony cushion scale," *Icerya purchasi*. It differs from the latter in having a plain egg sac instead of being corrugated, and the female resembles a lecanium and loses all power of locomotion as soon as the cotton appears. There is only one generation a year.

In some portions of the State, this scale has been practically exterminated by an internal parasite, *Eucyrtus flavus*.

Diabrotica soror, LeConte.—Fig. 15. This is one of the most destructive leaf-eating beetles we have to contend with, and from its great numbers and migratory habits it is a very formidable pest to fight, for when disturbed it will drop from the leaf and fly to some other plant. Nearly all our fruit trees are subject to its attacks, and it also eats into and damages ripe apricots. Melons, cucumbers, beans and other soft-leaved plants suffer severely from them. They also destroy rosebuds, carnation and pink blooms.

As a remedy, when the insects first appear, spray the foliage with Paris green, one pound to 200 gallons of water; or take five ounces of Paris green and 20 pounds of sulphur, mix well and dust on the trees or plants. But in no case should either remedy be applied to vegetables.

This is one of the very rare instances where a beetle is attacked by a Dipterous parasite, and not as an entomological curiosity, but one of great economic importance; as last season I found one-third of the diabroticas were destroyed by an internal parasite which I discovered in Los Angeles. Prof. D. W. Coquillett found it to be a new genus and named it *Celetoria crawii*.

Orange Aphis, Siphonophora citrifolii, Ashmead.—This is the green fly or louse of the young shoots of the orange tree, and at each of the three growing periods of the tree every season they appear in great numbers, and in some instances have checked the development of the leaves. If they become serious upon young trees, I would advise spraying with a weak rosin solution. They are preyed upon by an internal chalcid fly, and also by a green grub that upon first sight you would be tempted to destroy. It is blunt behind and pointed in front. This is the larvæ of the Syrphus fly, *Catabomba pyrastri*, Linn. Fig. 16 shows the larvæ, pupa and imago. The female deposits an oval, light-colored egg in the midst of a colony of aphis, from which the grub hatches and immediately proceeds to work. It will seize an aphis and lift it clear off the shoot, and after extracting the juice will drop the skin, and in a short time will entirely rid the tree of aphis.

Woolly Aphis, Schizoneura lanigera, Hansen. Fig. 17. This is one of the most troublesome insects that infest apple trees, both from its great fecundity and its ability to exist and propagate under ground, secure from the attacks of predaceous insects. This pest can readily be detected by the woolly-like secretions from their bodies, and also from the knotty or warty appearance of infested shoots. When young trees are infested they can be kept comparatively free by brushing kerosene over the infested parts, or equal parts of turpentine and water, applied in the same manner. Mix well while using.

When the roots of the trees are infested, there is no remedy so efficacious and inexpensive as gas lime, spread on the surface of the ground around the tree as far as the branches extend. Use one to two shovelfuls, according to size of tree. As this substance is of a caustic nature, great care must be taken not to allow it to come in contact with the trunk. To prevent the aphis from ascending or descending, remove the soil from the collar of the tree and place therein some wood ashes or air slacked lime. The various coccinellidæ and their larvæ, also the larvæ of the lace-winged fly, assist very materially in the fight against this pest.

While upon the subject, I would like to call particular attention to the danger of introducing other species upon trees from other States and countries.

Make a thorough and careful examination of all trees and plants that have recently been imported. If you have a County Board of Horticultural Commissioners, invite them to assist, as from their knowledge of the insect pests in their districts they will be better able to detect any new insect upon the plants. This is a question there should be no effort to evade, for the sooner the owner is aware of the existence of an injurious insect upon his place, the less expensive will be its extermination, and the prosperity of the district will not be menaced.

I would also state that my object in speaking of the various predaceous and parasitic insects is not to discourage spraying or fumigation, but to call attention to and encourage a study of this very interesting branch of entomology.

Agricultural Notes.

CALIFORNIA.

Butte.

First Carload of Oranges Shipped.—Oroville *Mercury*, Dec. 12: Last night the first carload was sent East by the W. R. Strong Co. Its destination is Chicago and it contains 300 boxes of Oroville oranges. This is the first carload of oranges that has been sent out of California this year. The fruit was picked from 90 trees, or a one-acre grove, owned by Joseph Gardella in Oroville. They are seedlings. The price paid was $1.40 per box on the trees, and therefore Mr. Gardella received $420 for one acre's production without turning over a finger or bothering his head about the marketing of the crop. The crops from trees in the yards of Mrs. Clara Freer and Major Marion Biggs, Jr., were being picked this morning. Several hundred boxes were taken from the former place and many from the latter, where the reporter saw some of the finest and largest seedling oranges that have been produced in Oroville this season. When the fruit is taken from the trees it is hauled to the depot, where the W. R. Strong Co. has established a packing-house, and the oranges are sized, wrapped, packed and put in cars, and sent direct East. The boxes are made with two compartments, and hold, at the greatest, about 125 oranges. Of the oranges picked from Major Biggs' trees, about 100 filled a box.

Fresno.

Oleander's Raisin Pack.—Fresno *Expositor*, Dec. 10: A. C. Bryan, vice-president of the Fresno Raisin Company of Oleander, said: "The raisin pack in our district amounts to about 125 carloads this season, of which we put up 60 carloads. The Curtis Fruit & Raisin Company packed about 50 carloads, and Mr. Cook and Napoleon Vieu seven and nine carloads respectively. Our packing-house closed down last Friday and the Curtis establishment on Wednesday. The quality of this year's crop is better than last year's, and the last of this season's crop was in better condition than the last of the season of '89 There was a ready sale for raisins and the prices received were good. Our company will declare a fat dividend."

Kern.

Diversified Fruit Growing.—Bakersfield, Dec. 11: Localities that have heretofore planted nothing but raisin grapes are now to include several varieties of stone fruits, and places that have raised principally peaches or prunes will henceforth grow other kinds of orchards as well as vineyards. This result is brought about largely by the experiment work that has been going on of late years. While our farmer has been trying a few trees of this, his neighbor has been doing a little something with something else. There is money in raisins, but there is also money in peaches, apricots, prunes, nectarines, almonds and figs.

Tree and Vine Planting.—Bakersfield *Echo*, Dec. 11: The amount of orchard and vineyard planting that will be done on the dry or unirrigated plains this winter will be surprising to those who have not kept track of things in that direction. From 10 to as high as 80 acres of trees or vines will dot the plains both north and south of here in another year. Conversation with the people living on these plains reveals this state of affairs: They expect to be able to irrigate their land some day from canals, but they cannot say just how soon that day will arrive; in the meantime they can be bringing their orchard or vineyard to a bearing age, and if it should reach that point before the canal reaches them, they will still be able to supply the needed moisture. The *Echo* has long contended that 20 acres of trees with a well was better than 160 of grain with six inches of rain.

Rye a Good Crop.—Bakersfield, Dec. 11: Several farmers have recently been heard talking about sowing rye instead of wheat or barley on land that is not irrigated. Two or three farmers in Linn's valley tried it last year and were well pleased with the result. They sowed it on the hillsides and got good returns. Some on the plains west of Rosedale will sow it this year. They say that in addition to the yield of grain or hay, it may be pastured off for some weeks, thus affording much good feed for cows or horses. If cut for hay, it should be cut when quite green.

Farm Notes.—Editors Press:—We have had a glorious rain and the farmers and stockmen are all jubilant over the prospect.—W. S., *Onyx, Dec., '90.*

Los Angeles.

Grain Seeding.—Pasadena *Star*, Dec. 10: A gentleman who returned from San Jacinto last night reports grain-planting in that valley and vicinity very active. About 15,000 acres have already been put in, and probably 50,000 acres more will be planted. One man is sowing wheat and barley on 2000 acres. In plowing this field a team makes a circuit of it once in half a day.

Persian Grapes.—L. A. *Express*, Dec. 11: Sec'y Hanchette of the Chamber of Commerce has received a letter from H. E. Van Deman, Pomologist in the United States Department of Agriculture at Washington, stating that he has sent seven varieties of the very best grapes grown in Persia, as follows: Askaree, White Shahanee, Chavooshee, Dizmar, Black Shahanee, Paykanee Razukee and Shiraz. The cuttings will be distributed among fruit-growers.

Vegetable Farming.—Los Angeles, Dec. 11: The Cahuenga farmers are turning the country upside down, putting in tomatoes, peas, beans and all winter vegetables for the New Year's dinner of the frozen Easterners.

Thoroughbreds to be Sent East.—L. O. *Herald*, Dec. 13: Billy Appleby has been secured by L. J. Rose to train and manage a string of race-horses for next season. The horses now in training at Agricultural park will be divided. Billy Gardner will have charge of the Eastern string, which will include the Flying Fairy and a number of aristocratically bred two-year-old colts and fillies. The string will perform at Westchester and vicinity. The second string will take in the California circuit and will then be shipped to Chicago for the Washington park meeting, and will, in all probability, wind up at Saratoga. Among them will be the black filly Leola by Eolus; the bay colt Bon Voyage by Argyle; the brown colt Mulatto by Argyle, and the bay filly Arnica by Sam Brown. Conrad will also be included in the Western string.

Napa.

Vintage of '90.—George Husmann in *Register*, Dec. 12: This has been the best in quantity and quality out of nine consecutive ones, since 1881. Of course this can only be taken with qualifications, as many vineyards in our valley are devastated by phylloxera, and others are so badly neglected by their owners that they could not be expected to yield a fair crop. No vintage in this State is exactly like any other. This last one, setting at naught all predictions of the weatherwise, proved to be rather earlier and higher in saccharine than that of last year. The grapes ripened fully as early and ripened at once, so that it pushed operations and confined them to a few weeks. White varieties had a fuller crop and suffered much less from coulure than red varieties, and red wines may, in consequence of this, be more sought after than white. While all wines are of excellent quality, if they were handled right, they show very high color, which is an advantage to red while rather a disadvantage to white, where the trade seems to prefer a greenish-yellow color to a golden tint. The cause of this was the sudden ripening of the grapes, and the proper preventive will be the earlier picking of the white grapes when they are not dead ripe, but just ripe enough to impart that sprightliness and flavor so much desired in our white wines. The acreage is decreasing instead of increasing, by the ravages of phylloxera, Anaheim vine disease and neglect. Are we going to wait for the day when the demand for our wines will exceed the supply? or will we take time by the forelock, like thoughtful and provident men and plant resistant vines to be grafted with the best European varieties? I think that but few will see their golden opportunity, while the majority will fold their hands in idleness and see their vineyards go down. We know we have the remedy; will we apply it?

Olive Culture.—Napa, Dec. 12: In the Napa Land Co.'s show window there is a potted branch from an olive tree loaded with berries of the Mission variety. It is from Mr. Vincent Smith's Glen Olive Farm southeast of town, and is a sample of what was to be seen on 500 trees in his orchard before the work of gathering was commenced a few days ago. The trees are five years old, and from one he has picked 20 pounds of berries. He will pickle most of these olives and crush the balance for oil. Mr. Smith has also 500 Picholine olive trees. They are four years old from the planting and are in thrifty condition.

Nevada.

Skinker Pears.—Nevada City *Herald*: Some years ago John Skinker was in the mountains, and seeing a pear tree near a cabin, which looked large and fine, he requested the owner to send him the crop to San Francisco, which in due time was done. The fruit was pronounced by fruitmen and experts to be the finest ever seen. Mr. Skinker then went up to the place and paid the man $150 for the tree, with the understanding that no slips be cut from it except by himself. The tree has been yearly pruned, and the slips grafted upon other trees in different sections of the State, and the fruit is known as the Skinker pear. A large number of trees has been grafted in this county from that stock, and the owners place great value upon the trees.

Sacramento.

The Grapes Wanted.—Sacramento *Union*, Dec. 12: John McNie of Florin permits us to make the following extract from a letter received by him from one of the great fruit houses of New York City: "The season having virtually closed, we find that between Sept. 4th and Oct. 23d we received from your association 13 carloads of grapes which sold gross for $17,692, or an average of $1360; the best sale brought $1523 and the poorest $1203 for the car, and as we have said above, the average was $1360. We think we have demonstrated that New York is the best market to receive such grapes as those packed by the members of your association, especially the Tokay, because that is the grape of all others fancied by our people. It is an attractive-looking grape and takes the fancy of our people, who in the past have been accustomed only to grapes of a green

or black color. Of course you know that enormous quantities of grapes are produced in this State—Concords, Catawbas and Isabellas, the former decidedly predominating. This is the large, round black grape, which sells well at low prices—three to five cents per pound. We have hardly any green-colored grapes excepting those that come from Spain, but they are usually in heavy supply during the fall of the year. The Muscat grape is not fancied by our people, and although a few may do well, we think it will be two or three years before our people will take to them. There are other grapes, like the Emperor, Cornichon, etc., which may do pretty well, but the Tokay is the grand grape for New York."

San Bernardino.

EARLY VEGETABLES GOING EAST.—Chino *Champion*, Dec. 12: California early vegetables and strawberries are now being shipped by Wells-Fargo to Eastern cities at a large profit to the producers. Assistant Superintendent Pridham, at Los Angeles, says: Green peas and beans are bringing from $6 to $8 per bushel; tomatoes are scarce and selling at $2.50 per box of 15 pounds in New York, and strawberries are quoted at from 45 to 50 cents per pound in Kansas City.

San Diego.

TREE PLANTING.—*San Diegan*, Dec. 11: It was supposed that the tree-planting record of last year would stand as the banner record for a number of years, but the inquiry now made shows that last year's record will be doubled and may be increased in even greater proportion. The rains have come, and the soil is now in fine condition for planting, which, of course, is the immediate cause of the activity, but the all-inspiring cause is the enormous demand experienced during the past year for California fruits. That demand is now having its general effect. One of the results will be the planting of a larger area of deciduous fruits—especially prunes—this year. Last year the great demand was for citrus fruits, lemons having an especial boom. Oranges and lemons will be planted this year in large quantities, but with them will also be planted large areas of apricots, prunes, peaches and other deciduous drying and canning fruits.

San Joaquin.

A PARADISE ORCHARD.—Lodi *Sentinel*, Dec. 12: P. B. Armstrong, who arrived last week from New York on a visit to his large orchard in Langford Colony, was so much pleased with the appearance of his property that he has purchased 253 acres adjoining his orchard. The land is known as the Wilson place, consisting of 160 acres, and the Dustin ranch of 93 acres. The latter will be planted with Mission olives, which adjoins 18 acres in the same fruit owned by Dr. E. Armstrong, thus making a 121-acre olive orchard, the largest in the State. The Wilson ranch will be planted with different fruits as follows: Prunes, 30 acres; vines, 20; pears, 10; peaches, 45; apricots, 10; oranges, 10; and cherries, 15. The remaining 20 acres will be transformed into a tropical garden, in which will be planted every known tropical fruit, such as bananas, oranges, lemons, limes, pineapples, date and cocoa-nut palms, etc. The entire garden will be laid off into drives, lawns and walks and made as near a paradise as it is possible. Mr. Armstrong's 640-acre orchard, together with his recent purchases and that owned by his brothers, aggregate 1015 acres, which by next spring will all be in trees, both fruit and nut. Through the center of this immense fruit farm two 50-foot avenues will run at right angles to each other, and will be lined on either side by the choicest of shade and ornamental trees. The road on the west side (1½ miles) of the farm will be bordered on either side with cypress hedges.

San Joaquin.

THE WOODBRIDGE CANAL.—Stockton, Dec. 11: An agreement between the Woodbridge Canal and Irrigation Co. and Frank P. Bell, for the construction of about 13 miles of canal, has been filed. The work must be commenced within 15 days from the time of the execution of the contract, and be finished on or before April 1st next. The contractor is preparing to commence work in earnest next Monday and rush it as fast as possible. The canal is to be extended from Woodbridge in a southeasterly direction to the Cherokee lane road, and thence southerly to the Calaveras river.

MUSHROOM GROWTH.—Stockton *Independent*, Dec. 9: The strangest evidence of the strength of vegetable life is to be seen at Russell's stables, where mushrooms are pushing up through three inches of concrete and two inches of bituminous rock covering which was laid hot and rolled smooth with heavy iron cylinders. In the rear portion of the stables, where vehicles are kept, the concrete and bituminous rock flooring was laid over ground which was at one time used as a corral. The floor was laid more than a year ago and has been dry and solid until the past week, when mushrooms began to push through and finally break the bituminous rock. Half a dozen mushrooms have come up since the bumps were first noticed in the flooring, and as many more have raised what look like large pustules in the black surface.

Santa Cruz.

POTATO NOTES.—Watsonville *Pajaronian*, Dec. 11: The potato-growers of this valley are not anxious to sell their crop. Prices are going up, and the chances for an "invasion" of Eastern potatoes are very slim, as the Eastern crop is light. The outlook appears very good for higher prices. In the meantime the Pajaro potato-grower serenely waits for a higher market and stores his product with the narrow-gauge railroad.

Solano.

ALMOND PROFIT.—Davisville Cor. Dixon *Tribune*, Dec. 13: Mr. Treat sold $12,000 worth of almonds this season from 40 acres of land, or a gross yield of $300 per acre. Place his expenses at $100, we have $200 profit from each acre, thus making it a paying investment at $2000, or $80,000 for the 40 acres. The orchard is not more than 10 years old, and it requires no great mathematical skill to show that by planting this tract in almonds (allowing its original worth to have been $100 per acre) its value has been enhanced at the rate of $7600 per annum. This is not taking into consideration his income from it for the past seven years, which would alone repay the original investment and ten times the expense of planting and cultivating.

Tulare.

IT RAINED BUGS.—Tulare *Register*, Dec. 6: This morning, when C. Bertram climbed to the top of the Kessing building in order to measure the rainfall, he found the entire roof covered with what looked like grains of wheat. An examination showed that the objects were bugs. Here and there among them were large beetles. The small bugs looked, under the magnifying glass, like young grasshoppers, most of the legs being knocked off by the force with which they struck the tin roof. The adjoining roofs were covered in the same way, but the rain of bugs was not wide in its extent, as a visit to the roof of the *Register* building failed to result in finding any bugs. The insects are there yet and may be seen by any one who will climb the ladder. There are millions of them and it is a strange sight.

PROSPEROUS CREAMERY.—Visalia, Dec. 4: The Visalia creamery stockholders held a meeting last Saturday. After deducting current expenses, the stockholders were paid 92¾ cents profit per hundred pounds for the month of September. This is a gratifying showing, especially when it is stated that the plant was only put in operation in September. During that month, 274 large and 142 Young America cheeses were made and sold. There is a good demand for the product of the creamery, and the cheese brings 13¼ cents in San Francisco.

TIMBER-LAND REFORM WANTED.—Traver *Advocate*, Dec. 12: The Directors of the Kaweah Colony were recently arrested and taken to Los Angeles to be tried for cutting timber on Government land. If the Government officials would be half as active in exposing the thieving corporations who gobble up thousands of acres of the best timber land in the State as they are in persecuting honest settlers, they would receive the plaudits instead of the condemnation of our citizens. The policy of the Land Department seems to be to strain at a gnat and swallow a camel.

WHEAT PLOWING.—*Advocate*, Dec. 12: Teams loaded with plows, hay, etc., are going through Traver every few hours of the day now, bound for the wheat-fields between here and the foothills, where their owners are going to put in crops of the cereals. Plowing and seeding is going on at a lively rate, and although each year shows a decreased acreage seeded to wheat and an increase in the acreage set to vineyards and orchards, the 76 country still has charms for the wheat grower, and wheat land hereabout—especially that owned by non-residents—is eagerly sought after.

PLOWING BY STEAM.—Visalia *Times*, Dec. 11: A telegram from Benicia states that a new traction engine, weighing 20 tons and competent to propel 40 plows, has just been turned out at the agricultural works in that city. The telegram further states that it "is the only straw-burning machine made for plowing." This latter statement is an error, as G. S. Berry of this county several years since invented and constructed a traction engine with which he levels and plows his land and harvests his crops. The engine is at work to-day, drawing 20 plows and traveling over 60 acres of land daily. He uses locomotive headlights at night and keeps his machine in operation day and night. J. J. Cairns, the largest wheat-grower in this valley—cultivating from 14,000 to 16,000 acres—also uses one of Mr. Berry's engines.

VINE PLANTING.—Traver, Dec. 11: A large acreage will be set to vines in the vicinity of Traver the coming spring, as numerous contracts are being made for plowing and leveling. The tracts will vary in size from a few acres to a whole section. The setting out of several tracts of the latter size is on the tapis. Most of them are colony schemes, many people clubbing together and taking as much land as they choose, while others show the investment of large amounts of money by capitalists. Many of our own people, being personally cognizant of the profits made at fruit-growing, are investing in colony tracts for fruit culture.

Yolo.

COTTON-GROWING.—Knight's Landing Cor. Woodland *Democrat*, Dec. 4: W. C. Curtis contemplates planting his ranch in cotton the ensuing year. Should this prove a success (and there is no obvious reason why it should not), it would surely be a great benefit to Yolo county in general and the vicinity of Knight's Landing in particular. It has been proven that cotton can be successfully grown in this neighborhood. A sample of cotton as grown on a ranch above town was to be seen on the showcase of F. A. Grimes for the last two weeks. It was literally loaded with pods of a fine quality of cotton, and was a specimen that would be a credit to the greatest cotton State in the Union.

NEW ORCHARDS AND VINEYARDS.—Knight's Landing, Dec. 1: The planting of orchards will soon commence. Among the many varieties of fruits that bring the better prices are the French prunes and the Seedless Sultana grape, but like all other industries, it can be carried to the extreme. Some of our enterprising farmers are contemplating the setting out of orchards and vineyards instead of the old-fashioned wheat-field. Among those who are going into the business on a large scale is Mr. Peart, whose ranch is about two miles south of town. He intends to plant 40 acres in French prunes and 40 acres in grapevines. This gentleman will be about the largest planter, but quite a number will try some fruit on a smaller scale.

Yuba

NOW FOR THE FAIR.—Marysville *Democrat:* The question is now settled that we are to have the citrus fair in this city, and it will probably be held early in January. The best of all kinds of fruits should now be selected and kept for the fair, and then all the nice movable shrubbery and flowering plants should be put in good condition to decorate the pavilion, for these decorations are a great help in showing off the fruit to advantage. It is an important matter that the committee at once look after the business of railroad transportation for those visiting the fair, and to make the best possible excursion rates, for this is essential to the success of the undertaking. Yuba and Sutter counties, through their supervisors, have authorized an appropriation of $500 each for the expenses of the fair, and there will be about $2000 more required, the larger part of which has already been guaranteed. Now let everybody resolve himself into a committee of one to make the fair a grand success.

DRIED-FRUIT SHIPMENTS.—Marysville *Appeal:* Within the next 30 days all dried-fruit shipments will cease in this section. This has been a good year for dried fruit of all descriptions, the demand in the Eastern markets far exceeding the supply, and the price has been fair. The shippers claim that there is more profit and less risk in handling dried than green fruit. Dried grapes have sold well this year, and a very extensive market seems to be opened up for this comparatively new product. The chief expense in producing dried grapes for the market is the picking. It is a very desirable production both for the grower and the shipper.

HISTORIC TREES.—Marysville *Democrat*, Dec. 12: We stated in a recent issue that the historic fig trees at the Hock Farm had all been cut down and that the grove would never be used again as a picnic ground. Those trees were planted by Gen. John A. Sutter many years ago and were admired by all visitors to that lovely grove. The high water last winter caused ten of the trees to turn over, and Mr. Holmes ordered all the others to be cut down.

RAISIN SHIPMENTS.—Marysville *Appeal*, Dec. 12: The last of five cars of raisins sent by Messrs. Kells, Carpenter, Green and Williams left here recently for Chicago. These consignments consist of over 7000 boxes, and have been sent to Chicago, New York and New Orleans. The quality has been pronounced equal to the best in the State, and they have commanded the highest price. This has been an unusually good grape year, and the success the raisin men have achieved will greatly encourage the planting of vines. Though it is not expected that the yield per acre will be as large next year, there are many new vines coming into bearing, and the crop will probably exceed that of any other year.

BROOMCORN FOR FEED.—Wheatland *Four Corners*, Dec. 12: A. W. Oakley, for several years past, has raised a large crop of broomcorn. From the sale of the brush he realized a handsome profit. Until this year he has counted on only the brush for profit, but now he has procured a crusher and will feed his stock with a mixture of cracked wheat and broomcorn. He will, in this manner, reap a benefit from the corn and the wheat which has been the stamping-ground of weevils since 1885.

ARIZONA.

CATTLE FOR CALIFORNIA.—Tombstone *Star:* Geo. W. Lang of Los Angeles, Cal., has left with 1000 head of cattle, which he recently purchased from Slaughter's Ranch, southeast of Tombstone. The cattle were driven to this city yesterday, and are now at the Silver Lake corral. Mr. Lang proposes to feed these cattle through the winter and put them in the market next spring. He will drive them over the old emigrant trail, and says he will reach the Colorado river in about 30 and Los Angeles in about 40 days. By doing this he will save about $4000, which he would have to pay the railroad company if he shipped by train. The railroad rates are $90 per car, and it would take from 50 to 60 cars to move this number of cattle, and the freight bill would be between $5000 and $6000; hence there is a saving in driving them overland, when the same number of cattle can be driven to California at from $1 to $1.50 per head, paying all expenses.

FRUIT CULTURE.—Phœnix *Gazette:* The disposition and determination of the men of this valley to plant more fruit trees and vines is highly commendable, both as a business proposition and as an enterprise in developing the Salt River valley. The planting of a few thousand increased acres means a long stride in the advancement of this valley, and we were credibly informed yesterday that a proposition is now under advisement for the planting of four sections in the high-grade fruits.

Cough-Cures

Are abundant, but the one best known for its extraordinary anodyne and expectorant qualities is Ayer's Cherry Pectoral. For nearly half a century this preparation has been in greater demand than any other remedy for colds, coughs, bronchitis, and pulmonary complaints in general.

"I suffered for more than eight months from a severe cough accompanied with hemorrhage of the lungs and the expectoration of matter. The physicians gave me up, but my druggist prevailed on me to try

Ayer's Cherry Pectoral.

I did so, and soon began to improve; my lungs healed, the cough ceased, and I became stouter and healthier than I have ever been before. I would suggest that the name of Ayer's Cherry Pectoral be changed to Elixir of Life, for it certainly saved my life."—F. J. Olliden, Salto, Buenos Ayres.

"A few years ago I took a very bad cold, which settled on my lungs. I had night sweats, a racking cough, and great soreness. My doctor's medicine did me no good. I tried many remedies, but received no benefit; everybody despaired of my recovery. I was advised to use Ayer's Cherry Pectoral, and, as a last resort, did so. From the first dose I obtained relief, and, after using two bottles of it, was completely restored to health."—F. Adams, New Gretna, N. J.

Ayer's Cherry Pectoral,

Young Folks' Column.

A Shop-Girl's Christmas.

[Written for the Rural Press by Fannie Isabel Sheerick.]

"PLEASE tell me the price of this lace?" Mrs. Perry had asked this question 3 times of the shop-girl behind the counter.

The big dry-goods store of Ames & Co. was thronged with people in haste with their Christmas shopping. It was growing dusk. It would soon be the fashionable dinner-hour. Mrs. Perry, whose carriage was waiting without, was very impatient.

"Such impertinence!" she said to her daughter, a tall, slim young creature clad from head to foot in costly furs, and speaking loud enough to be heard by all around. "I declare, I shall certainly report her. Next time she'll pay attention to such customers as we are."

Just then some one nudged the pale little girl behind the counter, who was distracted with the bustle and confusion and trying her best to attend to three people at once.

"Mary, quick," the kind voice whispered—"that lady in the sealskins—attend to her; she is very angry."

Mary Whiting turned her big brown eyes toward Mrs. Perry.

"I beg your pardon, madam," she said politely; "I did not hear you."

"You'll hear next time," Mrs. Perry said angrily. "I'll teach you a lesson that will make you keep your ears open."

Mary's lips quivered and her cheek flushed painfully, but she said nothing.

With a disdainful whirl of her magnificent sealskin, Mrs. Perry turned on her heel and went straight to the head floor-walker, pouring out her plaint in that gentleman's attentive ear.

"Of course," she said in conclusion, "you'll not expect me to trade longer with a house in which I can be treated with such incivility."

Mr. Reed was not a hard-hearted man in the main, but it was always business before clemency with him. He could not afford to lose one such customer as Mrs. Perry for half a dozen girls like Mary Whiting. In his smooth-tongued way he soon adjusted the matter with Mrs. Perry.

"The girl shall be dismissed at once," he said. "She is a new hand, or she would have known who you were instantly and not neglected you. I beg of you, Mrs. Perry, not to withdraw your trade from our house. You certainly shall not have cause to complain again."

"Very well," Mrs. Perry said haughtily, and motioning her daughter to follow her, she threaded her way carefully through the crowded aisles to the street.

"Drive fast, Tom," she said to the coachman, sinking back in luxurious ease on the soft cushion, without a thought of that poor girl out of whose mouth she had taken the very bread and butter this night.

On the way home, she discussed with her daughter the matter of new costumes, and so engrossing was this talk of silks and laces that the episode at the store was entirely forgotten.

But not so with Mary Whiting. Her heart sank within her as she waited on her last customers and placed her goods neatly on the shelves at the close of the day's work, for momentarily she was expecting the summons to appear before Mr. Reed. It did not come until she had donned her wraps and was ready to go.

She stood before Mr. Reed with downcast eyes, scarcely daring to hope for leniency.

"Miss Whiting," he said, "your services are no longer required in this house. You will find the amount due you at the cashier's desk. You have been guilty of rudeness to one of our best customers."

Bitter words rose to the girl's lips, but she swallowed her pride and offered an explanation. The loss of this position meant absolute destitution, but her entreaties fell upon dull ears. Mr. Reed knew that a dozen girls were waiting for her place. He had turned a score away that very morning. Customers like Mrs. Perry were not so easily replaced. He was quite obdurate.

At last Mary turned away. Though she knew nothing of the great issues between capital and labor and had never heard of monopolies, she felt that this was one of the conflicts between the rich and poor, and she needed no great wisdom to tell her which must win.

She choked back her tears and went for her money. It was a mere pittance. A wave of despair crept over her. She had faced starvation before, but oh not at Christmas—not at this glad, beautiful time when every one was so gay and happy and the world was so full of bright things. Eager, cheerful faces had passed before her all day. Girls and women had crowded each other out in front of her counter to get pretty baubles for the ones they loved. Gentlemen in great warm coats had waited patiently for their wives, whispering about presents for the children; even some shy young men had asked her advice about gifts for sweethearts. Yes, every one was remembered but her. She did not know of one solitary soul that would think of a gift for her.

Slowly she went out of the great store so brilliantly lighted, so warmly heated.

What should she do? She pondered the question as she crept along the streets, drawing her shawl closely around her and staring vacantly into the dazzling shop windows.

"Move on!" a policeman said gruffly as she hesitated at a crossing.

It was beginning to rain a little. She did not mind the rain-drops very much; they touched her face gently like messengers from that far-away heaven of which she had heard.

Heaven! That word recalled her mother—the dear mother laid under the sod only a few months before, whose grave and coffin she had starved herself to pay for.

Now she knew what to do. She turned the corners swiftly, facing the west; quickly she sped through the bright streets, soon leaving them behind her. She did not lessen her pace until the suburbs were reached; then she paused.

In front of her rose the spectral cross of Lone Mountain; around her lay the cemeteries.

The streets were quite deserted here—now and then a lonely pedestrian casting a huge shadow under the electric lights; but it did not seem half as lonely to Mary Whiting as the busy streets in the heart of town where she had been jostled hither and thither by the careless crowd.

Her heart throbbed painfully now that she was so near the last resting-place of her mother. She knew that the great gates of the cemetery were closed for the day, but she remembered a small gate in an obscure corner through which she had passed and which was often left unlatched. She soon reached it.

Ghostly as the place was, she felt no fear. Her one desire was to get away from that unfeeling humanity which had been cruel to her. Her one refuge on earth seemed the grave of her mother. Here, no breath of the world's unkindness could reach her.

With a moan of pain and longing she threw herself face downward upon the soft grass-covered mound. Her lips uttered no words, but in her heart was the deep, unspoken prayer which God always hears and answers.

The rain beat upon her, but she did not heed it. Her tired form was wrapped in a sleep which even the storm could not awaken. It seemed as if that mother whose presence she had invoked must be watching over her child.

An hour afterward, the clouds began to break; the rain ceased.

Just then a lantern might be seen moving slowly among the headstones. Several people followed it—two men and a little girl, all warmly clad and protected from the weather. Great drops splashed in their faces from every dripping tree and shrub, but they did not mind it.

They appeared to be hunting for some article that had been lost. At last the rays of the lantern fell upon something shining in the grass. The little one sprang to pick it up.

"I've found it, papa!" she exclaimed; "I've found it! I knew I lost it here."

But her exclamations of joy were cut short by a stifled cry from the sexton. His foot had stumbled against something lying across one of the graves. The moon now breaking through the clouds showed him what it was—the insensible form of a girl clad in the poorest of garments, now drenched through and through by the rain.

The prayer of the outcast had been answered.

When Mary Whiting again opened her eyes, it was in bewilderment and surprise. She thought at first she must be in the heaven of which she had dreamed. All around her was warmth and light and fragrance. The walls were covered with tinted paper. A bright fire blazed in an open fireplace. She was undressed and lying on a pretty brass bedstead. She had never seen one before, and she thought it must be of gold, it glittered so in the firelight.

She tried to move, but found that it hurt her head and made her limbs ache; so she sank back on the pillow, wondering vaguely how it had all happened.

"Don't move, dear lady," a gentle little voice cried as its owner emerged from a shadowy nook near the bed. "Mamma said you were to be very quiet and not talk. I'll talk to you."

The quaint little speaker sat down by the bed and took the girl's thin hand in her own.

"Mamma says you've been delirious, and that means to be out of your head; so I suppose you don't know how you came here. We found you night before last in the cemetery, lying across a grave. Papa and I and the sexton went to hunt a ring of mamma's that I lost. It was a very old ring—been in the family I forget how many years and years.

"I often go into the cemetery to play—it's so quiet there, and I love to watch the sparrows and the ground squirrels. They are so funny in their antics. That afternoon I had mamma's ring on and lost it. I would not let papa rest that night till he went with me to find it, because I knew how much mamma prized it. We thought you were dead at first, but mamma called a doctor when we got home, and now he says you'll be all right in a few days. You had a high fever yesterday, but it is all gone to-day. Now be quiet, dear lady this is my room that I gave up to you, and I'm going to take care of you all afternoon, because mamma and Lucille are busy fixing the Christmas things."

So saying the self-constituted little nurse settled herself sweetly in her corner and took up the doll clothes she had been making.

It was so luxurious to be there in that warm room. It was so comforting to feel kindness and love once more around her, that Mary had no desire to break the spell. She watched the deft fingers of the little seamstress at her side until her eyelids drooped and she fell into a sweet, refreshing slumber.

It was dusk when she awoke. Her little nurse gave her some supper on a silver tray.

It seemed to Mary that she must still be dreaming. She sat up for a little while and then fell asleep again. She was awakened by some one moving. It was midnight, as she saw by the bronze clock on the mantel, and this is the scene that met her eye:

A pair of small stockings hung over a chair in front of the fire and this chair laden with the most beautiful gifts that Santa Claus could bring to delight a child's heart. Over this chair a lady was leaning, all a mother's devoted love shining in her face, as she carefully arranged gift after gift and filled the stocking to overflowing.

Mary started as the lady turned her face and she beheld to her amazement, Mrs. Perry, the author of all her woes, and as she afterward discovered, the author of her happiness as well.

Seeing that she was awake, Mrs. Perry finished her work quickly and came toward her.

"I am not your enemy, child," she said, kindly, seeing how the girl shrank from her, "but your friend, although I gave you reason to think otherwise. Let me explain."

She sat down upon the edge of the bed and began to speak.

"I have a violent temper, which I have never been able to curb, and when I am angry I often do things for which I am afterward sorry. I did not really mean to make you lose your place, but I was impatient, angered and tired, and I made my complaint very strongly to Mr. Reed. I had no idea he would be so severe.

"When we reached home I found my youngest daughter had been playing in the cemetery and lost a valuable ring, given to me by a brother long since dead. After dinner, when the storm had somewhat abated, Florence insisted upon going after the ring, for she declared she knew where she had left it. She was so grieved about it that her papa, to pacify her, went for the sexton, and together they made a search for the missing ring.

"They found not only the ring, but you. When they brought you in and I looked upon your face, my heart smote me. I knew then the cruel wrong I had so thoughtlessly done you. We cared for you, and Florence, who is the most tender-hearted little creature in the world, gave up her room to you and has kindly watched over you ever since."

Mary's tears were falling upon the pillow.

"Dear angel," she whispered softly, at remembrance of the soft little hands stroking her own.

"The next day," Mrs. Perry continued, "I went to see Mr. Reed. When I found your name was Whiting, I began to trace you up, for that is my family name.

"Do you know, dear child, what was the result of my search after your history and antecedents? Could you ever guess?"

Mary shook her head mutely.

"Well, child, the brother who gave me that ring was your father."

"And you—you are my aunt!" Mary's eyes opened wide with the eager question.

"Yes; your father married greatly against the wishes of his family. After his marriage we lost track of him. I myself married and lived in the East a number of years. When I came back here a few years since, I deemed all traces of him lost, but I treasured the ring carefully. I had given him the mate to it. That mate I found upon your finger."

"Yes; my mother was married with it and it was her dying gift to me."

"Well, to cut the story short, you are my niece. I have plenty of money and shall adopt you. You have a refined air and a pretty face. I shall not be ashamed of you. You shall be educated as becomes a lady, and shall receive the same advantages as my daughters."

Mary was about to overwhelm her with expressions of gratitude; but Mrs. Perry, who dreaded a scene and who made light of all her benevolent deeds, silenced her gently, but firmly.

"Now," she said, "the clock tells me that the Christmas morning is upon us. I will wish you a Merry Christmas, and hope you will forgive me for giving you such a terrible heart-break."

Mary's heart was too full to answer. She could only press her lips gratefully to the plump white hand outstretched to her.

Mrs. Perry kissed her lightly on the forehead, and turning down the light left the room.

Mary, feeling that she had reached the seventh heaven, again fell asleep, after much wondering over the fate that had befallen her.

When she awoke for the third time, it was bright daylight. The Christmas bells were

CHRISTMAS MORNING—TRYING THE NEW PAINT-BOX.

ringing. The yellow sunlight was streaming through the windows.

All the pain was gone from her head. Her limbs ached no longer. She felt so well and so happy she would have leaped from the bed and dressed herself instantly, but upon reflection she found that all her clothes were missing.

But just at this moment the door opened noiselessly and Florence appeared, holding a big doll affectionately in one arm and a large package in the other. She laid the bundle on the bed, crying gleefully, "Merry Christmas!"

"Here are your new clothes," she said, "that Santa Claus sent you. Mamma has told me all about you. I am so glad you are my cousin and are to live with us. I think you are very sweet, and I shall love you very much."

"God bless you, little one," Mary cried, her eyes filling. "You are the angel He sent to answer my prayer."

Looking on this tender-hearted little Florence, Mary felt intuitively that here was the mainspring of all her aunt's benevolent deeds. Like some beautiful flower, the fragrance of her life permeated the lives of all around her.

While Mary dressed, Florence chatted merrily, showing her all the pretty toys Santa Claus had brought.

"I'm so glad it's Christmas, ain't you? Lucille is to be married to-night. When she's gone away you'll play with me, won't you? We'll have real good times. My! how pretty your new dress is and how sweet you look. Your eyes are so big and black, just like Lucille's. I noticed you looked like her the first night I saw you—every one thinks she's awful pretty. Now come; breakfast is ready."

Blushing under these compliments, Mary allowed the new little cousin to take her hand and they proceeded to the dining-room.

The house seemed very grand and magnificent to Mary, who had been living in an attic, and at first she felt a little awed; but she received a kind welcome from her aunt, and even from the stately Lucille, and she soon began to feel at home.

After breakfast, Florence took her in to see the Christmas tree. There, she pointed out a package marked "From Santa Claus to Mary." Mary opened it eagerly. It was a beautiful book full of lovely pictures and pretty poems. Between the leaves she found a worn photograph, which she kissed lovingly. It was the portrait of her father. On the title-page of the book was written "Merry Christmas."

"Yes!" she cried, "this is the merriest Christmas I have ever known," after which she immediately sat down and cried as if her heart would break.

Florence shook her little head sagely. She could not see how any one could be merry and yet cry. She looked at Mary very much grieved.

Mary threw her arms around her little cousin.

"They are tears of joy, dearie!" she cried. "This *is* the merriest Christmas I have ever known."

Newhall and San Fernando.

EDITORS PRESS:—The lovely Newhall valley is situated in the northern part of Los Angeles county, and is surrounded by lofty mountains on all sides. The little town of Newhall nestles amid a grove of oaks at the foot of the lofty Sierra San Fernando, and although having less than 100 inhabitants, ships an average of 100 tons of freight per day, consisting largely of crude petroleum.

The number and variety of the resources of this section are really wonderful, consisting of both mineral and agricultural—there being large orchards as well as extensive mining interests. A few miles south of town is situated the extensive orange orchard of the Porter Land and Water Co., consisting of 170 acres; also, the fig orchard of J. P. Widney, consisting of 45 acres. To the northwest is situated the extensive orchard of Mr. Cook, consisting of over 800 acres of deciduous fruit trees. In the immediate vicinity of Newhall, the Newhall Land and Farming Co. annually cultivate about 15,000 acres for wheat, and raise thousands of cattle, horses and sheep on their extensive domain.

In the San Fernando valley there is a wheat-field consisting of 50,000 acres in one unbroken field, controlled principally by the Lankershim Land and Farming Co. Seven miles to the west of Newhall is situated the Pico Oil wells, consisting of about 50 wells, producing several hundred barrels of crude petroleum per day. It is estimated that these wells have yielded about 4,000,000 dollars' worth of oil to the present time.

To the northward of Newhall valley several hydraulic placer mining companies are now operating, and in the Casteca mountains the Silver Mountain mining company are operating a galena mine. Three miles from Newhall is the historic spot where Francisco Lopez first discovered gold in California in 1842, as the old archives of Los Angeles prove, and many thousand dollars was sent from here in gold dust to the United States Mint at Philadelphia, by the late Don Abel Stearns, long previous to the discovery of Marshall at Coloma in 1848.

W. A. BROPHY.

Nearly all colds are slight at first, but their tendency is to so lower the system that the sufferer becomes a ready victim to any prevalent disease. The use of Ayer's Cherry Pectoral, in the beginning of a cold, would guard against the danger,

DOMESTIC ECONOMY.

CRABAPPLE PIE.—Make some puff paste and line deep tins; fill with the pulp after it has been sifted, season with nutmeg, and sprinkle thickly with flour and sugar. Bake with an upper crust, or when done, add a meringue of the whites of two eggs and one cupful of sugar. Brown slightly in a hot oven.

CREAM CAKES.—Have one-half pint of boiling water in a kettle, put in two-thirds cup of butter or lard, add 1½ cups of flour, let it cool a little, add five eggs well beaten, and beat up well; drop a spoonful at a time on a hot tin, and bake quickly. For filling, make a rich cornstarch with eggs, and flavor.

EGG PUDDING.—Four eggs, well beaten, four tablespoonfuls flour, one pint milk, one pinch salt, add all together (the milk last and slowly), put in well-buttered dish, and bake in slow oven. Eat with sauce made of buttor and sugar, beaten together into a cream. Flavor this sauce with a few drops of vanilla or lemon.

CREAMED APPLES.—Select thin-skinned apples, such as the "Fameuse," or snow, core, without paring; fill with sugar and bake. While cooling, whip 1½ cups cold, sweet cream till smooth and firm; add two tablespoonfuls powdered sugar, a little vanilla or lemon. Place apples in sauce dishes, cover with cream and serve at once.

HEAD CHEESE.—After having them thoroughly cleaned, boil the head and feet until the meat falls from the bones, salting while boiling, remove from the liquor, chop fine, season with black and red pepper, sage, thyme, etc., dried and pounded; put in a pan of proper size, add a few spoonfuls of liquor from the pot, and place the pan under weights. May be eaten in 24 hours.

BAKED APPLE DUMPLING.—Pare and core eight or ten apples. Roll out pieces of puff paste the size of a saucer. Put an apple in each piece and close the edges of the paste around the fruit. Lay the dumplings in a large, flat dish. Pour over them a sauce made of one cup butter and three cups sugar well creamed together, and seasoned with nutmeg, and bake one hour. Peach dumplings are made in the same way.

CHOCOLATE SPONGE.—Dissolve 2½ ounces of grated or powdered chocolate, 1½ ounces sheet gelatine, and sugar to taste in a pint of new milk, and let it simmer (not boil very gently) till it is all melted and quite smooth, then add half a pint of good cream and strain the whole. When quite cold and beginning to set, whip it lightly to a sponge, and put it into an oiled mold on ice if handy. To turn it out, just dip the mold in hot (not boiling) water, and loosen the edges carefully, as this sponge is very apt to break.

PATTIES FROM PUFF PASTE.—Roll the paste about half an inch thick, and cut out with a round or oval cutter about two inches in diameter. Take a cutter half an inch smaller and press it into the piece already cut out, so as to sink half-way through the crust; this is to mark out the top piece; lay on tins and bake to a delicate brown. They should treble in thickness by rising, and require from 20 minutes to half an hour to bake. When done, the marked-out top can easily be removed. Take out the soft inside and fill with sweetmeats for dessert or with minced chicken or oysters.

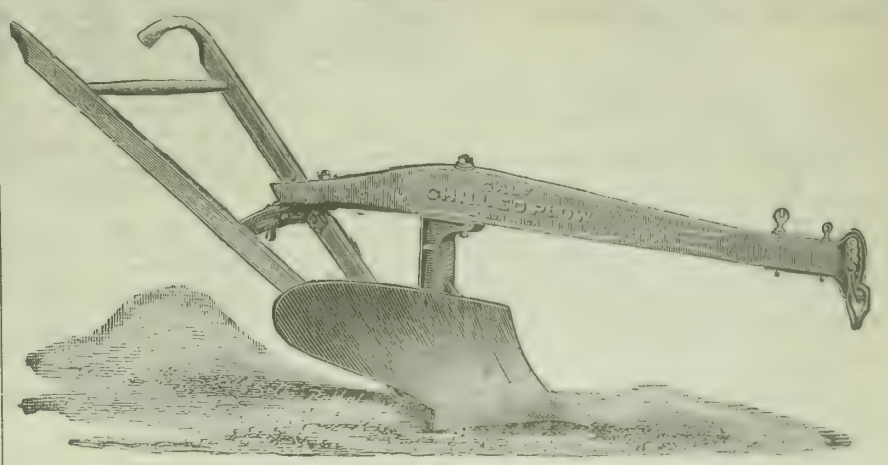
"Battle of Gettysburg."



The celebrated Panorama of the Battle of Gettysburg and Museum, corner Market and Tenth Streets, San Francisco, is a wonderful production. It has captured the entire State, doing a great deal of good. There is no better way of passing an hour or so, and in studying American history, than by visiting this Grand War Panorama. If any of our readers have not seen it, it will pay them well to do so.

Easy Binder.

Dewey's patent elastic binder, for periodicals, music and other printed sheets, is the handiest, best and cheapest of all economical and practical file binders. Newspapers are quickly placed in it and held neatly, as in a cloth-bound book. It is durable and so simple a child can use it. Price, size of Mining and Scientific Press, Rural Press, Watchman, Fraternal Record, Masonic Record, Harper's Weekly, and Scientific American, 75 cents; postage, 10 cents. Postpaid to subscribers of this paper, 50 cents. Send for illustrated circular. Agents wanted.

Buggies, Buckboards, Spring Wagons, Surreys and Road Carts. Write for our new catalogue. Baker & Hamilton, San Francisco and Sacramento.

BAKER & HAMILTON,
SAN FRANCISCO AND SACRAMENTO.

THE ONLY TRUE FERTILIZER

Is the GENUINE Compound of the MEXICAN PHOSPHATE & SULPHUR COMPANY prepared from GUANO and rendered soluble by the application of acids.

This manure is an ENRICHER of the soil and not, like others, a STIMULANT only; it will do for the land what no other can in rendering it PRODUCTIVE without IMPOVERISHMENT.

Its analysis is reliable; its work is immediate and effective, and for results we point with confidence to the ORCHARDS of RIVERSIDE, where it has been liberally used for the past three years.

It can be prepared to suit any land, with or without potash, as occasion may require. It is rich in PHOSPHORIC ACID, and can be made as rich in NITROGEN as the most deficient soil may exact.

WE GUARANTEE ALL WE CLAIM FOR IT,

Viz.: TO BE THE MOST COMPLETE FERTILIZER ON THIS COAST.

GOOD HEALTH

Medical Ethics in San Francisco and Berlin.

There seems to be a most decided contrast between the medical fraternity of Berlin and that of San Francisco. The telegraph, a few days ago, announced that a new remedy for diphtheria had been discovered by a German peasant, named Riegar, living near Berlin. Common report attached so much significance to it by reason of the great success which the poor, unlearned peasant met with in its application, that the story reached the ears of the now celebrated Dr. Koch, and friendly relations were at once established between the learned doctor and the poor peasant; and now we hear that the peasant's son has been called to Berlin and requested to experiment with the new remedy under the immediate supervision of Dr. Koch himself. The humane doctor is going to investigate and learn whether there may not be something of value to humanity in this accidental discovery alleged to have been made by a poor peasant.

What would our San Francisco surgeons and physicians have done under similar circumstances? Following the line of policy marked out and practiced by them, they would have refused all recognition of such "nonsensical quackery." They would have said to any one of their number who might have been anxious to investigate—"Hands off! Our code of ethics enforced by our Hippocratic oath forbids us to countenance any such quackery. We must stand by and let the children die of diphtheria until some one learned in medical lore shall have discovered and announced the discovery of some remedy better than any we now have."

In proof that such is the policy and practice of the medical profession of this city, we have only to call attention to the well-known fact that patients which our best reputed physicians and surgeons pronounce, beyond all doubt, afflicted with that most dreaded of all diseases, cancer, are constantly going to a well-known practitioner in this city, but one not of the dominant school, and are there being *cured* by constitutional treatment. Many of these patients, before leaving the regular faculty, submit to the cruel manipulation of the knife, and often *twice* without any beneficial effect. These facts are perfectly well known to every prominent physician in this city.

Do they follow the example of the German doctor? Not at all. They denounce in the strongest terms the practitioner—deny the cures, and when their own patients come back to them to prove what has been done, they refuse to talk with them and shut their doors in their faces!

The writer has often been asked why this is so. Why do our medical men refuse to look into this matter, so apparently important to the community? The most frequent answer is because the remedy is a secret and the profession will not experiment with a secret remedy. Herein lies the difference in practice between San Francisco and Berlin; for Dr. Koch keeps *his* remedy a secret to this day, and yet thousands of European physicians are experimenting with it.

Another equally common reason given is because the practitioner here is not in standing with the dominant school. To this we would answer, neither is the poor German peasant; yet as great and learned a man as Dr. Koch is ready and anxious to investigate as to what purports to be of benefit to the sick and suffering. The San Francisco physician is the proud pharisee who passes by on the other side, while Dr. Koch is the good Samaritan.

Then again, it is claimed, and correctly, that our friend is desirous of some remuneration for the discovery, which is contrary to medical ethics. There is nothing in the known world but medical ethics which makes such a demand. Common law, common custom and common sense say that the inventor or discoverer is worthy of a reasonable reward, especially when the discovery has been attained by many long years of investigation at great expense of money, time and health, to say nothing of the fierce opposition and obloquy which has been thrown at the effort by those who should have encouraged it, and who now demand the knowledge for the mere asking.

Further, we would reply that Dr. Koch keeps *his* remedy a secret and has already received a most princely reward in money, in addition to which honors without stint have been heaped upon him. Of course the doctor will make his remedy known to the world at the proper time. So will our San Francisco remedy be made known at the proper time and under proper conditions. There are philanthropists without number who stand ready to make good the compensation so soon as a proper medical investigation shall pronounce the cure a genuine one. Of course, time alone will prove its genuineness, but then, in the mean time, thousands are suffering and dying, while those who should investigate are doing nothing but putting hindrances in the way of investigation. That is not the way they do in Berlin.

Do they say there are no grounds for investigation? In reply, we would say that there is every day in the week waiting in a front parlor in this city, a large number of persons who have the authority of the most eminent physicians and surgeons of this city that they are afflicted with cancer. Some of these persons have been operated on in private offices and in public hospitals, and have subsequently been assured of the positive recurrence of the malady, with the assurance that the knife must again be used. These persons have afterward gone to the location referred to for treatment.

At that locality not less than twelve or fifteen has been the average number under treatment for the last five or six years—nine-tenths of which patients have been discharged as perfectly cured—*and not one single case of a return of the malady has been reported;* while when the knife is used, the books tell us that fully nineteen in twenty return within six or twenty-four months.

It has been intimated by some that these cases of cure were not cancer, but simply benign tumors. If such is the fact, what are we to say of the diagnosis of our leading physicians? Don't they know a cancer when they see it, and especially after they have cut it out, held it in their hands and put it under a microscope? Many and many cases have occurred and been successfully treated where the malady has returned after once and twice being cut out, and in one case after the third removal.

The only reasonable conclusion to which an honest-thinking man can arrive, after taking in the evidence, which is within the reach of all, is that either we have a remedy for cancer in this city or our leading physicians should be debarred by statute from practicing any longer in that specialty.

We desire that this statement should be received by our readers and the public as a most carefully considered utterance made after four years of most patient investigation, aided much of the time by medical gentlemen of undoubted standing in their profession, but whose names cannot be used in public because of the fearful professional pressure which is immediately brought to bear upon any medical person who presumes to make any inquiry into this matter of such vital interest to all. One of our medical advisers and assistants who was convinced that the discovery was a genuine one, and who attempted to bring the matter before the Medical Association of this city at one of its regular monthly meetings, was immediately put down, metaphorically stamped upon and the next day received a note that his assistance was no longer needed as a lecturer before the Cooper Medical College of this city. Others who have shown a desire to investigate have been threatened by word and by letter. The writer of these lines was present at the meeting referred to by invitation of a member of the association and was unceremoniously requested to leave the room, which he did after vainly endeavoring to make his excuse for being there. His voice was so completely drowned by the pandemonium of noise which accompanied his exit that he could not be heard ten feet from his person. We make this statement *now*, after four years of silence, as an evidence of the unseemly and unreasonable opposition of the medical fraternity of this city to allow any of their members to inquire into the truth or falsity of a medical discovery which we hold to be a better-proven reality than the alleged consumptive cure in Berlin and of fully equal value to mankind.

There are quite a number of gentlemen of standing, and several ladies also, not physicians, who have become sufficiently interested in this matter to join us in this inquiry, all of whom fully indorse the position we have taken in the matter and unqualifiedly condemn the course which our supposed health conservators are taking in regard to it.

In view of the importance of this inquiry, and the determined opposition thereto by those who should be foremost in aiding it, we appeal to the press to aid us in this work of humanity. All we ask for is an honest medical investigation. Let the State or City Board of Health or any other body of physicians select two or three cases such as they will pronounce cancer and proper subjects for the knife. Let those persons be placed under the treatment of Dr. Cook, and this vexed question will soon be practically settled. The doctor has for years been anxious for such a test. In common with all who have made inquiries into this alleged cure, we hold that the evidence fully warrants a demand for some such action, and we trust the press, not only of this city, but of the State generally, will unite with us in asking for a medical investigation.

But we have already quite overrun the space which we had allotted to this subject and will close with the remark that the name Kooh is the German for the English name Cook, which latter is the name of the person who has discovered a cancer cure in this city—Cook of Berlin for consumption, Cook of San Francisco for cancer.

W. B. E.

Did you ever buy a horse and not have some misgivings as to his points till they were fully tested? Not so with Ayer's Sarsaparilla; you may be sure of it at the start. It never disappoints those who give it a fair and persistent trial.

SIR PHILIP MILLER, the great English horticulturist, writing in 1740, says: "The best method to have Cabbages good is to procure fresh seed from abroad every year, for it is apt to degenerate in England in a few years."

The above is a simple illustration of the fact that the best seeds will rapidly degenerate under unfavorable conditions. The wise will take heed, therefore, and buy their seeds of D. M. Ferry & Co., Detroit, Michigan, whose world-wide reputation as the *best* and *most reliable*, as well as the *most extensive* seed growers and dealers, is due to the fact that they take advantage of every circumstance of climate, soil, methods of culture, selection of seed-plants, etc., to procure the best possible seeds and keep them up to that high standard.

Send your name to the firm's address, and you will receive a copy of their Seed Annual for 1891 free.

BEET SUGAR FACTORIES

E. H. DYER & CO.,
Sugar Chemists, Engineers and Draughtsmen, and Practical Manufacturers of Beet Sugar.
ALVARADO, CAL.

The members of this firm have spent many months in the largest beet sugar factories of Europe, studying the details of German and French methods of manufacturing sugar from beets, and also at works of the leading manufactories of beet sugar machinery. Having had many years' experience in manufacturing sugar from beets in California, and having fully demonstrated the feasibility of producing sugar from beets in this country in almost unlimited quantities, and in successful competition with cane sugar imported from foreign countries, we are prepared to furnish designs for factories, plans and drawings of the latest improved machinery now in use in Europe and this country. Can also furnish skilled engineers to superintend the construction of factories, and the necessary technical skill to operate the works successfully when completed. Will make personal examination of localities with regard to their fitness for the production of beet sugar, free of expense, except traveling expenses. Successful results guaranteed when the conditions are considered favorable.

The Goulds Spray Pump.

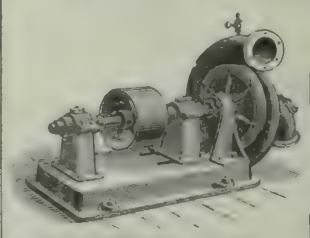
WITH BAMBOO EXTENSION ALL FITTED UP, COMPLETE WITH HOSE, BARREL AND SPRAY NOZZLE. These cuts show in faithful operation our Gould's and Star Spray Pumps. They are utilized for spraying Fruit Trees, Orange Groves, Vines, and in fact, all trees or shrubbery infested with the destructive insects which infest and do so much injury to Orchards, Vineyards, Orange Groves, etc. They are made entirely of brass, with the exception of frame and handle, and are strong and heavy; the valves being made entirely of metal or rubber, and will not be affected by the corrosive solutions such as Caustic Soda Acids, Lye, or any other solution that may be used to kill the destructive insect. Send for Special Circular and Prices of Spray Pumps. **NOTICE.**—ONGERTH'S LIQUID TREE PROTECTOR is the best Spray for killing Red Scale, Black Scale, White Cushion Cottony Scale, San Jose Scale, or any other insect. Send for Special Circular.

WOODIN & LITTLE,
312 & 314 Market Street, junction of Bush, SAN FRANCISCO, CAL.

Size No. 1, $13.50.

THE CELEBRATED

CHAPMAN-CLIMAX SPRAY PUMP



Is still ahead of all competitors, and is the most popular spraying machine in the market. The CLIMAX NO. 1, represented by this cut, is the cheapest reliable sprayer made, and its economy in the amount of wash required for a given amount of work will save its cost in a few days' operation.

IMPROVED CLIMAX NO. 2

Is a large double pump, made entirely of brass, and equipped complete with two lines of hose, four improved Pacific Cyclone Spray Tips, extensions, shut-off valves, etc. Guaranteed the safest, most satisfactory, and, in the end, the cheapest large spraying outfit in existence. Correspondence solicited. Address all communications to

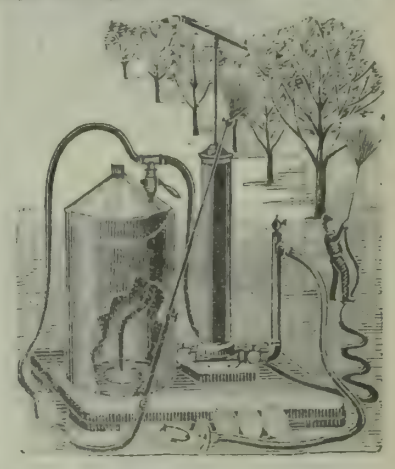
Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.



Messrs. H. H. Moore & Sons, Stockton, Cal.—Gentlemen: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (10½ gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful blisters. Respectfully yours,
FRANK H. BURKE,
Breeder of Registered Holsteins and Berkshires.
Menlo Park, Cal., January 22d, 1889.

Acme Spray Pump.

This is a strong, light bucket pump, and is just what has been needed by small Orchardists, Farmers, Stock and Poultry Raisers. This pump will stand a pressure of from 50 to 75 lbs. to the square inch. When charged it will keep up a continuous spray from 5 to 15 minutes, without pumping, according to the amount of air in the reservoir.

Sample pump sent complete for Spraying, with Suction Hose, Strainer, Discharge Hose, Rod, one Lime and one Chemical Nozzle, for $13. All my pumps have brass and Rubber Valves.

Spray Rods made to spray, from the ground, from 1 foot to 30 feet high and at any angle.

For Orchards, Farms, Stockmen and Poultry Raisers there is nothing like them.

CONTRACTS TAKEN FOR LARGE JOBS OF WHITEWASHING & TREE-SPRAYING.

Best practical essay on orange culture (limited to 2500 words) $50

The essay must be type-written and delivered to the Secretary on or before Jan. 10, 1891, unsigned but accompanied by a letter giving name of contributor.

CLASS 26—WINES.

Best general display of wines by maker $50

CLASS 27—MOST ARTISTIC DISPLAY.

Most artistic display $50

Rules and Regulations.

1. All exhibits must be in position and readiness for examination by the judges at 12 o'clock noon Tuesday, and no premiums will be paid on any article on exhibition unless properly entered on the Secretary's books before that time, and in the place assigned them for exhibition.

2. All exhibitors must obtain a card with number on from entry clerk to agree with exhibit. This card must be kept in a conspicuous place near the exhibit.

3. Competitors must be producers except in the competition for wines, in which case maker is admitted.

4. No article or exhibit entered for premium can be removed before the close of the fair without permission of the superintendent.

5. Free cartage in Marysville for all exhibits.

G. HUNSIKER of Cloverdale recently gave us good opportunity to examine the crystallized and dried white Adriatic figs for which he is finding an excellent market in his own county. His idea of a crystallized fruit is to our notion more correct than that of some other manufacturers. He does not give the fruit such a dense sugaring or syruping that its flavor is lost in a sweetness which cloys upon the palate. It is still a fig in flavor, but sugared enough to satisfy the requirements of a crystallized fruit. It strikes us he has struck a happy degree in his use of sugar. His dried figs are also very good in flavor and handsome. They are only lightly bleached, consequently do not have a pallid hue, nor do they taste of the match-box. We understand that Sonoma county towns now take all of Mr. Hunsiker's product from his 400 trees.

W. R. STRONG COMPANY have issued their catalogue for 1891 in style handsome enough for a Christmas card, and as a holiday greeting from a pioneer firm of nurserymen, seedsmen and fruit-shippers, the publication will be widely distributed over the coast and beyond. We find the publication replete with good things for the garden and with the most popular and approved sorts for the orchard, and it is a fitting exponent of California enterprise and progress.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos, $1; 10 mos., $2; 15 mos., $3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

FELIX GILLET of Nevada City has issued his 1891 catalogue of the choice varieties of fruits, to the collection of which he has given so many years and such earnest study, as readers of the RURAL know, from his important contributions to our columns. Mr. Gillet holds that though the production of a cooking prune is a proper field of enterprise for California, and its extent and profit is to be rejoiced in, the production of a first-class dessert prune should not be overlooked. This is a wise conclusion, and all who like him are experimenting in this direction should be encouraged and applauded.

McGarvin's Fruit Truck.

Mr. Smith McGarvin, inventor, patentee and manufacturer of the McGarvin Fruit Truck, has succeeded beyond his expectation in introducing this valuable adjunct to the fruit-growers. He is building two sizes, one of capacity of 2500 lbs. for one horse and one of 4500 lbs. for two horses. A RURAL representative visited his works at San Jose last week and learned that McGarvin is making preparations to incorporate for the purpose of extending his plant with a view of manufacturing extensively to meet the demand. He was just finishing one of large size on an order, and has just shipped one to Clements, San Joaquin county.

A New Carriage House.

Mr. T. A. Lauder (formerly connected with the Studebaker M'f'g. Co.) has opened a large repository at 927 K street, Sacramento. He has now a full stock of fine carriages, buggies, carts, farm wagons, harness, etc. Some of the largest manufacturing establishments in the East have given him an agency, and he has recently made favorable arrangements with Eastern houses that will enable him to sell first-class goods at bottom prices.

WE received this week a copy of the second annual catalogue of the California stump-puller. It is a 38-page pamphlet neatly gotten up and well illustrated, and contains much matter useful and interesting to those having land to clear. After a careful perusal of its pages, together with the favorable reports coming from sections where it has been used, we strongly incline to the belief that it is a machine possessing much merit, and one which is certain to make hand grubbing a thing of the past. The catalogue can be obtained by addressing Geo. Harvey, 547 Brannan street, and we advise every person interested to send for one.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

FOR WEEK ENDING DEC. 9, 1890.

442,471.—MACHINE FOR TURNING PILES, ETC.—A Ames, Berkeley, Cal.

The following brief list by telegraph, for Dec. 16, will appear more complete on receipt of mail advices:

California—Mora M. Barrett and J. F. Daly, San Francisco, governor for gas engines; Edwin Bartsch, San Francisco, syringe; John Beermaker, Santa Barbara, sea and wave power; Elswood Chaffee, Santa Monica, assignor of one-half to B. H. Fairchild, Claremont, car brake; John H. Eichler, San Francisco, rotary gas engine; Samuel C. Lewis, San Francisco, machine for making rock-drill bits; Lanthus E. Marshall, Martinez, assignor of one-third to P. Tormey, Pinole, car coupling; William Meakin, San Francisco, machine for reducing bituminous rock; Roscoe B. Paige, Oakland, wheel for road engine; Presley B. Smith, Alameda, assignor to M. Morganstern and J. A. Behr, San Francisco, fountain pen; John C. E. Stut, San Francisco, engine; William Wainwright, San Francisco, vaporizing spray nozzle; Henry B. Ward, San Diego, pipe coupling; George C. Watris and L. Haymann, San Francisco, construction of roadbeds for street railway; Frank White and F. J. Murphy, Pomona, animal trap.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

Struck Water.

EDITORS PRESS:—**The rains have been sufficient to place the soil in shape for plowing and all the farmers are busily engaged in that pursuit. The well-borers on Mr. Itim's place southwest of town, have struck a fine flow of water, and Mr. Itim has already contracted for the planting of 20 acres in grapes. Mr. Itim is a man of push and means.** S. H. O.

Pixley, Cal., Dec. 12.

MECHAM & FRITSCH,

—IMPORTERS AND BREEDERS OF—

Red Polled Cattle.

We have 19 head of Imported Stock.

Young Bulls and Crossbreds on Devons for sale.

H. MECHAM,

Importer and Breeder of Shropshire Sheep

They were all imported from England in '88, or bred direct from Imported Stock, and all registered.

H. MECHAM,

—BREEDER OF—

American Merino Sheep Without Horns.

The only flock in the United States. When we bought our sheep East 20 years ago, among them was a ram without horns. He grew to be a large fine sheep, shearing at 2 years old, a 12 months' fleece, 35 lbs. of long white wool.

I have bred from him and his get ever since and have never made an out-cross and never used the same ram but one year on the same flock. My rams at 2 years old will weigh from 160 to 180 lbs.; have a strong constitution, without wrinkles, and will shear on an average about 25 lbs., a 12 months' fleece, of long white wool. Rams and Ewes for sale. **P. O. Address:**

Stony Point, Sonoma Co., Cal.
R. R. Station, Petaluma.

New Importation!

THEO. SKILLMAN

Has just arrived in Petaluma with a new importation of

CHOICE YOUNG STALLIONS

S. F. MARKET REPORT

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Dec. 17, 1890.

The general feature of the past week was in the line of its predecessor. Farmers are again in want of rain. In many localities where they had started the plow, work has been stopped, owing to the land being too dry. Money is reported close. It is claimed that the supply in the banks is in excess of last year at this time, but the want of confidence in the situation deters many owners from putting out their holdings. The grain market has held fairly steady, with a stronger tone toward the close in wheat. The following is to-day's London cable:

LIVERPOOL, Dec. 17.—Wheat—Steadily held. California spot lots, 7s 4d to 7s 6½d; cargoes off, coas 38s to 38s 3d; just shipped, 37s 6d; nearly due, 37s 9d; cargoes off coast and on passage, firm; Mark Lane wheat, steady; French country markets generally dearer; wheat and flour in Paris, firm; weather in England, frost continues.

The Grain Supply.

NEW YORK, Dec. 15.—The visible supply of grain is as follows: Wheat, 25,166,000 bushels, an increase of 616,000; corn, 1,820,000 bushels, a decrease of 458,000; oats, 3,391,000 bushels, an increase of 81,000; barley, 4,345,000 bushels, a decrease of 164,000.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per ctl. for the past week:

	Dec	Jan	Feb	Mar.	April	May.
Thursday	7s6½d	7s6½d	7 6½d	7s6d	7s5½d	7s5½d
Friday	7s5½d	7s5½d	7s5d	7s5d	7s4½d	7s5d
Saturday	7s5½d	7s6½d	7s6½d	7s6d	7s6d	7s6½d
Monday	7s5½d	7s6½d	7s6d	7s5½d	7s6½d	7s6½d
Tuesday	7s6½d	7s6½d	7s6d	7s5½d	7s6d	7s6½d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D	Market
Thursday	37s6d	37s6d	37s6d	Steadier.
Friday	37s6d	37s6d	37s6d	Quiet.
Saturday	37s6d	37s6d	37s6d	Firmer.
Monday	37s6d	37s6d	37s6d	Quiet.
Tuesday	37s9d	37s6d	37 6d	Strong.

Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

Day.	Dec.	Jan.	Feb.	Mar.	May.	July.
Thursday	103½	101½	..	106¾	105¾	..
Friday	104½	102½	....	107	106¾	..
Saturday	106	105¾	..	107¾	107¾	..
Monday	103¾	101	106¾	107	106¼	..
Tuesday	103½	104	..	106½	106¼	..

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

Day.	Dec	May.	June.	July.
Thursday	90½	99¾	....	....
Friday	92½	100⅝	....	....
Saturday	93½	101½	....	....
Monday	93½	100¾	....	....
Tuesday	94½	102	....	....

NEW YORK, Dec. 17.—Wheat—$1.05½ for cash, $1.03⅝ for December, $1.04¼ for January, $1.05⅛ for May, and 99⅜c for July.

CHICAGO, Dec. 17.—Wheat—97⅜c for January and 99½c for May.

Foreign Grain Review.

LONDON, Dec. 15.—The *Mark Lane Express* says: English wheats are weak. Prices of foreign wheats are against sellers, except for Russian, which is firm. Flour is steady. Corn, in increased supply, is in strong demand. Mixed American is quoted at 27s on spot, 24s 9d on passage. At to-day's market English wheats were slow and unchanged. Foreign wheats were steady.

Hops

NEW YORK, Dec. 13.—Prime California hops sold here yesterday at 35c ₩ lb, 1c in advance on the preceding day for similar goods. The market shows rather more tone, but the local demand is still slow.

NEW YORK, Dec. 16.—The outside moderate sales to brewers in the hop market are very quiet. Samples are shown of small lots of fair to good stocks, but very few first class is offered, and holders, therefore, are quite firm. The interior market is quiet. Foreign is unchanged and unimproved.

California Products at the East.

NEW YORK, Dec. 12.—The importations of Malagas this season are exceedingly small. California monopolizes the whole trade in ordinary to good fruit of this class.

Upward of 3000 bags of California Lima beans were received here this week, the greater part going to fill old orders.

Local Markets.

	l.	140½	130½	140½	....

BAGS—So far as we can learn there is nothing doing in grain bags. Quotations are nominally 6¼c for May-June delivery.

BARLEY—The local market has eased off under fair receipts and buyers not caring to anticipate their requirements. In futures, trading has been light. The following are to-day's Call Board sales:

Morning Session: Buyer season—100 tons, $1.48¾; 100, $1.48⅜; 200, $1.48 ₩ ctl. Afternoon Session: Buyer season—100 tons, $1.47⅜; 300, $1.47½ ₩ ctl.

BUTTER—The market appears to be working into better position for the selling interest. The dry weather is said to have curtailed again the output from some of the dairies. Pickled and solid butter is getting scarce. Eastern or Central butter is coming in, but the quality does not average choice.

CHEESE—The market is stiff at full prices under moderate receipts and a good demand.

EGGS—Californian have come in more freely, but Eastern are in fair receipt only. There is a good demand.

FLOUR—The market is barely steady at current quotations.

WHEAT — The sample market is firm under strong holding. The low prices and silver advancing in price appear to justify the holding. In futures, trading has been fair. The following are to-day's Call Board reported sales:

Morning Session: Buyer 1890—500 tons, $1.30⅛ ₩ ctl. Afternoon Session: Buyer 1890—100 tons, $1.30⅛. Buyer season—1800 tons, $1.40⅜ ₩ ctl.

Market Information.

Cereals.

The local wheat market has held to fairly steady prices. In some localities buyers continue to pay an advance on San Francisco quotations. This, it is claimed, goes to show they consider prices low enough for an investment. It is claimed also that if they quoted full prices here it would have a tendency to put the market up on themselves. Buyers urge two things against the market—first, no spot vessels; second, a close money market. While there are no disengaged vessels here, there are quite a number due, with a large number due within the next 60 days. While money is scarce, it is temporary only, for in next month heavy disbursements will be made, all of which will go into circulation soon. Besides this, all present information coming from Washington City points to the dominant party dropping partisan legislation and taking up the financial situation with the view of passing a bill looking for speedy relief to the money market. It now looks as if this bill will be of a twofold character relief to the money market and at the same time advancing the market value. Higher prices for the latter means better prices for farm products, particularly wheat. Oregon and Washington continue to send us fair supplies of wheat. In this State (California) holders are slow in letting go, which keeps the market firm, for to get supplies buyers have to pay full up.

The San Francisco Produce Exchange gives the following stock of grain in California Dec, 1st, 1890:

LOCALITIES.	Flour, bbls.	Wheat, ctls.	Barley, ctls.	Oats, ctls.	Beans, sks.	Corn, ctls.	Rye, ctls
San Francisco and Oakland wharf, including grain afloat in harbor and in transit	30,076	774,936	241,588	46,280	45,896	68,066	4,705

July 1, 1885							

Farmers are in want of rain, but all present indications point to a general rainstorm soon.

Barley has fluctuated slightly, but unfortunately for holders, to slightly lower figures. The supply is going into consumption quite rapidly. It now looks as if the season of 1891-92 will open upon stocks lower than for several seasons past. The acreage that will be seeded to barley depends largely upon the character of the weather from now on. There are many who hold to the opinion that there will be an increase of fully 50 per cent more, but this is entirely problematical, for nothing is more uncertain than California winters.

Corn has been coming in quite freely, causing a shading off in prices. The demand appears to be confined to actual requirements.

The receipts of oats have been freer, but the market remains firm under strong holding. The demand continues fair. It is confined to actual requirements—prices being too high to invite speculation. The supply in this State, Oregon and Washington is light.

Rye is steady, with a firm tone reported.

Feedstuff.

There is a continued good demand for ground feed. Bran, middlings and ground or rolled barley are firm, while cracked corn and feedmeal are easier.

Free receipts of hay have not caused lower prices, although for some consignments not placed previous to shipment concessions were necessary to effect sales without additional cost to sellers. The supply in the country is light, while natural feed, except in favored localities, is scarce. In some counties freer feeding of hay is necessary to keep stock in condition to withstand the cold weather.

Live-stock.

Bullocks are slightly higher, that is, well conditioned. Poor, scrubby stock are unchanged. Mutton sheep are fairly firm, as are hogs. The impression prevails that the latter will advance slightly. Milch cows and horses are unchanged.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4½@4¾c ₩ lb dressed, 7@8c ₩ lb.; heavy, 4@4¼c ₩ lb.; dressed, 6½@7½c ₩ lb. Stock hogs, 3@3½c ₩ lb.

BEEF—Stall fed, 7@—c ₩ lb.; grass fed, extra, 6½@—c ₩ lb.; first quality, 5½@6c ₩ lb.; second quality 4¼@5c ₩ lb.; third quality, 3½c@4½ ₩ lb.; bulls and thin cows, 2@3c ₩ lb.

VEAL—Small, 8@9c ₩ lb.; large, 6@7½c.

MUTTON—Wethers, 7c ₩ lb.; ewes, 6½c ₩ lb. lamb, spring, 8@9c.

Fruit and Canned Goods.

The shipments of fruit and canned goods to the East by rail in November were as follows:

From	Canned Goods.	Dried Fruit.	Green.
San Francisco, lbs	4,232 670	657,900	.....
Los Angeles	77,330	144,610	42,750
Sacramento	734,800	2,127,470	928,380
San Jose	1,482,520	2,955,890	524,860
Marysville	328,290	210,910	.....
Colton	151,380	94,590	.....
Stockton	.....	699,910	180,300
Oakland	34,800	440,710	23,000
Totals	7,041,770	7,331,990	1,699,470
July	4,339,930	2,869,140	13,194,260
August	14,965,470	5,410,850	20,768 260
September	18,489,450	10,710,360	17,559,540
October	17,966,720	12,581,400	11,509,440
Since July 1	63,303,340	38,903,740	64,821,270

Fruits.

Grapes continue to come in sparingly; the demand is offish.

Berries are virtually out of the market.

Pears are in limited supply. The demand is chiefly for Winter Nelis.

Apples are cleaning up, causing a firmer tone for good keepers. Poor keepers are placed only at concessions. There are large quantities of specked and otherwise poor on the market. Choice good-keeping red apples of rich color are wanted, for which top prices are paid.

Oranges are coming in more freely, but as a large percentage are rather green, low prices must be accepted. For choice ripe oranges good prices are obtainable. It is claimed that from now on the quality will improve. Several carloads have been sent up north for Christmas trade.

Dried fruits are dull, with quotations hard to get from reliable parties. It is quite safe to state that the market will continue heavy until the spring trade starts up in 1891.

Raisins are easier. Eastern buyers are said to be making every conceivable excuse to throw up their purchases. If the market there was strong with higher figures quoted, then everything received would come up to representation. It is the market at the time purchases come to hand that makes the quality.

The total shipments of raisins from the State in the past month were 10,430,500 lbs. against 8,973,670 in October and 3,478,780 in September. None were sent East in July or August. During the five months ending Nov. 30, 1889, the shipments were as follows: Canned goods, 27,522,950 lbs.; dried fruit, 28,918,860 lbs.; green fruit, 38,773,690 lbs.; raisins, 15,147,780 lbs.

The totals for the past eleven months compare as follows with the shipments in 1889:

Articles.	Eleven Months— 1889.	1890.
Canned Goods	33,062,740	77,203,260
Dried Fruit	31,679,340	41 298,440
Green Fruit	62,812,500	86,286,500
Raisins	15,837,190	24,459,970
Totals	143,391,770	229,248,170

Vegetables.

In garden truck the market is becoming bare, making quotations altogether nominal and unreliable.

Cabbages are in free supply. The demand is fair. In root vegetables there is nothing of an important character to note.

Choice good-keeping onions have a firmer tone, due to smaller receipts and more disposition to hold for better prices. Poor keepers have to be sold on the market.

Notwithstanding the heavy receipts of potatoes, the market has a strong tone with some dealers talking up prices. It is reported that considerable are being stored in expectation of a better market. There are more inquiries for seed potatoes. It looks as if a very large acreage will be planted to potatoes in this State, Oregon and Washington.

Miscellaneous.

For the first time in this year, there is not a disengaged vessel in the port. An improvement in the wheat market abroad caused exporters to take up the vessels here.

In poultry the market has an easier tone, with turkeys lower. Large, well-conditioned hens and roosters are wanted. The most of the receipts are poor.

Beans have, as a rule, a weaker tone.

Hops have every appearance of improving after the holidays. The supply on this coast is very light. An increased acreage will be put out in this State, Oregon and Washington.

Wool still drags. Quotations are nominal.

Honey is in good supply. The market at the East is reported strong. The supply on this coast is light and the outlook not favorable for a large crop next year.

Exports by sea the past week aggregate as follows: Flour bbls, Sydney, 226; Central America, 3109; Mexico, 568; Panama, 200. Wheat ctls, Rio de Janeiro, 46,700; Antwerp, 125,068. Bran sks, Honolulu, 2000. Hay bls, Honolulu, 1225. Beans lbs, Apia, 1127; Auckland, 752. Dried fruits lbs, Apia, 650; Sydney, 3000. Corn ctls, Sydney, 2003; Central America, 621. Raisins boxes, Sydney, 50; Port Chalmers, 100; Mexico, 174. Broomcorn bls, Melbourne, 200. Canned fruits cases, Auckland, 200. Barley ctls, New York, 3888. Brandy gals, New York, 1600. Wine gals, New York, 67,082; Central America, 21,111; Mexico 2303; Panama, 1211; South America, 925.

Overland shipments the past month aggregate as follows: Beans lbs, 5,036,970; brandy gals, 301,650; dried fruits lbs, 7,331,990; green deciduous fruits, 1,678,770; honey lbs, 105,150; hops lbs, 431,860; nuts lbs, 721,703; potatoes lbs, 368,130; raisins lbs; 8,940,400; canned goods lbs, 2,809,100; wine gals, 4,874 620.

Dried Fruits, Etc.

The quotations given below are for average prices paid. Something very fancy fetch an advance on the highest quotations while poor sells slightly below the lowest quotations. Prices named, unless otherwise specified, are for fruit in sacks. Add for 50-lb boxes ½c per lb., and for 25-lb boxes ½c to 1c per lb.

HORSE-COLLAR TRUST—A BIG HOLE MADE IN IT. No Collar Trust! No Leather Trust! No Labor Trust! Competition is the life of trade, and Trusts kill competition. A business house which becomes fossilized to the point of requiring a Pool or Trust to hold it up, should be left severely alone, and those not leaning on Pools or Trusts be preferred. What chance has the rising generation for a fair share of this world's goods if they are hampered and shut out from many undertakings by Trusts? To all persons interested in Harness Goods: Please take notice that the firm of W. Davis & Son withdrew from the Collar Trust on September 13, 1890, and can, therefore, furnish Horse Collars at a Big Reduction on the Trust Prices, as we are the only Wholesale Saddlery House in San Francisco not tied up with High Prices. W. DAVIS & SON, 410 Market St., S. F.

THE

RAISIN INDUSTRY

A PRACTICAL TREATISE ON THE RAISIN GRAPES, THEIR HISTORY, CULTURE AND CURING.

By GUSTAV EISEN.

The house of H. S. CROCKER & Co. may take pride in this handsome volume as a sample of their bookwork. It is a large volume of over 200 pages, with about a dozen fine illustrations, germane to the subject, and printed on heavy paper, with wide margins. Intelligent readers will at once be struck, on opening the book, with the wide range and masterly handling of the subject. It contains a vast fund of important information, and every page of it is eminently practical. The table of contents will justify this statement. It is a fair and full account of raisin growing in all parts of the State adapted to the business. The author knows the business in all its details, and he can make the reader understand it.

There is space here for but few sentences from notices of the book. The October *California* says: "It is a work of singular merit. "There is not a dull page in the book. Its charm lies in the vigorous and lucid treatment of the subject. The language is luminous, apt and strong, albeit the idiom reveals the hand of a foreign master." Prof. E. W. Hilgard, of the State University, writes: "It is certainly a most timely work, and one that the author's training and experience have fitted him peculiarly to undertake. I congratulate him and the raisin industry of the State upon the forthcoming work, in which I recognize from the outset the Germanic thoroughness and a certain adherence to facts that do not always characterize such publications." Prof. E. J. Wickson, also of the University, says: "I discern in the work a breadth of information and a faithfulness in details of practice which will constitute it the standard treatise on the raisin. I congratulate the author sincerely upon his most excellent work." Col. Forsyth of Fresno, the World's Fair Commissioner, writes: "It is a concise history of raisin grape growing, and is a practical guide for the raisin growers, containing full and reliable information about how to plant and grow the vines, and how to cure and pack the raisins. With this book in hand the inexperienced farmer or clerk can safely engage in raisin growing with expectation of success from the very start." From a long review by the San Francisco *Chronicle:* "In this work the author has performed a much-needed task, going into the details of every branch of what has become one of the foremost industries of California. No man better qualified for the enterprise could have been found." It is also commended by other leading journals in the same spirit.

Sold only by Subscription; Price $3.00.

POULTRY-MEN, ATTENTION!

Every disease known to Poultry can be cured, and every flock made to lay, now, when eggs are high—by using

Wellington's Improved Egg Food,

The Standard for 12 YEARS. Do not get discouraged because you foolishly tried some preparations "called Egg Food" and got no results, but immediately get some of Wellington's Improved Egg Food, and you will have no more trouble. You will then have healthy Poultry and plenty of Eggs. It never has failed and it will not now. You try it.

LAND

WORTH LOOKING AFTER

—AND—

Likely to Double in Price Soon.

FINE VINEYARD CHOICE FRUIT RARE RAISIN AND ALFALFA LAND

EXAMINE THIS RARE CHANCE.

A well-cultivated farm of 160 acres, with miles of fencing and cross fencing, good improvements, 7-room, two-story, hard-finished house, nearly new, plenty shade trees, large barn, blacksmith shop, milk house, grain house and other outbuildings; 7 acres of bearing orchard; 20 acres of alfalfa; large flowing artesian well of splendid water, and first-class surface wells of water; pleasantly located 7 miles from Tulare City; is offered for sale rating less than ½ cost for improvements by the owner, who is engaged in other business. The land is offered for $20 to $25 per acre, on easy terms. The readers of this journal are assured that this chance is worth looking after. Parties in San Francisco who know the property can be referred to. Some adjoining land can be secured at favorable rates if desired.

For sale in sub-divisions of 40 acres or more if desired. Address E. M. DEWEY, Porterville, or A. T. DEWEY, 220 Market St., S. F.

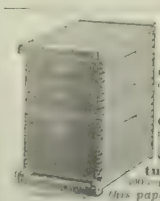
Dewey & Co.'s Scientific Press Patent Agency.



OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most *reliable* advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS U. S. and Foreign Patent Agency, the following are worthy of special mention:

CULTIVATOR.—Robert Simpson, Hanford, Cal. No. 441,382. Dated Nov. 25, 1890. The novelty in this cultivator consists in connection with a wheel shaft and suspended toothed-frame of rigid pole and guides and supports for holding the frame in place, and preventing it from swinging from side to side, and for raising and depressing it. The cultivator is prevented from swaying outside the line of the wheels, and it can be easily guided to avoid a root or tree. It may be raised to avoid anything and can be held at any desired depth in the ground. The draft is brought directly upon the pole, and the axle is relieved from this strain.

FERMENTING-TANK WINE-STRAINER.—John C. Jones, Napa, Cal. No. 441,419. Dated Nov. 25, 1890. This device is to be used in connection with the discharge of wine from the tanks in which it is fermented. It consists of a removable strainer and means for clearing it while in position. Within the tank are vertical channeled guides on each side of the discharge opening and extending to the top of the tank; in these guides is fitted a vertically movable box, and upon the interior of the box are adjustable rods forming a screen; a transverse bar travels upon the outer rods as guides, said bar having tongues which project between the intermediate rods, and a rod is arranged to reciprocate the transverse bar.

FRUIT-DRYING TRAY.—Wendell P. Hammon, Oakland, and Charles J. Sechrist, San Francisco, Cal. No. 441,871. Dated Dec. 2, 1890. This tray consists of a frame having a perforated paper bottom and a spring-actuated bar for holding the bottom in place. The paper bottom rests upon a wire netting or frame. The perforations in the bottom permit free circulation of air, and the fruit will be dried both from above and below. When soiled, the paper bottom can readily be removed and another substituted.

HOOP-COUPLING. — Lamartine R. Fulda, San Francisco, Cal., assignor of one-half to Edward Fulda, of same place. No. 441,869. Dated Dec. 2, 1890. This is an adjustable coupling for tank hoops. It consists of a clamp formed of screw-eye bolts bent and connected in such a manner that the ends of the hoop may be attached to it, and whenever the hoop becomes loose it may be tightened by screwing up the clamp. There are two screw bolts, each having one end threaded and the other bent at right angles and formed with an eye to receive the threaded end of the opposite bolt, the bent ends being adapted to pass through and hold the looped ends of the hoop

FRUIT GATHERER.—Florian Stanke, San Francisco, Cal. No. 441,859. Dated Dec. 2, 1890. This device belongs to that class of pruning shears and fruit-pickers or gatherers in which the shears are fitted to the end of a long pole, and are adapted to cut the branches or stems of the fruit, the fruit then dropping into a hopper on the head of the pole directly underneath the shears, and is directed by a suitable conveyor to a receptacle below. The object of this invention is to provide a device of this character which is adapted to cut fruit conveniently, no matter in what position it may be located, and to convey it below without bruising it, and also to provide a shears not only adapted for the picking of fruit, but for general pruning purposes. The essential improvement lies in the shears, which are formed with opposing jaws in line with the handles, and a second set of opposing jaws extending from the ends of the first jaws and at an angle therewith. This peculiar construction enables the shears to reach both horizontal and vertical stems conveniently. The mouth or hopper of the conveyor is made with a barred or grated open front, so that the operation of the shears may be readily seen. The conveyor itself has a tortuous passage which serves to break the fall of the descending fruit.

(Formerly Japanese Tree Importing Co.)

MAKE A SPECIALTY OF THE HARDY, SEEDLESS Oonshiu Orange Trees so highly recommended by all the leading horticultural papers. N. B.—Our Manager, Mr. H. E. Amoore, who has lived 28 years in China and Japan, is now traveling there in search of new fruits. Address him at Yokohama, Japan. All kinds of Japanese and Domestic Fruit Trees. Order at once for winter and spring delivery.

T. V. MUNSON,
DENISON, TEXAS,

Introducer of the Great PARKER EARLE STRAWBERRY, now begins the introduction of a few of his thousands of wonderful Grape Hybride. This season he offers four varieties, viz:

BRILLIANT, early red; CAMPBELL, early golden; ROMMEL, early white (promising for North and South), and HERMANN JAEGER, late purple; larger cluster and berry than *Herbemont*, suitable for south of Cincinnati and St. Louis, *all equal to best foreign in quality*. Descriptive circular and terms on application.

Arizona Everbearing Strawberry.

BY PLANTING QUITE A NUMBER OF THE LEADing varieties of Strawberry together for five years, I have produced a variety unlike any of the former. I have picked the fruit daily since April 20th to the present time, October 18th, and the vines are still full of bloom and berries. Roots are long and stand the drouth well. The berries are large, fine flavor and high color, and resemble the Jessie in shape somewhat. I am prepared to furnish them in small lots at $1.50 per doz., postpaid. R. E. FARRINGTON, General Nurseryman, Phœnix, Arizona.

FOR SALE.
250 SACKS PEACH PITS,

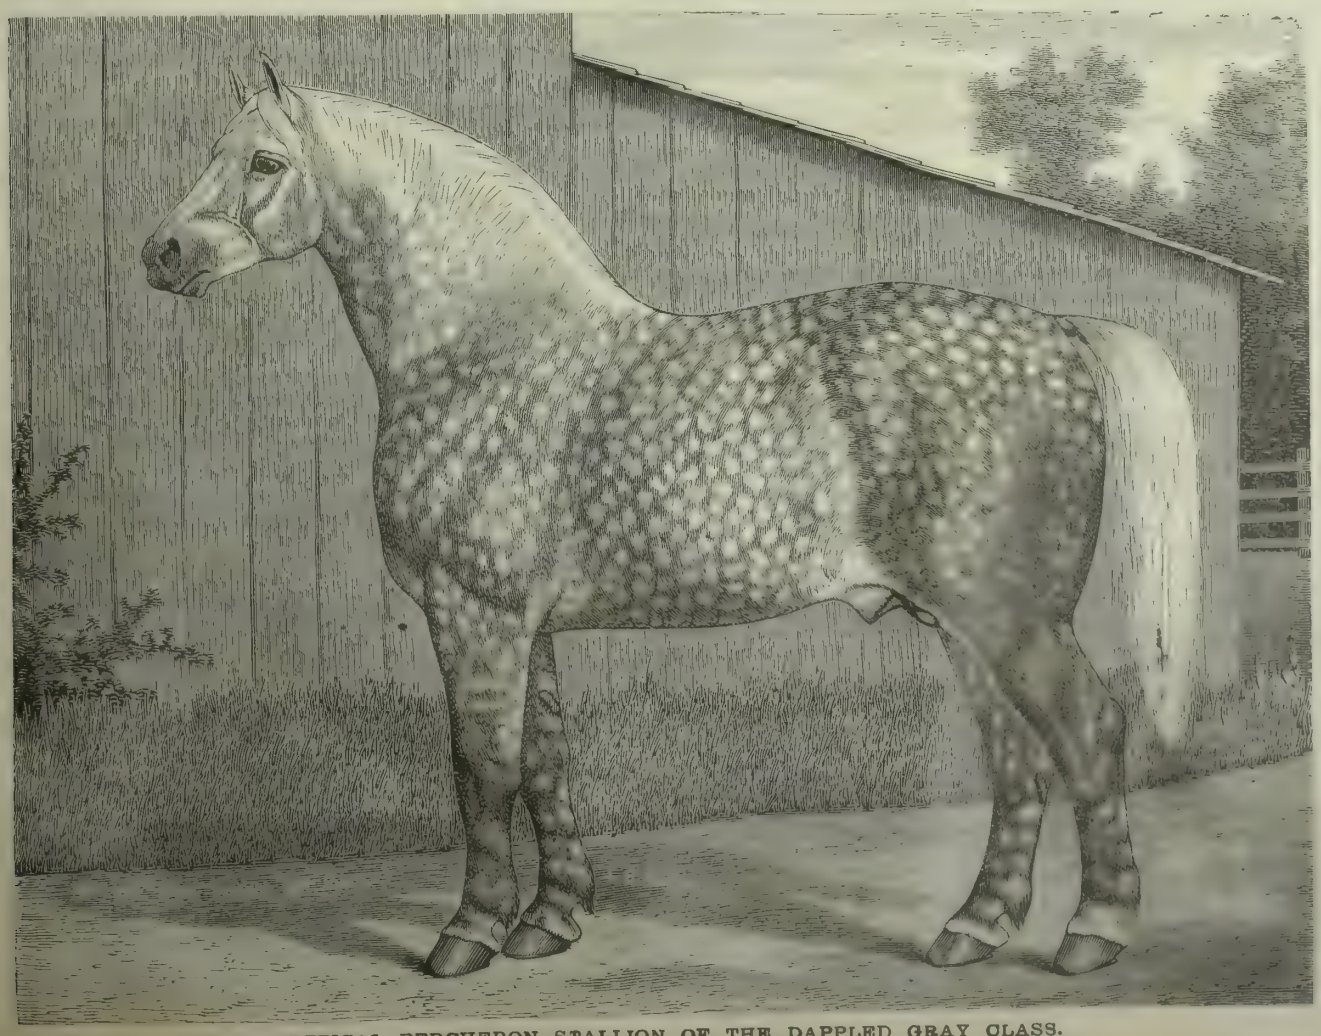
CALIFORNIA STATE

PACIFIC RURAL PRESS

CONTAINING OVER FOURTEEN PAGES READING MATTER.

Vol. XL.—No. 26. SAN FRANCISCO, SATURDAY, DECEMBER 27, 1890. DEWEY & CO., Publishers, Office, 220 Market St.

Close of the Volume.



This issue closes Volume XL of the pacific years, and the twentieth year of the history of our journal. One more year and the RURAL will "come of age" and be entitled to vote—then look out for reforms in public affairs and a general righting of things. If youth contains the promise of age, then the RURAL looks forward with confidence to its maturity, for it has had a steady youth—the whole score of years in the same hands which brought its first issue to the light in January, 1871.

On the last page of this issue is our usual index, which will enable the reader to readily turn to any article which has appeared during the last half year. We constantly bear in mind the value which our subscribers find in the RURAL, not only as a chronicler of our progress in agricultural arts, but as an expounder of improved and progressive methods. Thus the RURAL becomes a practical handbook of agricultural art and practice, and the index makes its treasures readily available. Fasten the issues together with a patent binder; sew them tightly with a strong cord, or, if you please, have the bookbinder make a volume of them, and you have information which cannot be found in such quantity and in such explicit detail in any other form.

With the next volume we begin anew the work to which our lives are devoted. We trust to take with us into the new volume all old friends and many new ones, and to return them full value for their esteemed confidence and patronage.

ENGLISH SHIRE STALLION BAYARD WEIGHING 1860 POUNDS AT 23 MONTHS.

A TYPICAL PERCHERON STALLION OF THE DAPPLED GRAY CLASS.

Typical Draft Stallions.

We give herewith engravings of representative specimens of the two leading draft breeds, the English Shire and the Percheron. These animals show individuality somewhat different from those we have recently portrayed in the RURAL, and are, therefore, of interest. The comments which we have previously made upon the breeds will serve to generally characterize these animals. Both breeds are powerful in muscle and great in weight, yet coupled with a briskness of motion and a wide-awake disposition which would hardly be expected with such weight. Consequently they are valuable not alone for moving heavy weights but for much work which requires a good pace. This is a very important point in improving the work horses of the country by crossing with these heavy breeds, because they impart a spirited disposition as well as greater weight and strength and the grades become of the greatest value for farm and road work. Fortunately there are many fine draft stallions scattered over the State and more are constantly being brought in, and the condition of our work stock is continually improving. On country roads and on city streets the influence of our imported sires is very noticeable, and both those who have had enterprise to import and those who had enterprise to invest in and use them are both entitled to much credit.

SECRETARY LELONG of the State Board of Horticulture has just returned from a brief visit to Los Angeles and the San Gabriel valley. At every place he went to, horticulturists were busy getting ground ready for planting, and his judgment is that a greater acreage will be put in oranges this season than for many years. Nurserymen have sold out long ago, and considerable Florida orange stock is coming in.

THE STOCK YARD.

The American Fat-Stock Show.

EDITORS PRESS: — The thirteenth annual meeting of this show was held at Chicago last month, and according to the account given in the *Breeders' Gazette*, it was below the average of former exhibitions. The Hereford breeders came forward with 50 head, against 31 head of Shorthorns and 28 head of grades and cross-bred animals, while the Polled Angus and Galloway classes were left without a single representative pure-bred animal.

The *Gazette*, which I shall largely quote, says: "The cattle show was not the exhibition we have seen in earlier days. The animals were hidden away behind the doors, under the amphitheater, in dark corners, and everywhere in fact except where they could be seen. * * * Not only was the arrangement of quarters forced upon the board a very bad one, but there was not the usual big run of fine cattle. Then, to make matters worse, everybody had to grope in the dark all through the week, for lack of particulars in regard to the various entries, because the catalogue was not delivered by the printers till half the animals enumerated in it had been judged."

Better late than never, the never being the rule in California, and I have often thought what a boon it would be to visitors at our best live-stock shows to be able to go about with catalogue in hand, and thus know the age, owner, breeder and pedigree, as much as necessary for the time being, of each and every animal, without having to hunt up the attendants or owner, often busy, every time one wanted to see the animals. How much better one would know what he was looking at, and at the same time be able to write down whatever he thought, be it good or not good, of each animal and herd, separately, if he chose to do so, for future reference. This would be a help to many a man looking for breeding stock, with the idea of buying some time in the near future, more especially to beginners and others not well acquainted with the pure-bred herds, of any breed, in that part of the country where the exhibition is held.

But to return to the stock show. The single-judge system now prevails at many of the leading cattle shows, both in this country and in Great Britain. All the classes at Chicago were judged on that principle.

The Shorthorns

Were brought out first, and only numbered six in the 3-year-old class in which Mr. W. H. Renick's "Nonesuch" was the winner, this steer being afterward adjudged the champion honors of the show.

There were fifteen steers in the 2-year-old ring, and thirteen in the yearling Shorthorn ring, among which were some rare good ones, one of which is described as being "a nicely-finished, wide-ribbed, low-legged fellow, full of good, solid flesh." Of another it said—a yearling—"His spread and depth of rib was simply prodigious, his loin was broad and full; his quarters long, deep and heavy; his twist filled to his hocks, and his thighs of unusual strength. In wealth of flesh, breadth of beam, and shortness of leg he was, in brief, the outstanding animal of the Shorthorn class. But the unevenness of flesh manifested along blades and ribs led the butcher judge to pass him for the blue in favor of the leveler Amelia's Hillhurst. The latter is a son of the well-known show bull Oscar 88290, out of an Acomb cow, and the impress of his Bates-bred dam is quite manifest in his superior gayety and finish. He has fine thickness of flesh on top, and the meat, which is nicely put on, though a trifle soft, is carried well down on the rib, but wants width at top as well as filling in twist, thighs and flanks."

These are "wants" hard to pass over, one would think, in a prize-winning steer, and for my part I would risk breeding from an animal with some flesh laid on a little unevenly, but still having abundance of both width and depth of carcass, to one lacking in the essential principles of *width and depth*, for where these are there is very apt to be a robust constitution, but where they are not the animal is pretty sure of being deficient in hardihood and vigor. By this I do not by any means infer that the premium was not placed right, but merely express my partiality for breeding animals with plenty of substance—weight and quality.

In the calf class there were seven entries; the two winners belonging to Mr. J. M. Turner are the get of Grand Duke of Woodburn 86825, a highly inbred bull of the Duchess family of Shorthorns.

The winning calf Romulus has the greatest weight for age of any animal on exhibition; at 355 days old, he weighed 1105 pounds, or 3.11 pounds per day since date of birth. This shows that there is still thrift and vigor in some of the most fashionably bred Bates Shorthorns, notwithstanding a good deal that has been asserted to the contrary.

Herefords.

"The fat-stock show of 1890 will long be memorable for its extraordinary display of pure-bred Herefords. Nothing equal to it, as a whole, has ever been presented by the breeders of 'White Faces' at previous exhibitions. In fact, all other pure breeds made but a sorry show in comparison."

In the three-year-old class, nine good bullocks put in their appearance, the first premium going to Mr. Culbertson's Bowdoin 11th, age 1128 days, weight 1915 pounds. "This steer went into the fight the most evenly-balanced bullock of all animals of his age on exhibition, with his great weight carried in admirable form. He was evenly filled with deep, mellow flesh at almost every point." The second went to Mr. Adams Earl's Earlington 8th, age 1290 days, weight 1170 pounds. "His tremendous spread of rib, full neck vein, heavy plates, thick, broad loin, low twist and nearness to the ground, certainly entitled him to bear Bowdoin company." The third prize bullock is spoken of as being full of good flesh, but not so neat in his bone as his more successful competitors.

"The two-year-old Herefords were probably as strong a single ring of cattle as ever stood beneath the exposition dome—twelve in number and altogether excellent in their uniform high quality."

Mr. Culbertson's Hindoo was placed first. It is rare, indeed, that any one exhibition can capture two blue ribbons in successive rings at this show. It is altogether exceptional when the same owner accomplishes this feat in the face of competition unprecedented in his class, but the veteran importer and breeder, Mr. C. M. Culbertson, has this great record to his credit. Mr. Earl took second premium with his Merry Boy, age 1075 days, weight 1910 pounds. The third prize was awarded to J. R. Price & Son's Coupon, age 1068 days, weight 1660 pounds.

There was no "let-up" to the number of "White Faces" pressing for recognition. Hereford breeders seemed bent on massing their well-ripened bullocks in such battalions as would emphasize beyond all question the claims of their favorites as beef-makers maturing at an early age. A long line of nineteen sappy yearlings, with mossy coats, broad backs and short legs were the despair of the single judge for the better part of an hour.

The first premium steer was Mr. T. Clark's Abel, well balanced fore and aft and full of mellow flesh.

Mr. Culbertson's Pathmaster was second, a little uneven on top and not fully filled on the quarter, but with his well-sprung ribs almost faultlessly covered and his chine a marvel of thickness.

For third Mr. Earl's Edison was chosen, and as a specimen of neatness, with thickness and breadth without hight, he had no superior in the lot.

Fat Hereford calves are always to be admired. In a class of ten, Mr. Adams Earl had an outstanding winner in Earl Wilton 43d, a burly 980-pound calf, full of hair and flesh.

Mr. Ponting's ripe Defiance calf with his rare loin, was placed second and Mr. Earl's Effel third.

The sweepstakes of the class, to the amazement of the spectators and exhibitors, was sent by Mr. McKay to Mr. Earl's calf-winner Earl Wilton 43d. The *Gazette* does not question the fact that the youngster selected for this high honor is extraordinarily developed for his age, etc., but it is rather too rude an overturning of generally accepted notions of propriety in such cases to pass by such bullocks as Bowdoin 11th and Hindoo Abel in a championship competition, no matter how perfect a calf may figure in the case.

The Devons dwindled this year to a trio, while the Holstein-Friesians never before pressed their claims so strongly as beef-producers.

Grades and Crosses.

The show in this class was not up to those of former years in point either of extent or excellence. Hereford breeders did their full share, but with few exceptions, the Shorthorns were not up to the mark. The Aberdeen-Angus acquired prominence only by their entire absence, and the Galloways had forward but a single representative, the third-premium animal in the three-year-old class, the first and second premiums going to Shorthorn grades.

In the two-year-old and yearling classes the winners had a preponderance of Hereford blood, though some were half Shorthorn and Hereford.

The winner in the calf class was three-fourths Shorthorn and one fourth native, said to be the only good calf in a class of three.

Sweepstakes.

Sweepstakes by Ages.—Mr. Renick's pure-bred Shorthorn Nonesuch was the champion three-year-old of the show over Mr. Culbertson's Hereford Bowdoin 11th.

Mr. Emendorf's grade steer Charley won sweepstakes premium for two-year-olds and the cross bred Hereford Shorthorn Sultan, belonging to Mr. Adams Earl, was winner in the yearling sweepstake class, the same owner's Earl Wilton 43d winning the sweepstakes premium in the calf class.

For the *Breeders' Gazette* challenge shield there was keen competition. The prize being awarded to to the Hereford steer Bowdoin 11th, makes the prize the absolute property of Mr. Culbertson, this being the third steer he has produced capable of bearing away the shield.

Grand Sweepstakes.—The rules of the show limited this competition to Renick's three-year-old Shorthorn Nonesuch, Emendorf's grade Charley, Morse's Devon, Earl's Hereford calf and Waddel's spayed black and white heifer. The Shorthorn had the advantage in age and scale, and barring his plain shoulders was a bullock that was indeed difficult to get over.

The *Gazette* medal-winner was not in. The judge lingered for quite awhile over Mr. Earl's magnificently ripened calf before passing the championship of the yard to the Shorthorn. (The calf had been awarded the Hereford sweepstake premium over all ages by the same judge.) With Nonesuch as the recipient of the society's chief honor, and Bowdoin 11th as the challenge shield champion, it is safe to say that the two strongest all-round bullocks of the show received the two most valuable prizes of the week, but as the Shorthorn beat the Hereford for the 3-year-old championship of the hall, he is entitled to all the glory that attaches to fighting his way successfully over all barriers from the beginning to the end.

The Carcass Competition.

In the dressed carcass competition Mr. Van Natta's Hereford Bendigo was awarded the prize for three-year-olds—four entries. None of the beef in this lot was of the best, but in this case the carcass designated was fairly entitled to the distinction given. The champion Shorthorn Nonesuch killed out a great lot of flesh, but it was overripe and lacking in even distribution of fat. The same may be said of the Galloway, with the additional objection that it was much too dark in color.

In two-year-olds the carcass of the Champion grade of the show, Mr. Emendorf's Charley, was chosen, but not without numerous protestations loud and deep. Compared either with the Herefords Sensation and Coupon, or the Shorthorn Victor, the award may fairly be challenged. If richness was desired, the Shorthorn had it in abundance, with less of the oily fats which made the prize carcass so fat and sleazy, but it was anything but attractive to the eye or touch.

A prettier lot of beef than the Hereford steer Sensation cut out has indeed never been seen upon the boards at these shows, unless we except the Sussex, and a majority of those who compared it with the prize carcass would have given it the preference.

There was not a bad carcass in the yearling class and Mr. Earl's Sultan was awarded the prize without leaving room for any severe criticism.

The ribbon for carcass showing greatest percentage of edible meat was awarded to a grade Hereford.

The ticket for steer dressing, greatest percentage of net to gross, went to Mr. Renick's Nonesuch, the champion Shorthorn, at 68 per cent, although the record shows that Morse's Devon weighed out in the same notch.

I have enumerated the winners of the principal prizes, to obtain which the Shorthorn and Hereford breeders have sacrificed animals which might have become noted sires had they been kept as such. Many of the prize-winning animals are themselves descended from prize-winners in the breeding-classes at some of the best shows, and some of them have unexceptional pedigrees as well, which makes it still more creditable to those breeders who have made such sacrifice of good and well-bred animals for the sake of upholding the merits of the respective breeds of cattle for the production of beef.

ROBERT ASHBURNER.

Baden Station, San Mateo Co., Cal.

FARMERS' INSTITUTES.

The First Institute in California.

The first assemblage of California agriculturists under the name of a Farmers' Institute was held in Tulare on December 10th. An outline of the proceedings at this pioneer Institute meeting is given in the Tulare *Register* as follows:

Despite the errors in the announcements, fixing the date for holding a Farmers' Institute at Tulare, quite a number of farmers and fruit growers gathered at Goldman's hall yesterday afternoon, and a profitable session was the result. Rev. N. W. Motheral of Hanford occupied the chair, and Mr. J. W. Mackie of Tulare was made secretary.

Prof. E. W. Hilgard was present, and being asked to give his views in regard to Farmers' Institutes, favored the audience with a little talk upon the Institutes of Wisconsin and other Western States, throwing much light upon the subject. One of the most important advantages to be gained by the Institute was the interchange of experiences of practical men and the wide publicity given the results of experiments. Almost every grower experimented more or less, but the results of such experiments, while important, were not known beyond the confines of the immediate neighborhood, and often not beyond the boundaries of the farm. The professor thought that in fruit-growing it was specially necessary to have, accessible to all, the results of the experiences of all, for in no vocation of man is there greater necessity for a discriminating intelligence than in fruit and vine culture.

Upon motion, the former Committee upon Permanent Organization, consisting of N. W. Motheral, John Tuohy and J. W. Mackie, was continued, and the names of I. H. Thomas and A. J. Pillsbury were added thereto.

The question up for discussion was: "What, how and when to plant;" and while all the talkers did not stick to their text very closely, a tremendous mass of information of one kind or another was elicited, and much of it was important.

Mr. I. H. Thomas was put upon the witness-stand and questioned by the chairman for the benefit of the assembled fruit-growers. A 40-acre farm was taken as the typical farm of the future, and the question was as to what it should be planted to.

Mr. Thomas thought that if it were good, sub-irrigated land, he would plant 20 acres to prunes and 20 to peaches, choosing for the latter the Foster, Susquehanna and Late Crawford. These are all yellow freestones, and are good for drying, canning or Eastern shipping, and they ripen successively, giving time to take care of one before the other is ready, and thereby preventing a rush.

Questioned as to George's Late, so highly prized at Bakersfield and upon the Sacramento, Mr. Thomas said that it was not a good peach for this section of the State. It was its size which sold it; it ripened from the center out and was neither fit to dry nor to can, and only to sell upon its good looks. Mr. James Morton corroborated Mr. Thomas' statement, adding that he had boxes of the fruit sent to him from Bakersfield and had tested it thoroughly, pronouncing it quite unfit for any use.

It was the general sentiment of all that if the land were wet land, sub-irrigated, 20 acres or so of the 40 should be set to prunes, but if not wet, it should be planted to raisin grapes. Raisin grapes should not be planted on heavy, wet land, and prunes on light, dry soils. But at all events, one-half the farm should be set to peaches, with, perhaps, some nectarines, but for a good, all-around stand-by, nothing could beat good peaches. Raisins and prunes might some time suffer from overproduction, but peaches, never.

Speaking of prunes, the sentiment was that for Tulare county at least, peach root was the best. The Myrobolan does not permit the tree to grow as large as the peach and the root is not strong enough to support the tree when it reaches maturity. Side by side, the prunes upon peach roots bear as much again as upon Myrobolan. Prof. Hilgard stated that prunes will not do upon apricot roots.

Speaking of the future outlook for prunes and of competition between this valley and the coast counties, Mr. Thomas thought that we could, upon our best prune land, produce twice as many pounds to the tree as Santa Clara county, and we would have much fewer prunes to the pound; that if competition did arise betwixt us and the coast counties, it would be bad on the coast counties. Still, there were 90,000,000 pounds of prunes imported from France each year, and until that was cut off and the natural increased demand supplied, there need be no fear of overproduction in prunes.

The matter of drying peaches came up, and Mr. Morton was asked about the advisability of sulphuring. Being in the fruit business for profit, his study was to give the market what it wanted and would pay best for, and as his sulphured fruit brought five cents per pound more than unsulphured fruit and it cost very little to sulphur, he sulphured. He thought, also, yellow peaches much preferable to white for drying. The white turned to an unpleasant gray and did not sell as well, and the selling qualities are the ones that should rule.

During the discussion of this subject, facts dropped out which show that the thing we call the market is a peculiar institution. For instance, peaches like George's Cling that have no merit except size sell in preference to others that lack no merit except size, and all yellow peaches have to be sold as Crawfords. The market won't touch a Susquehanna under that name but will snap it up eagerly under a Crawford label, although a better peach than the Crawford. There is nothing which growers have to study more closely than the market. The market prefers old stand-bys and is slow in taking hold of anything new. For a good while nectarines would not go. Now they are in good demand and sell higher than peaches.

Speaking of the shipping qualities of fruits grown upon irrigated land, Mr. Morton said that he had shipped fruit in ventilated cars that was 12 days in transit and which arrived in good condition and sold well, but his experience in shipping grapes had not been satisfactory.

This brought on a general discussion as to grapes in which a variety of opinions and expressions were brought out. Speaking of kinds, Mr. N. W. Motheral maintained that the bell-shaped grape was in reality the de Gordo Blanco and that the round grape was the Muscatel of Alexandria, although the books were all the other way. However, nearly all vineyards were mixed badly and the second crop of de Gordo Blanco had a round berry. The advantages of the fruit having the bell shaped berry were that it ripened earlier than the other, was not so thick upon the stem and had a thinner skin. On the other hand, cold north winds made it cast its bloom more than the other and it should be protected by windbreaks around the vineyards.

As to the Sultana, it did not bear so early as other grapes, and the market did not welcome it so heartily. It was only used by confectioners and had to be sold as Zante currants.

Speaking of alkali and its effects upon plants and vines, Prof. Hilgard expressed the opinion that this subject would demand greater attention as irrigation advanced and that unless precautionary measures were taken, the bringing of these salts to the surface would entail great expense. The only cure for black alkali is plaster, which properly used, will change it to a white alkali, and vegetable life will stand eight times as much white alkali as black. The only way to remove a superabundance of white

alkali is by washing and bleaching out by under drainage or some other method of drainage.

Other subjects were discussed which we haven't space to report and much of the talk was desultory and could not well be reported. The chairman, Mr. Motheral, did much to bring out points of interest and to give spirit to the proceedings. It is to be hoped that interest in Farmers' Institutes will grow and that they will be very generally held throughout the State. Tulare county breaks the ice; what county will follow?

THE APIARY.

How to Keep Your Italians Pure.

EDITORS PRESS:—A few months ago I received a communication from a bee-keeper who had purchased an Italian queen from me at the commencement of the season, stating that the progeny from this queen were remarkably beautiful bees. He now writes that this queen must have met black drones this season and become tainted, as her progeny appears to be little better than the rest of his bees. I have had several communications from other parties to the same effect, blaming the dealers for having supplied them with impurely fertilized queens.

Now I wish to say right here that when a queen has once been fertilized that is sufficient for her whole life and she never afterward meets any other drone for the purpose of fertilization. Therefore, if a perfectly pure Italian queen meets a pure Italian drone, this queen will produce pure Italian bees during the whole of her life. Although this may seem a little surprising to a novice, yet it is nevertheless perfectly true, as almost every intelligent modern apiarist will tell you.

I have already stated in my last paper that the old queen *always* leaves the hive with the first swarm. I would therefore suggest to any one who purchases an Italian queen and wishes to keep this race pure, that the best way to do so is to clip the queen's wing before introducing her, for the following reasons: We will suppose an Italian queen has been introduced to a colony of hybrid or black bees, and that her wing has *not* been clipped; the result is, the queen goes off with the first swarm, and if this swarm has come off without the knowledge of the apiarist, away she goes with the swarm to the woods, the young queen left in the hive meets a black or hybrid drone, and the colony which is supposed to be pure Italians, quickly becomes reduced to hybrids or blacks again. The apiarist, not knowing what has happened, still expects that the queen in this hive is the one sold to him as a pure Italian, and finding his colony reduced to hybrids, or black bees, he blames the dealer for having sold him an impurely fertilized queen.

Now supposing we clip off half of one of the wings of the queen before introducing her; when the first swarm issues, she will of course make an attempt to go with them, but, being unable to fly any distance, she will drop near the hive, where she may be easily found, having a small cluster of bees with her. The swarm, after flying around, will frequently cluster in the usual manner; and if we have found the queen before the swarm has clustered, we take a new hive, remove two or three frames of brood from any hive, and after brushing off the bees, we place the queen on one of the combs containing brood, then put these frames into the new hive and fill up with empty combs or frames filled with foundation (if on hand). Next remove the hive from whence the swarm issued, place the new hive on the stand previously occupied by the old one, and if this has been done while the swarm was clustering, the result will be as follows:

The swarm, finding they have *no queen*, will return to their old location, entering the new hive now containing their queen and some brood; the greater part of the bees left in the old hive, when they fly out, will return to the new hive, leaving the old hive so nearly deserted that all after-swarming is generally prevented, and we have the satisfaction of knowing that we have saved not only a swarm but probably a valuable queen from going astray. Should the swarm have already returned to the old hive before we found the queen, we still go through the same process exactly as described above, as fully two-thirds of the bees from the old hive will enter the new one when placed on the old stand.

How To Clip the Queen's Wing.

To do this with a queen which you have received in a queen-cage, take the cage containing the queen and her attendant bees into a room and close all doors and windows so that they cannot get away, then hold the cage close to the window and allow the bees and queen to walk out on to the window-pane (should the queen fly she will return on to the window), then catch her by the shoulders. You need not be afraid, for she will not sting. Be careful not to pinch her too hard or to injure the soft part of her body, then transfer her to the two forefingers and thumb of the left hand (still holding her by the shoulders) and with a sharp pair of scissors clip off half of one of the *long* wings. As this mars the appearance of a fine queen, we usually take off half of *both* the long wings, then return her to the cage either with or without her attendant bees, and she is ready for introducing.

WM. STYAN.

San Mateo.

THE IRRIGATOR.

Proposed State Irrigation Service.

A little more than a year ago, Mr. A. J. Pillsbury, one of the editors of the Tulare *Register*, conceived the idea that inasmuch as the irrigation districts being formed under the Wright law were feeling their way along slowly and painfully over an untried road, an association of district officers ought to be formed by means of which an interchange of experiences might be had which would be decidedly helpful. The matter was talked up in the *Register* and other papers, and finally the Board of Directors of Tulare Irigation District sent out invitations to other districts for a meeting at Tulare. The meeting was held on the 12th and 13th of September last and was very successful. It was there decided that a permanent association should be formed, and a committee was appointed to perfect a plan for organization, but only a sort of provisional form of government has thus far been effected.

Mr. Pillsbury was made secretary of this provisional form of association, and has maintained quite an active correspondence with districts and prominent friends of the district system ever since, and with the result that the subject has so grown upon him that, in his judgment, no form of association less comprehensive than his draft of a bill provides for will prove adequate to the needs of the district system of irrigation in California. This draft will be submitted to the next meeting of the association, to be held at Sacramento January 8th, and after undergoing such changes as are deemed advisable, will doubtless be presented to the Legislature.

The theory upon which this draft is founded is that irrigation is the paramount interest in California; that the State cannot become greatly populous without it, but can sustain a tremendous population when all of its waters shall have been put to economical and intelligent use; that the district system of irrigation is the only system which can enable irrigating neighborhoods to command capital for constructing needed irrigation works, or compel a frugal use of the waters of this State, and that the district system will in time supersede all other systems.

The State has conferred very great powers upon these irrigation districts, including the power to create bonded indebtedness, a power that is very likely to lead communities into extravagances, especially if there should chance to be a bit of a boom on anywhere, and very likely also to prompt sharpers to enter upon schemes of a swindling nature. There is certainly no lack of opportunity for extravagance and speculation, and a most rigid system of supervision is imperatively demanded; yet, strange to say, the State exercises no supervision whatever outside of the judiciary, which can do nothing of its own volition and so must be an inadequate protection.

It is proposed in the draft as printed below that the State shall delegate this supervisory power to the associated districts themselves, and certainly nobody can be more deeply interested in maintaining the faith and credit of all the districts. It is made the duty of the association to examine into the conduct of every district and publish reports of their condition. This alone will have a most salutary effect, but as the association is forbidden to negotiate the bonds of any district until its acts have been approved by a civil engineer and an attorney, to be selected by the association, it will be nearly impossible for any district to market its bonds without such approval, for capitalists will soon come to require it before considering purchases of bonds.

The financial aid asked from the State is not great. Indeed it is much less than other interests are getting. It is only asked that the secretary's office shall be maintained and the printing be done at public charge, which will cost no more than $5000 a year at the outside. This is much cheaper than the State could discharge its duty of supervision for by any other method.

Of course there are other services besides that of supervision of districts, which it is expected that the association will perform. It is expected that it will develop a market for irrigation district bonds, hold annual conventions wherein the experiences of irrigators from all portions of the State will be compared and important recommendations made as to methods, and, by a system of correspondence and issue, and of bulletins, keep all the districts informed as to methods of procedure adopted here and there. In this way the best heads among the directors of all the districts will, by their advice and example, be able to shape the work for the districts throughout the State. In fact there seems to be no limit to the good results which might flow from associated action among all the irrigation districts of California, properly empowered and aided by the State.

The Proposed Law.

Mr. Pillsbury submits the following draft of a bill wholly upon his own individual responsibility, and not as an official act of the association with which he is connected.

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. It shall be lawful for five or more irrigation districts organized under and by virtue of an Act entitled "An Act to provide for the organization and government of irrigation districts," approved March 7, 1887, to unite in forming a State Association of Irrigation Districts to which all irrigation districts organized or to be organized under and by virtue of said Act shall be entitled to membership upon terms of equality. Such association when formed shall be a State institution.

SEC. 2. The State Association of Irrigation Districts shall have power and it shall be its duty to inquire into the acts and inspect the works of all irrigation districts organized or to be organized under the laws of this State, and its authorized agents shall not be denied access to the books and archives of any of said districts. Said association shall have power to make, ordain and establish and put into execution such by-laws, ordinances, rules and regulations as shall be necessary for the good government of said association; provided that said by-laws, ordinances, rules and regulations shall not be inconsistent with the laws or Constitution of this State or of the United States. Said association shall have power to contract and be contracted with, to sue and be sued, and its purpose shall be to promote the development of the district system of irrigation in California by securing the co-operation of the irrigation districts of the State in a united effort to that end. Said association shall have power to act as special agent for any irrigation district affiliated therewith, and when duly authorized so to act by such district may do any of the acts which such district itself may do, but said association shall have no power to bind any district without such special authority except as herein provided.

SEC. 3. The State Association of Irrigation Districts shall meet in open session in October of each year upon such day and at such place as shall have been determined at the preceding annual meeting, and each district belonging to such association shall be entitled to one vote in the meetings of such association and shall designate some number of its board of directors to represent such district at such meetings. Provision shall be made at such meetings for consideration and discussion of matters important to the development of irrigation in California and industries dependent thereon; and it shall be the duty of said association to use all suitable means to collect and diffuse such information as is calculated to aid in the development of irrigation and the district system thereof in this State, and shall make such recommendations and suggestions as experience and good policy shall dictate.

SEC. 4. The officers of said association shall consist of a board of five trustees, to be selected from among its accredited representatives, in whom shall vest the general prudential and financial affairs of said association, and whose duty it shall be to execute its by-laws, ordinances, rules, regulations and recommendations. There shall also be a president and vice-president of said association, who shall be members of the board of trustees and ex-officio president and vice-president thereof; and a secretary and treasurer who shall not be members of said board. The president and two trustees shall, at the first meeting of this association held subsequent to the approval of this Act, be elected to hold office until the second annual meeting of said association, and the vice-president and one trustee shall be elected to hold office until the first annual meeting held subsequent to the approval of this Act; and thereafter the terms of office of all trustees shall be two years, but all shall hold office until their successors have been elected and have qualified. If from any cause a vacancy shall occur in said board, it shall be filled by the remaining members until the next annual meeting of the association. The secretary and treasurer shall be appointed by the board of trustees and shall hold office for two years unless removed for good cause shown.

SEC. 5. For its maintenance said association shall have power, at its annual meetings, to levy an assessment upon the taxable property of all irrigation districts belonging thereto not to exceed one cent upon each $100 of assessed valuation of property in such districts, and it shall be the duty of the boards of directors of such districts to include the same in their next regular tax levy, to collect the same with its other taxes and pay it over to the treasurer of the association on or before the first day of March of each year. The by-laws of said association may also provide for the payment by each district of an admission fee of $50, before being entitled to membership therein. The association shall have the power to negotiate the sale of bonds of any district belonging thereto, when specially authorized so to do, and at a price not lower than a minimum price to be prescribed by the board of directors of said district, but before undertaking to negotiate the sale of such bonds, the legality of such bonds must be affirmed by an attorney to be selected by the board of trustees of said association, and the proposed works must be approved by a civil engineer to be selected by said trustees. The expense of such affirmation and approval shall be borne by the district offering bonds for sale, and for its services in selling said bonds the association shall be entitled to receive a commission not exceeding one per centum upon the face value of said bonds so sold, but from which said commission there shall be deducted the expense of affirmation and approval above referred to, whereupon the residue shall be paid to the treasurer of said association and become a part of the general fund thereof.

SEC. 6. It shall be the duty of the secretary of said association to attend all meetings of the association and of the board of trustees, and to make and preserve a record of such meetings; to conduct the correspondence of the association and of the board of trustees and preserve a record of the same; to collect statistics and other information showing the actual condition and progress of irrigation in this State and elsewhere; to keep all accounts of the association and of the board of trustees; to visit each irrigation district in the State and prepare and cause to be published a report touching the area, character of soil and productions of said district, together with the nature and cost of irrigation works, quantity of water utilized, source of water supply, system of distribution, and such other matters as the board of trustees or association shall require, or shall seem to be of public concern. He shall correspond with investors and financial agencies, and use all proper means to develop and maintain a ready market for irrigation district bonds. He shall collect books, papers and pamphlets relating to irrigation and forms of production dependent thereon, and preserve the same. Under direction of the association and the board of trustees, he shall prepare for publication such reports as are required by law or the association or trustees; and by means of the issuance of periodical bulletins, he shall keep the irrigation districts belonging to the association constantly advised concerning all occurrences touching their interests. He shall appoint, subject to the approval of the board of trustees, a competent person as clerk and shall be responsible for the acts of said clerk. He shall maintain an office in the city of San Francisco at an expense for rent, stationery and incidentals, not exceeding $500 per annum, and said office shall be open daily, except Sundays and legal holidays, from nine o'clock A. M. to four o'clock P. M. He shall be paid for his services as secretary the sum of $200 per month, and his actual traveling expenses not to exceed $500 during any one year. His clerk shall be paid a salary (as such clerk) of $50 per month, each to be paid as other State officers are paid. Said expenditures herein provided for are to date from the day upon which a copy of the by-laws of said association, together with a certificate of organization, signed by the president and secretary thereof, is filed in the office of Secretary of State, and are to be paid out of the general fund in the State treasury.

SEC. 7. All printing required to be done by this Act shall be done by the State Printer.

An Irrigation Convention.

A session of the State Association of Irrigation Districts of California is hereby called to meet at Sacramento, California (in such hall of meeting as shall hereafter be determined upon, due notice whereof will be given), upon Thursday, Jan. 8, 1891, at 10 o'clock A. M.

The purposes of said meeting will be to perfect the organization of said State Association of Irrigation Districts; to agree upon and formulate such amendments to the irrigation laws of this State as shall be deemed needful and expedient; to use all proper means to secure their enactment by the Legislature and approval by the Governor; and to consider such other matters as the association shall be pleased to consider.

In the deliberations of such association each irrigation district which shall have become a member thereof, shall be entitled to one vote, and the board of directors of such district should designate, by resolution, one of their number who shall be empowered to cast the vote of such district, and a copy of such resolution under seal of said district shall constitute the credentials required. It is earnestly hoped that every irrigation district in California will be authoritatively represented at such meeting, for it is believed that it will be productive of most important results. It will not be objectionable to have more than one member of district boards of directors as well as other district officers present, and doubtless they will be asked to take part in the discussions (but not in the balloting), and it would be well, too, for each district to extend to known friends of the district system a cordial invitation to be present with full privileges as to debate.

The dispatching of business would be much facilitated if persons having amendments to the law to be proposed would reduce them, as nearly as may be, to proper form before presentation. Districts which have not already joined the association will be given an opportunity to join when the association meets.

J. W. NANCE, President.
A. J. PILLSBURY, Secretary.

A HOUSE FLY is born fully grown and of mature size, and there are no little flies of the same species, the small ones occasionally observed being different in kind from the large ones. The house fly does not bite nor pierce the skin, but gathers its food by a comb or rake, or brushlike tongue, with which it is able to scrape the varnish from covers of books, and it thus tickles the skin of persons upon which it alights to feed upon the perspiration. The fly is a scavenger, and is a vehicle in which contagious diseases are spread. It poisons wounds, and may carry deadly virus from decaying organic matter into food.

ELECTRIC LIGHTING, says M. Fontaine, did not make its appearance until the close of the year 1873. It was in Paris, in November, 1873, in the workshop of M. Gramme, that the first installation on a really industrial scale of electric lighting took place.

Patrons of Husbandry

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

The Master's Desk.

R. W. DAVIS, W. M. S. G. OF CALIFORNIA.

There will be an effort made at the coming session of the Legislature to amend the Road laws, so that the keeping of the roads shall be by school districts instead of in townships, as is now the case. In addition to the school district plan, why not add a section providing that the work of maintaining such roads shall be let to the lowest responsible bidder for a term of three or five years? This is a most important subject—one on which subordinate Granges should, by resolution and petition, inform their representatives of their wishes. Let the action be taken at once. Don't wait till the last days of the session. Remember the story of "the early bird."

The farmers of California demand some legislation on the subject of fire insurance. If the city people are satisfied with the rates now charged by the insurance compact, the country people are not. Equal and exact justice is all we want. We want the legal right to compete with others in carrying our own insurance. The Legislature ought not to refuse that privilege. We believe the State's Solons will not deny the farmers this right of self-protection. Keep an eye on your Senator and Assemblyman when the Insurance bill comes up.

Kansas has elected a Congressman so plain and so economic that he does not wear socks. I wonder if he will be so plain while Congressman and so economic with the people's money? Let us hope, at least, that he will practice some lessons of economy with the public coin. Parsimony we don't want. Economy we do want.

The manufacturers of ordinary wrapping paper have formed a trust. Do you wonder at it? It won't do to trust anybody nowadays.

That the California poppy should have been chosen as the "Flower of State" seems both proper and appropriate. It is a fitting tribute to the Grange, for what flower is more universally the companion of the Patron than the native poppy? On hillside and on plain, by stream and on desert sand, the golden-hued poppy is the agriculturist's constant companion. The tillers of the soil in this great Golden State have reason to be proud of the "State Flower," the charming golden-leafed poppy. It is the first flower of spring and stays most of the summer. Pretty poppy, ever welcome!

For the next thirty days Deputies and other Past Masters will be very busy installing the officers for the New Year. It is the duty of the installing officer to report at once to the Secretary of the State Grange, the full list of officers installed.

Bro. Ava E. Page has been re-elected to the office of Master of the Missouri State Grange. Bro. P. is also the accommodating Gate-Keeper of the National Grange. We rejoice to know of his re-election to the Mastership, for it surely insures active, successful work for the Order in the State of Missouri. By the way, did you know that the Missouri State Grange unanimously passed a resolution asking for the 1892 session of the National Grange? From this it will be seen that the oldest farmers' organization yet has friends, and friends who ask for the privilege and for the honor of entertaining the National Grange.

With the burial of the old year don't forget to bury all personal hatred and animosity. If your brother or sister of the Grange has erred, forgive him or her and start on the new year without enemies and without animosities. If you will do this, the new year will have more pleasant days and more sweet faces for you than it otherwise would have. Don't you think so?

Do you know that a cultivated mind, an inventive brain, is the most lasting and profitable fertilizer a farmer can procure? Get one and use it!

Tranquillity, coupled with modesty, makes a most becoming garment for any lady, regardless of her age, her size, her complexion or her vocation. Anybody can obtain the article. It is obtainable anywhere, at any time, without money and without price.

What's the news from your Grange?

Several of the sisters have been talking "turkey" quite lately. No doubt they intend to convey the thoughts of Christmas-time, but somehow our mind took, or wanted to take, another view of the subject.

Sebastopol Grange conferred the first and second degrees at the last meeting.

Happy New Year to all.

Publishers' Comments.

The following, from the Tulare *Register* of Dec. 12th, tells much that is unfortunately true. We know both from extensive experience and observation the difficulty of getting Grangers to patronize the best of papers that faithfully advocate their cause. Although we blame nobody in particular for it, still we think the editor of the *Register* will live long enough to see he has greatly underrated the coming business and political accomplishments of farmers' organizations.—Eds. Press.

Grange Department, Finis.

The Grange Department of the Tulare *Register* is no more. Its valedictory was placed in our hands this week and Mr. J. W. Mackie, its editor, retires with emotion. We feel a little emotional also. The idea occurred to us that inasmuch as the farmer was upon the very eve of grabbing the political lines out of the political hands of the political jehu who had been running things generally and was about to fire that worthy off the box, the aforesaid farmer ought to have an organ, ought to have a means of communicating his wishes, hopes, aspirations and fears to the dear public. Therefore we set aside certain columns of the *Register* to the free and untrammeled use of the Grange. Mr. Mackie was chosen editor, and the Grange, with the same generosity which characterized our giving of space, generously gave him all the work to do, and he got his Scotch back up, quit, and the Grange department is no more.

We will say this for Mr. Mackie, what he did, he did well. What he wrote was well written, and what he said was well worth reading, but he did not propose being made a pack-horse of, and we do not blame him.

As for ourselves, we haven't anything in particular to grumble about, and hereafter we shall at all times stand ready to set aside one or more columns of the *Register* to the Grange or Farmers' Alliance, at the rate of twenty-five dollars per month per column, coin down, and we shall do it cheerfully, but there shall be no more free business. Of course we shall be glad to hear from our farmer friends at any time upon any subject, and will give them space in our columns as we give others, but we shall do the editing and reject what we do not want.

The point of this experience is that the farmer is the worst man on earth to try to do anything for. Why, all the Granges in California couldn't keep one little weekly paper's nose out of water. The Farmers' Alliance throughout the State of California will not do as much business as one Tulare merchant. Farmers banded as a political party may play the mischief for one campaign, but it will be the victory of a formless mob without leadership and without cohesive power. One victory, and it will fall to pieces like a rope made of sand. A saloon is more effective in politics than a Grange or an Alliance. A brotherhood of farmers seems to be an impossibility. If we were asked why this is so we could not answer, but it does seem to be so.

The *Register* is in sympathy with the farmers' interest. We believe that the farmer has had to take the little end of everything. His end of the horn of plenty has always been the tip end, but the fault is his own. There is no injustice about it. Every man should suffer the legitimate consequences of his own acts. It is right that he should, and would be wrong if he did not. The evils which the farmers of the United States suffer are the legitimate consequence of their own negligence, and they have no right to complain of any party or interest. We view the present farmers' movement over this country with infinite satisfaction, but we have not the remotest idea that it will live to be four years old. It will be a fly blister upon the two old parties and will do them good. The old parties will live, but the fly blister, having served its purpose, will be cast into the rubbish-heap.

Sudden Death.

Died on his ranch, Dec. 15, 1890, G. F. Starn, of heart disease. The *Sutter Independent* has the following concerning his death:

"The deceased had been long known in this community, and his sudden death cast a gloom over every household where the sad event was known. He was an exemplary member of the Methodist church, and his walk and conversation had always been orderly and honorable. He was a practical horticulturist and took a lively interest in everything calculated to improve and develop that industry. He leaves a widow and four children to mourn his loss. They have the sympathy of a wide circle of friends who share in their bereavement. The funeral took place under the auspices of Yuba City Grange on Wednesday afternoon from the M. E. church. Rev. H. C. Tallman preached the funeral discourse at the church, and at the grave the beautiful burial service of the Patrons of Husbandry was impressively rendered by the officers and members of the Grange of which deceased was a worthy member. The following brother Patrons acted as pall-bearers: G. W. Carpenter, Herman Berg, J. P. Onstott, F. Cooper and W. J. Gray. The attendance of friends was very large."

The farmers in '67 sold $1,284,000,000 worth of grain from less than sixty-six million acres. In '87 there was more than twice the acreage reaped and more than twice the harvest, yet they received $79,711,000 *less* money for their product. But the interest on mortgages kept at nearly the same figure. In '67 we had $52 per capita in circulation, in '87 less than seven, in '90 only five, and the glorious work still goes on. Put these few facts together, brother farmer, and then scratch your head real hard. —*Monache Tidings.*

Mortgages on Land.

The following letter, published in the Portland *Oregonian* of Dec. 19, will interest a great many of our readers, who have viewed with alarm the rapidly increasing alien ownership of our land:

Editor Oregonian:—It is said that the Lombard Loan and Trust Company, of London, has foreclosed on at least 120,000 acres of farmlands in Kansas alone.

It seems the company's agents loaned money on some of these lands at 2 per cent a month, and on chattels—such as household furniture, farming utensils, cattle, horses, hogs and fowls—at 2½ per cent, or 24 and 30 per cent a year. They would estimate the land at its lowest cash value, and then place a loan of 25 per cent of this amount on the property, and take a mortgage.

It seems that this Lombard Loan and Trust Company—this cruel creature with a soft and liquid name—made a clean sweep of everything, except the open air and blue sky, whenever it lit down upon an American farm. It might have been called the "London Locust Plague Company," but that would have been a gross libel upon an honest but hungry insect that visited the same region some fifteen or sixteen years ago, and only devoured every green thing, while it left the soil in all its integrity to the settler.

On the other hand, the Lombard Loan Company's agents, when the interest came due, foreclosed on all the chattels—robbing barns, fields, hen-roosts, parlors, kitchens and bedrooms—and selling farms worth from $2000 to $4000 for just enough to pay costs of sale and lawyer's fees, bidding them in themselves at prices ranging from $40 to $60, and then bringing a bill against the former owners for the principal and interest still due.

In this way, vast tracts of Kansas farming lands are now owned by foreign sharpers, while the evicted owners are still in debt for more than the amount originally loaned upon them. All this was done "legally," as there were no usury laws—such as exist in Oregon—to prevent the carefully-planned robbery.

Several years of drouth in Kansas brought about a condition which made the farmers an easy prey to these English Shylocks, and ended in wholesale evictions which discounted those in Ireland, over which Americans are so deeply interested.

Strange to say, the farmers were driven from their homes without resisting the officers of the law, save in a few instances. In one case, some twenty five farmers armed themselves with guns, and met the evicting party and told them to "git;" and they got, and did not think it best to return.

In another instance, one of the loan and trust company's agents arrived in the neighborhood with the necessary legal papers, and put up with one of the farmers, with the intention of attending to business the next day; but a committee of disguised grangers called that night at his stopping-place and asked his intentions. The agent replied that he "proposed to move immediately upon their farms." The committee took the gentleman to a lonely ravine and endeavored to induce him to give up his project and retire from the missionary field, which he refused to do. Nobody knows what happened afterward; but the next morning a loan and trust agent was found hanging by a rope from a bridge that spanned the ravine.

On the 4th day of last July a banker was selected to deliver an oration in one of the Kansas towns, and in the presence of a large concourse of ruralists, he began by saying: "Fellow-citizens, this glorious day is the one day in the year when the rich and poor can meet together without distinction or regard to caste." He didn't go any farther. He was interrupted by a shower of such missiles as industrious hands could find lying around loose, and by responses that bore no resemblance to "amens" in an old-fashioned camp-meeting. He disappeared in the rear of the platform and was obliged to take a train out of town that afternoon to avoid being the subject of a midnight surprise party.

Of course all these irregular proceedings are to be deprecated, but we must remember that with those long-suffering Kansans it was a simple question of self-preservation touching themselves and their wives and children, and when we consider that, with the exception of these rare and natural, if not justifiable, deviations from the Christian doctrine of non-resistance, they obeyed the requirements of the law and became penniless exiles and wanderers from their homes, we must give them credit for greater patience and self-denial than Oregonians and Californians would or will be likely to display under similar circumstances.

This English loan and trust company is doing its part toward introducing the European tenant system in America. In some instances the company not only charged 2 per cent a month, but in addition to this interest, which aggregated upward of 24 per cent annually, took "bonuses" whenever opportunity offered. In this way it was an easy matter to secure large holdings, upon which to place renters and serfs, who assume all the risks for the sake of keeping soul and body on speaking terms. I am informed by former citizens of Kansas that a person can travel for miles at a stretch in Southeastern Kansas—which is the garden of the State—and see nothing but farms owned by the Lombard Loan and Trust Company—farms that have been swallowed up by this 30 per cent interest infamy, and which are now grown up to wild mustard and other weeds, and awaiting cultivation by their new foreign lords and their tenants.

Now we are informed that they are about to erect agricultural colleges in several Western States for the purpose of educating English agents to oversee the white slaves who are to be imported and placed on lands that British money lenders have legally stolen from the citizens of the "best government the sun ever shone upon." Is it any wonder that one of the planks in the Farmers' Alliance platform embodies a demand for an alien land law? Is it any wonder that the pent-up emotions of the farmers burst forth on November last in a cyclone of opposition to national banks and loan and trust companies, both foreign and domestic, with a vehemence that paralyzes party wirepullers and slate-makers all the way from Kansas to the four corners of the Union? The end is not yet. If I thought it was, I would pray Queen Victoria to send one of her numerous family over here to wear the crown at Washington.

James G. Clark.

Grant's Pass Dec 10.

Coming State Grange Sessions.

Alabama, July 22, '91; Connecticut, January, '91; California, September, '91; Colorado, (Denver), Jan. 13, '91; Delaware (Dover), Dec. 9, '90; Georgia, ———; Illinois (Springfield), Dec. 9, 90; Indiana (La Fayette), Dec. 9, '90; Iowa (Des Moines), Dec. 9, '90; Kansas (Olathe), Dec. 9, '90; Kentucky, ———; Massachusetts (Worcester), Dec. 16, '90; Minnesota (Chowen), Dec. 16, '90; Mississippi (Hickory), Dec. 9, '90; Missouri (Cameron), Dec. 9, '90; Maine (Lewiston), Dec. 16, '90; Maryland (Baltimore), Dec. 9, '90; Michigan (Lansing), Dec. 9, '90; Nebraska (Pawnee City), Dec. 9, '90; New Hampshire (Manchester), Dec. 16, '90; New Jersey (Trenton), Dec. 12, '90; New York (Elmira), Feb. 4, '91; North Carolina (Potecasi), Dec. 9, '90; Ohio (Tiffin), Dec. 9, '90; Oregon (Hillsboro), May, '91; Pennsylvania (Harrisburg), Dec. 9, '90; Rhode Island (Providence), Jan. 13, '91; South Carolina, ———; Tennessee (Greenfield) Aug. 20, '91; Texas (McGregor), Aug. 13, '91; Vermont (West Randolph), Dec. 10, '90; Virginia (Alexander City), Dec. 10, '90; Washington (Klickitat Co.), June, '91; West Virginia (Charleston) ———; Wisconsin (Madison), Dec. 9, '90.

Farm Mortgages.

The *Bankers' Monthly*, which surely would not overestimate the matter, in speaking of the farm mortgages in six of our best States, gives the amount carried by each as follows: Kansas, $235,000,000; Indiana, $645,000,000; Iowa, $567,000,000; Michigan, $500 000,000; Wisconsin, $357,000,000; Ohio, $1,127,000,000.

Here are mortgages on the farms of only six States aggregating $3,431,000,000, the interest on which at 6 per cent amounts to over $200,000,000. Now the whole production of gold and silver in the United States per year is not half enough to pay the interest on the farm mortgages of six States, and yet these same bankers are demanding the destruction of treasury notes, the demonetization of silver and the establishment of a gold standard; and the farmer, what is he doing? Well, he is economizing, cursing the ring politicians and voting the old party ticket.—*Pacific Union.*

Figures.

When Egypt went down, two per cent of her population owned 97 per cent of her wealth.

When Babylon went down, 2 per cent of her population owned all her wealth.

When Persia went down, 1 per cent of her population owned the land.

When Rome went down, 1800 men owned all the known world.

There are about 40,000,000 people in England, Ireland and Wales, and 100,000 people own all the land in the United Kingdom.

In the United States, three fifths of the entire wealth of the country is owned by 31,100 persons—less than one-twentieth of one per cent of the population.

In 1860 there were but two millionaires in the United States and no tramps. To-day there are 35,000 millionaires and 1,500,000 tramps.

Enterprise Grange Installation.

Editors Press:—I am requested to announce that Enterprise Grange, No. 129, will install officers the first Saturday in January (the 3d), followed by a feast. Grange to open at 10 o'clock. A general invitation is extended to all Grangers who may find it convenient to meet with us. Yours fraternally,

Etta Plummer, Sec'y.

Perkins, Dec. 22, 1890.

FARMERS' ALLIANCE.

SUBSCRIBERS who are members of the Farmers' Alliance can have their names changed to the Grange Edition of the RURAL PRESS *free*, much to their advantage.

National Farmers' Alliance and Industrial Union.

President.....L. L. POLK, Washington, D. C.
Vice-President.....B. H. CLOVER, Cambridge, Kan.
Secretary.....J. H. TURNER, Washington, D. C.
Treasurer.....H. W. HICKMAN, Puxico, Mo.
Lecturer.....BEN TERRELL, Washington, D. C.
Executive Council—K. A. Patty, Macon, Miss.; Isaac McCracken, Ark.; Evan Jones, Dublin, Tex.
Executive Committee—C. W. McCune, Washington, D. C.; Alonzo Wardall, Huron, South Dakota; J. F. Tillman, Palmetto, Tenn.

Cal. State Alliance Officers for 1890-91.

President.....MARION CANNON, Ventura
V. Pres't.....PETER ROTH, Black's Stat'n Yolo Co.
Secretary.....C. W. PEDLAR, Gilroy
Treasurer.....J. W. HINES, San Jose
Chaplain.....MRS. J. KENNEAR, Modesto
Lecturer.....J. L. GILBERT, Fresno
As't Lecturer.....P. K. WOOD, Los Angeles
Door-Keeper.....J. B. JOHNSON, San Jose
As't Door-Keeper.....MRS. M. A. TALCOTT, San Jose
Serg't-at-Arms.....C. W. MARTIN, Santa Barbara
State Bus. Man'g'r, J. M. MOORE, 297 Linden Ave., S. F.

EXECUTIVE COMMITTEE—JNO. S. DORE, Fresno; JESSE POUNDSTONE, Grand Island (Colusa Co.); JAS. MORGAN, Santa Barbara; E. M. WARDALM, Monrovia (Los Angeles Co.); DAVID REED, Monterey.

NATIONAL DELEGATES—J. S. BARBEE, Santa Barbara, and D. C. VESTAL, San Jose.

Organizing Deputies.

J. B. RIGDON for Alameda and San Benito counties.
KATE L. SQUIRE for Santa Cruz and Santa Clara counties.
F. P. COOK for Merced and Stanislaus counties.
H. W. RHYNE for San Luis Obispo county.
J. W. HINES, San Jose—Deputy-at-Large.

The Moral Import of the Farmers' Alliance.

The above is the subject of a discourse delivered in New York City, Dec. 7th, by Rev. Thomas Dixon, Jr., pastor of the Twenty-third Street Baptist Church. Mr. Dixon is delivering a series of sermons on current events to crowded houses. He is pronounced a brilliant orator by the metropolitan press, and the *Phrenological Journal* declares him a second Patrick Henry. The sermon was received last week just as we were going to press, consequently but a brief extract could be given. As everything pertaining to the Farmers' Alliance is at present engrossing a large share of public attention, we take pleasure in printing the discourse in full and expect to be able to give further effusions from the reverend gentleman's pen. The following is the discourse in full:

The real sensation of the year 1890 is the advent of the National Farmers' Alliance and Industrial Union. It is no mushroom growth. It is here to stay. It is the resistless movement of millions under the oppressions of centuries. Its motive power is social, economic, religious and political. The advent of these embattled hosts is the most pregnant event of this generation. It is the beginning of

A Revolution

That will shake this continent and move the world.

The first time they gathered around the ballot-box was the 4th day of last November. They polled between two and three million votes, elected the Governors of three States, sent forty men to Congress, and scared the life out of hundreds they did not send. What is the moral meaning of this great movement?

1. It is the protest of the patient burden-bearers of the world, who have toiled through weary years, struggling beneath the wrongs of economic and political superstitions. In America the farmers have literally become the beasts of burden of the nation. Their business has been to feed over 65,000,000 people, together with the hosts of the Old World, with the products of the year's work, and then through the winter eke out a miserable existence wrestling with their

Mortgages, Cyclones and Floods.

While they are doing this, we laugh and grow fat, dance and make merry in the city, and bet how much they will make next year, buy and sell their crops fifty times before they are planted, and charge old "Hayseeds" with all our losses.

The question is, whether these men, the freest of the free, the authors of this country's liberty, shall assert their rights and obtain justice, or degenerate into the condition of tenants and serfs. The conditions of labor in all other industries have undergone marvelous development and changes in the past hundred years. The farmer works under the same stern conditions, perishing in the midst of boundless prosperity, for others. He has determined to effect a change in these conditions, and readjust himself on a living basis to the new civilization.

This movement means the education of the masses as masses—of the farmer as a farmer. It means the assertion of the manhood of the yeomen of the nation. This is real education. The accent of our education has hitherto been to get on, "to rise." We have been taught to climb out of the humble sphere in which we were born into some so-called higher sphere. The smith learns to despise his anvil, and the clodhopper to look with contempt upon the plow. They rise to "higher" things. They become lawyers, and doctors, and preachers, and bankers, railroad men and politicians. We now have fully 8,000,000 men in this country educated to be Presidents of the United States. We only need about a dozen Presidents in a hundred years—an awful waste of raw material.

The farmers are learning and teaching it to their children, in this organization, that the work of the farm is as sacred, as noble, as honorable as that of any sphere in life. Women, too, are admitted to the Order. Well they may. There are more farmers' wives in the insane asylums of America than any other class. They have actually recognized the fact that

Woman Is a Human Being.

A reporter once asked an old farmer in the West what he thought about the question "Is marriage a failure?" He replied: "What, marriage? Well, let's see. There's Lucindy gits up in the mornin', kindles the fire, milks six cows, starts four children off to school, tends to three others, skims 20 pans o' milk, feeds the hens, likewise the hogs, looks after some motherless sheep, gits breakfast, washes up the dishes, gits dinner, et cetera—why, mon, do you think I could *hire* anybody to do all that for what she gits? Not much! It's a great success, sir!" Ah! these patient, sad-faced, weary millions of women! The pathos of their lives! They have entered this organization with cheeks flushed with hope, many of them for the first time in life! May God lead and bless them! This movement means

Co-operation as Against Competition.

It is in this principle of Socialism that the Order has its strongest foundation. They are pledged to co-operate with each other in the production of economic goods, and not only so, but to co-operate in the distribution of these goods. The Alliance stores for supplies are a prominent feature of their work. These stores contain the germ idea of the great industrial co-operative societies of workingmen in Great Britain. They are asserting in life the principle that it is better for men to fight *for* each other than *against* one another. They are learning the secret of associated power—that in union there is strength. It is in the light of this fact that we solve the apparent paradox, that while they cry out against trusts and monopolies, in the same breath they demand that the Government press its functions to the very verge of State Socialism. These cries are not inconsistent. They are the assertion of fundamental principles. They recognize the important fact that government is not something separate from the people, but when normally administered is simply the people governing themselves—that it is not a power to be forced, but a power to be utilized for the happiness of all.

4. The organization means brotherhood. It is a fraternal and benevolent Order with principles of love and fraternity, wide as the world, universal as the rose.

The 5th and 6th Articles in their St. Louis Declaration of Purposes,

A Second Declaration of Independence, read thus:

"5. To constantly strive to secure entire harmony and good-will to all mankind, and brotherly love among ourselves.

"6. To suppress personal, local, sectional and national prejudices, all unhealthy rivalry and all selfish ambition."

An ideal as high as heaven—an echo of the life of Jesus of Nazareth. They have determined to "bear one another's burdens and so fulfill the law of Christ." They pledge themselves to alleviate suffering and pain, to care for the widows and educate the orphans of their dead. This is climbing the hights of life. This is pure religion, undefiled.

They have gone into politics not because they are a political organization. They have been

Forced to Go Into Politics

Because their principles were social, economic and religious. All social and economic questions have become political questions, and all political questions are religious. The political arena is where all the great questions of to day and to-morrow must be fought and settled. Let no man deceive himself by believing that this organization is but a passing episode in politics. Remember its foundation is not primarily political, but social and economic. It is the embodiment of grand moral ideas; it is the movement of a revolution. It will not go backward. May God give its leaders wisdom.

An Independent Opinion.

The city of Indianapolis has been chosen as the place, and Washington's Birthday the time to form a political party on the lines of financial, land, transportation and labor reform. So far so good; but to unite with either of the old parties means the betrayal of the young Samson into the hands of the Philistines. If the farmers and industrial classes are not able to "go it alone," they have not strength enough to enforce lasting reform in either old party or in legislation.

Unconditional surrender should be demanded of the monopolists and money-changers in the control of the Government, and if the patriotic men of both parties dare not support and rally around a new party, then any union with Democrats or Republicans will be barren of good results. If the Democrats indorse any reform platform and candidates, they will be compelled to give their present leaders the bounce, for they are as servile gold and Wall-street fearing men as the Republican bosses. This the leaders of both parties will try to prevent by having just enough half-way reform planks adopted to divide the radical elements and keep themselves and Wall street in power.—*Monache Tidings.*

Answer, Who Can.

If farmers create the largest portion of the world's wealth and are admitted to be the bone and sinew of a nation's power, why is it that laws are made to discriminate against them?

The mechanic and farmer pay directly nine-tenths of the taxes of this nation; but not a mother's son of them can borrow one dollar from our government to assist them in their business, and yet the use of millions is given to the speculative class on the flimsy pretense of safe-keeping, while other millions are loaned to the same class for speculative purposes, at a cost of one per cent.

If a United States bond is good security for money used in the banking business, why is it not equally as good security for money to be used in any business?

If our government can loan money for one kind of business, by what rule is it made unconstitutional to loan for another on the same security?

If our government can loan money on its bonds, why not loan money at the same rate on the people's land which make the bonds good, for if there were no farms or farmers there would soon be no value to the bonds of this country.

Labor creates and sustains all wealth, yet it receives but a small portion of what it makes. Why should it be compelled to pay all taxes? Answer who will or can.—*Laborers' Light.*

Semper Fidelis Alliance, No. 8.

EDITORS RURAL PRESS:—In compliance with your request, I send the following roll of officers of Semper Fidelis Alliance, No. 8, of Brooks, Yolo county, Cal.:

Pres., J. H. Norton; V. P., H. H. Smith; Sec., I. M. Henry; T., J. C. Winter; C., Rev. J. J. Smith; L., H. E. Norton; D. G., R. R. Robison; A. D. G., A. Winter; S., Miss Loma Robison.

We have an Alliance of 31 members strong, all earnest in their work and ready to answer any call for the advancement and benefit of our cause. Yours fraternally,

I. M. HENRY, Sec.

Brooks, Cal., Dec. 18.

STANFORD, Blaine, Cleveland, Hill and several other equally honorable statesmen with presidential aspirations are said to be laying wires to capture the Alliance men in '92. This kind of thing can't be worked; no land-grabbers, corporation tools, professional politicians nor lawyers need apply. The little ones get the bounce at all the State Alliances, and the big ones will feel a hob nailed boot in '92.—*Monache Tidings.*

Machines—Human and Mechanical.

New Inventions Greatly Enlarge the Scope of Labor.

Much has been said of late in regard to the influence of labor-saving machinery on the scope of labor, and it has been stoutly held by many that the present condition and future prospects of mechanics in this country are far less satisfactory than they were in the earlier history of the country, before the recent great advance in the introduction of labor-saving machinery. But the most careful-thinking people, even among our best mechanics, hold to the contrary. In consideration of this question, we would refer our readers to the following, which we clip from the columns of the Holyoke (Mass.) *Manufacturer:*

As old people fondly look back on the days of their youth, and say that such days were fraught with more of sensible and pleasurable living than is experienced by the rising generation, so do many of our veteran mechanics delude themselves by thinking that when they learned their trade, under conditions far more narrow and crude than those belonging to the advancement and greater enlightenment of the present day, men who followed mechanical vocations were better off and had more promising opportunities than they now do.

No doubt there is a good deal to make such reasoning appear plausible. Thirty or 40 years ago small machine shops were scattered thickly throughout the country, and many a mechanic, on a contracted scale, conducted an independent business for himself. Every settlement in the country had one or more clever individuals who, with the few rude tools and appliances of the times, did the "tinkering" for their neighbors. There was a deal of mechanical work done by hand, and to the old stagers it seems as if men then obtained employment more generally than in these days, in which labor-saving machinery has such extensive usage. But if they stopped to think, they would perceive that as many, if not more, individuals in proportion to the number of inhabitants, are at the present time engaged in mechanical pursuits. There has been a concentration of labor, that is all. The small shops have disappeared, but large establishments, containing new and improved machinery of all kinds, requiring for its guidance many hands, have supplanted them, and surpassed them to an immense extent in amount of work performed. It may be said, to roughly illustrate, that men now work in gangs, and under a system of concentration, whereas formerly labor was more generally diffused among individuals who worked independently of each other.

What the Grumblers Say.

The grumblers say that the mechanic is not so much in demand, and not so much respected, socially, as he once was. At the time when steamboats, railroads, and labor-saving machines were beginning to be constructed, no doubt wages were good, and the services of the mechanic held in high value. Circumstances then were such that for a time an unusually lively impetus was given to that department of labor peculiar to his vocation. The field was wide and sparsely tilled, and with no great degree of effort yielded rich returns. But after all, the methods of the time, if enterprising and vigorous, were yet rude, and of a nature necessarily so transitory that they soon yielded before more disciplined efforts and more careful, exacting and intelligent requirements. So the hasty methods of the mechanics of former days, and the few rude appliances and tools they used, did good work in their time, but would not be suitable now.

With the Growth of the Country

Machinery has increased, and the mechanic has commensurably gained in intelligence. The result is natural enough, and desirable. Now we make more devices in a day than would have sufficed for a month 30 or 40 years ago, and modifications and improvements, one after another, crowd upon each other with astonishing rapidity. The mechanics of to-day are obliged to make themselves acquainted with the manner of operating multiform contrivances, and in such connection must continually make practical application of many of the principles of natural philosophy, the laws regulating steam, etc. Who doubts that many more well-educated and intelligent men are found among the ranks of craftsmen than formerly? If anything, the community awards the best and most worthy members of this class a higher social position than that possessed by their predecessors of a generation or more ago.

Beneficial Effect of New Inventions.

Many new inventions of utility greatly enlarge the scope of labor rather than contract it. By use of labor-saving machinery many more useful fabrics and articles are manufactured, and also many new things are made which soon create new wants among the people, whose consumption of any given manufacture, when times are good, keeps pace with the increased production. Since sewing machines were invented, the average housewife probably has two new calico gowns where formerly she had one. *Labor saving machines do not decrease the amount of work performed by people in the world; they only bring about greater results in proportion to the strength laid out in their management than manual exertion without their aid can accomplish.* The law of things is such that men may vary, facilitate and advance their undertakings to vastly wider performance, but still the generality of them, albeit under easier and more favorable conditions, must work as much as did primitive Adam in the rough country outside of Eden.

During the past few years, mechanics, in common with all other classes, have suffered much from the evils of widespread business depression. Thickly multiplying inventions have doubtless tended to create a temporary disadvantage, for inventors did not cease to construct many fresh devices, as well as make numerous improvements in old machines, up to the stagnate period of business, when the demand for all kinds of manufactures was on a scale of contraction. Nevertheless as soon as makers and inventors find that they are overcrowding the market to such an extent as to be losing or wasting considerable money in so doing, they stop manufacturing until the surplus is disposed of and the demand and supply are equalized.

But until this happy result is realized the mechanic suffers severely from lack of sufficient employment, because purchasers of machinery cannot afford to buy new tools, or improve old ones, since the demand for the goods made by these machines has likewise dropped off. Let the business of the country be once fairly revived, however, and machines, old and new, will be in active demand, and the mechanic will have no reason to complain of their influence.

There Is a Bright Future

For the skilled laborer in this country, provided only he will steadily follow the path of progress, embrace all his opportunities for improvement and advancement, and obtain a thorough mastery, practical and theoretical, of his trade. He cannot be successful if he unambitiously plods like a day-laborer and does not consider his vocation an art in which to take pride and make continual improvement. He must not stop to complain, but must endeavor to keep pace with the enlightenment of the times, must educate himself by all means in his power, and obtain superior intelligence. Indeed, it would seem advisable for mechanics in each manufacturing community to club together and establish schools in which, were they not more than an hour or two during two evenings of the week, they might acquire some geometry, the elements of mechanics, the theory of steam, magnetism, electricity, etc.

The workmen who may thus strive to obtain education and make effort to completely master all details pertaining in any way to their calling, will soon find intelligent exertions rewarded by the attainment of a good living, and an honorable position in society as well.

Thoughts for New Year's.

Think that this day will never dawn again.
—*Dante.*

Reflect upon the words that Sadi penned,
Reveal not every secret to a friend;
For how can you foretell what is to be?
He may, hereafter, be your enemy.
And with your enemy the wisest plan
Is not to do him all the harm you can;
For it may happen to you in the end
To make your present enemy a friend.
The hand that can withhold the tongue discreet,
These fit the Sheik to fill the Sultan's seat.
—*Richard Burton, St. Stark.*

Happy the man who has the poet's heart,
E'en though he lack the poet's golden tongue!
Happy is he who having never sung
And hopeless e'er to sing though but small part
Of those fair visions that before him start,
Still lives within a world forever young,
Still walks, high fancies, noble thoughts among,
And feels the inference which the planets dart.
"Do thy duty, that is best!
Leave unto thy Lord the rest!
Whatsoever thing thou doest
To the least of mine and lowest,
That thou doest unto me!"
—*Longfellow's "Hymn Beautiful."*

Yet smile not, worldling, for in deeds
Not all of life that's brave and wise is!
He strews an ampler future's seeds;
'Tis your fault if no harvest rises;
Smooth back the sneer; for is it naught
That all he is and has is Beauty's?
By souls the soul's gains must be wrought,
The actual claims our coarser thought,
The ideal hath its higher duties.
—*Lowell "On a Portrait of Dante."*

I hold it of little matter
Whether your jewel be of pure water,
A rose diamond or a white,
But whether it dazzle me with light.
I care not how you are dressed,
In coarsest weeds or in the best;
Not whether your name is base or brave;
Nor for the fashion of your behavior;
But whether you charm me,
Bid my bread feed and my fire warm me,
And dress up Nature in your favor.
—*Emerson.*

From the Gorilla to the Monkey.

[Written for the RURAL PRESS by JAMES G. CLARK.]

Hereditary wealth has always been the root of "polite society." To learn what the latter term means we must consult its orthodox interpreters.

England's titled aristocracy gave to the world a Lord Chesterfield, but it was the proud mission of America's moneyed aristocracy to evolve a Ward McAllister. When Boston's cultured, democratic reformer and author of the immortal "Battle Hymn of the Republic," wrote her lecture, "Is Polite Society Polite?" Mr. McAllister's book, "Society as I Have Found It," was not born.

This volume, which has suddenly become the text-book of Gotham's fashion center, is supposed to embody the social tactics and ethics of "polite society," by the accredited oracle and mouthpiece of New York's illustrious "Four Hundred."

The distinguished author, with uncalled-for modesty, aims to disarm criticism by prefacing his work with the following brief note: "One who reads this book through will have as rough a mental journey as his physical nature would undergo in riding over a corduroy road in an old stage-coach. It makes no pretensions to either scholarship or elegant diction.—W. McA." Mr. McAllister evidently overestimates the effect of his effort on one's mental sensibilities.

It does not jolt the mind a particle; and it is far less a "rough mental journey" than a dreary and monotonous one to travel through its pages. He need not have advertised its entire innocence of scholarship and elegant diction, for the class he so fittingly represents is not as a rule distinguished for that sense and diligence which are essential to average literary excellence and expression. Nevertheless, his book as an authoritative definition and exposition of the vast issues and interests involved in "first society," and as an ultimate ring on the uplifted horn of aristocracy grounded in hereditary wealth, is a useful and an important one.

It reveals the moral and intellectual hights to which society thus founded may climb, not alone in our New World Babylon, but in every other city, when given the proper time and scope to expand, "pull itself together" and soar to its loftiest ideal.

It is significant, not because it plainly voices and measures the ambitions of a class which—thanks to a compensating Providence—is forever few and limited as compared with vastly larger classes who are of some actual use to the world in which they live, but because it unerringly indicates the one goal that the descendants of all very rich men in our cities are striving to reach.

For while it is true that "many are called but few are chosen," it is equally true that all try to get there and are chagrined and disappointed if they fail to be numbered among the elect.

New York's "400" do not differ in organic quality and aspirations from the moneyed element in younger and smaller cities, save as a regular army corps differs from half-drilled and ununiformed militia companies and regiments that are aiming to become adepts in the same order and tactics. In short, New York's "400"—deny and kick against it as we may—embody the materialized and perfected substance of things hoped for by all the scattered society fragments whose members aim to walk in the same path.

Where these paths lead, especially if paved with gold, can easily be learned by reading Mr. McAllister's "Guide Book." In one portion of the volume he tells how he converted a bright, unsophisticated young kinswoman into a popular and successful society belle by adroitly and gradually emptying from the dear girl's heart and brain every noble emotion and aspiration and filling the void with polite society chaff until she resembled a bird of Paradise deprived of its inward and original substance by a skilled taxidermist and then stuffed and mounted for exhibition in a dead-bird show.

He relates how he managed to get her well married and settled, for all of which the young lady and her fortunate husband ought to be truly thankful.

To prove that society people have warm and sympathetic hearts to tie to, and are duly considerate of the feelings of old friends who have been unfortunate and have dropped out of the charmed circle, as thousands do, and are excluded from Eden by the "flaming sword" of gold and of fashion, Mr. McAllister proudly says: "A true society man will not cut an old fossil who dresses shabbily but has the aspiration of a prince. If you see him, cross the street and avoid meeting him, but don't cut him."

Of course it is not only generous but brave and manly in the "true society man" to cross the street to avoid meeting an old friend whose only fault consists of financial reverses which had, in the twinkling of an eye, changed him from a gentleman to an "old fossil." But, in case of the street being muddy, as Gotham's are in certain seasons, a rheumatic society man might slip into some convenient shop and a young and limber one climb a convenient lamp-post to save patent-leather boots rather than "cut an old fossil." If Mr. McAllister's ideal society exercises such an elevating and humanizing influence upon men, what must it do for the other sex, who are necessarily more subject to conventional forms than men are?

Mr. McAllister should at least be thankful for frankly, if unconsciously, portraying a condition for which every genuine man or woman ought to blush.

The social offspring he has introduced to the American public, and which has a hundred devotees among the followers of Mammon where the Babe of Bethlehem has one, is the crown and blossom of nearly two centuries of labor and travail on the part of Gotham's hereditary wealth.

A few men in whom acquisitiveness predominated over every noble and manly attribute have successfully made the accumulation of surplus means the chief end of existence.

The descendants of these men have succeeded in keeping this wealth—most of it gathered through unfair and dishonest methods—within the limits of family control. The result has been the creation and evolution of a social structure and dynasty labeled by Mr. McAllister as society's "400." And it is admitted that these 400 are the fashion leaders of America. It is said that the late Wm. H. Vanderbilt spent several hundred thousand dollars on a single great party in the vain attempt to become a member of this envied order; and an ambition akin to this inspired the wife of another American money king, when she sued a London editor for publishing to the world the awful fact that the lady had in former years worked with the hands given her for the express purpose. The London courts, according to precedents founded on the Old English law, "the greater the truth, the greater the libel," rendered judgment in the woman's favor.

This order of aristocracy, this house that money built, is the end to which our commercial prosperity, under the workings of great private trusts and our American system of protection (for manufacturers and corporations) is leading us. And to this end we seem to be dedicating our free institutions, our Congress and our courts, with the American eagle, the star-spangled banner and the Declaration of Independence thrown in.

It is said that Americans do everything in a hurry, but one can hardly realize that in less than a hundred years we have renounced the democratic ideals of Washington, Franklin and Jefferson and placed the crown of social distinction on the brows of lazy parasites whose chief claim to the honor lies in the fact that they consider it degrading to earn their living and creditable to feed, fatten and grow wealthy on the toil and misfortunes of those whom their fathers robbed. Such an outcome is calculated to confirm Darwin's theory, though it hardly seems possible that a creature which, according to high scientific authority, began its dual-legged career as a robust, roaring, lusty gorilla, representing the survival of the strongest, wandering untamed and unintimidated through the unbroken wilderness of animated nature, holding in its all-conquering hand an uprooted sapling for offensive and defensive warfare, and bearing in its rude breast and brain the latent germs of mighty manhood and of divine aspiration and immortal destiny, has at last ended that career and merged all its lofty promise in a little capering, dancing, decorated thing, balancing its diminutive dignity over a six-ounce cane, crossing streets and hiding away to avoid meeting or cutting indigent and unfortunate comrades, and finding its highest satisfaction in midnight sprees, suppers and carousals and in making fantastic shadows on the walls of fashion.

Dead to all sense of right,
Turning day into night,
All life's variety
Merged in "propriety"—
Graceful "400."

Oh the slight change they made
All in late styles arrayed,
Forward through flunkeydom,
Down into monkeydom—
Noble "400."

City and Country Life.

In an interesting article in the December *Forum*, on "Longevity and Country Life," President C. W. Eliot points out the great difference between an urban and a rural population in the average duration of life. Taking the registration reports of Massachusetts for forty-seven years, he shows that in the thirty years from 1850 to 1880 the average age of all the persons who died in Suffolk county, an urban county on the seaboard, was 23½ years; the average age of all who died in Barnstable, a rural county on the same seaboard, was thirty-seven; in Franklin, an inland rural county, 38½, while the average age of all who died in the island county of Nantucket during the thirty years was very nearly double the average age in Suffolk, namely, 46.15.

The same reports, he says, show that the annual death rate is uniformly higher in the densely populated counties than in the sparsely populated ones. Other causes besides density of population, he concedes, contribute to produce these striking results, but the fact remains that a family which lives in the country has a better chance of long life than one that lives in the city. In spite, however, of the tendency of city life to shorten the average duration of human existence, it is interesting to note that the urban population is increasing far more rapidly than that of rural sections.

Representative William M. Springer, in an article in the same number of the *Forum*, calls attention to the fact that between 1880 and 1890 the increase of rural population in this country was only eight per cent, while the increase of the urban population was more than fifty-seven per cent. This computation includes only cities of 8000 and upward, and Mr. Springer believes that if it embraced cities of 4000 it would indicate that the rural population had decreased during the decade, while the total increase had been in the cities.

These two results have been due, of course, very largely to the removal of country people to the cities and towns, which have grown in size by the depletion of the rural districts, the latter acting as feeders to the former, and swelling the total population of the cities, while keeping down their own.

The causes of the strong attraction which the cities possess for country people are obvious enough, but it is probable that a great majority of those who are drawn to them do not realize what they lose by the exchange, and how little most of them really gain. There are more amusements, more pleasures and more opportunities for the accumulation of money in a city, but there are, on the other hand, more worries, troubles and chances for disappointment and failure than in the country.

Scarcely one person in ten thousand betters himself permanently by leaving his rural home and settling in a city. To most, such a change means an increase in anxieties, in the uncertainties of livelihood, in the nature and hours of labor, and in the hardships and wearing burdens of existence. Life may have less color in the country, but it has more calm, less bustle and excitement, but more depth and true satisfaction, less brilliant rewards for the few, but more lasting happiness for the many.

Above all things, as President Eliot shows, the pure air, healthful exercise and the restful surroundings that insure a tranquil mind and a contented heart in the country make for a long and vigorous life, free from morbid influences and carking cares. Under such wholesome conditions there are sound minds in sound bodies, and the country gives us the men and women who replenish the worn-out and enfeebled stock of the cities, and supplies the leaders in thought and action necessary to the progress and greatness of nations. Thus the country is not only the material foundation of a nation's prosperity, but of its intellectual and moral welfare also, and any undue decline in its comparative population must be regarded with regret and solicitude.—*Baltimore Sun.*

A LIE NAILED.—Old Lady: Yes, when Gen. Washington came here, he sat right in that chair, with me on his lap, told me I was a very pretty girl, and— Tommy Makeabreak: I thought Washington never told a lie.

Alfalfa.

[Written for the RURAL PRESS by ISABEL DARLING (LUPA).]

"Say, Bub, what young one is that?"

"Which?"

"The one down by the water."

"Oh, that's Alfalfa."

"Alfalfa! Where did she get such a funny name?"

"We gave it to her."

"What under the sun is she doin'?"

"Making a bed for her doll-baby."

"What out of?"

"Willowe."

"Well, I swan! How black her hair is! Why, she's an Indian!"

"Yes, Pah-Ute."

"How did she get here?"

"Ask one more question and you'll have an even half dozen. It seems to me you're of an inquiring turn of mind, as they said about the cat when she smelt of the cream. You grew here in 'the States,' I take it. I'll tell you, though. We brought her. You appear to want more—have an Oliver-Twist kind of feeling. All right. 'Have a carriage to the Russ House, Russ House?' or 'This way to the Palace Hotel, sir?' Any place where you can get your soup-bowl filled. You really do want to know about Alfalfa?

"Well, 'once upon a time' we, myself and the rest of us, left California to take care of itself for awhile, and came back over the summit into Nevada. Never mind what we were after, for we didn't get it, but kept stock and raised alfalfa for hay.

"Don't you know what that is? It's a tall, coarse clover with a purple blossom full of honey (the bees soon smell it), and it grows so fast we cut two, perhaps three, crops in a season. White help is scarce and every one hires Piute men, sometimes women (they never call themselves squaws) to rake and pitch. The men don't work because they like it, but because they want money, and they do like gambling. The women work to live, I suppose, and keep their babies, but they never seem to have more than two or three, and when they go to work at white people's houses they take them along, and maybe a mother or sister for a nurse; so if you hire one you have quite a family to board, but then they ask only four bits a day."

"Say, sonny, wait a minute. How much is four bits?"

"Half a dollar—fifty cents."

"All right, drive on; but it's curious what a difference there is in folks."

"Here's another thing for you to mix with your black birch and sassafras to chew till you've studied out the meaning of it. You never can make them own to having a name in their own language. Twist your question as you please and they will say, 'no, no Pah-Ute name,' so the whites label them and we had a plenty of Charlies and Toms and Sams and Marys and Janes in the hay-field.

"One afternoon they had gone to their work as usual, but inside of an hour fat old Sally came waddling back to the house, all out of breath and sputtering something about 'Louisa' and 'papoosie;' but the Pah-Ute and English words tumbled over each other so mother couldn't make them out and went to see what she meant. What do you think she found?"

"I give it up."

"Well, Louisa sat leaning against the hay and on the ground beside her, rolled up in her apron, was a black-eyed, brown-faced baby, looking around as coolly as if it had always seen such things and wasn't at all surprised."

"Good natur'!"

"Yes, mother felt that way, but she brought out some small clothes that were left over when we 'kids' kicked out of the cradle, and father paid her for a full day, with two bits over for the papoose, and found a chance for her to ride home (it was two miles and she was going to walk), but that child couldn't be moved till it was tied up in just such a thing as Alfalfa is making now, only it wasn't handsome like the one she had afterward, all close work of fine willows, with that round roof over the head-piece stitched with red, green, blue and yellow worsted, and ribbons to lace across the front after the baby had been wound in its red shawl and laid in there.

"You needn't ask. Yes; that was Alfalfa, and we made a pet of her, for she was Louisa's first baby, and was always clean and dressed like white children, with stockings and little red shoes. She was always pleasant but solemn looking, as if somehow she was sorry for herself but never expected anything different. Louisa wasn't one of the gay kind, either. Baby's father was a dude. He wore a silk handkerchief around his neck when the others wore cotton, and carried a watch, and the ostrich plume in his hat was never shabby."

"You don't say! The men wear feathers in their hats! I thought they stuck them in their hair, in a straight row down the back of the head."

"Ho! They dress mostly like other folks, but they do like feathers, beads and blankets yet. When the Blaine hats went out of fashion with us they came in with the Pah-Utes; but I never saw them trimmed with any plumes except black. The women go bareheaded or run a string across one corner of a blanket, so as to make a hood of it, or if you give them a sunbonnet, they will wear it, but they don't put on style like some of the men. Dude

Charlie was a boss gambler, and spent more than half his time in Virginia City, so he thought he would pick out another wife and keep her there. [They are allowed to have only two.] But Louisa didn't seem to like it. She didn't say much, but sometimes she talked with the women she worked for. She was proud of him, you see, and wanted him all to herself."

"That's nat'ral."

"I suppose so. One winter day she took cold going home after a washing and kept coughing and coughing till she coughed herself to death. Perhaps her being low-spirited made it easier. Every one tried to help her, and the Pah-Ute medicine man was terribly anxious, for he had already lost two patients and he knew the next one would make a bad slip-up for him. Oh, I forgot that you don't know what that means. If their doctor loses three cases one after another, the tribe concludes that he has been practicing without a diploma from the Great Spirit, and a committee of three is chosen to shoot him at sight. Their ways of curing are not all down in our doctor books, but perhaps, on the whole, they don't kill any more than ours.

"Louisa died, and the doctor, poor man, never practiced any more. Dude Charlie was shot six months after for something a relative of his had done long ago, and we managed to get Alfalfa to live with us. We've kept her ever since, couldn't do without her. She was three years old then; she is five now. That's all."

"It sounds *jest like a white story*. Thank ye, boy, thank ye. 'The Lord hath made of one blood all the nations of the earth.'"

The Coming Woman.

EDITORS PRESS:—My friends Clara S. Brown, Maude S. Peaslee and others could not have read my articles very carefully. I said in the beginning that I was talking about cooks *in the future*—that we were in a transition age and could not at once reach a time in which things are the way they ought to be, but we are surely coming to it. Then women shall be able to do what *is* truly womanly.

Those who like to cook are perfectly welcome to do so if they want to, but I maintain that they have no right to set themselves up as models for all other women, and nobody has any business to point to these cooks as models and taunt other women on their account.

As to the question of "affording," I say it is the poor woman who can least afford to sacrifice herself to cookery. Her family, if she has any, look to her for inspiration in art and culture, if that family are ever to know anything about these things at all. A rich woman can hire artists and professors—these cost more in the end than cooks.

How is a girl to study anatomy and painting in addition to the usual education? These branches are already becoming part of the usual education. As a matter of fact, thousands of girls are studying anatomy and painting and paying for their own lessons, earning the money by teaching and in various ways, precisely as they have long been paying for music and elocution lessons. It is not a question of means at all, but a question of judicious choice. Going back a little, because thousands of girls are doing these things, they have enough to do without worrying themselves over cookery, and they are making a far better preparation for the future than any amateur cook.

As to the question how a girl is to be supported, that is more vital and far-reaching than many of my critics suppose. It is now generally admitted among right-minded people that every child has a moral right to demand support as long as possible. Those who have thrust upon that child the burden of seventy years of earthly existence owe that child everything possible as an atonement. Persons who are not prepared to recognize this obligation, or are too poor, have no business to become parents at all. Now, if the average woman spent as much time and thought in studying her real duties to posterity as she does to the "science" of pots and kettles, the problem of any child's support (and education) would be well-nigh solved before there was the possibility of a child at all.

The whole subject resolves itself into one grand appeal to all women to look forward. Rise above the "weak and beggarly elements." Don't "hug your chains." Don't dwell upon the petty cares and hindrances of the present as divine ordinances which must always necessarily be, but think of them as local and temporary, and do what you can to prepare the way for the royal woman who is to come.

MARGARET B. HARVEY.

"YOUR husband is less at home now than ever," reiterated the minister. "Do you try to make home attractive to him?" "Do I? I should say I did. And not only that, but I've got my mother to come live with us to help make it still more pleasant for him."—*Philadelphia Times.*

HIS FIANCEE: Are you sure you would love me just as tenderly if our conditions were reversed—if you were rich and I were poor? He: Reverse our conditions and try me.—*Brooklyn Life.*

"Life is an accident."
"And is always fatal."

YOUNG FOLKS' COLUMN.

Blackie Whitehen.

A True Story.

[Written for the RURAL PRESS by KATHERINA BRYANT NOLAN.]

Old Lady Whitehen nestled her family in a sheltered nook behind the barn, and a big, uneasy chicken was perched on her back, warming his toes.

He balanced himself with difficulty and winked his eyes as if he needed to finish up his morning nap; still he appeared to look very comfortable to three or four fluffy little fellows, who stood around and looked at him wistfully from out of the corners of their eyes.

It so fell out that Mr. Whitehen came strutting round the corner just then, and when he saw Mrs. Whitehen he saluted her in most gallant fashion. He was able to crow the longest and loudest of any rooster on the ranch, and was a handsome, noble-looking bird.

Four of the young things, so cosily cuddled under Mrs. Whitehen's soft breast, poked their way out to look at Papa Whitehen, so the three small wait-abouts rushed underneath and nestled uneasily into the vacant places. She stood up to make room for them and the little rooster on her back came down "on the fly," and did not stop until he happened to meet another little rooster, when he came to a sudden halt.

It was war to the two chickens. They glared at each other awhile and then with a spring and spread of wings they touched beaks and tried their spurs. Still it was a harmless, comical, gay little dance they really led each other, although they made a pretense of being very bloodthirsty.

The old gentleman stood on one foot and cocked an eye at them as if he was proud to see so great a fight in the family. The hens set up shrill little cackles, those who could stop eating long enough, otherwise the fight went on without creating any excitement. When these two young warriors were tired of the battle, they walked off together in a very friendly sort of way, keeping an eye out for flies and grubs, and that was the end of it all.

These chickens lived in a lovely place in one of the famous valleys of Southern California. The rancher raised a great many chickens and his wife looked after the young things when they broke out of their shells until they were old enough to go abroad with their mothers. The latter were very ungrateful old hens. They looked upon Mrs. Rancher as an enemy, and no amount of experience ever taught them any wisdom or manners. They were indeed a stupid lot.

Mrs. Rancher flew about in a broad-brimmed hat; she just hated a sunbonnet. It was always blowing off and dancing all over the grounds, carried by the fresh ocean breezes hither and thither, yet she always ran after it patiently until she caught it and plastered it upon her head as if it was sure to stay firm after that, but it never did. It was fully as unruly as the hens.

This particular morning she came out and went up toward the mountain. Multitudes of small houses resembling dog-kennels stood in rows on this elevated, sloping part of the ranch. Opening the roof of one of these affairs and looking in, she said:

"Oh, you little darlings."

Four hens set on four nests, each made within a square box, and there was an opening just big enough for a hen to go out into the little corral made of laths. None of the four biddies moved the least bit; they did not even wink their eyes, but stared stolidly straight ahead. Mrs. Rancher didn't look at the hens, for in one of the nests five black and white downy, fluffy little chicks winked their bright eyes, and were cunningly balancing themselves on the uneven edges of the straw. She put her hand in and cleared out the broken egg-shells, but quickly shut the cover with a slam and went down to the house, Mrs. Crosspatch was so savage and pecked at her so fiercely.

The morning fog had now rolled down from the mountains and rested like a fleecy, billowy cloud in the valley far below, so Mrs. Whitehen started out to scratch for her family and keep their crops full. This was a tedious task, as a chicken's crop never stays full; there is always a hollow waiting to be filled up. So it was scratch, scratch, scratch—work, work, work all the day long for Mrs. Whitehen, who was an amiable old thing. Her chickens were of all ages and sizes, principally because they had been adopted when their brothers and sisters met with disaster. They were a mournful lot. Their relations had been drowned, gobbled by snakes, strange cats, stray dogs, and disappeared mysteriously; so it was a complaining, easily-scared mixed-up brood that followed her around in the daytime and slept under her wings at night.

At high noon, there was a row up in the chicken ranch. Mrs. Rancher ran up and lifted the same cover and four, downy, fluffy, little things lay dead. Two angry hens and broken eggs told the tale.

"Dear me," said Mrs. Rancher, in a vexed tone of voice; "I wish I had taken old Crosspatch out this morning. I might have known she'd do something. I do feel so cross."

At that, she grabbed Mrs. Crosspatch by the leg and sent her flying toward the big henhouse.

"Come, little Blackie," she said, as she took the little fellow left over from the fray in her hand; "I'll take you down to the house and try to raise you."

So Blackie was born and coddled and fussed with until he was strong enough to run with Mrs. Whitehen, and then her troubles began. He was a noisy little, fluffy little, black little Langshan. He was eternally thirsty to begin with, and could not ever get enough to eat to go on with. His legs were so short that it took nearly all his time to run after the others, and he yipped so shrilly whenever he found himself left in the rear that Mrs. Whitehen always ran back and scratched him up something delicious at such times. In this way he became a noisy, fussy, troublesome, spoiled chicken, and was growing up without the least training, which made him very selfish indeed.

One day he was racing along full tilt, chasing a fly, and he ran right upon the back of Bessie, the old red cow. He forgot all about the fly, and fell to scratching with those two tiny feet of his as if in the middle of a fine gravel-heap, and this was rare fun until the cow decided that it was time for her to stand up awhile. She chewed her cud solemnly, blinked her eyes wisely and gazed straight ahead just as if no such thing as a chicken ever existed. This was maddening to a chick of so great importance as Blackie felt himself to be, and he began a series of yells or yips that brought Mrs. Whitehen back in a hurry.

Her beak was close to the ground, her wings spread until they dragged, and every feather on her body stuck out straight, so that she looked very fierce and equal to two ordinary-sized hens. She raced around awhile and then ran off after the rest of her brood, so Blackie settled down to think things over and decide how he could best help himself.

Presently a big horsefly came and buzzed saucily in the cow's ear. She gave it a flop, and he rushed into her eye and then up her right nostril, which tickled her. She gave her head an angry shake and he sailed back toward the chicken who had an eye on him. Whack! went that cow's tail and off went that black chicken, sailing through the air like a little balloon. Mrs. Rancher was looking out of the pantry window, and she laughed and considered it a most excellent joke.

Blackie did not consider it at all funny. He thought it a narrow escape from sudden death, and he grew somewhat sedate, learning to take care of himself and also to make less noise. When he got his growth, he was a big, handsome, shiny, satiny looking bird, with long, drooping tail feathers, that shaded into lovely green tints in the sunlight, and he became the lord and master of the flocks.

He was quite the pride of Mrs. Rancher's heart, and she never tired of telling the story of his hatching out, and of the day he sat on the back of the old red cow.

GOOD HEALTH.

Electrical Remedies.

A contemporary gives the following: The number of electrical appliances for wearing upon the human body are almost numberless. There are many people who believe that electrical belts, brushes, combs, etc., have a strong curative power. There are also found people who will carry a piece of potato in their pocket as cure for rheumatism. The latest fad in this line is to carry a bit of electric arc-light carbon, that some of the electricity left over from last night's lighting may soak into their bodies and ease up on the pain a trifle.

All these notions have not the least foundation; a person may stand between the poles of the most powerful magnet yet invented, and strong enough to lift hundreds of pounds of iron, and never feel the slightest magnetism, either for good or for ill. A theory is in existence that the magnetism attracts the iron in the blood and thus starts up a better circulation. All the iron that exists in the human system is combined with hydrochloric (muriatic) acid and is in the form of the oxide of that metal, and in this form the magnet has no power over the oxide of iron; and if a person's blood does not circulate until it is started up by magnetic effect upon iron contained therein, it would not circulate more than once during the coming century.

There is a great deal in the use and abuse of imagination, and people who are taken violently ill after riding a few blocks on electric cars are ready to be rated as first-class cranks as far as imagination is concerned. A current of *electricity* passing through the body may benefit by agitating and perhaps decomposing certain portions of the tissue, but *magnetism* has no effect whatever upon the human system.

A little electricity goes a great way in this respect; physicians, in giving electrical treatment, use from one to five one-thousandths of an ampere. From two to four amperes passed through the vital parts of the human body is sure death. The tissues cannot stand so violent an agitation. The resistance of the body is so great that hundreds and perhaps a thousand volts pressure is necessary to force this amount of current through the body.

When meaning to take a little magnetism or electricity for the body's good, it might be well to have the electricity applied by a responsible physician, but do not go to the trouble of taking your ride on the field magnet of a light dynamo, or sandwich yourself between the poles of a big alternating current machine.

HEALTH OF THE STATE.—The report of the State Board of Health gives mortality reports for November from 103 localities, with an estimated population of 752,739. It shows an annual mortality at the rate of 18.60 per thousand, which is the largest death rate we have had for many months. This increase is due to the increased area of country in which diphtheria, typhoid fever and acute pulmonary diseases have been present. The mortality from pneumonia, for instance, just doubled that for October, and the deaths from diphtheria and croup were also largely in excess over the preceding month. Consumption caused the death of 157 persons—an increase over last month. Pneumonia was fatal in 110 instances, bronchitis caused 24 deaths, congestion of the lungs was fatal in 19 cases, and whooping cough caused two deaths. Diphtheria is credited with 58 deaths, which is a largely increased mortality over last report. Thirty-seven of these deaths occurred in San Francisco.

DANGER FROM MUSICAL INSTRUMENTS.—A French military surgeon has been making researches on wind instruments which had been used by phthisical bandsmen, and warns musicians of the importance of disinfection. He recommends that instruments should be filled with a five per cent solution of carbolic acid, or, in the case of metallic instruments, that they should be dipped into boiling water. These precautions are of the utmost importance when phthisical persons have used the instruments; for it was found in such cases that liquids used to wash them out presented a virulence similar to that of a pure culture of tuberculosis. Happily, the danger is small as long as the interior is thoroughly moist, which of course it usually is; but when an instrument has been lying by for some time, so that the interior has become dry, there is real danger of air containing dried germs of the disease being drawn into the lungs of the person who next plays upon it.—*New York Ledger.*

DOMESTIC ECONOMY

A Batch of Griddle Cakes.

The approach of cold weather sharpens one's appetite for hot breakfast cakes, with their usual accompaniments of plenty of maple or sugar syrup. It is said that there is no food which supplies so much carbon to the system as sugar or molasses, and now is the time when one needs a good supply of coal. Try a few of these recipes, and see if they are not good.

Put one pint of graham flour, half a pint o white flour, half a pint of Indian meal, one heaping teaspoonful of sugar, half a teaspoonful of salt and two teaspoonfuls of baking powder into a sieve, and sift them. Beat one egg till light, and mix it with half a pint of milk and the same amount of water. Make a smooth batter from these ingredients, adding a little more milk if too thick. Bake as usual on a hot griddle.

Rice Cakes.—Take two cups of boiled rice and mix with half a pint of milk while the rice is warm. If cold rice is used, great care must be taken that the lumps are well broken. Stir in one pint of flour, into which one heaping teaspoonful of baking powder has been thoroughly mixed, one teaspoonful of sugar and one of salt and one well-beaten egg. Beat the batter till it is very smooth before baking.

Indian Meal Cakes.—Take three cupfuls of Indian meal and one cupful of graham flour, one teaspoonful of sugar, one-half teaspoonful of salt and two teaspoonfuls of baking powder; sift together and mix into a smooth batter with two cupfuls of milk—or more if the batter is too stiff. Make the cakes small and bake at least twice as long as other griddle cakes.

Quick Buckwheat Cakes.—Sift two cupfuls of buckwheat flour with two teaspoonfuls of baking powder, one teaspoonful of salt and one tablespoonful of sugar. When ready to bake, add cold water enough to make a rather thin batter.

Raised Buckwheat Cakes.—Take a small half-cupful of nice light yeast and mix with two cupfuls of warm water and one teaspoonful each of salt and sugar. Mix wheat and buckwheat flour in the proportion of two cupfuls of buckwheat to one cupful of wheat, stir the mixed flour into the yeast and water till it will drop from the spoon like dough. Set the batter in a warm place and let it rise at least half. As soon as the fire is built in the morning, stir warm water enough into the dough to make it rather thin batter, set it near the stove, and it will have risen enough to be nice by the time it is wanted for baking. If there is a suspicion of sourness, add a little soda.

All griddle-cakes are better if eaten hot and crisp as when first taken from the griddle. A square of salt pork is the very best griddle-greaser. The griddle should be lightly greased and no accumulation of grease or scraps should be allowed to collect in it while baking. It is better to scour the griddle with salt and wipe carefully before putting away. If the griddle is washed with water, it is likely to stick.—*Albany Cultivator.*

The Week.

Since our last a moderate amount of rain has reached most parts of the State, and has done much to remove apprehension, though the fact remains that the winter thus far is one of the driest upon record. As we write, however, on Tuesday, the indications in sky and air and the reports from the north combine to indicate rain in California perhaps before Santa Claus can finish his rounds.

We go to press one day earlier this week to give our employes a chance for Christmas enjoyment. As this will be the last issue which can reach most of our readers before the New Year's holiday, we extend to all an earnest wish for a Happy New Year. May it bring comfort to their homes, prosperity to their enterprises and joy to their hearts. May it be a good year in the highest sense in every individual's experience, and then it will be a happy one according to the verdict of the ages, that with the highest good dwells the greatest happiness. Thus may it prove to all of us.

A New Year's Sermon.

We live in an age of enlightenment and in a country notably rich in every form of natural wealth. We enjoy the advantages of liberal institutions and a free Government. Churches and schools abound, newspapers and other means for the cheap dissemination of knowledge being within the reach of all. And yet there are heard complaints among every class and on every hand. Look where we will and we see the evidence of much poverty, suffering and widespread unrest! The tillers of the soil and the toilers in the factories, the wage-payer and the wage-earner, the producer and the consumer, all are dissatisfied and clamoring for a change. Everybody is crying out for reform, an end that everybody hopes to reach by different means.

The grain-growers of the North and the cotton-planters of the South are anxious that the General Government should advance them money, at low rates of interest, on their lands and the products thereof; this done, these honest people fancy they would be prosperous and happy. As a cure for all the ills that flesh is heir to, the Nationalists would have the Government possess itself of all the telegraphs, the railroads and other means of transportation and operate the same in the interests of the people; this accomplished, the Nationalistic heart would be gladdened, and the whole world and the rest of mankind be relieved from the severer burdens of life. Intoxicants, say the Prohibitionists, are the cause of all our multitudinous woes. Stop then their sale and save the race. Give us greenbacks, say the advocates of that species of currency, and we will be all right. Adopt the free coinage of silver, exclaim the friends of the white metal, and the country is safe; gold or ruin, say their opponents. Single tax, shriek the landless disciples of Henry George, to which a great army of cranks respond, co-operation forever, community of interests or equal distribution of property being the panacea of the socialist and other proletarian bands.

Wherefore this clamor? Why this all-pervading discontent? Whence comes it and what does it mean? Let us look a little below the surface and see if we cannot detect other causes for most of these troubles than those ascribed by this vast concourse of malcontents. What about our growth in luxury and extravagance? Our costly amusements and pastimes? What about the time and the money expended in these? Looking back, is it not perceived how great has been the spread of these pernicious and costly practices of late years? How fearfully during this time has been the growth of the alcoholic, the nicotine and the morphine habit! How have the drinking saloons and the opium dens been multiplied among us, the simple beverages and healthful recreations of the olden day having been forgotten or converted into mere money-making devices.

It is now little else than a constant round of horse races, prize fights, rowing or wrestling matches, baseball or billiards, with a score of other pastimes and pleasures equally pernicious and expensive. How can a people hope to prosper whose intoxicants cost more than their clothes and their tobacco half as much as their bread? How can they hope to make money when, in idleness or dissipation, they lose fully ten per cent of their time

How can they expect to get ahead when they spend the bulk of their earnings in the indulgence of pleasure or in the purchase of articles wholly unnecessary if not absolutely hurtful? It cannot be done, and the sooner these suffering and complaining thousands come to realize this fact and act accordingly, the better for them and all others concerned. Let these deluded people emancipate themselves from their evil habits, economize their time and save their money, and there will speedily come an end of hard times. This is the true panacea, compared with which all these other reforms, even if practicable, would count as nothing. It is the case, indeed, that the inhabitants of these United States will have to largely amend their ways in the several particulars mentioned, or it will matter little to them whether these other reforms carry or not. A people who have surrendered themselves to mere pleasure-seeking and sensuality are already lost, or so near it that any effort made in the hope of saving them would be labor thrown away. D. G.

The Ennobling of Silver.

We had an interesting talk the other day with Mr. Albert Montpellier, Manager of the Grangers' Bank, on the financial situation. He called our attention to the significance of the incidents of the recent monetary crisis in England, which was averted by the shipping of $15,000,000 in gold from the Bank of France to the Bank of England. A letter from Paris, describing the incident, says:

This is the third or fourth time that the Bank of France has gone to the help of the Bank of England during the present century, and the explanation of it is very simple. The Bank of England has only one kind of metal in its safes and can only pay in gold, but the Bank of France can pay its way in silver, and so it does not have to go around borrowing gold when short of that metal. If the Bank of France is richer than its brother inssitution in London, it is because its vaults are filled with both gold and silver.

This chapter of French experience seems to have especial significance for us. Our growth as a country and the vastly increased volume of our commercial transactions call for an increased circulating medium. Plainly, we need more money to do business with, but we need also good money, not something which appears to be money but is not. This end could be accomplished by the remonetization of silver, that we could have both gold and silver to meet our needs, as has France.

Irrigators' Convention.

Much space upon another page is given to matters pertaining to a meeting of irrigators to be held in Sacramento on January 8th, prox. This is, as elsewhere stated, a prosecution of the work begun at the Tulare meeting a few weeks ago, and it should attract the attention of all irrigators, especially those working or intending to work under the Wright law. It will be seen that a plan is proposed for centralizing and crystallizing the irrigation interests of the State into a form likely to prove valuable and effective in many ways. Whether this plan is best or whether some other proposition would offer better results, we do not presume to affirm. It is well, however, to have some definite propositions before the people in advance of such a meeting, that they may think over the matter and discover what may be even better than that proposed. Our columns are open to such propositions, and anything of this nature submitted in time for publication in our next issue will reach those interested in advance of the meeting.

We cannot but urge upon all interested the importance of attending the meeting which has been called, and bringing their insight and their experience to the elucidation of the subjects which will be brought forward.

Beet Sugar at Chino.—The construction of a first-class beet-sugar factory at Chino, San Bernardino county, is assured. Richard Gird and Henry Oxnard have signed contracts for the work, and thus assured the construction of the factory and the growth of beets sufficient for its operation. It is announced that $500,000 is to be expended in the works, and the inception of the enterprise will be of great importance to the South and to the whole State.

Sorghum Syrup.

In our last issue we alluded briefly to the manufacture of sorghum syrup, and promised notes from the experience of producers.

Mr. James Linforth of this city, the well-known dealer in sorghum machinery, shows a number of personal letters from interior sorghum-growers and syrup-makers, from which we quote briefly to show the drift of the business. T. J. Henderson of Butte county writes: "We have just finished and there was a merchant waiting with an express wagon for the last 30 gallons. We have had orders since which we could not fill." John Blackiston of Placer county writes: "My experience demonstrates that cane can be raised here, and that at a profit. We will go into the business extensively next year." J. F. Butler of Fresno county says: "Our 35 acres yielded over 4000 gallons of syrup. The people generally are disgusted with the fancy 'drips,' and anything pure is hailed as a godsend. Sorghum grows well here, but requires a great deal of water and much labor, so that the profit is less than it should be." B. L. Musseter of San Bernardino county sent up a sample of syrup which we had the pleasure of examining. It is very fine in appearance and flavor. It was shown at the San Bernardino fair and was much praised. Mr. Musseter does not yet find the market as good as he would like, but there is often difficulty in beginning an enterprise. It seems likely that at first the best market will be found in the smaller interior towns and mining camps, and although this requires some effort and peddling, the producer can save freight as an offset for his time in developing his market.

The Squirrel Ordinance Rejected.

Our readers will remember the squirrel ordinance adopted by the Supervisors of Contra Costa county declaring ground squirrels infesting the lands in the county to be a public nuisance, and ordering all owners and occupants of lands within the county to exterminate and destroy them within 90 days after the passage of the ordinance, and thereafter to keep their lands free from the pests. Any person violating the ordinance was guilty of misdemeanor. Such a person, tried and convicted in the county court, appealed to the Supreme Court and was released. The Supreme Court held as follows:

It is certainly a most effective means of abating a nuisance, viz., the squirrels, and bringing about a very desirable end. We regret exceedingly that we cannot see our way clear to uphold and enforce such an important and original piece of legislation. Indeed, it would give us great pleasure to see the power here assumed applied to snakes, tarantulas, ants, flies, fleas and other reptiles, insects and pests which tend to make man's life a burden, and to have it exercised and enforced in every county in the State. But we are unable to see by what right or authority of law a board of supervisors can impose upon a land-owner the burden and expense of exterminating animals *terræ naturæ* on his own land or elsewhere. We know of no law which can be held to authorize a board of supervisors to enact such an ordinance and we are quite clear that it cannot be enforced for the reason that it is unreasonable and burdensome in the extreme. Let the petitioner be discharged.

General Schofield has received a telegram from General Ruger confirming the reported capture of Big Foot and his followers and Sitting Bull's fugitives in Cherry Creek district. The surrender and disarmament of these Indians, Ruger declares, practically ends the probability of any serious trouble with the Indians at Cheyenne River and Standing Rock reservations, and is a good step toward ending the whole trouble.

A new decision of the Supreme Court of the Empire of Leipsic is to the effect that if you remain seated when the health of the Emperor is proposed you are guilty of the crime known as *lese majestas*, a sort of petty treason, punishable by various degrees of imprisonment on prison diet.

Lake Superior Iron Ore to the amount of over 8,400,000 tons was mined this year in that region. This is said to be 1,000,000 tons more than the output of 1889. The Escanaba and Marquette mines produced 5,000,000 tons.

Appalling Reports of starvation at the east end of London have startled the aristocratic west end.

HORTICULTURE.

The Rational Manufacture of Olive Oil as Practiced in Europe.

[An essay read at the Santa Cruz Convention by L. PAPARELLI, First Assistant in Viticulture at the State Experiment Station.]

The following remarks on the operations preliminary to making of olive oil form part of a more exhaustive paper on the whole subject now being prepared by Mr. Paparelli:

Ripening and Picking of Olives.

Ripening.—The ripening and picking of the olives affect very materially the olive-oil industry, and therefore in gathering them their degree of maturity should be closely noted, for on that depends in great measure the quantity and quality of oil that will be obtained.

The ripening of olives varies greatly according to the nature of the soil and of the climate, of the exposure of the plantation and of the tree, also according to the variety cultivated and the kind of manure used.

In warm climates and under the influence of strong sunlight the olives ripen more quickly and in general give a heavy-tinted oil, rich in special aromatic matters. In cold climates, on the contrary, the ripening is retarded and the oils produced are lighter, clearer and whiter. In moist or rainy climates the olives ripen very late, and the quantity of oil they give is less.

In poor, clayey soils the maturity is retarded and the yield of oil small; in a fertile, calcareous soil, slightly moist, warm and rich in phosphates, the ripening is generally normal and the yield much more abundant. The olive-grower in seeking to improve his soil should choose those manures [illegible] will hasten the maturing of his crop and [illegible] the same time increase its quantity and quality.

Finally the maturity will be early or late, according to the variety cultivated and according to the northern or southern exposure of the tree or of its branches; also according to the form given to the tree in pruning, and to the amount of cultivation given to the soil.

In olive-oil making the maturity of the olive should be considered from an industrial standpoint, not from a physiological one; thus, the gathering of the olives should be governed by the quantity and quality of oil that it is desired to produce.

The ripening of the olive is marked by four variations in the color of the pellicle: 1st, from olive-green to lemon-yellow; 2d, from lemon-yellow to red or purplish-red; 3d, from purplish-red to wine-red; 4th, from wine-red to a velvety-black.

Generally, under moderately favorable conditions of soil and climate, the velvety-black color will mark the proper time for gathering the olives for industrial uses, though the ripening is physiologically continued for some time longer.

However, the exterior coloration of the olive is not an infallible sign of its ripeness, for there are modifications in this coloration and variations in its intensity dependent on the different varieties cultivated. It should also be borne in mind that the velvety-black tint in olives grown in a cold climate does not represent the same degree of ripeness that the same tint does in olives grown in a warmer one; so that these and other general considerations, though giving an approximate idea of when to gather the crop, must be supplemented by local experience, which alone can determine the exact time. While noting the color of the outside of the olive, it must also be cut and the pulp examined, to see whether it is whitish or colored, observing also the quantity of water and the droplets of oil it contains; notice should also be taken of the stone, whether it is still white or has become brown, and of the taste of the juice, whether sweet or bitter, and so on.

If, in the extraction of the oil, high quality is the object in view, the olives must be gathered when they show the black-velvety color in cold climates; but as in warm climates this color corresponds to a certain over-ripeness, in order to obtain an oil of equal delicacy the fruit must be gathered while still yellowish and hardly commencing to redden.

If, on the contrary, the oil-maker cares little about the high quality of his oil, but aims principally at quantity, he can gather his olives at their complete maturity. He ought, however, never to leave them on the trees longer than this, for they will gain nothing in oil and run the risk of being spoiled by climatic causes or by birds and insects; and in this case the oil he will obtain will be of even inferior quality to that intended, and it will keep poorly.

Summarily, then, it may be said that olives gathered a little *before* their perfect maturity, yield an oil of superior delicacy and fruity taste; those gathered a month later give an oil of ordinary quality, while those gathered very late give a very inferior oil, which can only be used in the manufacture of soap, or for illuminating or lubricating purposes, etc.

The oils furnished by fruit of different degrees of maturity may be characterized thus:

Very ripe olives furnish a bitter oil; those which are nearly ripe give an oil which has a fruity taste and everything considered is better than any of the others; olives which are completely ripe produce an oil with a strong flavor which is hardly agreeable and is subject to becoming rancid; over-ripe olives yield a very greasy, thick oil, which it is very difficult to keep from spoiling.

Methods of Gathering the Olives.—The ripening of the olives not being uniform on all trees and varying even on the same tree, two or three separate pickings are generally made.

This should be done in good weather when the atmosphere is clear and dry, and when the soil is not damp from previous rains.

Four ways of gathering the olives are practiced: 1st, picking up those which have fallen on the ground; 2d, picking by hand; 3d, beating the trees; 4th, shaking the branches.

The falling of the olives may be caused by climatic influences, or by animals, or finally by overripeness. These fallen olives are gathered and kept separate to be used for the making of an oil of inferior quality.

Hand-picking is the method most to be recommended, as it does not injure the fruit in any way; and in a country like California, where the olive trees have not yet arrived at any great hight, it should be practiced exclusively. Hand-baskets are the best receptacles to use in this way of gathering.

Beating the trees with a pole or stick is the worst possible way of harvesting, and should only be practiced in exceptional cases, as it damages both the fruit and the crop, doing harm also to future crops.

Shaking the branches to make the olives fall, though less pernicious than beating the tree, is not to be recommended except in certain cases; that is, when, from the hight of the tree or the extent of the branches, the olives grow out of reach of the workman's hand. As shaking the tree only detaches the spoilt or overripe fruit, it cannot be considered as a rational mode of harvesting. The conclusion, then, is that it is absolutely necessary to pick by hand if we wish to avoid all danger of injuring the quality of the oil, or of lessening the future production of the tree. Beating and shaking should be limited to those exceptional cases where the olives cannot be reached, by any available means, by the hand of the workman. It must not be forgotten to spread cloth sheets under the trees to save the olives from being still more damaged by falling directly on the bare soil.

Selection and Preservation of Olives.

The olives should be selected to a certain extent during the gathering, and more completely and carefully afterward at the oil-mill. This selection is of great importance, as the fruit communicates to the oil all the qualities and all the defects that it possesses when worked.

To transport the olives from the orchard to the oil-mill, sacks should never be used, but some receptable with unyielding sides, in order to protect the fruit from being damaged on the way.

For this purpose baskets of different sizes and shapes the the most suitable, but in case they cannot be procured, whatever is used must dry easily, and not be too porous or absorbent, like soft wood.

The handling of the olives in filling and emptying the baskets should be done very carefully in order not to break the skin, for in that case, are pulp being exposed to atmospheric agencies, fermentation is likely to set in and extend to the rest, rendering it impossible to preserve them till the time desired. Oil made from such fruit will not only be inferior from the beginning, but will very quickly acquire a very disagreeable rancid taste.

The object in selecting is to separate the fruit into four different qualities; 1st, the good olives; 2d, the dry or frost-bitten ones; 3d, those which have been broken, crushed, or in any way damaged in gathering; 4th, the spoilt olives. It is unnecessary to say that in sorting over, all leaves, twigs, etc., must be picked out.

It may be objected that to put all these details in practice would entail too great an expenditure of time and money; but when we consider the much greater price for which superfine oils can be sold, and the loss there will be in making only one grade of oil from the olives of different qualities, the practice of sorting will be found to be an economy.

Sorting by hand alone can only be practiced on a small scale, but by the use of an appropriate apparatus, moved by some motive-power, large quantities can very quickly be sorted. This apparatus does not make a very complete selection, but is a great saving, even if the separation has to be finished by hand. Such a machine will be described hereafter.

Conservation of Olives.

In a rational treatment of olives they ought to be kept as short a time as possible after picking, for to keep them for any length of time in order to work them at one's convenience is as little practicable as would be the keeping of a similar quantity of grapes to be crushed later. The principal end to be kept in view in the keeping of olives is the prevention of all heating of the mass that would cause fermentation; but as the time which elapses between the picking and the working should be as short as possible, the capacity of the oil-mill should be proportionate to the size of the olive plantation. In this way the delays and losses which are so common in many oil factories will be avoided.

Of course it is useless to attempt to preserve any but the olives picked by hand and in the very best condition; all others must be crushed immediately, as they cannot be preserved by any practical means.

The only good method of preservation is to make use of trays or shelves of willow or cane; all other methods offer insuperable objections.

The trays are arranged on shelves in a cool and well-ventilated room facing north. The thickness of the layer of olives on each tray ought to average about two inches and a half, and under no circumstances should it exceed four inches. Frequent observations of temperature should be made on each layer, and if the temperature rises above 59° F., they had better be taken to the mill at once. In order to prevent any elevation of temperature, it is necessary to turn over the olives often, and so cool them by aeration.

With regard to the quality of the oil, the keeping of the olives should be as brief as possible. It is always better to work them immediately, but as that is not generally possible, three or four days should be the limit. In this time the olives lose a portion of their water of vegetation, which in a rainy season is doubtless of some advantage.

Even when all the conditions for the preservation of the olives are favorable, they must not be kept too long, as the oil may lose but will never gain in quality. In conclusion, I may say that the oils of Nice and Lucca owe their reputation to the fact that there the olives are worked immediately after gathering, or are only kept for a very short time and with all the care demanded by a rational method of treatment.

Practical Olive Culture.

[An essay read at the Fruit-Growers' Convention at Santa Cruz by W. ALSTON HAYNE, JR., of Santa Barbara.]

Feeling sure that olive culture is to become one of the leading industries of California, I deem it of more importance to give my own practical experience than to write anything about the historical olive tree or give any flowery picture of what was done thousands of years ago with this famous tree.

My own experience in olive culture might be of benefit to those who are contemplating planting olives; I therefore venture to give some of my ideas. I say my practical experience, because I believe in this lies the only true road to success. Much has been written about olive culture, and mainly in regard to European experience. From what I have read in French, Italian and Spanish works, while at the same time I have steadily grown the olive for nine years, I do not believe that foreign ideas will do to follow out, nor do they apply to California. I certainly would not have known this had I not found it out by the practical manipulation of olive cuttings and olive trees as the thing is worked here in this State. One idea which seems to prevail is that the olive trees will grow and thrive on thin, poor land, rocky land, in fact any sort of land; that all the useless spots on a place will grow olives finely; that the Lord made these spots on the earth for the olive. I do not blame a man who has had no experience for at once believing this; it is natural that he should. I at one time thought it must be so, My experience, however, has taught me better. I will admit that the olive tree is hardy and that it will live with very little care, but those of us who plant olives do not propose to be satisfied with merely seeing the tree live; we want it to grow, and grow big, and hurry up in every respect. I have planted the trees where I could not cultivate them, among the rocks, and at the same time I have planted them where I could do good cultivating, and at the end of two years it would be hard to convince a stranger that the trees thus cared for were really of the same age, and planted out in orchard at the very same time.

The idea of sterile, thin, rough land being good for the olive is all nonsense. I dare say that many a man has refused to purchase good land for his orchard of olives, because he was led to suppose that two-dollar land was as suitable. I do not pretend to say that one must have rich, heavy, low land for olives; this would be almost as bad for the tree as the poor land which I have described. The first described land I would recommend for goats; the second, heavy, low land, for corn and pumpkins; we have plenty of other kinds of land; soil that is better than the goat land, and yet not so expensive as the corn land. My experience has shown me that the olive tree does best in places where the soil is deep, and especially where the land is new, but the ground must be of a light character, easy to keep loose; sand or gravel mixed in is very good, but not necessary; especially must it be naturally well drained and have a good exposure. The water must drain off from the roots, leaving the ground moist but not soggy.

Most of my trees are planted 30 feet apart; some are 25 feet; I should prefer a greater than a less distance.

To save expense have your land as near level or gently sloping as possible; leave the ends of the rows far enough from the fence, so as to enable the plowman to easily swing a four or six horse team; in this way much money will be saved in cultivating. Where land is out or broken, or rough and stony, one, or at the most two horse teams must be run, and thus four or five men must be employed where one man would do, if the above plan is carried out in laying out an orchard. One live man can cultivate an orchard of 5000 trees for three or four years, with only occasionally having a little help; of course, after this time there will be considerable pruning, and soon after fruit picking will require more labor. Children, however, if looked after, can gather the berry as well as men, and it costs very much less.

In regard to propagating the olive, I have had much experience. I first commenced to propagate them from cuttings, 15 inches long, and of all thicknesses. I planted them in ditches, four feet apart, and in the row from 10 to 12 inches, covering nearly the whole cutting, hardly exposing any of the top. I cultivated them well, and those that grew, when two years old, were ready to plant out in orchard form. In using large cuttings, however, many will die and one cannot count on getting a good percentage of them to come. In fact, this old method does not pay any longer, when one raises trees as I do, for the market, and as I raise many thousands for sale, I have about abandoned this method.

Besides what I have here mentioned, there is another very important thing. The larger the cuttings are, the less roots they develop. Most all of the nurserymen now are propagating from what they call "tips," that is, the extreme ends of the branches; these are easily obtained, which makes it an inducement. This method I have carefully experimented with and have about abandoned it—it is a very slow way—and those that do root, when a year old are such little bits of things that it is really discouraging. The roots, however, that they develop are pretty good, only they seem feeble and make slow growth.

The plan that I have now hit on is a much surer way and develops remarkable roots and grows five times faster than the "tip" method. I use sprouts taken from trees in bearing; they make a very thrifty, fast-growing tree. I now have over 80,000 started in this way, and I shall for the future propagate after this method. One thing I should advise never being done, and that is to plant a large cutting where it is always expected to remain, for this reason: The olive tends to have a surface root, and if the tree is never transplanted and set deeper, the roots will be too near the surface, and when the tree grows a good heavy top and the happy orchardist thinks that all is well, there will come a heavy rain, making the ground like mush; a wind then following the rain, will lay the trees as flat as a flounder, and no staking will ever insure the tree against other storms that will follow. Nothing is more discouraging than after four or five years of care to wake up some fine morning and see hundreds of your trees flat on the ground. What I here mention is only what experience has taught me; transplant, therefore, from the nursery and get all roots well down.

I have planted several large orchards in the Santa Ynez valley, in Santa Barbara county. The one I am now interested in has 114 acres in olives. There are about 30,000 olive trees growing in the valley, most of which I have raised. The trees are now coming into bearing. This part of the county is attracting much attention, and it is looked upon as a grand place for olives. A company has recently been formed and 2000 acres of land has been purchased, all of which is to be planted in olives. I doubt very much if there will be or is such a vast olive orchard anywhere in California as this contemplated one. The Santa Ynez olive oil is to become a famous brand, as the company I have mentioned will spare no expense to make it known the world over.

ENTOMOLOGICAL.

Lecanium Scales on Deciduous Trees.

In the southern part of Alameda county there seems to be unusual trouble with lecanium scales on deciduous fruit trees. These lecaniums are the common black scale of the olive and the apricot scale. A correspondent of the *Call* writing from Niles seems to refer especially to the black scale when he says the pest was brought in on orange trees, but includes the apricot scale in the comments on remedies. We quote as follows:

The scale was evidently brought into this section by an infected lot of orange trees, which were brought from Los Angeles some eight or nine years ago, and it has only been within the past three or four years that the orchards generally became infected, so the manner of ridding the orchards of this pest is a new one to the farmer in this section. The same spray that is used upon the orange trees in the southern part of the State does not seem to answer for other trees. The apricot and peach were the first to be attacked, but this year they are found on the plum and prune as well, while sometimes a few may be seen upon a stray cherry or nut or even a fig, and it will be only a matter of another season when all the trees will be equally covered.

Of twenty-one orchards personally inspected, with the aid of a good microscope, but one, a young ten-acre peach orchard on sandy bottom land, was clean, it had never been sprayed; one other, a mixed eight-acre young orchard, was also almost clean, one or two only being found; it had been sprayed in January with the soda and potash wash, half a pound of each to three gallons of water; one large mixed orchard, old and young trees, had never been sprayed and was literally covered; of the others, nine had been sprayed late, in the last of January or first of February, with soda and potash, half a pound of each to four or five gallons of water, and were even worse than last season; three had been sprayed in December and January with insecticide, one pound to

four or five gallons of water, and were in good condition, comparatively clean; the others were hard to classify, sometimes the peaches were clean and apricots bad, and sometimes vice versa. As the scale has only hatched out within the past three or four weeks, many were sure they had none, the old ones were dead, but a close inspection usually brought them to view.

The general opinion seemed to be that either wash would do the work if carefully applied. It must be in calm weather, neither too hot nor damp; must be applied either in December or January for the first time, and ought to be ½ pound of caustic soda and ½ pound of caustic potash, 98 per cent each, to 3 gallons of water, or 1 pound of the insecticide to 4 gallons of water. Neither wash can be applied later than the middle of February, as it will burn the tender twigs when sap is in them. The cost of these washes is about the same, from 8 to 10 cents a tree, which is a heavy expense, aside from the pumps and labor necessary. Several farmers are intending to experiment with different washes this season and the results will be watched with the greatest interest.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

ALMOND PROFIT.—Livermore, Dec. 15: J & O. Ramke, owners of the old Eidon ranch, just northwest of this place, sold $265 worth of almonds from the old orchard of 70 trees, covering one acre of land, on the place, this season. The variety is the Languedoc, and the nuts brought but 10 cents per pound, while the Hatch varieties sold for from 15 to 17 cents. The Messrs. Ramke intend planting an almond orchard on their property in the near future.

INCREASING GRAPE YIELD.—Livermore *Herald:* Some idea of the increase in crop production being made by the vineyards of Livermore valley may be obtained from a statement of the yield of the Wegener vineyard, planted in 1882. There are 55 acres in vines. The yield in '88 was 85 tons; in '89, 125; and in '90, 220.

PLOWING.—Haywards *Journal*, Dec. 20: Geo. A. Wiley of the Cook ranch, reports that the farmers were well satisfied with the present weather. Seldom has so much land been cut up at this time of year, and the ground was never before in such fine condition. He has already over 600 acres turned over.

Butte.

AN INDIGENOUS OLIVE.—Oroville *Mercury*, Dec. 19: Erasmus Faul, who owns a dairy farm near Oroville, has placed on exhibition a bottle of "Dutch Olives," which were picked from trees on the Faul & Finch tract. These berries resemble the Picholine in color but are much smaller in size. They differ from other olives in having a double seed and grow on a bush instead of a tree, although they resemble the olive family to which they are closely allied. This olive was a discovery made by Faul and the name is one given it by himself. It is an indigenous variety, and when cultivated, the bushes bear prolific crops. The oil made from the berry, of which a sample is also shown, is of an excellent quality, although many claim that it is not as rich as that made from the standard olive. However, Faul thinks that it is destined to fill a long felt want, will suit the taste of people with thin blood first rate, and will prove indispensable for running machinery. Upon the tract there are now about a dozen of the bushes in full bearing, and it is intended to plant the entire Faul & Finch tract of 10 acres to them. The attention of Mr. Faul was first called to this native olive by a herd of swine which he had feeding in an alfalfa tract. These bushes were growing along the fence, and the hogs partook of the berry with great gusto and preferred them to the alfalfa, and Fred finally concluded that what the hogs considered good must have some merit unknown to man, and he began an investigation which has resulted as above stated.

ORANGE NOTES.—Oroville *Register*, Dec. 18: Judge N. W. Winton has been in Oroville for a day or two. The Judge is largely interested in orange growing in Thermalito, and has one of the finest and best cared-for groves in this part of the State. While in Sacramento he purchased from the W. R. Strong Co. four thousand orange trees to be planted this winter in Thermalito. These trees are for W. W. Carr, a wealthy Dubuque, Iowa, furniture manufacturer. They include 1000 Washington Navels, 1000 Malta Bloods, 1000 Mediterranean Sweets, and the same number of Jaffa orange trees. The Judge will plant these on the forty-acre tract purchased by Mr. Carr from the Thermalito Company in August last. He will also plant for his daughter, Mrs. Waitham, ten acres in Mission olives....Mr. E. A. Platt, who had charge for the Strong Co. of the orange picking in Oroville, gives us the following figures: They picked the fruit from 258 orange trees, which gave 705 boxes. These boxes average 176 to the box, making a total of 124,080 oranges. The trees averaged 2 7-100 boxes, or 480 oranges to the tree. Some of them were large, full-bearing trees, and others were just coming into bearing and had but little fruit on. They picked 22 boxes from three trees owned by Mrs. Z. M Sexton, or an average of 7⅓ boxes to the tree. An acre of orange trees in full bearing, as these trees were, would give 80 times 7⅓ boxes, or 586 boxes, making nearly two carloads. The price paid was but $1.40 per box, but at this rate an acre would produce $820 worth of fruit. Joe Gardella furnished 300 boxes from 80 trees, some being so young that only 25 oranges to a tree were obtained. The price was $1.45 a box or $435 from an acre of trees.

Fresno.

WEATHER FAVORABLE FOR PLOWING.—Sanger *Herald*, Dec. 20: Farmers generally state that the ground is in better condition for plowing this year than ever before known. Every available team has been put into service this week, and the area devoted to grain this season will be larger than heretofore. The damp, foggy weather we have been experiencing several weeks past, has kept the ground moist, but fair weather would be more beneficial to the crops.

FRUIT PRODUCT.—Fresno *Expositor*, Dec 17: The shipments of raisins, dried grapes, green fruit, dried fruit and wine in 1890 from Fresno will be considerably more than double those of last year. They already amount to 1286 carloads, against 629 carloads for last year. These big figures show plainly the rapid increase in these industries and explain the prosperity so plainly evident on all sides. The shipments from this point during the time between Jan. 1st and Dec. 10, 1890, are as follows:

Products.	East, Carloads.	Pac. Coast, Carloads.	Less than carloads in lbs.
Raisins.....	602	16	114 215
Dried grapes...	162	2	25 690
Green fruit....	140	59	100 915
Dried fruit....	61	3	34 800
Wine.....	32	186	.
Totals.....	1007	266	*275,610

*Amounting to 13 carloads.

Humboldt.

MORE STRINGENT FRUIT-PEST LAW.—Eureka *Times:* The most important question in regard to fruit-raising in Humboldt is the guarding of our orchards against insect pests. We certainly believe that the Legislature should devise a plan by which the Horticultural Commissions are given more power. The Commissioners, in almost every county, are hampered by the delays of the law, and the opposition and violations of law, by those who care nothing about fruit-raising generally, but persist in endangering the industry and property of others. The Commissioners should have power to condemn and secure speedy execution of their action. Some power similar to that vested in case of glandered horses should be conferred on them. In many instances already the slow operations of the law have allowed the rapidly increasing pests to propagate themselves, where much trouble and serious loss might have been avoided had the Commissioners been empowered to act promptly.

Kern.

PREPARATIONS FOR TREE AND VINE PLANTING.—Bakersfield *Echo*, Dec. 18: Work has begun on the preparation of fields for trees and vines. Where leveling is required, that is being done, and will be followed by deep plowing. Early planting seems to be preferred by experienced orchardists and vineyardists. A gentleman in charge of one of the largest vineyards in the county said recently that he did not consider December too early for the planting of vines. That gave the ground a chance to be settled around the roots by the rains, and less irrigation was required. January and February will be busy months, though many acres will probably be planted by late arrivals from the East as late as March and April. Some of the Rosedale vineyards were planted in the latter month last spring, and the result was very satisfactory.

Lassen.

FREIGHT CHARGES ON LIVE-STOCK.—Susanville *Mail*, Dec. 18: Live-stock may be shipped from Amedee to Oakland or San Francisco at the following rates: Horses, $94 per car; cattle, $80; sheep, $55, transfer at Reno to be performed by owner at his own expense.

FEED FOR STOCK.—Susanville *Advocate*, Dec. 18: Ben Neuhaus, one of Willow Creek's solid farmers, came in from that place on Tuesday. He says stock is still on the range, and the people have plenty of hay now to feed until warm weather in the spring.

FARMERS PLOWING.—Susanville, Dec. 18: Advices from points throughout Honey Lake valley state that enough rain has fallen during the past two weeks to enable the farmers to commence plowing, there being no snow in the valley.

Los Angeles.

ORANGE CROP.—L. A. *Mirror*, Dec. 20: According to estimates, the orange crop of Los Angeles county for the present season will approximate 2750 carloads. This is above the crop of a year ago. Accurate statistics show that about 1700 carloads of oranges will be produced in the following localities: In the San Gabriel and Alhambra districts, 500 cars; in the Azusa and Glendora districts, 130; in the Pomona district, 148; in the Pasadena district, 300; in the Los Angeles district, 316; in the Downey district, 107; and in the Rivera district, 200 cars.

TIMELY WARNING TO FRUIT-GROWERS.—Pomona *Progress*, Dec. 18: Commissioner Mitchell informs us that some of the careless and thoughtless nurserymen in Los Angeles are putting the fruit orchards in this region in jeopardy by the importation of thousands of peach trees from New Jersey. It is high time something was done to stop this importation. The widely-known disease, the yellows, is widespread throughout New Jersey, Michigan, Maryland and Pennsylvania. The disease has killed millions of thrifty peach trees in the East, and no cure has ever been found for it. It is a dangerous trouble in any peach orchard, and spreads with unusual rapidity. The Eastern peach-growers and buyers have repeatedly said during the past few years that, while the yellows is fast reducing the quantity of that fruit grown there, the California orchards have been clean and thrifty. For that reason it was predicted that in a few years California would have the only real peach orchards in the United States. Now that trees are brought into this section from the worst region in the East for diseased peach trees, it is alarming.

PROSPEROUS TIMES.—Los Angeles, Dec. 20: As an evidence of the general prosperity of the producers of this county, 40 per cent of the mortgages on farms in the county have been paid during the year, and it is estimated that a corresponding amount of mortgages will be paid during the next 12 months.

VEGETABLE GROWING.—Los Angeles, Dec. 20: The raising of winter vegetables for shipment East has lately become quite general, and it is anticipated that during the coming three months large quantities will be sent out. Already string beans, green peas, tomatoes and peppers are being shipped, and as near as can be estimated, 3,000,000 pounds will be shipped during January and February.

Merced.

FRUIT PLANTING.—Merced *Star:* On all sides we hear of colonization prospects and plans for planting figs, raisins and other fruits. Merced county, or at least that portion of it under the great canal, seems to be thoroughly wide awake and in earnest on the proposition of fruit and vine culture. There is now more work planned for the coming season than can be done by the people and stock now within the confines of the country. The remainder of California will be heavily drawn upon for supplies and for machinery. Five hundred mules are under charge of Foreman Rouse at Rotterdam colony. The 200 acres owned by the Company de Esplotta, which is to be planted to olives, has all been leveled and the land is now ready for use. The force is now working on the 300 acres southwest from Yosemite Lake. Rapid progress is being made in all directions.

EXPECT LARGE CROPS.—Merced *Argus*, Dec. 20: Farmers have commenced plowing since the late rain and say if rains are favorable after the holidays, crops will be larger than ever before known in the valley.

Sacramento.

NEW SYSTEM OF STRINGING HOPS.—Santa Rosa *Republican*, Dec. 20: One of the most extensive hop-raisers of the county recently visited Sacramento county and carefully examined the method of stringing hops employed by a large number of the growers there. Instead of the usual method known here, big poles about 20 feet long and as thick as the ordinary telegraph poles, are procured. They are set in the ground only on the sides of the hop-field, about 50 of them being used on an acre. A heavy wire is strung from post to post along the side of the field, and from these wires, which are about 18 feet from the ground, are strung lighter ones across the field. From these, wire strings go down to the hop stakes. The plant or vine travels up the string, and can keep on growing until it has grown seven or eight feet higher than it can by the old system. The gentleman said that the new system is a great improvement over the old one, first, because it will permit of nearly twice as many plants to the acre being grown; second, because on account of the vine growing straight up the sun has a better chance at it and develops the crop much better; third, because the system would last almost forever, or many times longer than the present one; and lastly, because he found that the hops raised by the farmers who used the new way turned off about double the yield realized here.

San Benito.

A LARGE ORCHARD.—Hollister *Free Lance*, Dec. 19: Four years ago a tract of 325 acres lying two miles southwest of Hollister, known as the Brewster ranch, was purchased. The new owners began improving it, setting out orchard and vineyard where wheat and other cereals had hitherto grown. To a limited orchard consisting mostly of Bartlett pears, they have made additions, until 1400 fruit trees were in bearing this season, all of which produced abundantly fruit of superior size and flavor. Encouraged by the success of this experiment, it was determined to set the entire place in orchard and vineyard, and an extensive nursery was prepared and placed in charge of an experienced orchardist, and in addition to the 1400 fruit trees mentioned above, there are now growing thriftily 850 French prunes, one and two years old, 3000 grapevines of the Muscat of Alexandria and Rose of Peru varieties for table grapes and raisin culture, and 37 acres have been set out to figs of the White Adriatic variety. In addition to this there are now in the nursery, ready for planting during the present season, 3000 young almond trees grafted on almond stock, 3000 peaches on peach stock, 3000 apricots on Myrobolan roots, 4500 Silver prunes on Myrobolan roots, and 12,500 French prunes on Myrobolan roots, besides a splendid lot of grafting stock on which 50,000 young trees will be grafted this season, mostly French prunes and almonds. A tract of 160 acres will be set out this season, mostly to French and Silver prunes, peaches, apricots and almonds, while a new tract of over 30 acres is being prepared for a nursery for the young trees intended for future planting. The varieties of apricots are the Blenheim and Ambrose principally.

San Bernardino.

CORN YIELD.—Chino *Champion*, Dec. 19: Several teams have been hauling sacked corn from Chino to Pomona for several days past. It was all grown on sod land after the first plowing, without irrigation, and hardly any cultivation. It was at one time feared that the wire worms had almost destroyed the crop, but several ten-acre tracts yielded from 30 to 50 bushels, and it is reported that in some instances higher yields were obtained.

San Joaquin.

GROWERS STORING.—Stockton *Independent*, Dec. 17: The potato crop of the county is being stored in Stockton warehouses for better prices. The market is firm, but growers are disposed to hold for top prices, as the San Joaquin county crop is the best in the general market and must be in demand throughout the season. It is estimated that 40,000 sacks of potatoes will be stored in the Stockton warehouses before the owners conclude to supply the San Francisco market. About 10,000 sacks are now on storage at Miller's warehouse, and several more shipments are to arrive. Frank Madden and W. R. Clark have made a profitable speculation in potatoes and hope to add to their profits now in sight. They raised about 6000 sacks of choice potatoes on leased ground near Lockeford and have stored 3500 sacks with Frank Lane, leaving 2500 sacks on storage at Lockeford.

WEALTH IN WALNUT-TREE GROWING.—Stockton *Independent*, Dec. 17: The cultivation of walnut trees for timber is receiving considerable attention from the press of California. An experiment made this year in a garden in this city shows that it requires plenty of water and soil well prepared. No mere sprinkling or ordinary irrigation though is to. It wants either a flood or else that the hardpan be perforated, a large excavation made and filled with soft earth to permit its taproot to penetrate deeply for a sufficient water supply and to admit of the expansion of the trunk. A couple of dozen walnut sprouts were set out in a Stockton garden last spring after they had attained a growth of from three to six inches from the nut. Four of these were located near a drain which received the overflow from a windmill tank. The others were in beds prepared for flowers or vegetables. Those that received the overflow are now about six feet high, while the highest of the others is not over two feet. Some of the small ones were dug up a few days ago and it was found that the taproot had encountered the hard subsoil, and in the effort to penetrate it, had been doubled backward and curled like the letter S. This arrested the growth of the tree, and the consequence is that most of those that did not receive proper treatment are scrubby and not worth transplanting. The best way to plant them for shade trees is to make excavations through the hardpan large enough to admit of the trees' growth to two feet or more in diameter without crowding the hardpan. They should be filled with soil well mixed with sand, and then given abundant moisture. By similar treatment, walnut trees in this city have attained a girth of about 30 inches in seven years. This seems sufficient evidence that with due care cabinet timber could be raised in 12 or 15 years. A Stockton man makes a rough estimate that 115,000 feet of walnut lumber can be raised on one acre in 15 years? This, at double the price of redwood, or say $50 a thousand, would be at the rate of $5750 an acre for the timber alone, with no labor whatever after four years' cultivation, if properly irrigated.

THE WOODBRIDGE DITCH.—Lodi *Review*, Dec. 18: After a long siege of hard work in securing rights-of-way, the promoters of the Woodbridge canal have resumed the work of making ditch, and the directors are in hope that they will be able to supply water to the farmers who have been fortunate enough to give rights-of-way in order to have the waters of the Mokelumne river poured over their broad acres for next season's crops. If the several water schemes that are being agitated in this county at present meet with success, San Joaquin will be the banner agricultural and fruit-growing county in golden California. We know that this county has the resources to make its people a most prosperous one, and all we need is water and plenty of it to develop these resources.

Santa Clara.

A GOOD MOVE BY PRUNE-GROWERS.—San Jose *Mercury*, Dec. 19: At the regular semi-monthly meeting of the Doyle Fruit Growers' Association, D. W. Miller advocated the organization of the prune-growers of Santa Clara county and raising a sufficient sum of money to send a reliable person to France and have him keep the growers here posted as to the crop and prospects there. By doing this, growers would not be at the mercy of speculators, as now, but would wait until they knew whether the foreign crop was to be light or heavy, and then set their prices accordingly. He referred to the reports that reached us last spring from France: one week it was a large crop and the next week the crop was a failure, to be followed in a few days by another report, this time that the French crop of prunes would be very large. The reports that the growers get through the papers are unreliable. Mr. Woodhams favored the project and said that there was not a paper published in San Francisco that would for one moment stand for the grower if the interests of the buyer and moneyed men were at stake.

If the growers were united, we could set the price on our products. Several others spoke in favor of the plan, and on motion of Mr. Braun the chair appointed a committee of three to ascertain the cost of sending a man to France and also bring the matter before the other horticultural societies in the county. D. W. Miller, E. T. Petti and A. R. Woodhams were appointed on the committee.

Santa Barbara.

EDITORS PRESS:—Began to rain at 7 A. M. the 3d instant and continued most of the time for 24 hours, giving us 2¾ inches of water. Since then there have been a few showers which will make three inches for the storm. Land in splendid condition to work. If the weather continues favorable, plows will be busy turning over the ground for seeding. The rain came just in time, which found nearly everybody ready for it. Hay, of a quality not comparable to the price, had reached $20 per ton, and not a few began to wish they had big stacks for higher prices, in case the rain did not come. Now hay and other feedstuffs cannot run up to famine prices. November was a very warm, dry month. There was a dash of rain from the west the 6th of about a third of an inch; balance of the month dry and clear. It is somewhat cloudy now with appearance of more rain. The wet season never started in here with a more favorable prospect.—O. N. CADWELL, *Carpinteria*. [This letter has been unfortunately delayed, but is none the less interesting.—EDS. PRESS.]

Santa Cruz.

LATE STRAWBERRIES.— Watsonville *Pajaronian*, Dec. 18: The berry-growers are sending chests of strawberries to San Francisco every day—the shipments aggregating about 20 chests daily. Only one week to Christmas and plenty of ripe strawberries in the Pajaro valley. The strawberry comes very near being an all-year bearer in this valley.

SHEEP SCARCE.—Watsonville, Dec. 18: Some of our butchers are buying dressed mutton in San Francisco. Sheep are scarce and high in price.

Sonoma.

TREE-PLANTING.—Suisun Cor. Dixon *Tribune*, Dec. 20: A. T. Hatch owns a tract of land some two or three miles southeast of Lincoln, and this week he put some men to work on it to prepare it for trees. He intends to plant about 100 acres this winter and spring to fruit, mostly peaches, pears, prunes, nectarines and apricots.

Sonoma.

FARMERS ENCOURAGED.—Santa Rosa *Republican*, Dec. 11: "Nearly every farmer in Sonoma county is plowing to-day," said a dealer who stands in close relationship with our agriculturists. "Last Saturday I sold over a dozen plows, and the farmers told me that the rains had put the ground in good condition and that they would all go to plowing to-day in real earnest. A number of harrows was also bought last Saturday, and in every instance the buyers said that farm work would be in full blast to-day. The farmers feel much better than they did a year ago. They have had a profitable year and they feel greatly encouraged. I can tell by our trade. Our business is 25 per cent better than it was a month ago and 10 per cent better than it was at this time one year ago. Everything looks favorable for a prosperous season here, and the farmers seem to be in it," he concluded.

THE HOP INDUSTRY.—*Republican*, Dec. 11: John McMinn, Jr., Secretary of the Sonoma County Hop-Growers' Association, said: "There will be an increased acreage in hops because the hop-raisers of Sonoma county had such a bonanza this season that, appreciating a good thing, they will try and secure more of it. Some of our farmers have almost grown rich this season by reason of their hops. The increase in acreage will be mostly in the Russian river district. About 300 acres are being prepared for hops there. Rayford Peterson and the Farmers are getting a very large field ready, and there are a number of others. The crop this year was 1250 bales short of what it was last year, but last year was an exceptionally good year. Several farmers have contracted for one-half of their entire product. They are contracting their hops at from 15 to 17 cents per pound. This guarantees them a fair profit, and practically secures them for the next year. With one-half of their crop contracted for at those prices, they can afford to wait and run the risk of getting better prices on the other half. The farmers like the Indians as hop-pickers much better than they do the Chinamen. They are more careful, and are not so apt to neglect anything in the scramble to earn their money as the Chinamen. Buyers generally prefer hops that have been picked by the Indians, and will give more for them. The prospects are certainly very favorable for a great increase in hop-culture in Sonoma county from this on."

Sutter.

USING WHEAT FOR FEED.—Yuba City *Farmer*, Dec. 20: Owing to the scarcity of barley this season, many of the farmers are using wheat for horse feed. Having been in localities where wheat was the principal grain used for horses, we would like to state to those who use it, that they will find it much to their advantage to soak wheat 10 or 12 hours before feeding. It will produce better results, and is less liable to injure the horse.

Tehama.

A FRUIT CANNERY.—Red Bluff *People's Cause*, Dec. 20: The fruit-growers are beginning to move in the matter of having a fruit cannery established here. They say it will be necessary to have a cannery in operation here next season. Wherever canneries have been established they have made a financial success, and there is no reason why one should not be successful in Red Bluff.

Tulare.

TREE AND VINE PLANTING.—Visalia *Times*, Dec. 18: The *Times* stated, a few weeks since, that at least 1000 acres of land in the vicinity of Visalia would be planted to trees and vines this season. The indications now are that the acreage will be double that, or 2000 acres.

ARIZONA.

ARIZONA SHEEP TO COMPETE FOR THE WORLD'S CHAMPIONSHIP.—Flagstaff *Champion*: Daggs Bros., the largest sheep-owners in the Southwest, have about fifty head of their finest sheep grazing on alfalfa at their ranch near Phœnix. They will be kept there until 1893, when the World's Fair opens, and six of the best ones will be taken to Chicago for exhibition. Three of them will have fleeces about three years old, and three will have no fleeces. Sheds will be built, so that the animals will have shelter from rain and shade during the hottest part of the day. They estimate that the sheep will have a 16 inch fleece by that time, and that they will carry off the ribbon on range sheep at least, if they do not secure the championship of the world.

RAISING HOGS.—Tucson *Citizen*, Dec. 13: A business which can be made lucrative in Arizona is the raising of hogs for market. The valley of the Santa Cruz is prolific in the production of corn, as the many loads of the article brought to the city for disposition this fall will testify. With almost no care but the planting, it will yield 40 or 50 bushels to the acre. Parties engaged in the pursuit, state that with cultivation 100 bushels to the acre is easily produced. The raising of the cereal has been largely engaged in in the vicinity of Tucson. Mr. Berger of San Xavier raised 15,000 bushels this summer, and Mr. Kennedy, north of town, also raised several thousand bushels. Mexicans have also made a very good thing of corn-growing. The cereal now brings a cent a pound in town, which of itself makes corn-raising profitable, but to bring the largest and surest returns it should be turned into pork. Pigs can be safely and surely grown on the bottom lands, requiring no feeding whatever, arriving at the age for fattening, strong, and growing, and without a cent of expense for feed. To a fat pig six months old to bring it to the weight of 200 pounds will require, say 300 pounds of ear corn, from four to five pounds per day being ample feed. Ten bushels of corn will, therefore, fat a pig which will bring at least $10. Corn is worth $1 per hundred pounds, leaving a net profit on the pork of $7 on each pig, not including the profit on the corn. As a substitute for corn, sugar beets are a practicable feed, and pigs are now being purchased for the purpose by Mr. Sanders, who is connected with the Mohawk Ranch Co. of Mammoth. Beets are also a beneficial crop to the land, counteracting the alkali in the soil which is so prevalent in Arizona.

FRUIT CULTURE.—Phœnix, Dec. 15: We have about 1500 acres in bearing peach and apricot trees; also White Adriatic figs (figs of commerce) and about 2500 vines, mostly of the raisin grape, in bearing. In the last two years we have planted about 4000 acres of orchards and vineyards, and still the good work goes on with a fair prospect this season of planting as many acres as we have, all told heretofore. But the old idea that we could not raise fruit has been expelled and experiments and experience give us new light so that we can plainly see that the majority of deciduous fruits thrive well here; also experiments in citrus fruits are proving satisfactory. Josiah Harbert and David Turner have each an orange orchard with little fruit the second year, looking as fine as the best in any country, and small fruits—blackberries, raspberries, strawberries—produce as well.

NEVADA.

WHEAT-GROWING.—Reno *Gazette*, Dec. 18: The farmers on the Big Meadows raised 3000 tons of grain this year, and would have raised 5000 tons if they had not had the misfortune of losing their dams across the Humboldt river. Next season they will gather fully 6000 tons of cereals, besides a large quantity of alfalfa.

HAY AND STOCK.—Reno, Dec. 18: It is estimated that farmers in Big Meadow have hay enough on hand now to feed 5500 beef cattle from now until the 1st of April. Joseph Marzen is feeding 400 head now; Joe Hill, 400; Henry Thies, 75; Stauffer & Sweetser, 150; L. N. Carpenter, 65; besides 250 head that will be driven in next week by Col. Hardin. He has bought all of W. C. Ruddle's hay and will feed 50 head at his place, and the other 200 at L. N. Carpenter's.

NEVADA WHEAT.—Marysville (Cal.) *Appeal*, Dec. 12: Residents of this section of the country will be surprised to learn of the wheat-producing quality of Nevada lands. That State has never been considered a wheat-growing country, yet it appears that in quality and in the quantity of the wheat she produces, she compares favorably with any other State. There are a few instances where Nevada's lands produced from 65 to 70 bushels to the acre, and the average is about 35 bushels. When one considers that Ohio does not produce more than 13 bushels, and that the average throughout the United States is only 15, this is certainly a good showing. Nevada farmers are being encouraged to devote new land to the cultivation of wheat and other cereals, and it is said her bright days are near at hand. There is an ample market, as California flour-mills now ship over the mountains 100 barrels a day. H. H. Beck, a prominent millman of Reno, Nev., says his company took over from California, last year, three carloads of seed wheat, and sold it at $1.70 a cental. He told the Nevada farmers that he would buy all they raised at that price, if it was as good as the seed. Many broke up alfalfa ground and raised wheat, all of which he bought. The Nevada farmers are well satisfied, and say they will double the acreage in wheat next season.

The special quality of Ayer's Hair Vigor is that it restores the natural growth, color and texture of the hair. It vitalizes the roots and follicles, removes dandruff, and heals itching humors in the scalp. In this respect, it surpasses all similar preparations.

"Battle of Gettysburg."

The celebrated Panorama of the Battle of Gettysburg and Museum, corner Market and Tenth Streets, San Francisco, is a wonderful production. It has captured the entire State, doing a great deal of good. There is no better way of passing an hour or so, and in studying American history, than by visiting this Grand War Panorama. If any of our readers have not seen it, it will pay them well to do so.

LAND
WORTH LOOKING AFTER
—AND—
Likely to Double in Price Soon.

FINE VINEYARD
CHOICE FRUIT
RARE RAISIN
AND ALFALFA
LAND

EXAMINE THIS RARE CHANCE.

A well-cultivated farm of 160 acres, with miles of fencing and cross fencing, good improvements, 7-room, two-story, hard-finished house, nearly new, plenty shade trees, large barn, blacksmith shop, milk house, grain house and other outbuildings; 7 acres of bearing orchard; 20 acres of alfalfa; large flowing artesian well of splendid water, and first-class surface wells of water; pleasantly located 7 miles from Tulare City; is offered for sale rating less than ½ cost for improvements by the owner, who is engaged in other business. The land is offered for $20 to $25 per acre, on easy terms. The readers of this journal are assured that this chance is worth looking after. Parties in San Francisco who know the property can be referred to. Some adjoining land can be secured at favorable rates if desired.

For sale in sub-divisions of 40 acres or more if desired. Address E. M. DEWEY, Porterville, or A. T. DEWEY, 220 Market St., S. F.

SHEEP AND WOOL.

Mountain Sheep.

Nearly all the lofty mountain chains of the globe are inhabited by wild sheep, that rank the highest among animal mountaineers. Possessed of the keenest of sight and scent, with strong limbs, they live, says the St. Louis *Globe-Democrat*, secure amid the loftiest peaks, leaping unhesitatingly from one crag to another or jumping unscathed down the side of bold precipices. Although exposed to the wildest storms and most rigorous weather, they show no evidence of suffering, but apparently enjoy the best of health. Naturalists classify these wild sheep under five distinct species. There is the American bighorn, or Rocky mountain sheep; the argall, found in the principal ranges of Asia; the burrhal of the upper Himalayas; the Corsican mouflon, and the African wild sheep. To the American bighorn species belong the wild sheep of the Sierra Nevada. They are found in the Upper Missouri and Yellowstone regions to the Rocky mountains, south as far as the Rio Grande and in the ranges of Washington and Oregon. All the many mountain summits within these limits, rising thousands of feet above the sea-level, are more or less inhabited by them. Compared with the best-known domestic breeds, the wild sheep are more than twice as large, with the wool covered by smooth, soft, thick hair. The color is brownish-gray, with the under parts and haunches white and the tail black, bordered with yellow. The wool is always white, and grows in beautiful spirals down out of sight among the straight, shining hair, like delicate climbing vines among stalks of corn.

The horns of the male are of immense size, measuring in their greater diameter from five to six and one-half inches, and from two and one-half to three feet in length around the curve. They are yellowish-white in color, and ridged transversely, like those of the domestic ram. Their cross-section near the base is somewhat triangular in outline and flattened over toward the tip. In rising from the head they curve gently backward and outward, then forward and outward, until about three-fourths of a circle is described, and until the flattened, blunt tips are about two feet apart. Those of the female are flattened throughout their entire length, less curved than those of the male, and much smaller, measuring less than a foot along the curve. The average weight of a full-grown male is 344 pounds.

Another difference from the tame sheep is that the wild is bold, daring and graceful, with every bit of the body and feet as smooth and clean as the grass of the mountain pastures. In the writings of many of the earliest travelers in America, reference is made to the "bighorns." A Catholic missionary to California in 1797 tells of a wild deer with a head like a sheep, that has flesh tender and delicious to eat. Where they have long been hunted, as in the neighborhood of the passes in the California Alps, they become very shy, but in the retired wild canyons and about the almost inaccessible peaks, they are no more timid than the sheep in a farmer's field. In the months of November and December, and probably during a considerable portion of midwinter, they all flock together, male and female, old and young.

In spring and summer the full-grown rams form separate bands of from 3 to 20, and are usually found feeding along the edges of glacier meadows or resting among the castle-like crags of the high summits; and whether quietly feeding or scaling the wild cliffs for pleasure, their noble forms and the power and beauty of their movements never fail to strike the beholder with living admiration.

Their resting-place seems to be chosen with reference to sunshine and a wide outlook, and most of all to safety from the attacks of wolves. Their feeding-grounds are among the most beautiful of the wild gardens, bright with daisies and gentians and mats of purple bayanthus, lying hidden away on rocky headlands and canyon-sides, where sunshine is abundant, or down in shady glacier valleys, along the banks of the streams and lakes where the plushy sod is greenest. Here they feast all summer.

When winter storms set in, loading their highland pastures with snow, then, like the birds, they gather and go to warmer climates, usually descending the eastern flank of the range to the rough, volcanic tablelands and treeless ranges of the Great Basin adjacent to the Sierra. They never make haste, however, and seem to have no dread of storms, many of the strongest only going down leisurely to bare, wind-swept ridges to feed on bushes and dry bunchgrass, and then returning up into the snow.

In the months of May and June they bring forth their young in the most solitary and inaccessible crags, far above the nesting-rocks of the eagle. I have frequently come upon the beds of the ewes and the lambs at an elevation of from 12,000 to 13,000 feet above sea level. These beds are simply oval-shaped hollows, pawed out among loose, disintegrating rock-chips and sand upon some sunny spot commanding a good outlook, and partially sheltered from the winds that sweep those lofty peaks almost without intermission.

Like the Ibex of Europe, the Rocky Mountain sheep do not hesitate to plunge headlong down the face of a precipice and alight on their horns. The horns are so large at the base that they cover all the upper portion of the head down nearly to a level with the eyes, and the skull is exceedingly strong; but more often, when making a big jump, the sheep will alight on their feet. Not only are their legs strongly muscled, but on the bottom of the feet are bulging pads. These serve to break the shock of a jump and enable the sheep also to keep their feet on an incline.

The only animal that may fairly be regarded as a companion of the sheep is the Rocky Mountain goat, which is more antelope than goat. He, too, is a brave and hardy climber, fearlessly accompanying the sheep on the wildest summits and braving with him the severest storms, but smaller and much less dignified in demeanor. His jet-black horns are only five or six inches in length, and the long white hair with which he is covered most obscures the expression of his limbs. In some portions of the Rocky and Cascade mountains it occurs in flocks of considerable size, where it is eagerly pursued by the Indians, who make use of its skin in various ways as clothing, that of the head with the horns attached being sometimes worn as a cap.

Fashion Notes.

Ladies' Costume.

FIGURE 1.—This illustrates a ladies' costume. Camel's-hair, velvet and crepe de Chine are united in the costume, and a handsome garniture is provided by Kursheedt's Standard steel bead boleros, cuffs, skirt trimming and girdle. The foundation skirt, which is in the usual four-gored style and may be worn with or without a small bustle, is overhung at the front by a drapery that is disposed in graceful folds and wrinkles by plaits at the top, the back edge of the drapery being tacked to the side-gores of the skirt. The skirt trimming mentioned is applied to the lower part of the drapery, with rich effect.

Fig. 2—MISSES' DRESS.

Fig. 1—LADIES' COSTUME.

The superb adjustment of the stylish overdress is accomplished by the usual number of darts and seams, and full surplice-fronts cross over its smooth fronts in characteristic style. The front edges of the surplice fronts flare in V shape to reveal a vest of crepe de Chine, which is shirred at the top to form a pretty frill at the throat, and the fullness below is collected at the lower edge in deep, overlapping plaits. Short jacket fronts of unique design pass into the shoulder and under-arm seams and are overlapped at the top by the rolling collar, and a pointed girdle conceals the lower edge of the surplice fronts. The fanciful back is arranged in plaits that flare becomingly upward from the lower edge, and the drapery, which is joined to the basque portion of the over-dress, is disposed at the center of the back in deep, overlapping plaits that flare stylishly in fan fashion and are overlapped at the top by bournous folds. At the sides the drapery is arranged in deep, backward-turning plaits, which are well pressed in their folds and fall with panel effect to the edge. The full sleeves are arranged to curve fashionably over the shoulders, and the wrists are trimmed with round cuff facings of velvet, to which handsome steel-bead cuffs are applied. The girdle is overlaid with a steel-bead girdle, and bolero ornaments of steel trim the jacket fronts and are continued over the shoulders to form square ornaments at the back.

Many charming color contrasts may be effected in a costume of this kind, and the mode will develop stylishly in one material. Wool goods and velvet or faille form an appropriate combination, and cashmere, serge, cloth and other fabrics of similar texture will make up nicely with Bengaline, corded silk, armure, etc. Crochetted lace, passementerie, gimp, novelty bands, etc., may be added in any suitable manner for garniture.

Misses' Dress.

FIG. No. 2.—This illustrates a Misses' dress. In this instance the dress is shown developed in a charming combination of pale Goblin-blue and old-rose cashmere and old rose velvet. The body is made up on a closely adjusted lining, and from it the skirt hangs in natural folds at the front and sides and in two double box-plaits at the back. The skirt is prettily trimmed at the foot with three encircling rows of velvet ribbon. Graceful fullness is collected in rows of shirring at the lower part of the front, and above the shirring it spreads becomingly in soft folds toward the neck, where it is confined by a row of gathering. Opening over each side of the fullness is a jaunty jacket-front that rounds away from the shoulder and is trimmed at its edges with a band of velvet. The back is smooth across the shoulders, but has fullness collected in short rows of shirrings at the bottom, with somewhat the effect of a French waist. Velvet ribbon follows the lower outline of the body, its ends meeting at the closing of the fronts under a rosette and long loops and ends of velvet ribbon; and two rosettes of velvet ribbon are placed at the back over the tops of plaits in the skirt. The collar fits closely, and the rolled-over part flares at the throat. The full sleeves are finished in frills at the bottom and are mounted on coat-shaped linings, which show below the sleeves with the effect of under-sleeves and are encircled near the lower edges with velvet ribbon.

Numerous attractive combinations of colors and textures may be easily effected by the mode, dove-gray and a rich shade of yellow forming one of the newest and most pleasing of the recent color contrasts. Fluffy ruchings or rose-quillings of silk will trim the costume beautifully, and they may be applied to the edge of the skirt and to the neck and wrists with becoming effect. Dress goods of all kinds are well adapted to the mode, which is a graceful and artistic style.

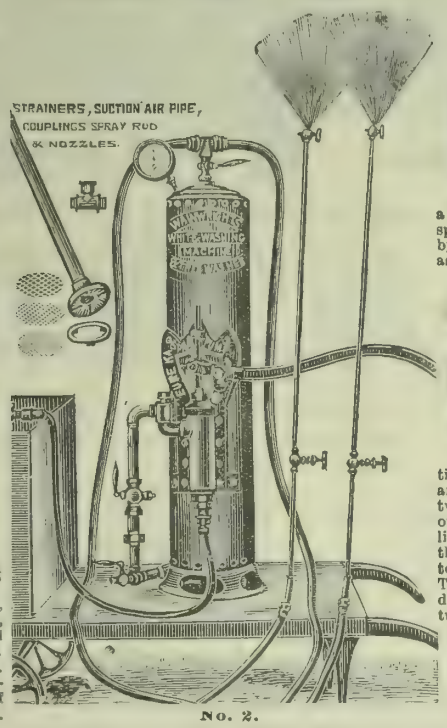
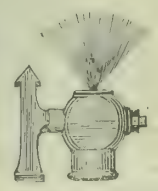
EUREKA SPRAY PUMP.



No. 1.

The price of this Pump, as seen in cut, $15. With 25 feet of best Rubber Hose, Suction Pipe and Strainer, 1 Spray Rod and 2 Spray Nozzles, complete for Spraying, $25. An extra outfit for another stream, for No. 1 or No. 2 Pump, furnished for $10, consisting of 1 Spray Rod, 2 Nozzles, 25 feet of best Hose, and a T outlet for double stream.

Spray Rods Made to Order

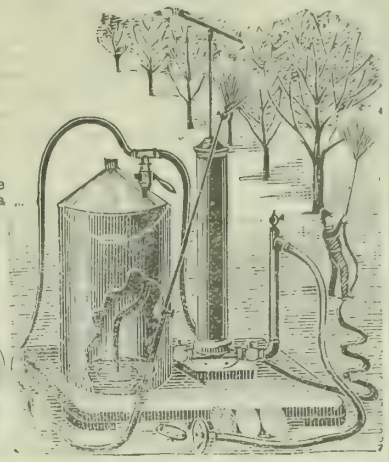


To spray from the ground, from 1 to 30 feet high and at all angles.

NIAGARA SPRAY PUMP.

No. 2.

The price of this Pump, without attachments, $25; with Steam Gauge, 25 feet of best Rubber Hose, Suction Pipe and Strainer, 1 Spray Rod for all angles, 1 Lime and 1 Chemical Nozzle, complete for spraying, $40. Without Steam Gauge, $35.



This Nozzle will make a solid stream or a spray of any fineness, by turning the spigot, as seen in the cuts.

These cuts show sectional views of No. 2 and 3 Nozzle. The two jets strike each other, and all the liquid passing through the nozzle is made into vaporous spray. The spray may be reduced to any size by turning the spigot.

ACME SPRAY PUMP.

No. 3.

This is a strong, light bucket pump, and is just what has been needed by small Orchardists, Farmers, Stock and Poultry Raisers. This pump will stand a pressure of 100 pounds to the square inch. When charged it will keep up a continuous spray from 5 to 15 minutes, without pumping, according to the amount of air in the reservoir.

SAMPLE PUMP sent complete for Spraying, with Suction Hose, Strainer, Discharge Hose, Rod, one Lime and one Chemical Nozzle, for $13.

These Pumps are Brass, with Rubber Valves.

For Orchards, Farms, Stockmen, Poultry Raisers,

THERE IS NOTHING LIKE THEM.

Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

MESSRS. H. H. MOORE & SONS, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (10½ gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful blisters. Respectfully yours,
FRANK H. BURKE,
Breeder of Registered Holsteins and Berkshires.

Death Valley.

A Government Expedition to Visit it Shortly.

"Valley of Death."

Long before a white man ever looked upon the direful spot, the Indians of California and Nevada knew it by that name.

Imagine a narrow strip of arid plain, shut in between two mighty mountain walls, the peaks stretching up 10,000 feet into the burning sky. So precipitous are these rocky barriers that in a journey of 14 miles you pass from an eminence of two miles above sea level to the plain 175 feet below the ocean tide mark. The surface of this plain is composed of salt and alkali and it is impossible to go over it on horseback, because it is a mere crust through which the animal you ride breaks up to its knees into a thick alkali paste which eats both hair and hide. There are paths by which one may make one's way across if one knows where to find water on the opposite side.

There is something unearthly about the whole appearance of things in the valley, the two ranges of gigantic peaks that hem it in between them looking like the backbones of a couple of monstrous beasts, and a gray haze that never lifts, making everything indistinct to the view. No vegetation is to be seen save a very scanty sagebrush, with leaves that are not green but gray, with here and there a tall cactus, which looks in the night like a dead man standing erect with arms extended. But the supreme horror of the place is the heat, which is unspeakable. There is a breeze which, instead of being cool, is so scorching hot as to blister your face. Into this natural furnace the sun pours its rays with never a cloud interrupting from one year's end to another. When the famous geologist, Professor Gilbert, succeeded in crossing the valley, nearly 20 years ago, barely escaping death from thirst, the thermometer inside his saddle-bag went up to 130 degrees and then burst.

A suggestive feature of the Death valley landscape is the color of the mountain rocks, which are actually sunburnt to an iron brown hue. Chip off a little flake and you find the stone of its natural lighter hue underneath. Streams flow from mountain springs down toward the valley, but never reach it because the heat dries them up on the way. Once in a great while there is a tremendous storm in the Amargosa desert to the eastward, and a river a mile in width flows from the desert around the south end of the Amargosa range and northward through the valley. Does it flow out again at the other end? Not much. It is dried up and lost before it gets that far.

Such is the Valley of Death—itself simply the most horrible spot in that great region of despair. The object of the Government in exploring it is simply to learn what kinds of animals live there. This enterprise is part of a great work which the Department of Agriculture has been for some time carrying on, the purpose of which is to map out the whole United States into what are called "faunal areas." For example, suppose it is determined what are precisely the limits of the area occupied by the jackass rabbit. When that much is known, it must necessarily be true that any plant which thrives in one part of that area will do well in any other part. There is such an intimate relation between animal life and plant life in this world that, having found out the various areas inhabited by different birds and mammals, you have learned just where each form of vegetable growth can be produced to advantage. When the Government has completed this important task, the farmers of the country will have placed before them maps outlining with the closest accuracy the regions within which each kind of vegetable or fruit is susceptible of profitable cultivation. Thus the agriculturist, wherever he may be located, will know with certainty what he ought to plant.

At the beginning, the expedition will be divided into two parties. One of these is now at Owens lake in California, on the point of starting out. It is under the command of Vernon Bayley, and will begin work at the foot of the Inyo range, to the west of which Owens lake is. Bayley will not go far, however, until joined by Professor T. S. Palmer with the other party.

The first thing done will be to locate all the places where water is to be found. Hundreds of people have lost their lives in Death valley through starting off in the morning without knowing where they were going to find water at night. There will be no such foolishness as that indulged in by the expedition. With every precaution, a sufficient amount of suffering will of necessity have to be undergone. Water is the great desideratum in that horrible place, where the air is much drier than that of the Sahara, and the heat so great as to put the body through a sort of evaporating process such as that to which a dried apple is artificially subjected. So rapid is this evaporation of the bodily moisture that three gallons of water a day are absolutely necessary for each individual, instead of the three pints one ordinarily consumes. If one were to sit down in the desert all day long and do nothing but drink water, he would still feel thirsty. Even with a supply of three gallons a day the blood of the traveler across the waste becomes thickened, the features grow thin and peaked, dreadful constipation sets in and fever threatens madness. In crossing the valley one cannot very well carry with him more than enough water for one day's supply. The only way to do is to hurry over and try to reach the other side—only about 15 miles distant—before one succumbs for want of drink. If you know precisely in which of the gorges of the mountains springs are to be found, it is well enough, but if you are not certain on this point, you are likely to become so exhausted after traveling up to the heads of one or two gorges fruitlessly as to find nothing better to do than to lie down and die the most horrible of deaths. You will not need burial, for your body will not decay, but will simply be shriveled up to a mummy and lie there in the Valley of Death to all eternity, imperishable, staring up at the burning sky. Here and there all over the awful plain of salt and alkali are scattered the dried bodies of men and animals, preserved for all ages to come. During the mining fever in that neighborhood, from 1872 to 1878, hundreds of people were lost in trying to get across. You may have heard of an "alkali sink." That is what Death Valley is. As has been said, the plain of the valley is below the level of the sea, and the alkaline river flowing into it at certain seasons from the Amargosa desert deposits its alkali in the crust, through which the foot in stepping breaks into the abominable paste beneath.

It will be the work of the expedition to kill and capture every sort of living creature that can be found in Death Valley and its surrounding region. Every specimen of animal life to be discovered there will be represented by from a dozen to a score of specimens in the collection which will be brought back to Washington. Mammals, birds, reptiles and batrachians will all be grist to the mill of the naturalists. It is expected that many new species will be secured, such as are not at present known to science. The birds will be shot and the mammals will be trapped at night. All of the gentlemen engaged in this exploration are most expert trappers and they will carry with them many dozens of small steel-wire contrivances of a sort that are found most effective in the capture of all kinds of little quadrupeds. It is not anticipated that the valley itself will afford many examples of animal life, save for reptiles and insects, but in the mountains and around about the case will be different. As for the reptiles, they will be caught with the hand or by throwing something over them. Doubtless a valuable assortment will be secured of lizards of different colors, and of the peculiar rattlesnakes with horns over their eyes which belong in that country. There are no frogs there, it is supposed, but there are some queer desert toads that live in "washes" where there is water for part of each year. When the water dries up, the creatures bore their way down into the mud deeper and deeper, and when it hardens over them like so much brick, they simply stay there buried until the water comes a few months later to release them from their baked prisons. The entomologist of the expedition will devote his attention to gathering the desert beetles, ants, scorpions, centipedes, and the like.

Very particular attention will be paid to the birds, which, as soon as shot, will be carefully measured in the flesh, skinned and stuffed on the spot. After being stuffed, they will be packed in chests of drawers, which are very hard to carry on muleback, until they are dry. Then they will be put into small boxes with cotton wool and sent to Washington whenever a chance offers. Necessarily communication will have to be constantly kept up with civilization, inasmuch as enough provisions cannot be carried along at a load in the wagons to last for the entire season. The town called Keeler, at Owens lake, will be the intermediate point utilized between the expedition and the world. All the mammals captured will be treated just like the birds. The reptiles will be put at once into alcohol. Greatest interest will be felt in discovering what forms of life are able to exist in so mad a country. Such vegetable life as is found there will afford the botanist material for his collection. Incidentally, the mountains will be explored and covered by the operations of the parties.

The first white man who ever visited Death valley was Capt. Bendire, who told your correspondent yesterday that on the occasion referred to, in 1869, he did not attempt to cross the valley, but simply skirted around its edge, as he expressed it, "like a cat on the edge of a plate of hot mush." Captain Bendire, while doing the act of the cat on the plate of hot mush, came across only three dried mummies of men in Death valley.

Investigation will be made by the expedition of the strange fishes that inhabit certain springs at the south end of Death valley. These are deep pools, and in them are found fish unknown elsewhere in the world, which have no eyes. The whole country thereabout is certainly a most extraordinary one. Seventy miles south of the valley is so-called "Devils' Playground"—a dreadful desert, across which a wind like a furnace-blast continually blows, the black lava and hot sand of its great plain radiating back the sun's heat so that the whole landscape is tremulous to the eye. Southeast of Death valley 100 miles, is "Dead mountain," on the side of which thermometers have registered 140 degrees in the shade. On the east side, the precipitous rocks are much broken up and the sun shining on their white points and angles makes the mountain look from a distance as if whole conventions of ghosts were assembled upon it. The Indians believe, on this account, that the mountain is the abode of their dead warriors. Hence the name.—*Examiner.*

THE ONLY TRUE FERTILIZER

Is the GENUINE Compound of the MEXICAN PHOSPHATE & SULPHUR COMPANY prepared from GUANO and rendered soluble by the application of acids.

This manure is an ENRICHER of the soil and not, like others, a STIMULANT only; it will do for the land what no other can in rendering it PRODUCTIVE without IMPOVERISHMENT.

Its analysis is reliable; its work is immediate and effective, and for results we point with confidence to the ORCHARDS of RIVERSIDE, where it has been liberally used for the past three years.

It can be prepared to suit any land, with or without potash, as occasion may require. It is rich in PHOSPHORIC ACID, and can be made as rich in NITROGEN as the most deficient soil may exact.

WE GUARANTEE ALL WE CLAIM FOR IT,

Viz.: TO BE THE MOST COMPLETE FERTILIZER ON THIS COAST.

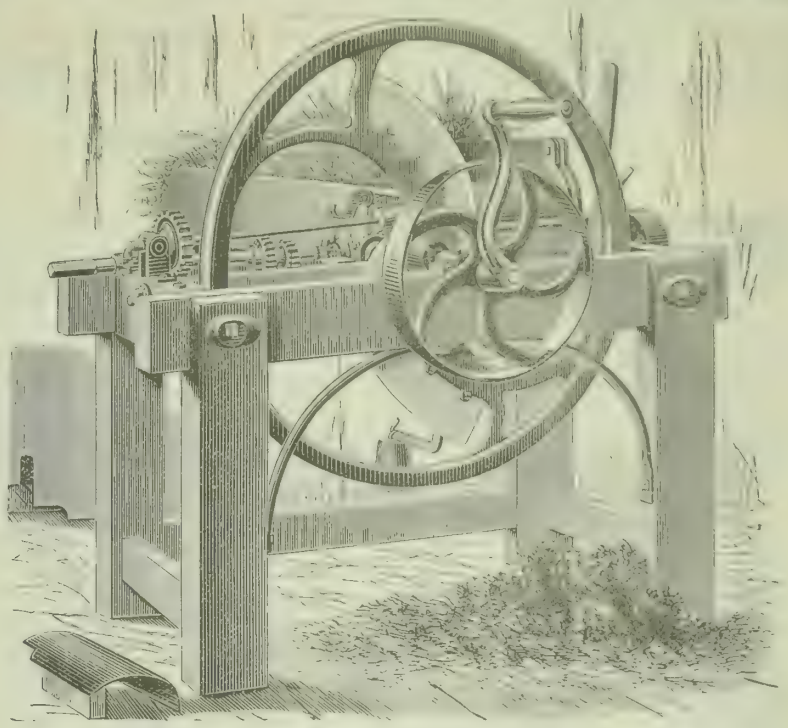
By MATTHEW COOKE.
Late Chief Executive Horticultural Officer of California. Illustrated with over 750 wood-cuts and 25 pages of classified illustrations. This book is designed for the use of orchardists, vineyardists, farmers and others interested in the subjects treated. It is designed to convey practical information concerning some of the species of insects injurious to the industries of cultivators of the soil, and those interested in earth produce generally. Price $4, postpaid. For sale by Dewey & Co., publishers, 220 Market St., San Francisco.

THE "TRIUMPH"
—ALL METAL—
Spading Harrow.

The Best Pulverizer in the World!

JUST THE THING FOR WORKING SUMMER FALLOW LAND.

Specially Adapted for Orchards and Vineyards.



FOR TWO HORSES. Works the soil about six feet wide. Angle of teeth adjustable to work the soil at desired depth. THIS HARROW is something entirely new. IT IS THE GRANDEST ACHIEVEMENT of its inventor, C. LA DOW, who is the recognized authority on Harrows, there being but few leading Harrows at the present time not built under his patents. We have made exclusive arrangements for its sale and it can be obtained only through us or our agents.

THE NAME "SPADING" refers to its action on the soil. The action of each cutter is like that of a small spade, lifting and turning the soil from a depth of four to six inches, doing more perfect work than is possible with any other Harrow in the world. THE BLADES are made from spring steel, in operation vibrating and shaking off sticky soil. IT NEEDS NO SCRAPERS to clean the revolving cutters.

Considering the immense amount of labor done, the draft is very light, as the pulverized soil passes through the gangs of revolving cutters, being left smooth. THE GANGS are so arranged that the most uneven ground is thoroughly harrowed and left level. IT LEAVES NO FURROW or ridge; when the field is harrowed it is all left smooth. 10, 12 and 14-ft. sizes in stock. Send for circular.

BEET SUGAR FACTORIES

E. H. DYER & CO.,
Sugar Chemists, Engineers and Draughtsmen, and Practical Manufacturers of Beet Sugar.
ALVARADO, CAL.

The members of this firm have spent many months in the largest beet sugar factories of Europe, studying the details of German and French methods of manufacturing sugar from beets, and also at works of the leading manufactories of beet sugar machinery. Having had many years' experience in manufacturing sugar from beets in California, and having fully demonstrated the feasibility of producing sugar from beets in this country in almost unlimited quantities, and in successful competition with cane sugar imported from foreign countries, we are prepared to furnish designs for factories, plans and drawings of the latest improved machinery now in use in Europe and this country. Can also furnish skilled engineers to superintend the construction of factories and the necessary technical skill to operate the works successfully when completed. Will make personal examination of localities with regard to their fitness for the production of beet sugar, free of expense, except traveling expenses. Successful results guaranteed when the conditions are considered favorable.

EXCELLENT BOARD, $10 per Month.

FURNISHED ROOM $3 per Month.

Occupies two elegant buildings, containing over 70 rooms. Employs the ablest teachers, has the largest attendance and is the most highly recommended of any private school on the Pacific Coast. Board, Room and Tuition for six months, $128. Board, Room and Tuition for fifty-two weeks, $244.

THE PACIFIC GAS OR GASOLINE ENGINE.

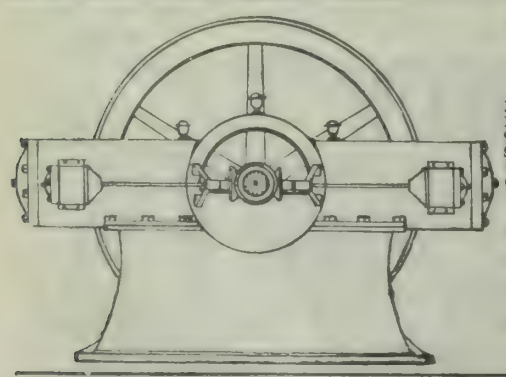
Patented June 17, 1890—Nos. 430,504, 430,505, 430,506—also in Great Britain and Other Foreign Countries.

Starts Instantly Without the Necessity of Boiler, Fire or Experienced Engineer.

OVER 150 IN ACTUAL OPERATION.

The Engine uses from 20 to 25 feet of Coal Gas, or about one-eighth of a gallon of Gasoline, per hour per horse-power. Is now in use for Pumping Purposes, running Printing Presses, Small Factories, Elevators, Jewelers' Lathes, Polishers, Dairymen's, Agricultural, Mining and Wood-working Machinery, Well Boring and all other purposes requiring cheap and convenient power. Persons having but little space will find this the most suitable of all Motors.

USE IN BOATS.



The Company makes a Specialty of

ENGINES FOR SMALL BOATS AND LAUNCHES.

A. T. DEWEY, W. B. EWER, GEO. H. STRONG. } Dewey & Co.'s Scientific Press Patent Agency { ESTABLISHED 1860

INVENTORS on the Pacific Coast will find it greatly to their advantage to consult this old, experienced, first-class Agency. We have able and trustworthy Associates and Agents in Washington and the capital cities of the principal nations of the world. In connection with our editorial, scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other agencies. The information accumulated through long and careful practice before the Office, and the frequent examination of Patents already granted, for the purpose of determining the patentability of inventions brought before us, enables us often to give advice which will save inventors the expense of applying for Patents upon inventions which are not new. Circulars of advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 220 Market St., S.F.

The Veterinarian.

Neurotomy for Navicular Disease.

EDITORS PRESS:—I would like Dr. Buzard's opinion of neurotomy (unnerving) for navicular in horses. Does the operation cure the disease? Has it been performed often on this coast? Is the operation a difficult one? Is there a veterinary operating table on this coast? If so, who has one? What is the cost of the operation? I should like the above questions answered in the RURAL PRESS, and oblige F. H. S., *Sacramento.*

EDITORS PRESS:—For navicular disease there is no cure. A measure of relief may be given in the early stages, and the horse can be worked for a time, but sooner or later the lameness becomes so great as to render this out of the question. Unnerving is the grand remedy for this disease. It does not cure the diseased structures, but it takes away all pain and consequent lameness, and makes the horse useful.

Neurotomy is an operation of long standing, and it has been performed very often on this coast by myself and other veterinary surgeons who have practiced here for years.

The operation is one of the simplest that the veterinary surgeon is called upon to perform. Of course it is necessary to know something of the anatomy of the parts, which can be learned in a very short time. Dr. Carpenter of this city was the first to own a veterinary operating table on this coast. He has had one several years, and I believe the only one in this city. I have used it myself, and consider it a boon to the operator.

The cost of the operation depends a great deal on the value of the horse, and whether the operation takes place here or in the country, as a veterinary surgeon's time has to be considered.

A. E. BUZARD.

Cow with Swollen Tongue.

EDITORS PRESS:—I have a valuable cow with the tongue enormously swollen. Please tell me what is the matter and advise me what to do.—W. M., *Pasadena.*

EDITORS PRESS:—This animal is suffering from *glossitis*, which is dangerous, as the patient, if not relieved, is liable to suffocate.

The remedy is free and deep longitudinal incisions; they should be made along the upper rather than the under surface to avoid the ranine arteries. When one side is involved the œdema may be so great as to cause the lower surface, which yields the more readily, to be turned directly upward, when the incision must be made with great care.

A. E. BUZARD, M. R. C. V. S. L.
11 Seventh St., S. F.

Another Foe of the Icerya.

EDITORS PRESS:—You will doubtless be pleased to learn that the *Lestophonus iceryæ*, which was imported into this State at the same time that the Vedalia was, is at the present time living and infesting the iceryas at Mr. Chapman's, in the San Gabriel valley. Yesterday, Mr. A. Scott Chapman brought me several specimens of iceryas in whose bodies were the puparia of this fly, and in the same box that these were brought in was a living adult *Lestophonus*. It is indeed interesting to learn that this useful but slow-going friend of ours has been enabled to maintain itself, notwithstanding the fact that it has been so nearly starved out through the voraciousness of its more energetic co-laborer, the Vedalia.

Los Angeles. D. W. COQUILLETT.

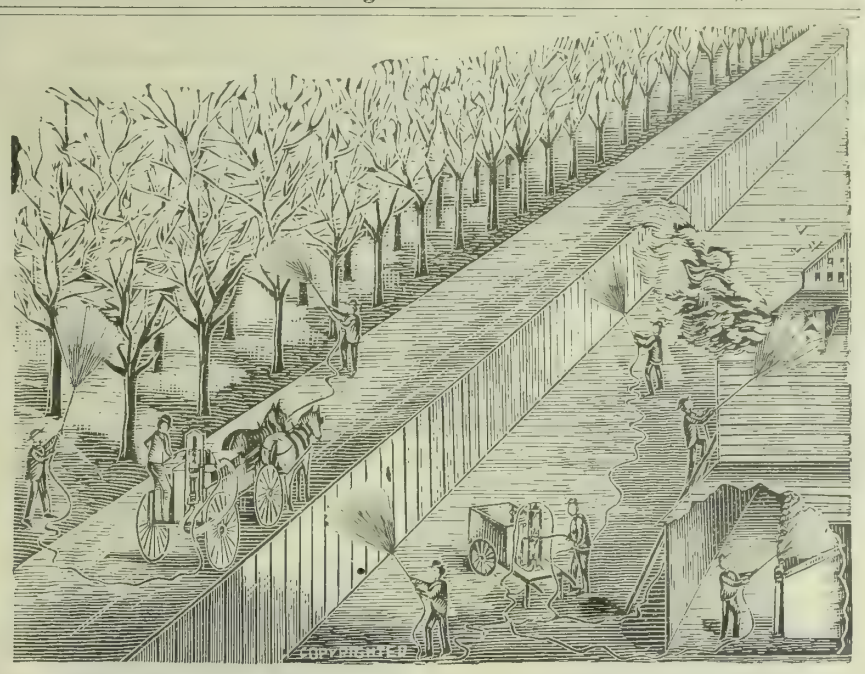
THE rapid increase in the wealth, business and prosperity of the United States during the past ten years is simply marvelous. The total wealth of the country is now $71,459,000,000, equal to nearly $1000 per head. This is an increase in ten years of $17,000,000,000, or 42 per cent. England's wealth in 1885 is given as $50,000,000,000, giving an average wealth per head of $1545. The average in Scotland is $1215 per head, and Ireland $565. The total wealth of France is estimated at $36,000,000,000. England exacts in taxes $20 per head of population, while each individual in the United States pays but $12.50. America will produce 9,000,000 tons of iron this year, while England's production is 8,600,000 tons.

THE statement is made at Berlin that the German Government will grant Koch 100,000,000 marks for the privilege of manufacturing Kochen.

As Ayer's Sarsaparilla outstrips all other blood purifiers in popular favor, so Ayer's Almanac is the most universally familiar publication of the kind in the world. It is printed in ten languages and the annual issue exceeds fourteen millions of copies. Ask your druggist for it.

TIMBER FORESTS GOING FAST.—The rate at which the timber forests of this country are becoming exhausted is something that people in general have no proper idea of, says the *Ohio Valley Manufacturer*, and it is evident that if a substitute for timber for furniture and buildings is not produced, there will soon be serious consequences. From a recent authentic statement it appears that the amount of timber converted into lumber in Michigan, Wisconsin and Minnesota last year reached the enormous aggregate of 8,305,833,277 superficial feet, exclusive of white-pine shingles, which, if added, would bring the total consumption up to 9,000,000,000 feet. It is asserted as a matter of fact that the timber lands of the Northwest are practically exhausted. Of 20,000,000,000 feet reported by the census of 1880 as then standing in Lower Michigan, only one-tenth now remains, and in the three States there is estimated to be less than 10,000,000,000 feet.



DEWEY & CO. 220 Market St., S. F. Elevator, 12 Front. Patent Agents.

Imported Percherons.

Those looking for choice Percheron blood should not overlook the announcement made in our advertising columns by J. C. Smith, the well-known importer. He now offers horses which he believes to be the best brought to the State. Their quality has been approved by our own people by the award of premiums at Sacramento and Oakland fairs. Mr. Smith may be addressed either at this city or at Oakland, as may be learned from his advertisement.

Easy Binder.

Dewey's patent elastic binder, for periodicals, music and other printed sheets, is the handiest, best and cheapest of all economical and practical file binders. Newspapers are quickly placed in it and held neatly, as in a cloth-bound book. It is durable and so simple a child can use it. Price, size of Mining and Scientific Press, Rural Press, Watchman, Fraternal Record, Masonic Record, Harper's Weekly, and Scientific American, 75 cents; postage, 10 cents. Postpaid to subscribers of this paper, 50 cents. Send for illustrated circular. Agents wanted.

WAINWRIGHT'S WHITEWASHING MACHINES AND TREE-SPRAYING APPARATUS.

We call the attention of our readers who are interested in bug-spraying and whitewashing machinery to W. Wainwright's advertisement in the adjoining column. Mr. Wainwright was prevented from making an exhibit on account of a severe accident to him by being thrown from his buggy a few days before the opening of the Fair. We herewith reproduce some remarks made by us June 28th on the Wainwright Whitewashing and Tree-Spraying Apparatus.

Death to Bugs—Good-By Dirt.

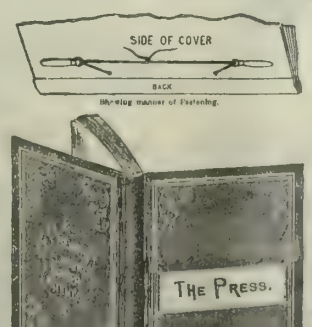
The Wainwright Spraying Apparatus is applicable to more domestic uses productive of comfort and cleanliness than any invention on the San Francisco market. A *Journal of Commerce* representative had supreme curiosity to see how this mechanical whitewasher would do the work so long monopolized by the colored man. To that end and for the purpose of comparison, he visited the Clay-street wharf where men and brushes had just finished a job of whitewashing the entire interior. The work had been well done notwithstanding the goodly quantity of material wasted upon the floor and piles of sacked grain. From thence he went to Spreckels' wharf, at the foot of Folsom street, to see the whitewashing machine in operation. Extended observation gave the machine approval over the good old way. It enabled one man to do the work of a dozen. The whitewash was applied in a vaporous spray and under a pressure of 80 to 120 pounds, forcing it into every diminutive crack, giving the surface a smooth and even appearance, impossible to achieve with the brush and by hand. Another important fact was very apparent. The whitewash vapor was forced into loose joints, cracks, and all the hiding-places of insects, making their old homes entirely uninhabitable. No further evidence was needed to prove the incalculable value of this machine for whitewashing fences, barns, stables, and especially the domiciles for poultry. In no other way can the poultry-house be kept absolutely free from vermin.

It is easy to see how perfectly adapted this apparatus is for spraying orchards and vineyards. It may be charged with any liquid wash desired, and this be delivered where wanted, and under a force that drives it into the cracks and lines in the bark, and among all the foliage above and below. It does its work perfectly and with such rapidity as to make its use highly economical over any other plan of spraying trees or vines. Besides, there is little waste of material. In fact, its cost is saved several times over in one manipulating of not a very large orchard. The accompanying picture is an object-lesson, showing this apparatus at work in several directions, and in all of which it does its work admirably.

Orders for the machine should be sent to Mr. William Wainwright, at 1409 Jackson street. Those of our readers who contemplate having large amounts of whitewashing or tree spraying done in this city or any other part of the State, should send size of buildings and orchards to Mr. Wainwright, when estimates of cost will be promptly furnished them. Illustrated circulars of spraying and sprinkling apparatus will be sent on application.

DEWEY'S PATENT ELASTIC PAPER BINDER.

Simple and Durable.



The simple manner in which the sides or lids of the cover are permitted to turn easily by the elasticity of the rubbers is a novel and successful feature of the invention.

To produce at moderate cost a neat and substantial binder, which would be durable, easily and rapidly handled, has been the aim of the inventor, who in business has long had need of such an article. This object has been accomplished in so simple a manner that the binder has comparatively few parts. The adjustable portions are such as are not likely to be lost, disarranged or worn out quickly. The pointed straps and elastic bands are in such common use as to be obtainable for a trifle at almost any village store. It approaches book-binding to a remarkable degree.

The binder was patented by A. T. Dewey (of Dewey & Co., publishers and patent agents, San Francisco), and has been well tested by service, and its construction improved from time to time, until its use seems to give perfect satisfaction.

It is the cheapest of all elastic binders yet offered to the public, and we believe will give the best satisfaction of any, and especially moderate-priced binders.

The price for binders of good quality, having strong cloth sides, of suitable size for RURAL PRESS, SCIENTIFIC PRESS, *Harpers' Weekly* or the *Scientific American*, is eighty five cents.

Showing manner of Fastening.

Dewey's Easy Adjusting Paper and Periodical Binder

DIRECTIONS FOR USING Dewey's Patent Paper Binder.

PATENTED 1892.

LAY the binder flat open before you—the side having the rings at the right. Place the article to be filed face down on the left half of the cover. Stab the strings upward through it about one-half inch from its back. Pass the strings through the cover and the rings and tie with a bow knot, quite taut, in order to hold the sheets strongly in an elastic embrace between the covers. The rings should not be drawn close to the holes in the binder, as that would prevent any play for the inner edges of the binder on opening.

Now strings and rubber bands can be supplied cheaply by stores anywhere, or they will be sent by mail on receipt of order and cash by

DEWEY & CO., Publishers, S. F.

Our advice to libraries, reading-rooms and individuals is to try this binder. A sample is not expensive. The names of libraries, societies, individuals, newspapers, periodicals, etc., will be stamped in gilt letters on the covers when ordered. The cost will be quite moderate when a considerable number are ordered at a time to be stamped alike. Other sizes manufactured to order in quantities at reasonable prices.

☞ These Binders and File-holders are manufactured solely by Dewey & Co., Publishers, S. F. Sold by S. F. News Co., news-dealers, book-sellers and stationers.

PRICE OF BINDERS (in standard quality), size of Dewey & Co.'s newspapers, Scientific American, Harper's Weekly, etc., - 85 Cents.

LAND FOR LABOR

Vineyard Land

On the Dewey Homestead Tract, within one mile of Tulare City corporation limits. From 5 to 20 acres will be sold cheap, without a cash payment, and without interest the first year, to any responsible party who will put the same to raisin vines. Terms of payment after first year, 20 per cent of purchase per annum. This offer will not be open long.

Address THOS. H. THOMISON, Tulare, F. M. DEWEY, Porterville; or A. T. DEWEY, 220 Market St., San Francisco.

P. S.—Other desirable raisin and fruit land for sale at very low rates. Also grain land to rent on shares. Terms liberal.

The German Savings and Loan Society,

526 California Street.

DIVIDEND NOTICE.

For the half-year ending December 31, 1890, a dividend has been declared at the rate of five and forty-hundredths (5 40-100) per cent per annum on Term Deposits, and four and one-half (4½) per cent per annum on Ordinary Deposits. Payable on and after FRIDAY, January 2, 1891. GEO. TOURNEY, Secretary.

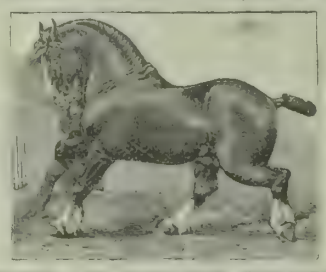
THE BEST FENCE YET!

Cheap, Durable, Portable and Safe.

THE SPALDING HUMANE WIRE FENCE is composed of eight No. 12½ galvanized steel wires, woven into four cables of two wires each; interwoven every five feet is a corrugated iron stay or guard, and held in place by the cables, thereby holding the cables firmly in place, preventing them being spread apart and letting stock through. The stays or guards are corrugated and an inch and three-quarters in width, making the fence as visible as a board fence, which is **a very essential point.** Write for circulars and prices. Address **BIRD-TURNBULL MFG. CO., 195 La Salle St., Chicago.**

MANHATTAN STOCK FOOD.



Saves One-Quarter of Grain Feed.

FRAUDULENT PARTIES have been selling an article, claiming theirs to be the same, and, in order to mislead, have added a prefix to "Manhattan." Our genuine food is called simple "Manhattan Food," with the Red Ball Brand.

S. F. Market Report

Market Review.

DOMESTIC PRODUCE, ETC

SAN FRANCISCO, Dec. 23, 1890.

General trading in farm products is of the usual holiday character, and therefore untrustworthy as a guide. The demand has been unusually large for fowls, apples and other holiday goods. In wheat, trading is fair at firmer prices. The advance in freights from Atlantic seaports causes a decline in wheat at Chicago and also at New York. The English market strengthened some. The following is to-day's cable:

LIVERPOOL, Dec. 23.—Wheat—Quiet and of a holiday appearance. California spot lots, 7s 4½d to 7s 7½d; cargoes off coast, 38s 3d; just shipped, 38s; nearly due, 38s 3d; cargoes off coast and on passage, strong; wheat on passage to Continent, 786,000 qrs; wheat and flour on passage to Cork, U. K., 2,222,000 qrs; Weather in England, frosty; seems breaking up.

Foreign Grain Review.

LONDON, Dec. 22.—The *Mark Lane Express* in its review of the British grain trade, says: English wheats are firm at an advance of 3d; foreign are slow. Decreased supplies of California have enhanced its value 6d. Flour is steady. At to-day's market wheat was quiet; foreign, firm. Corn and oats are steady.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per ctl. for the past week:

	Dec	Jan.	Feb	Mar	April.	May.
Thursday	[illegible]	7s8½d	7s[illegible]d	7s7¼d	7s7d	7s7½d
Friday	7s7½d	7s7½d	7s8½d	7s8½d	7s8½d	7s8d
Saturday	7s7½d	7s7½d	7s8d	7s8d	7s8d	7s7½d
Monday	7s7½d	7s7½d	7s7½d	7s7d	7s7½d	7s7½d
Tuesday	....	....	....	....	....	....

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday	38s0d	37s6d	37s9d	Firm.
Friday	38s0d	37s9d	37s9d	Hardening
Saturday	38s0d	37s9d	37s9d	Strong.
Monday	38s0d	37s9d	37s9d	Strong.
Tuesday	....	....	....	....

Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

Day.	Dec.	Jan.	Feb.	Mar.	May.	July.
Thursday	104½	104⅝	....	106⅝	106⅝	...
Friday	105⅝	105½	....	107⅛	107⅛	...
Saturday	105⅛	105⅛	....	107½	106½	...
Monday	104½	104½	105½	106½	105½	...
Tuesday	....	....	....	....	....	...

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

Day.	Dec.	May.	June.	July.
Thursday	99½	100	....	....
Friday	99	100⅛	....	....
Saturday	99	100	....	....
Monday	90½	98¼	....	....
Tuesday	....	....	....	....

NEW YORK, Dec. 23.—Wheat—$1.06⅛ for cash, $1.04½ for December, $1.04⅜@1.04½ for January, $1.05⅜@1.05⅝ for May, and 99⅜@99½c for July.

CHICAGO, Dec. 23.—Wheat—90c for January and 98¼c for May.

Visible Supply of Grain.

NEW YORK, Dec. 22.—The visible supply of grain is as follows: Wheat, 25,365,000 bushels, an increase of 179,000; corn, 2,117,000 bushels, an increase of 296,000; oats, 3,455,000 bushels, an increase of 64,000; rye, 480,000, an increase of 5000; barley, 4,258,000 bushels, a decrease of 107,000.

California Fruits at the East.

NEW YORK, Dec. 18.—The *Commercial Bulletin* says: The troubles before noted with California raisins continue, with no signs of improvement. Prunes seem to be giving more or less trouble one way or another, more particularly from the cancellation of orders by retailers consequent upon the inability of jobbers to make satisfactory deliveries, owing to backward arrivals on early contract purchases. Other dried fruits are simply full, if exception be made to some inquiry for peaches at very low prices, presumably on speculative account.

NEW YORK, Dec. 21.—The raisin market is in no better shape. It will take time to recover from the detriment of improperly cured, unsound and actually rain-injured offerings. Constant rejections reflect severely upon the general stock. The weakness that has befallen prices on account of the heavy receipts make distributive buyers suspicious of even prime and useful goods. Bagged lots, three crowns, decidedly irregular; wide range, 5½@8½c; three-crown boxes, loose, freely offered $1.60@1.90; Londons, $2.10@2.40. A few Forsyths sold Saturday at $2.57@1.20.

Unpeeled peaches dull at 14c; strictly choice, however, are held back for better chances. Apricots quiet; 18 sacks, 15 boxes.

Prunes move slowly at 11¼c for 60's to 90's, the largest not above 13c.

Hops.

NEW YORK, Dec. 19.—A considerable quantity of choice hops were sold in Schoharie county yesterday at 40c per pound for exportation. Two good lots sold in Cooperstown for 35c. This is taken to indicate better values for choice shipping qualities. The business with brewers is improving and the market is regarded generally better.

NEW YORK, Dec. 21.—Spot hops continue quiet, but with interior sales of considerable volume quotations are more compact. Common to choice State, 32@40c, 37c buying really good; Pacific range 30@38c. Exports for the week, 2934 bales; the season to date, 14,834 bales; last year, 7867 bales; receipts, 56,763; last year, 51,407. The Hop Exchange has been incorporated.

H. Kains Jackson in London (England) *Farmer* Dec. 1, says: Although there is very little business doing in a general way, holders of 1890 hops are not disposed to accept lower prices, and consequently values keep very firm. Merchants are supplying orders from consumers, and are able to make full prices; but for the present they are not prepared to take large lots from growers, who must, therefore, continue to exercise the quality of patience and wait until the trade reopens. There can be little fear of their being able to realize good prices, because the supplies of hops of really desirable class are so very small. In all probability there will be no considerable buying on the part of merchants until after Christmas. Foreign markets are mostly firm, but there is very little doing for export, the prices realizable on this side being below those made abroad. Californian hops, when pressed for sale here, have to be sold at less money than was obtainable some years ago.

NEW YORK, Dec. 22.—The current demand for hops indicates a continuance of the improvement in the general feeling at London. Reports are that several lines of American hops have been bought there at 210@215s.

Eastern Wool Markets.

NEW YORK, Dec. 19.—*Bradstreet's* will say tomorrow: The wool markets are in a very strong position. Quotations have not changed for several weeks although the demand has been light. Dealers have not pressed sales and have shown an unusual amount of confidence in prices. The demand for Ohio and Michigan fleeces is stronger. Texas wools are selling much better than a week ago. California and territory wools are not active, but a limited amount of stock prevents any decline in prices. Pulled wools are quiet and unchanged. Foreign wools show less activity than for the preceding week. The London market manifested considerable strength at the close. Advices from Melbourne state that market as unchanged, but that there is a tendency toward higher values.

NEW YORK, Dec. 21.—There is enough trading here in wool to inspire confidence. New England's tone helps the feeling. The open expression is that whatever concessions may have been latterly granted will be restored in the opening of the market of 1891. Standard lines are regarded as very secure. As heavy worsted goods have gone out fairly and the impression prevails that the winter will be reasonably long, the inferences encourage holders' views.

Local Markets.

BAGS—The market is dull at 6¼@6¾c for standard-sized hand-sewed. To lay bags down, the cost is about 6c.

BARLEY—The sample market is reported quiet but firm. In futures, trading has been quiet. The following are to-day's reported sales on Call:

Morning Session: Buyer 1890—200 tons, $1.44⅜; 200, $1.44¾. Buyer Season—100 tons, $1.48; 100, $1.48½; 100, $1.48¾; 100, $1.48¾ ₩ ctl. Afternoon Session: Buyer 1891—100 tons, $1.45. Buyer season—300 tons, $1.49; 100, 1.49¾ ₩ ctl.

BUTTER — The market, while reported firm, does not carry out the assertion, for large buyers do not appear to have any difficulty in getting concessions. Natural feed is improving, but cold weather is against a marked increased flow of milk, except where cows are well cared for.

CHEESE—The market is strong, with a good demand ruling.

EGGS—Eastern are in lighter supply, yet the market for Californian does not respond. Considerable quantities of eggs, cold storage, are on the market; after those are cleared up prices will do better, unless heavy overland receipts do not come to hand.

FLOUR—The market is steady at current quotations. There is a fair home and export demand.

WHEAT—The local market has exhibited considerable strength throughout the week. The strengthening of the English markets, due chiefly to an advance in silver, caused a better tone, but with a decline in silver the foreign markets are easier. France is drawing more freely. In futures, trading has been light. The following are the reported sales made on to-day's Call:

Morning Session: Buyer 1890—400 tons, $1.31¼; 100, $1.31¾; 200, $1.31½. Buyer season—100 tons, $1.41⅝; 700, $1.41¾. Buyer 1891—100 tons, $1.47½ ₩ ctl. Afternoon Session: Buyer 1890—500 tons, $1.31¼; 700, $1.31⅜; 200, $1.31½; 500, $1.31⅝. Buyer season—300 tons, $1.42; 300, $1.42½; 100, $1.42¼; 100, $1.42½; 100, $1.42⅜. Buyer 1891—100 tons, $1.48; 100, $1.48½; 300, $1.48¼ ₩ ctl.

Market Information.

Produce Receipts.

Receipts of produce at this port for the week ending Dec. 22d, were as follows:

Flour, qr. sks	72,887	Middlings, sks	3,088

Cereals.

London *Agricultural Gazette*, Dec. 1: As yet, the cold weather does not appear to have had any influence on the consumptive demand, but if it lasts such a result might be expected to follow. Meanwhile, imports are smaller, while the supply afloat is materially increasing, shipments from India and from Russia having been liberal; in the latter case, however, there is a prospect of their being restricted by the closing of certain important ports by ice, but milder weather may set in and this element of strength be lost. As matters now stand, the one real factor of strength in the trade is the small stocks of flour which give life to the milling industry of the country.

Mark Lane Express, Dec. 1: Foreign wheat is kept from advancing by reason of the large quantity on passage. Russia last week sent off over 400,000 qrs., and Indian exports rose to 115,000 qrs., while California sent off 90,000 qrs., 72,000 qrs. of this total being for the United Kingdom; while the chief shipping countries continue to dispatch such formidable quantities, even good weekly arrivals will not prevent the quantity afloat from increasing. It is, however, impossible for Russia to repeat recent heavy shipments, for when we look down the list of ports we find that quite half have become partially or wholly closed by ice since the last shipments reported. By rail only 6 per cent of Russian wheat and 12 per cent of Russian maize exports found their way westward. Indian exports owe their increase mainly to the fall in silver, amounting to 8d. per oz., 54d. to 46d. Since last Monday, however, bar silver has recovered to 48¼d., and any quotation over 4s. now impedes Indian exports.

The local wheat market has held to strong prices. Holders are not pressing the market, believing in better prices later on. This opinion is grounded upon the strong markets abroad and increasing supply of tonnage. If silver advances to higher prices, then better wheat markets are assured. Oregon and Washington are sending us liberal supplies, considerably more than for several years past. It looks as if the free tonnage on the way to "up-north" ports will meet the requirements of our northern neighbors without their sending to us an average of about 1000 tons of wheat a week. It may be that close money markets up north are forcing weak holders of grain to realize at present low prices.

Rains, followed by clear but moist weather, have caused plows to be started in every section, unless we may perhaps except where the soil is heavy adobe. From the best obtainable advices we feel justified in stating that the acreage which will be seeded to grain this winter and next spring will be the largest on record. The cool, frosty weather is calculated to put the land into the best possible condition, where such weather is enjoyed.

Barley has fluctuated, yet the market has exhibited considerable strength. The consumption is large. With an abundance of natural feed, less rolled barley will be fed, which would have an influence on the market, provided the stock in the State was large. The Hawaiian islands take increasing quantities of rolled barley. Oregon and Washington are sending barley to this port, but as the supply in those two States is said to be light, it is only reasonable to conclude that receipts from that source will soon be cut off.

Oats held steady under moderate receipts. The demand continues free. The stocks held in this city are being depleted, while the supply to draw from is light. It is claimed that there will be an increased acreage seeded, both in this State and Oregon. Choice seed oats, particularly black and gray, are higher.

Notwithstanding light receipts, corn has a weaker tone, with concessions reported. Some holders claim that after the holidays the market is likely to improve.

Rye is steady, as is buckwheat.

Feedstuff.

Ground feed is no exception to the general holiday dullness. The demand is falling off, causing a weaker tone. The falling off in the call is due to better natural feed. The Hawaiians are buying more rolled barley, finding that the cheaper feed.

Hay is coming in quite freely but the grade is only fair. Choice to extra choice is in light supply, for which full prices are obtained. There is said to be a marked falling off in the demand, yet if cold weather continues, and if rains hold off for a fortnight or so, the demand will be large and prices stiffer. The market is controlled by the weather.

Live-stock.

The demand at the moment is running on the more choice bullocks, mutton, calves, etc., for the holiday trade; prices for which are at an advance on regular current meats. There appears to be a growing impression that while the market for bullocks may improve, yet any advance that may take place will cause increased shipments from Arizona and other southern points. Mutton sheep, hogs and calves are firm.

Fruits.

Grapes are in light supply. Good keepers fetch a slight advance.

Pears are in lighter receipt, causing a stronger market, particularly for Winter Nelis.

Receipts of northern and foothill apples are increasing, yet the trade is cleaning up the market for the more choice varieties. Red apples are in better demand than any other kind, but this always obtains at the holiday season.

Dried fruits are neglected, causing quotations to be nominal. To sell, concessions are necessary; to buy, full prices must be paid. It is generally claimed that after next month the market ought to show signs of improvement.

Raisins are still moving East, but in greatly reduced quantities. The pack this season was about 1,800,000 boxes. The low estimate made by interested parties of the pack has had a bad effect. Large buyers, by it, caused many packers to hold while they were selling their own purchases. Now that the pack is known, those who held and also those who shipped East on consignment are the sufferers. Experience has demonstrated the wisdom of striking when the iron is hot, or, in other words, selling when the buyers are after the goods.

Six cars came in yesterday with Southern California oranges. The quality shows an improvement. Riverside Navels were sold by one firm at $4.50 as an outside figure, while another firm received $5. The latter were very choice and sold in a small way. One firm quotes Riverside seedless at $3.25 as the highest price, while another quotes $3.50 as an outside figure. Difference in quality, perhaps, makes the difference in the price. Lemons are lower. California limes are coming in.

Vegetables.

Garden truck is going out. Peas, beans and tomatoes come to hand from the southern part of the State, but being out of season and commanding high prices, are slow of sale.

The receipts of onions are light. Choice good keepers are strong at a slight advance. The supply in this State and Oregon is said to be light.

Potatoes continue to fluctuate. After advancing slightly, the market at the close appears to be shading off. All advices report large quantities being stored for better prices. The storing being handy to transportation will be a menace to the market, for the holdings can be sent to this city on a day's notice. The acreage being planted to potatoes in the southern part of the State is very large, and new will begin to put in an appearance soon after the holidays.

Miscellaneous.

From the *Commercial News* of Dec. 23d the following summary of tonnage movement is compiled:

On the way to	1890.	1889.
San Francisco	291,125	201,652
San Diego	12 676	9,066
San Pedro	3.187	904
Oregon	35.836	24,960
Puget Sound	41,266	15,255
Totals	384,090	251,837
In port at		
San Francisco, disengaged	4,329	10,496
" " engaged for wheat	46 929	85,800
San Diego	4 250	4,037
San Pedro	2,009	
Columbia River	13.733	
Puget Sound	.....	.....
Totals	69 250	100,333

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to Dec. 17, 1890, the following are the exports from this port:

	1890.	1889.
Wheat, ctls	5,503.473	6,000,074
Flour, bbls	542,000	517,262
Barley	175,792	812,882

Beans are slightly easier. Hops are strong. A choice consignment can be placed at top prices.

Wool is dull. A large consignment of Australian came to hand the past week. The market at the East and also abroad is reported stronger.

Honey is firm, with a good shipping demand reported.

Exports by sea the past week aggregate as follows: Wheat ctls, Havre, 166,182; Cork, 39,074; London, 13,282. Flour bbls, Honolulu, 2425; China, 10,617; Japan, 1550; Liverpool, 4480. Hay bales, Kahului, 137; Honolulu, 2112. Beans lbs, Honolulu, 3813; China, 8298. Mustard seed lbs, London, 40,059. Bran sks, Honolulu, 3535. Barley ctls, Honolulu, 1855. Rolled barley ctls, Honolulu, 3187. Corn ctls, Honolulu, 155. Honey cases, Sydney, 150; London, 300. Raisins bxs, Sydney, 100; China, 22.

Dressed turkeys were cleaned up this (Tuesday) morning at 17@19c. The quality averages better than last year. Live turkeys dragged. The weather is cold, which is favorable for dressed fowls.

Dried Fruits, Etc.

The quotations given below are for average prices paid. Something very fancy fetch an advance on the highest quotations while poor sells slightly below the lowest quotations.

Prices named, unless otherwise specified, are for fruit in sacks. Add for 50-lb. boxes ½c per lb., and for 25-lb boxes ½c to 1c per lb.

SAN FRANCISCO, CAL.

Office, No. 138 Montgomery St., under Occidental Hotel.

GOMBAULT'S CAUSTIC BALSAM.—The experienced trainers of both running and trotting horses are never without the Gombault remedy. It almost entirely supersedes all other articles or means of relieving lameness, bunches or blemishes, and it is most desirable for use instead of all cautery or firing, which leaves unsightly scars. Gombault's is an old and sterling remedy, recommended and used by veterinarians. If you cannot find it at your dealers, send to Lawrence Williams & Co., Cleveland, O.—*Turf, Field and Farm.*

A CHARACTERISTIC ADVERTISEMENT in its straightforward business talk is that of J. J. H. Gregory, the veteran seedsman of Marblehead, Mass. Mr. Gregory's reputation for fair dealing and exact fulfillment of promises is a hardy annual, and has never failed to justify the entire confidence of his customers. All who want reliable seeds should be sure to send for his 1891 catalogue.

HORSE-COLLAR TRUST—A BIG HOLE MADE IN IT. No Collar Trust! No Leather Trust! No Labor Trust! Competition is the life of trade, and Trusts kill competition. A business house which becomes fossilized to the point of requiring a Pool or Trust to hold it up, should be left severely alone, and those not leaning on Pools or Trusts be preferred. What chance has the rising generation for a fair share of this world's goods if they are hampered and shut out from many undertakings by Trusts? To all persons interested in Harness Goods: Please take notice that the firm of W. Davis & Son withdrew from the Collar Trust on September 13, 1890, and can, therefore, furnish Horse Collars at a Big Reduction on the Trust Prices, as we are the only Wholesale Saddlery House in San Francisco not tied up with High Prices. W. DAVIS & SON, 410 Market St., S. F.

4 DEDERICK'S WORKS, ALBANY, N.Y.

Dewey & Co.'s Scientific Press Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most *reliable* advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

How to write letters, etc., etc. Making in all a handy and reliable companion for those who desire to "LIVE AND LEARN." 160 pages, bound in leather; the cover. Price 25 cts.

Wilford's Original Dialogues and Speeches for Young Folks.—Being by far the most complete of its kind ever issued. This work supplies that palpable want, which has so long been evident in books of this class, that of *Dialogues* and *Speeches* adapted to the natures of children. This work contains **19 Original Dialogues** and 53 Speeches, especially adapted for children between the ages of 5 and 12 years. 160 pages.

Paper cover, Price..... ..25 cts.

Brudder Gardner's Stump Speeches and Comic Lectures. Containing the best hits of the leading Negro delineators of the present day, comprising the most amusing and side splitting contribution of oratorical effusions which have ever been produced to the public. The newest and best book of Negro comicalities published. 160 pages. Bound in illuminated paper covers. Price.....25 cts.

Burdett's New Comic Recitations and Humorous Readings.—A new volume of comic and humorous selections, compiled by the celebrated humorist, James S. Burdett many of which have never before been published in book form. In addition to the new and original pieces here contained, this book has the advantage of *containing together in one volume* all of the very best selections of a comic nature which have hitherto attained a wide popularity through the public representations of the most renowned humorists of the day. It is the newest, handsomest and choicest book of its kind. Price.....25 cts

The Candy Maker.—A Practical Guide to the Manufacture of the various kinds of Plain and Fancy Candy. The fullest directions are given for getting up the most exquisitely beautiful looking candies, as well as the most alluring to the palate; while equal attention is given to all the plainer kinds, so universally liked by the "little ones." Every Direction, every Recipe, every Concoction of which Sugar, Spice and Essence are the ingredients, is given in such a plain way that a child can understand them. Large 12mo. Price.....50 cts.

Wilson's Ball-Room Guide and Call-Book.—The most complete published, containing full and requisite information for the giving of Receptions, Parties, Balls, etc., with clear directions for calling out the figures of every dance, together with thirty-eight pages of the latest and most fashionable copyright music, and containing nearly one hundred figures for the "German." Bound in illuminated board cover, with Bound in illuminated paper cover, Price.....50 cts.

Dunbar's Complete Hand-Book of Etiquette.—This work presents, in a clear and intelligible manner, the whole art and philosophy of Etiquette. Among the contents are: Bodily Deportment, Speak Grammatically, Self-respect, Pedantry, Social Characters, Traveling, Useful Hints on Conversation, Forms of Invitation, Letters of Introduction, Bridal Etiquette, Ball-room Etiquette, etc., etc. Bound in Boards, cloth back. Price..... ..50 cts.

Carpenter's Manual. Instructs in the use of tools and the various operations of the trade, including drawing for carpenters, forms of contracts, specifications, etc., with plain instructions for beginners, and full glossary of terms used in the trade. Also gives plans and specifications for building a number of frame houses. Illustrated. Price.....50 cts.

Ropp's Commercial Calculator. A Practical Arithmetic for Practical Purposes, containing a complete system of useful, accurate and convenient tables, together with simple, short and practical methods for rapid calculation. Bound in Cloth, Price.....25 cts.

A portion of the above works will be sent from our office direct, while some will be ordered from other publishing houses, requiring some two weeks longer time.

N. B. The above prices include the prepayment of postage by us.

Address, DEWEY & CO.,
220 Market St., San Francisco, Cal.

Reckoning Time.

A correspondent of the New York *Evening Telegram* tells its readers how the time is reckoned at the observatory in Washington, as follows:

The observatory does not reckon its time by the sun, but by the so-called "fixed" stars, which are so far off that their position with relation to the earth does not change appreciably within a few months or years. Star time is the only true time, therefore. The operator looks through a big telescope and watches for a given star that he knows to cross the plane of the meridian. As it crosses he records what moment it does so, as shown by a star time clock with a 24-hour dial. Then he consults a printed table that shows him at just what number of hours, minutes and seconds the star in question must actually have crossed the meridian plane.

The table is right, and by as much as the star-time clock differs from it, the latter is wrong. No attempt is made to set the star clock right, allowance being simply made in subsequent calculations for the error thus discovered, which amounts only to a fraction of a second in some days. Next the corrected time, as taken from the star clock, is reduced to sun time, which requires some figuring, inasmuch as the star year is one day longer than the sun year. A sun time or "standard" time clock stands close by, and the amount that this varies from the truth having been ascertained, allowance is made for the error in sending the noon stroke all over the country.

Regulating Chronometers.

At the observatory all the chronometers made for the navy are tested and regulated before they are sent out on vessels, each of which is supplied with three first-class chronometers, as well as one that is half used up, called a "hack," for carrying about and for rough service generally. It takes 21 weeks of testing to properly regulate and prove a chronometer, and part of the trial consists in subjecting the instrument to the action of cold in an ice-box, and to heat communicated through steam pipes. Each chronometer, when given out, is accompanied by a chart telling just how it will vary under certain temperatures.

What the World Owes to Cranks.—It was to the courage and perseverance of a crank that we owe the discovery of this great hemisphere. It was a crank that gave us the printing press, the cotton loom, the locomotive, the telegraph. All the great inventors, from Archimedes to Edison, have been cranks; all the great philosophers, from Plato to Herbert Spencer; all the reformers, from Lycurgus to Lady Habberton; all the great preachers, from Peter the Hermit to Henry Ward Beecher; all the heroes who left their plows standing in the furrow while they went to fight for liberty under Washington.—*Kate Field.*

Our Agents.

Our Friends can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

John Simpson—Oregon.

A Curious Fact in statistics of population is the greater number of people whose age is expressed in decimals of ten. For instance, in the last census of Rhode Island there were more than twice as many people 50 years old as there were 49. So, again, it was shown that there were in a certain county 2000 colored people 69 years old, 1200 seventy-one, and 19,000 seventy. The fact is a striking illustration of the general fondness of people for round numbers. A man who is 59 or 61 years of age is quite apt to call himself 60, and in a similar case a woman will call herself 40 or 50.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. Look carefully at the label on your paper.

WHEN THE HAIR

Shows signs of falling, begin at once the use of Ayer's Hair Vigor. This preparation strengthens the scalp, promotes the growth of new hair, restores the natural color to gray and faded hair, and renders it soft, pliant, and glossy.

"We have no hesitation in pronouncing Ayer's Hair Vigor unequaled for dressing the hair, and we do this after long experience in its use. This preparation preserves the hair, cures dandruff and all diseases of the scalp, makes rough and brittle hair soft and pliant, and prevents baldness. While it is not a dye, those who have used the Vigor say it will stimulate the roots and color-glands of faded, gray, light, and red hair changing the color to

A Rich Brown

or even black. It will not soil the pillow-case nor a pocket-handkerchief, and is always agreeable. All the dirty, gummy hair preparations should be displaced at once by Ayer's Hair Vigor, and thousands who go around with heads looking like 'the fretful porcupine' should hurry to the nearest drug store and purchase a bottle of the Vigor."—*The Sunny South*, Atlanta, Ga.

"Ayer's Hair Vigor is excellent for the hair. It stimulates the growth, cures baldness, restores the natural color, cleanses the scalp, prevents dandruff, and is a good dressing. We know that Ayer's Hair Vigor differs from most hair tonics and similar preparations, it being perfectly harmless."—From *Economical Housekeeping*, by Eliza R. Parker.

T. V. MUNSON,
DENISON, TEXAS,
Introducer of the Great PARKER EARLE STRAWBERRY, now begins the introduction of a few of his thousands of wonderful Grape Hybrids. This season he offers four varieties, viz:
BRILLIANT, early red; CAMPBELL, early golden; ROMMEL, early white (promising for North and South), and HERMANN JAEGER, late purple; larger cluster and berry than *Herbemont*, suitable for south of Cincinnati and St. Louis, *all equal to best foreign in quality*. Descriptive circular and terms on application

Arizona Everbearing Strawberry.
By planting quite a number of the leading varieties of Strawberry together for five years, I have produced a variety unlike any of the former. I have picked the fruit daily since April 20th to the present time, October 18th, and the vines are still full of bloom and berries. Roots are long and stand the drouth well. The berries are large, fine flavor and high color, and resemble the Jessie in shape somewhat. I am prepared to furnish them in small lots at $1.50 per doz., postpaid. R. E. FARRINGTON, General Nurseryman, Phœnix, Arizona.

JAPANESE TREE CO.
(Formerly Japanese Tree Importing Co.)
Make a specialty of the hardy, seedless Oonshiu Orange Trees so highly recommended by all the leading horticultural papers. N. B.—Our Manager, Mr. H. E. JOHN A. SALZER, LA CROSSE, WISCONSIN.

1891.

1891.

Home Grown, Honest, Reliable.

I offer you my Vegetable and Flower Seed Catalogue for 1891 FREE. Note the immense variety of seed it contains, and that all the best novelties are there. Not much mere show about it (you don't plant pictures) but fine engravings from photographs of scores of the choice vegetables I have introduced. Would it not be well to get the seed of these from first hands? To be the oldest firm in the United States making mail and express business a specialty proves reliability. Honest and honorable dealing is the only foundation this can rest on. My Catalogue is FREE by mail. A matter of second postal cards will interest my customers. J. J. H. GREGORY & SON, Marblehead, Mass.

PACIFIC RURAL PRESS.

Truly a Farm and Home Journal of the highest class, pure in tone and well informed on all matters of industrial interest.

All branches of Farming, including the keeping and breeding of Horses, Cattle, Sheep, Swine, Bees, Poultry, etc.; Garden, Fruit, Vine, Grain, and Hop Culture; Reliable Market Reports, with other important departments devoted to the Grange, Home Circle, News, etc.

It is the Leading Agricultural Home Newspaper and standard authority on all branches of California Agriculture.

Its illustrations are probably the most practical, original and helpful of any agricultural journal in the world.

It also contains more fresh and useful agricultural information for the readers of this coast, by far, than can be obtained through any other publication issued here or elsewhere.

Established by its present proprietors in 1870, with rare facilities for leading in its position, and securing the combined patronage of the most intelligent and thrifty husbandmen of this coast, where the soil, climate, and many other conditions, imperatively demanded a new agricultural literature.

A steady and leading advocate of the Grange cause from its first introduction on this coast, in 1873, the Grange edition of the RURAL has been endorsed as the OFFICAL WEEKLY ORGAN OF THE STATE GRANGE OF CALIFORNIA, and as successor to the weekly issues of the *California Patron* it is the leading Grange advocate for OREGON, WASHINGTON, IDAHO AND MONTANA TERRITORIES.

It has the fullest and most accurate REPORTS OF HORTICULTURAL MEETINGS, and is the best record of the EXPERIENCE OF INDIVIDUAL FARMERS AND FRUIT-GROWERS in all parts of the State.

Its market reports are prepared with care and the greatest reliability possible for the benefit of the producer.

Yearly subscription $3. [Fifteen months are allowed new subscribers and old subscribers paying $3, ten months for $2, five months for $1 and three months for 60 cents, paid strictly in advance.]
